It is not necessary to pursue the comparison between the two epistles farther. The argument which results from it stands thus: No two other epistles contain a circumstance which indicates that they were written at the same, or nearly at the same time. No two other epistles exhibit so many marks of correspondency and resemblance. If the original which we ascribe to these two epistles be the true one, that is, if they were both really written by St. Paul, and both sent to their respective destination by the same messenger, the similitude is, in all points, what should be expected to take place. If they were forgeries, then the mention of Tychicus in both epistles, and in a manner which shows that he either carried or accompanied both epistles, was inserted for the purpose of accounting for their similitude: or else the structure of the epistles

\* Ephes. v. 20—22. *Euxaristountej pantote uper pantwn, en onomati tou Kuriou h̄lwn Ihsou Xristou, t& Qe& kai patri, upotassomenoi allhloij en fob& Qeou. Ai gunaikej, toij idioij andrasin upotassesqe. wj t& Kuri&.*

† Colos. iii. 17. *Kai pan o, ti an poihte, en log&, h en erg&, panta en onomati Kuriou Ihsou, euxaristountej t& Qe& kai patri di] autou. Ai gunaikej upotassesqe toij idioij andrasin, wj anhken en Kuri&.*

was designedly adapted to the circumstance: or lastly, the conformity between the contents of the forgeries, and what is thus directly intimated concerning their date, was only a happy accident. Not one of these three suppositions will gain credit with a reader who peruses the epistles with attention, and who reviews the several examples we have pointed out, and the observations with which they were accompanied.

## No. II.

There is such a thing as a peculiar word or phrase cleaving, as it were, to the memory of a writer or speaker, and presenting itself to his utterance at every turn. When we observe this, we call it a *cant* word, or a *cant* phrase. It is a natural effect of habit; and would appear more frequently than it does, had not the rules of good writing taught the ear to be offended with the iteration of the same sound, and oftentimes caused us to reject, on that account, the word which offered itself first to our recollection. With a writer who, like St. Paul, either knew not these rules, or disregarded them, such words will not be avoided. The truth is, an example of this kind runs through several of his epistles, and in the epistle before us *abounds*; and that is in the word *riches* (**ploutoj**), used metaphorically as an augmentative of the idea to which it happens to be subjoined. Thus, "the *riches* of his glory," "his *riches* in glory," "*riches* of the glory of his inheritance," "*riches* of the glory of this mystery," Rom. ix. 23. Ephes. iii. 1C; i. 18. Colos. i. 27: "*riches* of his grace," twice in the Ephesians, chap. i. 7; and ii. 7; "*riches* of the full assurance of understanding," Colos. ii. 2; "*riches* of his goodness," Rom. ii. 4; "*riches* of the wisdom of God," Rom. xi. 33;

"*riches* of Christ," Ephes. iii. 8. In a like sense the adjective, Rom. x. 12, "*rich* unto all that call upon him;" Ephes. ii. 4, "*rich* in mercy;" 1 Tim. vi. 18, "*rich* in good works." Also the adverb, Colos. iii. 16, "let the word of Christ dwell in you *richly*." This figurative use of the word, though so familiar to St. Paul, does not occur in any part of the New Testament, except once in the Epistle of St. James, ch. ii. ,5, "Hath not God chosen the *poor* of this world, *rich* in faith?" where it is manifestly suggested by the antithesis. I propose the frequent, yet seemingly unaffected use of this phrase, in the epistle before us, as one internal mark of its genuineness.

### No. III.

There is another singularity in St. Paul's style, which, wherever it is found, may be deemed a badge of authenticity; because, if it were noticed, it would not,

I think, he imitated, inasmuch as it almost always produces embarrassment and interruption in the reasoning. This singularity is a species of digression which may properly, I think, be denominated *going off at a word*. It is turning aside from the subject upon the occurrence of some particular word, forsaking the train of thought then in hand, and entering upon a parenthetic sentence in which that word is the prevailing term. I shall lay before the reader some examples of this, collected from the other epistles, and then propose two examples of it which are found in the Epistle to the Ephesians.

2 Cor. ii. 14, at the word *savour*: "Now thanks be unto God, which always causeth us to triumph in Christ, and maketh manifest the *savour* of his knowledge by us in every place. (For we are unto God a sweet *savour* of Christ, in them that are saved, and in them that perish:

to the one we are the *savour* of death unto death; and to the other the *savour* of life unto life. And who is sufficient for these things?) For we are not as many, which corrupt the word of God: but as of sincerity, but as of God, in the sight of God speak we in Christ." Again, 2 Cor. iii. 1, at the word *epistle*: "Need we, as some others, *epistles* of commendation to you, or of commendation from you? (Ye are our *epistle* written in our hearts, known and read of all men: forasmuch as ye are manifestly declared to be the *epistle* of Christ ministered by us, written not with ink, but with the Spirit of the living God; not in tables of stone, but in fleshy tables of the heart.") The position of the words in the original shows more strongly than in the translation, that it was the occurrence of the word ***epistolh*** which gave birth to the sentence that follows:

2 Cor. iii. 1. *Ei m̄ xrhzomen, wf tinej, sustatikwn epistolwn proj uþaj, hþec uþwn sustatikwn; hþepistolh hþwn uþreij este, eggegrammenh en taij kardiaij hþwn, ginwskomenh kai anaginwskomenh uþo pantwn anqrwpwn: faneroumenoi ofi este epistolh Xristou diakonhqesa uf' hþwn, eggegrammenh ou melani, alla pneumati Qeou zwntoj: ouk en placi liqinaij, all' en placi kardiaj sarkinaij.*

Again, 2 Cor. iii. 12, etc. at the word *vail*: "Seeing then that we have such hope, we use great plainness of speech: and not as Moses, which put a *vail* over his face, that the children of Israel could not steadfastly look to the end of that which is abolished: but their minds were blinded: for until this day remaineth the same *vail* untaken away in the reading of the Old Testament; which *vail* is done away in Christ. But even unto this day, when Moses is read, the *vail* is upon their heart. Nevertheless when it shall turn to the Lord, the *vail* shall be taken away. (Now the Lord is

that Spirit: and where the Spirit of the Lord is, there is liberty.) But we all, with open face beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory, even as by the Spirit of the Lord. Therefore seeing we have this ministry, as we have received mercy, we faint not."

Who sees not that this whole allegory of the *vail* arises entirely out of the occurrence of the word, in telling us that "Moses put a *vail* over his face," and that it drew the apostle away from the proper subject of his discourse, the dignity of the office in which he was engaged? which subject he fetches up again almost in the words with which he had left it: "Therefore seeing we have this ministry, as we have received mercy, we faint not." The sentence which he had before been going on with, and in which he had been interrupted by the *vail*, was, "Seeing then that we have such hope, we use great plainness of speech."

In the Epistle to the Ephesians, the reader will remark two instances in which the same habit of composition obtains; he will recognise the same pen. One he will find, chap. iv. 8—11, at the word *ascended*: "Wherefore he saith, When he *ascended* up on high, he led captivity captive, and gave gifts unto men. (Now that he *ascended*, what is it but that he also descended first into the lower parts of the earth? He that descended is the same also that *ascended* up far above all heavens, that he might fill all things.) And he gave some, apostles," etc.

The other appears, chap. v. 12—15, at the word *light*: "For it is a shame even to speak of those things which are done of them in secret. But all things that are reproved are made manifest by the *light*: (for whatsoever doth make manifest is *light*. Wherefore he saith,

Awake, thou that sleepest, and arise from the dead, and Christ shall give thee *light*.) See then that ye walk circumspectly."

## No. IV.

Although it does not appear to have ever been disputed that the epistle before us was written by St. Paul, yet it is well known that a doubt has long been entertained concerning the persons to whom it was addressed. The question is founded partly in some ambiguity in the external evidence. Marcion, a heretic of the second century, as quoted by Tertullian, a father in the beginning of the third, calls it the Epistle to the Laodiceans. From what we know of Marcion, his judgment is little to be relied upon; nor is it perfectly clear that Marcion was rightly understood by Tertullian. If, however, Marcion be brought to prove that some copies in his time gave ***en Laodikei%*** in the superscription, his testimony, if it be truly interpreted, is not diminished by his heresy; for, as Grotius observes, "*cur mea re mentiretur nihil erat causae*." The name ***en Efes&***, in the first verse, upon which word singly depends the proof that the epistle was written to the Ephesians, is not read in all the manuscripts now extant. I admit, however, that the external evidence preponderates with a manifest excess on the side of the received reading. The objection therefore principally arises from the contents of the epistle itself, which, in many respects, militate with the supposition that it was written to the church at Ephesus. According to the history, St. Paul had passed two whole years at Ephesus, Acts xix. 10. And in this point, viz. of St. Paul having preached for a considerable length of time at Ephesus, the history is

confirmed by the two Epistles to the Corinthians, and by the two Epistles to Timothy. "I will tarry at *Ephesus* until Pentecost." 1 Cor. xvi. 8. "We would not have you ignorant of our trouble which came to us in *Asia*" 2 Cor. i. 8. "As I besought thee to abide still at *Ephesus*, when I went into Macedonia." 1 Tim. i. 3. "And in how many things he ministered unto me at *Ephesus* thou knowest very well," 2 Tim. i. 18. I adduce these testimonies, because, had it been a competition of credit between the history and the epistle, I should have thought myself bound to have preferred the epistle. Now, every epistle which St. Paul wrote to churches which he himself had founded, or which he had visited, abounds with references, and appeals to what had passed during the time that he was present amongst them; whereas there is not a text in the epistle to the Ephesians from which we can collect that he had ever been at Ephesus at all. The two Epistles to the Corinthians, the Epistle to the Galatians, the Epistle to the Philippians, and the two Epistles to the Thessalonians, are of this class; and they are full of allusions to the apostle's history, his reception, and his conduct whilst amongst them; the total want of which, in the epistle before us, is very difficult to account for, if it was in truth written to the church of Ephesus, in which city he had resided for so long a time. This is the first and strongest objection. But farther, the Epistle to the Colossians was addressed to a church in which St. Paul had never been. This we infer from the first verse of the second chapter: "For I would that ye knew what great conflict I have for you, and for them at Laodicea, and for as many as have not seen my face in the flesh." There could be no propriety in thus joining the Colossians and Laodiceans with those "who had not seen his face in the flesh," if they did

not also belong to the same description.\* Now, his address to the Colossians, whom he had not visited, is precisely the same as his address to the Christians, to whom he wrote in the epistle which we are now considering: "We give thanks to God and the Father of our Lord Jesus Christ, praying always for you, *since we heard of your faith* in Christ Jesus, and of the love which ye have to all the saints." Col. i. 3. Thus he speaks to the Colossians: in the epistle before us, as follows: "Wherefore I also, *after I heard of your faith* in the Lord Jesus, and love unto all the saints, cease not to give thanks for you in my prayers." chap. i. 15. The terms of this address are observable. The words "having *heard of* your faith and love," are the very words, we see, which he uses towards strangers; and it is not probable that he should employ the same in accosting a church in which he had long exercised his ministry, and whose "faith and love" he must have personally known, † The Epistle to the Romans was written before St. Paul had been at Rome; and his address to them runs in the same strain with that just now quoted: "I thank my God through Jesus Christ for you all, that your faith is *spoken of* throughout the whole world." Rom. i. 8. Let us now see what was the form in which our apostle was accustomed to introduce his epistles, when he wrote to those with whom he was already acquainted. To the Corinthians

\* Dr. Lardner contends against the validity of this conclusion; but, I think, without success. Vol. xiv. p. 473. edit. 1757.

† Mr. Locke endeavours to avoid this difficulty, by explaining "*their faith*, of which St. Paul had heard," to mean the steadfastness of their persuasion that they were called into the kingdom of God, without subjection to the Mosaic institution. But this interpretation seems to me extremely *hard*; for, in the manner in which faith is here joined with love, in the expression "your faith and love," it could not be meant to denote any particular tenet which distinguished one set of Christians from others; forasmuch as the expression describes the general virtues of the Christian profession. Vide Locke in loc.

it was this: "I thank my God always on your behalf, for the grace of God which is given you by Jesus Christ." 1 Cor. i. 4. To the Philippians: "I thank my God upon every remembrance of you." Phil. i. 3. To the Thessalonians: "We give thanks to God always for you all, making mention of you in our prayers; remembering without ceasing your work of faith, and labour of love." 1 Thess. i. 2. To Timothy: "I thank God, whom I serve from my forefathers with pure conscience, that without ceasing I have remembrance of thee in my prayers night and day." 2 Tim. i. 3. In these quotations, it is usually his *remembrance*, and never his *hearing* of them, which he makes the subject of his thankfulness to God.

As great difficulties stand in the way, supposing the epistle before us to have been written to the church of Ephesus, so I think it probable that it is actually the Epistle to the Laodiceans, referred to in the fourth chapter of the Epistle to the Colossians. The text which contains that reference is this: "When this epistle is read among you, cause that it be read also in the church of the Laodiceans; and that ye likewise read the epistle from Laodicea." chap. iv. 16. The "epistle *from* Laodicea" was an epistle sent by St. Paul to that church, and by them transmitted to Colosse. The two churches were mutually to communicate the epistles they had received. This is the way in which the direction is explained by the greater part of commentators, and is the most probable sense that can be given to it. It is also probable that the epistle alluded to was an epistle which had been received by the church of Laodicea *lately*. It appears, then, with a considerable degree of evidence, that there existed an epistle of St. Paul's nearly of the same date with the Epistle to the Colos-

sians, and an epistle directed to a church (for such the church of Laodicea was) in which St. Paul had never been. What has been observed concerning the epistle before us, shows that it answers perfectly to that character.

Nor does the mistake seem very difficult to account for. Whoever inspects the map of Asia Minor will see, that a person proceeding from Rome to Laodicea would probably land at Ephesus, as the nearest frequented seaport in that direction. Might not Tychicus then, in passing through Ephesus, communicate to the Christians of that place the letter with which he was charged? And might not copies of that letter be multiplied and preserved at Ephesus? Might not some of the copies drop the words of designation ***en t<sup>o</sup> Laodikei%***,\* which it was of no consequence to an Ephesian to retain? Might not copies of the letter come out into the Christian church at large from Ephesus; and might not this give occasion to a belief that the letter was written to that church? And, lastly, might not this belief produce the error which we suppose to have crept into the inscription?

\* And it is remarkable that there seem to have been some ancient copies without the words of designation, either the words *in Ephesus*, or the words *in Laodicea*. St. Basil, a writer of the fourth century, speaking of the present epistle, has this very singular passage: "And writing to the Ephesians, as truly united to him who is through knowledge, he (Paul) calleth them in a peculiar sense *such who are*; saying *to the saints who are and (or even) the faithful in (Christ Jesus)* for so those before us have transmitted it, and we have found it in ancient copies." Dr. Mill interprets (and, notwithstanding some objections that have been made to him, in my opinion rightly interprets) these words of Basil, as declaring that his father had seen certain copies of the epistle in which the words "in Ephesus" were wanting. And the passage, I think, must be considered as Basil's fanciful way of explaining what was really a corrupt and defective reading; for I do not believe it possible that the author of the epistle could have originally written ***agioij toij ousin***, without any name of place to follow it.

## No. V.

As our epistle purports to have been written during St. Paul's imprisonment at Rome, which lies beyond the period to which the Acts of the Apostles brings up his history; and as we have seen and acknowledged that the epistle contains no reference to any transaction at Ephesus during the apostle's residence in that city, we cannot expect that it should supply many marks of agreement with the narrative. One coincidence however occurs, and a coincidence of that minute and less obvious kind, which, as hath been repeatedly observed, is of all others the most to be relied upon.

Chap. vi. 19, 20, we read, "praying for me, that I may open my mouth boldly, to make known the mystery of the gospel, for which I am an ambassador in bonds." "*In bonds*," **en alusei**, in a *chain*. In the twenty-eighth chapter of the Acts we are informed that Paul, after his arrival at Rome, was suffered to dwell by himself with a soldier that kept him. Dr. Lardner has shown that this mode of custody was in use amongst the Romans, and that whenever it was adopted, the prisoner was bound to the soldier by a single chain: in reference to which, St. Paul, in the twentieth verse of this chapter, tells the Jews, whom he had assembled, "For this cause therefore have I called for you, to see you, and to speak with you: because that for the hope of Israel I am bound with this *chain*" **thn alusin tauthn perikeimai**. It is in exact conformity therefore with the truth of St. Paul's situation at the time, that he declares of himself in the epistle, **presbeuw en alusei**. And the exactness is the more remarkable, as **alusij** (a chain) is nowhere used in the singular number to express any other kind of custody. When

the prisoner's hands or feet were bound together, the word was *Sea-pot*, (bonds), as in the twenty-sixth chapter of the Acts, where Paul replies to Agrippa, "I would to God, that not only thou, but also all that hear me this day, were both almost, and altogether such as I am, except *these bonds*," ***parektoj twn desmwn toutwn***. When the prisoner was confined between two soldiers, as in the case of Peter, Acts xii. 6, two chains were employed; and it is said, upon his miraculous deliverance, that the "chains" (***aluseij***, in the plural) "fell from his hands." ***Desmj*** the noun, and ***desmai*** the verb, being general terms, were applicable to this in common with any other species of personal coercion; but ***alusij***, in the singular number, to none but this.

If it can be suspected that the writer of the present epistle, who in no other particular appears to have availed himself of the information concerning St. Paul delivered in the Acts, had, in this verse, borrowed the word which he read in that book, and had adapted his expression to what he found there recorded of St. Paul's treatment at Rome; in short, that the coincidence here noted was affected by craft and design; I think it a strong reply to remark, that, in the parallel passage of the Epistle to the Colossians, the same allusion is not preserved; the words there are, "praying also for us, that God would open unto us a door of utterance to speak the mystery of Christ, for which *I am also in bonds*," ***dibkai desmai***. After that has been shown in a preceding number, there can be little doubt but that these two epistles were written by the same person. If the writer, therefore, sought for, and fraudulently inserted, the correspondency into one epistle, why did he not do it in the other? A real prisoner might use either general words which comprehended this amongst

many other modes of custody; or might use appropriate words which specified this, and distinguished it from any other mode. It would be accidental which form of expression he fell upon. But an impostor, who had the art, in one place, to employ the appropriate term for the purpose of fraud, would have used it in both places.

## CHAPTER VII.

### THE EPISTLE TO THE PHILIPPIANS.

#### No. I.

WHEN a transaction is referred to in such a manner, as that the reference is easily and immediately understood by those who are beforehand, or from other quarters, acquainted with the fact, but is obscure, or imperfect, or requires investigation, or a comparison of different parts, in order to be made clear to other readers, the transaction so referred to is probably real; because, had it been fictitious, the writer would have set forth his story more fully and plainly, not merely as conscious of the fiction, but as conscious that his readers could have no other knowledge of the subject of his allusion than from the information of which he put them in possession.

The account of Epaphroditus, in the Epistle to the Philippians, of his journey to Rome, and of the business which brought him thither, is the article to which I mean to apply this observation. There are three passages in the epistle which relate to this subject. The first, chap. i. 7, "Even as it is meet for me to think

this of you all, because I have you in my heart; inasmuch as both in my bonds, and in the defence and confirmation of the Gospel, ye all are **sugkoinwnoi mou thj xaritoj**, joint contributors to the gift which I have received.\* Nothing more is said in this place. In the latter part of the second chapter, and at the distance of half the epistle from the last quotation, the subject appears again: "Yet I supposed it necessary to send to you Epaphroditus, my brother, and companion in labour, and fellow-soldier, but your messenger, and *he that ministered to my wants*. For he longed after you all, and was full of heaviness, because that ye had heard that he had been sick. For indeed he was sick nigh unto death: but God had mercy on him; and not on him only, but on me also, lest I should have sorrow upon sorrow. I sent him therefore the more carefully, that, when ye see him again, ye may rejoice, and that I may be the less sorrowful. Receive him therefore in the Lord with all gladness; and hold such in reputation: because for the work of Christ he was nigh unto death, not regarding his life, *to supply your lack of service toward me*" chap. ii. 25—30. The matter is here dropped, and no farther mention made of it till it is taken up near the conclusion of the epistle as follows: "But I rejoiced in the Lord greatly, that now at the last your care of me hath flourished again; wherein ye were also careful, but ye lacked opportunity. Not that I speak in respect of want: for I have learned, in whatsoever state I am, therewith to be

\* Pearce, I believe, was the first commentator, who gave this sense to the expression; and I believe also, that his exposition is now generally assented to. He interprets in the same sense the phrase in the fifth verse, which our translation renders "your fellowship in the Gospel;" but which in the original is not **koinwni% tou euaggeliou**, or **koinwni% en t& euaggeli&**; but **koinwni% ej to euaggelion**.

content. I know both how to be abased, and I know how to abound: every where and in all things I am instructed both to be full and to be hungry, both to abound and to suffer need. I can do all things through Christ which strengthened me. Notwithstanding ye have well done, that ye did communicate with my affliction. Now, ye Philippians, know also, that in the beginning of the Gospel, when I departed from Macedonia, no church communicated with me as concerning giving and receiving, but ye only. For even in Thessalonica ye sent once and again unto my necessity. Not because I desire a gift: but I desire fruit that may abound to your account. But I have all, and abound: I am full, having received of Epaphroditus the things which were sent from you." chap. iv. 10—18. To the Philippian reader, who knew that contributions were wont to be made in that church for the apostle's subsistence and relief, that the supply which they were accustomed to send to him had been delayed by the want of opportunity, that Epaphroditus had undertaken the charge of conveying their liberality to the hands of the apostle, that he had acquitted himself of this commission at the peril of his life, by hastening to Rome under the oppression of a grievous sickness; to a reader who knew all this beforehand, every line in the above quotations would be plain and clear. But how is it with a stranger? The knowledge of these several particulars is necessary to the perception and explanation of the references; yet that knowledge must be gathered from a comparison of passages lying at a great distance from one another. Texts must be interpreted by texts long subsequent to them, which necessarily produces embarrassment and suspense. The passage quoted from the beginning of the epistle contains an acknowledgment,

on the part of the apostle, of the liberality which the Philippians had exercised towards him; but the allusion is so general and indeterminate, that, had nothing more been said in the sequel of the epistle, it would hardly have been applied to this occasion at all. In the second quotation, Epaphroditus is declared to have "ministered to the apostle's wants," and "to have supplied their lack of service towards him;" but *how*, that is, at whose expense, or from what fund he "ministered," or what was "the lack of service" which he supplied, are left very much unexplained, till we arrive at the third quotation, where we find that Epaphroditus "ministered to St. Paul's wants," only by conveying to his hands the contributions of the Philippians: "I am full, having received of Epaphroditus the things which were sent from you:" and that "the lack of service which he supplied" was a delay or interruption of their accustomed bounty, occasioned by the want of opportunity: "I rejoiced in the Lord greatly, that now at the last your care of me hath flourished again; wherein ye were also careful, but ye lacked opportunity." The affair at length comes out clear; but it comes out by piecemeal. The clearness is the result of the reciprocal illustration of divided texts. Should any one choose therefore to insinuate, that this whole story of Epaphroditus, or his journey, his errand, his sickness, or even his existence, might, for what we know, have no other foundation than in the invention of the forger of the epistle; I answer, that a forger would have set forth his story connectedly, and also more fully and more perspicuously. If the epistle be authentic, and the transaction real, then every thing which is said concerning Epaphroditus and his commission would be clear to those into whose hands the epistle was expected to come. Considering the

Philippians as his readers, a person might naturally write upon the subject, as the author of the epistle has written; but there is no supposition of forgery with which it will suit.

## No. II.

The history of Epaphroditus supplies another observation: "Indeed he was sick nigh unto death: but God had mercy on him; and not on him only, but on me also, lest I should have sorrow upon sorrow." In this passage, no intimation is given that Epaphroditus's recovery was miraculous. It is plainly, I think, spoken of as a natural event. This instance, together with one in the Second Epistle to Timothy, ("Trophimus have I left at Miletum sick,") affords a proof that the power of performing cures, and, by parity of reason, of working other miracles, was a power which only visited the apostles occasionally, and did not at all depend upon their own will. Paul undoubtedly would have healed Epaphroditus if he could. Nor, if the power of working cures had awaited his disposal, would he have left his fellow-traveler at Miletum sick. This, I think, is a fair observation upon the instances adduced; but it is not the observation I am concerned to make. It is more for the purpose of my argument to remark, that forgery, upon such an occasion, would not have spared a miracle; much less would it have introduced St. Paul professing the utmost anxiety for the safety of his friend, yet acknowledging himself unable to help him; which he does, almost expressly, in the case of Trophimus, for he "left him sick;" and virtually in the passage before us, in which he felicitates himself upon the recovery of Epaphroditus, in terms which almost exclude the supposition of any supernatural means being em-

ployed to effect it. This is a reserve which nothing but truth would have imposed.

No. III.

Chap. iv. 15, 16. "Now, ye Philippians, know also, that in the beginning of the Gospel, when I departed from Macedonia, no church communicated with me as concerning giving and receiving, but ye only. For even in Thessalonica ye sent once and again unto my necessity."

It will be necessary to state the Greek of this passage, because our translation does not, I think, give the sense of it accurately.

*Oidate de kai uheij, Filippisioi, ofi en arx<sup>^</sup> tou euaggeliou, ofe echlqon apo Makedoniaj, oudemia moi ekklhsia ekoinwnhsen, ej logon dosewj kai lhyewj, ei mh uheij monoi: ofi kai en Qessalonik<sup>^</sup> kai apac kai dij thn xreian moi epemyate.*

The reader will please to direct his attention to the corresponding particulars *on* and *on kai*, which connect the words ***en arx<sup>^</sup> tou euaggeliou, ofe echlqon apo Makedoniaj***, with the words ***en Qessalonik<sup>^</sup>***, and denote, as I interpret the passage, two distinct donations, or rather donations at two distinct periods, one at Thessalonica, ***apac kai dij***, the other after his departure from Macedonia, ***ofe echlqon apo Makedoniaj***.\* I would render the passage, so as to mark these different periods, thus: "Now, ye Philippians, know also, that in the beginning

Luke ii. 15. ***Kai eyeneto, wj aphlqon ap' autwn ejt ton ouranon oifaggeloi***, "as the angels were gone away," i. e. *after* their departure, ***oipoinenej eipon proj allhlouj***. Matt. xii. 43. ***'Otan de to akaqarton pneuma ecelq<sup>^</sup> apo tou anqpwpou***, "when the unclean spirit is gone," i. e. *after* his departure, ***dierxetai***. John xiii. 30. ***'Ote echlqe (Ioudaj)***, "when he was gone," i. e. *after* his departure, ***Legei Ihsouj***. Acts x. 7. ***Wj de aphlqen oflaggeloj ollalwn t& Kornhli&***, "and when the angel which spake unto him was departed," i. e. *after* his departure, ***fwnhsaj duo twn oiketwn***, etc.

of the Gospel, when I was departed from Macedonia, no church communicated with me, as concerning giving and receiving, but ye only. And that also in Thessalonica ye sent once and again unto my necessity." Now with this exposition of the passage compare 2 Cor. xi. 8, 9: "I robbed other churches, taking wages of them, to do you service. And when I was present with you, and wanted, I was chargeable to no man: for that which was lacking to me the brethren which came from Macedonia supplied."

It appears from St. Paul's history, as related in the Acts of the Apostles, that upon leaving Macedonia he passed, after a very short stay at Athens, into Achaia. It appears, secondly, from the quotation out of the Epistle to the Corinthians, that in Achaia he accepted no pecuniary assistance from the converts of that country; but that he drew a supply for his wants from the Macedonian Christians. Agreeably whereunto it appears, in the third place, from the text which is the subject of the present number, that the brethren in Philippi, a city of Macedonia, had followed him with their munificence, ***oτε  
echlqon apo Makedoniaj***, when he was departed from Macedonia, that is, when he was *come into Achaia*.

The passage under consideration affords another circumstance of agreement deserving of our notice. The gift alluded to in the Epistle to the Philippians is stated to have been made "in the beginning of the Gospel." This phrase is most naturally explained to signify the first preaching of the Gospel in these parts; viz. on that side of the Ægean sea. The succours referred to in the Epistle to the Corinthians, as received from Macedonia, are stated to have been received by him upon his first visit to the peninsula of Greece. The dates

therefore assigned to the donation in the two epistles agree; yet is the date in one ascertained very incidentally, namely, by the considerations which fix the date of the epistle itself; and in the other, by an expression ("the beginning of the Gospel") much too general to have been used, if the text had been penned with any view to the correspondency we are remarking. Farther, the phrase, "in the *beginning* of the Gospel," raises an idea in the reader's mind that the Gospel had been preached there more than once. The writer would hardly have called the visit to which he refers the "beginning of the Gospel," if he had not also visited them in some other stage of it. The fact corresponds with this idea. If we consult the sixteenth and twentieth chapters of the Acts, we shall find, that St. Paul, before his imprisonment at Rome, during which this epistle purports to have been written, had been *twice* in Macedonia, and each time at Philippi.

## No. IV.

That Timothy had been long with St. Paul at Philippi is a fact which seems to be implied in this epistle twice. First, he joins in the salutation with which the epistle opens: "Paul and Timotheus, the servants of Jesus Christ, to all the saints in Christ Jesus which are at Philippi." Secondly, and more directly, the point is inferred from what is said concerning him, chap, ii. 19: "But I trust in the Lord Jesus to send Timotheus shortly unto you, that I also may be of good comfort, when I know your state. For I have no man likeminded, who will naturally care for your state. For all seek their own, not the things which are Jesus Christ's. But *ye know the proof of him*, that, as a son with the father, he hath served with me in the Gospel." Had Timothy's

presence with St. Paul at Philippi, when he preached the Gospel there, been expressly remarked in the Acts of the Apostles, this quotation might be thought to contain a contrived adaptation to the history; although, even in that case, the averment, or rather the allusion in the epistle, is too oblique to afford much room for such suspicion. But the truth is, that in the history of St. Paul's transactions at Philippi, which occupies the greatest part of the sixteenth chapter of the Acts, no mention is made of Timothy at all. What appears concerning Timothy in the history, so far as relates to the present subject, is this: "When Paul came to Derbe and Lystra, behold, a certain disciple was there, named Timotheus, whom Paul would have to go forth with him." The narrative then proceeds with the account of St. Paul's progress through various provinces of the Lesser Asia, till it brings him down to Troas. At Troas he was warned in a vision to pass over into Macedonia. In obedience to which, he crossed the Ægean sea to Samothracia, the next day to Neapolis, and from thence to Philippi. His preaching, miracles, and persecutions at Philippi, follow next: after which, Paul and his company, when they had passed through Amphipolis and Apollonia, came to Thessalonica, and from Thessalonica to Berea. From Berea the brethren sent away Paul; "but Silas and *Timotheus* abode there still." The itinerary, of which the above is an abstract, is undoubtedly sufficient to support an inference that Timothy was along with St. Paul at Philippi. We find them setting out together upon this progress from Derbe in Lycaonia; we find them together near the conclusion of it, at Berea in Macedonia. It is highly probable, therefore, that they came together to Philippi, through which their route between these two places lay.

If this be thought probable, it is sufficient. For what I wish to be observed is, that in comparing, upon this subject, the epistle with the history, we do not find a recital in one place of what is related in another; but that we find, what is much more to be relied upon, an oblique allusion to an implied fact.

## No. V.

Our epistle purports to have been written near the conclusion of St. Paul's imprisonment at Rome, and after a residence in that city of considerable duration. These circumstances are made out by different intimations; and the intimations upon the subject preserve among themselves a just consistency, and a consistency certainly unmediated. First, the apostle had already been a prisoner at Rome so long, as that the reputation of his bonds, and of his constancy under them, had contributed to advance the success of the Gospel: "But I would ye should understand, brethren, that the things which happened unto me have fallen out rather unto the furtherance of the Gospel; so that my bonds in Christ are manifest in all the palace, and in all other places; and many of the brethren in the Lord, waxing confident by my bonds, are much more bold to speak the word without fear." Secondly, the account given of Epaphroditus imports, that St. Paul, when he wrote the epistle, had been in Rome a considerable time: "He longed after you all, and was full of heaviness, because that ye had heard that he had been sick." Epaphroditus was with St. Paul at Rome. He had been sick. The Philippians had heard of his sickness, and he again had received an account how much they had been affected by the intelligence. The passing and repassing of these advices must necessarily have occupied a large portion

of time, and must have all taken place during St. Paul's residence at Rome. Thirdly, after a residence at Rome thus proved to have been of considerable duration, he now regards the decision of his fate as nigh at hand. He contemplates either alternative, that of his deliverance, chap. ii. 23, "Him therefore (Timothy) I hope to send *presently*, so soon as I shall see how it will go with me: but I trust in the Lord that I also myself shall come shortly:" that of his condemnation, ver. 17, "Yea, and if I be offered\* upon the sacrifice and service of your faith, I joy, and rejoice with you all." This consistency is material, if the consideration of it be confined to the epistle. It is farther material, as it agrees with respect to the duration of St. Paul's first imprisonment at Rome, with the account delivered in the Acts, which, having brought the apostle to Rome, closes the history by telling us "that he dwelt there *two whole years* in his own hired house."

#### No. VI.

Chap. i. 23. "For I am in a strait betwixt two, having a desire to depart, and to be with Christ; which is far better."

With this compare 2 Cor. v. 8: "We are confident and willing rather to be absent from the body, and to be present with the Lord."

The sameness of sentiment in these two quotations is obvious. I rely however not so much upon that, as upon the similitude in the train of thought which in each epistle leads up to this sentiment, and upon the suitableness of that train of thought to the circumstances under which the epistles purport to have been written.

\* *All' ei kai spēdonmai epi th̄ qusi% thj pistewj ūhwn*, if my blood be poured out as a libation upon the sacrifice of your faith.

This, I conceive, bespeaks the production of the same mind, and of a mind operating upon real circumstances. The sentiment is in both places preceded by the contemplation of imminent personal danger. To the Philippians he writes, in the twentieth verse of this chapter, "According to my earnest expectation and my hope, that in nothing I shall be ashamed, but that with all boldness, as always, *so now also* Christ shall be magnified in my body, whether it be by life, or by death." To the Corinthians, "Troubled on every side, yet not distressed; perplexed, but not in despair; persecuted, but not forsaken; cast down, but not destroyed; always bearing about in the body the dying of the Lord Jesus." This train of reflection is continued to the place from whence the words which we compare are taken. The two epistles, though written at different times, from different places, and to different churches, were both written under circumstances which would naturally recall to the author's mind the precarious condition of his life, and the perils which constantly awaited him. When the Epistle to the Philippians was written, the author was a prisoner at Rome, expecting his trial. When the Second Epistle to the Corinthians was written, he had lately escaped a danger in which he had given himself over for lost. The epistle opens with a recollection of this subject, and the impression accompanied the writer's thoughts throughout.

I know that nothing is easier than to transplant into a forged epistle a sentiment or expression which is found in a true one; or, supposing both epistles to be forged by the same hand, to insert the same sentiment or expression in both. But the difficulty is to introduce it in just and close connexion with a train of thought going before, and with a train of thought apparently generated

by the circumstances under which the epistle is written. In two epistles, purporting to be written on different occasions, and in different periods of the author's history, this propriety would not easily be managed.

### No. VII.

Chap. i. 29, 30; ii, 1, 2. "For unto you it is given in the behalf of Christ, not only to believe on him, but also to suffer for his sake; having the same conflict which *ye saw in me*, and now hear to be in me. If there be therefore any consolation in Christ, if any comfort of love, if any fellowship of the Spirit, if any bowels and mercies, fulfil ye my joy, that ye be like-minded, having the same love, being of one accord, of one mind."

With this compare Acts xvi. 22: "And the multitude (at Philippi) rose up together against them (Paul and Silas): and the magistrates rent off their clothes, and commanded to beat them. And when they had laid many stripes upon them, they cast them into prison, charging the jailor to keep them safely: who, having received such a charge, thrust them into the inner prison, and made their feet fast in the stocks."

The passage in the epistle is very remarkable. I know not an example in any writing of a juster pathos, or which more truly represents the workings of a warm and affectionate mind, than what is exhibited in the quotation before us.\* The apostle reminds his Philippians of their being joined with himself in the endurance of persecution for the sake of Christ. He conjures them by the ties of their common profession and their

\* The original is very spirited: **Ei taij oun paraklhsij en Xrist& , ei ti paramuqion agaphj, ei taij koinwnia pneumatoj, ei tina spl agxna kai oiktirmoi, plhrwsate mou thn xaran.**

common sufferings, to "fulfil his joy;" to complete, by the unity of their faith, and by their mutual love, that joy with which the instances he had received of their zeal and attachment had inspired his breast. Now if this was the real effusion of St. Paul's mind, of which it bears the strongest internal character, then we have, in the words "the same conflict which ye saw in me," an authentic confirmation of so much of the apostle's history in the Acts, as relates to his transactions at Philippi; and, through that, of the intelligence and general fidelity of the historian.

### CHAPTER VIII.

#### THE EPISTLE TO THE COLOSSIANS.

No. I.

THERE is a circumstance of conformity between St. Paul's history and his letters, especially those which were written during his first imprisonment at Rome, and more especially the epistles to the Colossians and Ephesians, which being too close to be accounted for from accident, yet too indirect and latent to be imputed to design, cannot easily be resolved into any other original than truth. Which circumstance is this, that St. Paul in these epistles attributes his imprisonment not to his preaching of Christianity, but to his asserting the right of the Gentiles to be admitted into it without conforming themselves to the Jewish law. This was the doctrine to which he considered himself as a martyr. Thus, in the epistle before us, chap. i. 24, (I Paul) "who now rejoice in my sufferings for you"—"for you" i. e. for those whom he had never seen; for a few verses

afterwards he adds, "I would that ye knew what great conflict I have for you, and for them at Laodicea, and for as many as have not seen my face in the flesh." His suffering therefore for *them* was, in their general capacity of Gentile Christians, agreeably to what he explicitly declares in his Epistle to the Ephesians, iii. 1: "For this cause I Paul, the prisoner of Jesus Christ *for you Gentiles*" Again, in the epistle now under consideration, iv. 3: "Withal praying also for us, that God would open unto us a door of utterance, to speak the *mystery* of Christ, for which I am also in bonds." What that "mystery of Christ" was, the Epistle to the Ephesians distinctly informs us: "Whereby, when ye read, ye may understand my knowledge in the *mystery of Christ*, which in other ages was not made known unto the sons of men, as it is now revealed unto the holy apostles and prophets by the Spirit; *that the Gentiles should be fellowheirs, and of the same body, and partakers of his promise in Christ by the Gospel.*" This, therefore, was the *confession* for which he declares himself to be in bonds. Now let us inquire how the occasion of St. Paul's imprisonment is represented in the history. The apostle had not long returned to Jerusalem from his second visit into Greece, when an uproar was excited in that city by the clamour of certain Asiatic Jews, who, "having seen Paul in the temple, stirred up all the people, and laid hands on him." The charge advanced against him was, that "he taught all men every where against the people, and the law, and this place: and farther brought Greeks also into the temple, and polluted that holy place." The former part of the charge seems to point at the doctrine, which he maintained, of the admission of the Gentiles, under the new dispensation, to an indiscriminate

participation of God's favour with the Jews. But what follows makes the matter clear. When, by the interference of the chief captain, Paul had been rescued out of the hands of the populace, and was permitted to address the multitude who had followed him to the stairs of the castle, he delivered a brief account of his birth, of the early course of his life, of his miraculous conversion; and is proceeding in this narrative, until he comes to describe a vision which was presented to him, as he was praying in the temple, and which bid him depart out of Jerusalem, "for I will send thee far hence *unto the Gentiles*." Acts xxii. 21. "They gave him audience," says the historian, "*unto this word*, and then lifted up their voices, and said, Away with such a fellow from the earth!" Nothing can show more strongly than this account does, what was the offence which drew down upon St. Paul the vengeance of his countrymen. His mission to the Gentiles, and his open avowal of that mission, was the intolerable part of the apostle's crime. But although the real motive of the prosecution appears to have been the apostle's conduct towards the Gentiles, yet, when his accusers came before a Roman magistrate, a charge was to be framed of a more legal form. The profanation of the temple was the article they chose to rely upon. This, therefore, became the immediate subject of Tertullus's oration before Felix, and of Paul's defence. But that he all along considered his ministry amongst the Gentiles as the actual source of the enmity that had been exercised against him, and in particular as the cause of the insurrection in which his person had been seized, is apparent from the conclusion of his discourse before Agrippa: "I have appeared unto thee," says he, describing what passed upon his journey to

Damascus, "for this purpose, to make thee a minister and a witness both of these things which thou hast seen, and of those things in the which I will appear unto thee; delivering thee from the people, and from the Gentiles, unto whom now I send thee, to open their eyes, and to turn them from darkness to light, and from the power of Satan unto God, that they may receive forgiveness of sins, and inheritance among them which are sanctified by faith that is in me. Whereupon, O king Agrippa, I was not disobedient unto the heavenly vision: but showed first unto them of Damascus, and at Jerusalem, and throughout all the coasts of Judea, and then to the Gentiles, that they should repent and turn to God, and do works meet for repentance. *For these causes* the Jews caught me in the temple, and went about to kill me." The seizing, therefore, of St. Paul's person, from which he was never discharged till his final liberation at Rome, and of which, therefore, his imprisonment at Rome was the continuation and effect, was not in consequence of any general persecution set on foot against Christianity; nor did it befall him simply as professing or teaching Christ's religion, which James and the elders at Jerusalem did as well as he, (and yet, for any thing that appears, remained at that time unmolested); but it was distinctly and specifically brought upon him by his activity in preaching to the Gentiles, and by his placing them upon a level with the once-favoured and still self-flattered posterity of Abraham. How well St. Paul's letters, purporting to be written during this imprisonment, agree with this account of its cause and origin, we have already seen.

## No. II.

Chap. iv. 10. "Aristarchus my fellow-prisoner saluteth you, and Marcus, sister's son to Barnabas, (touching whom ye received commandments: If he come unto you, receive him;) and Jesus, which is called Justus, who are of the circumcision."

We find Aristarchus as a companion of our apostle, in the nineteenth chapter of the Acts, and the twenty-ninth verse: "And the whole city of Ephesus was filled with confusion: and having caught Gaius and *Aristarchus*, men of Macedonia, *Paul's companions in travel*, they rushed with one accord into the theatre." And we find him upon his journey with St. Paul to Rome, in the twenty-seventh chapter, and the second verse: "And when it was determined that we should sail into Italy, they delivered Paul and certain other prisoners unto one named Julius, a centurion of Augustus' band. And entering into a ship of Adramyttium, we launched, moaning to sail by the coasts of Asia; *one Aristarchus, a Macedonian of Thessalonica, being with us.*" But might not the author of the epistle have consulted the history; and, observing that the historian had brought Aristarchus along with Paul to Rome, might, he not for that reason, and without any other foundation, have put down his name amongst the salutations of an epistle purporting to be written by the apostle from that place? I allow so much of possibility to this objection, that I should not have proposed this in the number of coincidences clearly undesigned, had Aristarchus stood alone. The observation that strikes me in reading the passage is, that together with Aristarchus, whose journey to Rome we trace in the history, are joined Marcus and Justus, of whose coming to

Rome the history says nothing. Aristarchus alone appears in the history, and Aristarchus alone would have appeared in the epistle, if the author had regulated himself by that conformity. Or if you take it the other way; if you suppose the history to have been made out of the epistle, why the journey of Aristarchus to Rome should be recorded, and not that of Marcus and Justus, if the groundwork of the narrative was the appearance of Aristarchus's name in the epistle, seems to be unaccountable.

"*Marcus, sister's son to Barnabas.*" Does not this hint account for Barnabas's adherence to Mark in the contest that arose with our apostle concerning him? "And some days after Paul said unto Barnabas, Let us go again and visit our brethren in every city where we have preached the word of the Lord, and see how they do. And *Barnabas determined to take with them John, whose surname was Mark.* But Paul thought not good to take him with them, who departed from them from Pamphylia, and went not with them to the work. And the contention was so sharp between them, that they departed asunder one from the other: and so Barnabas took Mark, and sailed unto Cyprus." The history which records the dispute has not preserved the circumstance of Mark's relationship to Barnabas. It is nowhere noticed but in the text before us. As far, therefore, as it applies, the application is certainly undesigned.

"*Sister's son to Barnabas.*" This woman, the mother of Mark, and the sister of Barnabas, was, as might be expected, a person of some eminence amongst the Christians of Jerusalem. It so happens that we hear of her in the history. "When Peter was delivered from prison, he came to the house of *Mary the mother*

*of John, whose surname was Mark; where many were gathered together praying."* Acts xii. 12. There is somewhat of coincidence in this; somewhat bespeaking real transactions amongst real persons.

## No. III.

The following coincidence, though it bear the appearance of great nicety and refinement, ought not, perhaps, to be deemed imaginary. In the salutations with which this, like most of St. Paul's epistles, concludes, we have "Aristarchus, and Marcus, and Jesus, which is called Justus, *who are of the circumcision*" chap. iv. 10, 11. Then follow also, "Epaphras, Luke the beloved physician, and Demas." Now, as this description, "who are of the circumcision," is added after the first three names, it is inferred, not without great appearance of probability, that the rest, amongst whom is Luke, were not of the circumcision. Now can we discover any expression in the Acts of the Apostles, which ascertains whether the author of the book was a Jew or not? If we can discover that he was not a Jew, we fix a circumstance in his character which coincides with what is here, indirectly indeed, but not very uncertainly, intimated concerning Luke: and we so far confirm both the testimony of the primitive church, that the Acts of the Apostles was written by St. Luke, and the general reality of the persons and circumstances brought together in this epistle. The text in the Acts, which has been construed to show that the writer was not a Jew, is the nineteenth verse of the first chapter, where, in describing the field which had been purchased with the reward of Judas's iniquity, it is said, "that it was known unto all the dwellers at Jerusalem; insomuch as that field is called in *their* proper tongue,

Aceldama, that is to say, The field of blood." These words are by most commentators taken to be the words and observation of the historian, and not a part of St. Peter's speech, in the midst of which they are found. If this be admitted, then it is argued that the expression, "in *their* proper tongue," would not have been used by a Jew, but is suitable to the pen of a Gentile writing concerning Jews.\* The reader will judge of the probability of this conclusion, and we urge the coincidence no farther than that probability extends. The coincidence, if it be one, is so remote from all possibility of design, that nothing need be added to satisfy the reader upon that part of the argument.

#### No. IV.

Chap. iv. 9. "With Onesimus, a faithful and beloved brother, *who is one of you*"

Observe how it may be made out that Onesimus was a Colossian. Turn to the Epistle to Philemon, and you will find that Onesimus was the servant or slave of Philemon. The question therefore will be, to what city Philemon belonged? In the epistle addressed to him this is not declared. It appears only that he was of the same place, whatever that place was, with an eminent Christian named Archippus. "Paul, a prisoner of Jesus Christ, and Timothy our brother, unto Philemon our dearly beloved, and fellow-labourer, and to our beloved Apphia, and *Archippus* our fellow-soldier, and to the church in thy house." Now turn back to the Epistle to the Colossians, and you will find Archippus saluted by name amongst the Christians of that church. "Say to Archippus, Take heed to the ministry which thou hast received in the Lord, that

\* See Benson's Dissertation, vol. i. p. 318 of his Works, edit. 17j6.

thou fulfil it." (iv. 17.) The necessary result is, that Onesiums also was of the same city, agreeably to what is said of him, "he is one of you." And this result is the effect either of truth, which produces consistency without the writer's thought or care, or of a conjecture of forgeries confirming and falling in with one another by a species of fortuity of which I know no example. The supposition of design, I think, is excluded, not only because the purpose to which the design must have been directed, viz. the verification of the passage in our epistle, in which it is said concerning Onesimus, "he is one of you," is a purpose, which would be lost upon ninety-nine readers out of a hundred; but because the means made use of are too circuitous to have been the subject of affectation and contrivance. Would a forger, who had this purpose in view, have left his readers to hunt it out, by going forward and backward from one epistle to another, in order to connect Onesimus with Philemon, Philemon with Archippus, and Archippus with Colosse? all which he must do before he arrives at his discovery, that it was truly said of Onesimus, "he is one of you."

## CHAPTER IX.

### THE FIRST EPISTLE TO THE THESSALONIANS.

No. I.

IT is known to every reader of Scripture, that the First Epistle to the Thessalonians speaks of the coming of Christ in terms which indicate an expectation of his speedy appearance: "For this we say unto you by the word of the Lord, that *we* which are alive and remain unto the coming of the Lord shall not prevent them

which are asleep. For the Lord himself shall descend from heaven with a shout, with the voice of the archangel, and with the trump of God: and the dead in Christ shall rise first: then *we which are alive and remain* shall be caught up together with them in the clouds.—But ye, brethren, are not in darkness, that that day should overtake you as a thief." (chap. iv. 15—17; v. 4.

Whatever other construction these texts may *bear*, the idea they leave upon the mind of an ordinary reader, is that of the author of the epistle looking for the day of judgment to take place in his own time, or near to it. Now the use which I make of this circumstance, is to deduce from it a proof that the epistle itself was not the production of a subsequent age. Would an impostor have given this expectation to St. Paul, after experience had proved it to be erroneous? or would he have put into the apostle's mouth, or, which is the same thing, into writings purporting to come from his hand, expressions, if not necessarily conveying, at least easily interpreted to convey, an opinion which was then known to be founded in mistake? I state this as an argument to show that the epistle was contemporary with St. Paul, which is little less than to show that it actually proceeded from his pen. For I question whether any ancient forgeries were executed in the life-time of the person whose name they bear; nor was the primitive situation of the church likely to give birth to such an attempt.

## No. II.

Our epistle concludes with a direction that it should be publicly read in the church to which it was addressed: "I charge you by the Lord that this epistle

bo read unto all the holy brethren." The existence of this clause in the body of the epistle is an evidence of its authenticity; because to produce a letter purporting to have been publicly read in the church of Thessalonica, when no such letter in truth had been read or heard of in that church, would be to produce an imposture destructive of itself. At least, it seems unlikely that the author of an imposture would voluntarily, and even officiously, afford a handle to so plain an objection. Either the epistle was publicly read in the church of Thessalonica during St. Paul's life-time, or it was not. If it was, no publication could be more authentic, no species of notoriety more unquestionable, no method of preserving the integrity of the copy more secure. If it was not, the clause we produce would remain a standing condemnation of the forgery, and, one would suppose, an invincible impediment to its success.

If we connect this article with the preceding, we shall perceive that they combine into one strong proof of the genuineness of the epistle. The preceding article carries up the date of the epistle to the time of St. Paul; the present article fixes the publication of it to the church of Thessalonica. Either therefore the church of Thessalonica was imposed upon by a false epistle, which in St. Paul's life-time they received and read publicly as his, carrying on a communication with him all the while, and the epistle referring to the continuance of that communication; or other Christian churches, in the same life-time of the apostle, received an epistle purporting to have been publicly read in the church of Thessalonica, which nevertheless had not been heard of in that church; or, lastly, the conclusion remains, that the epistle now in our hands is genuine.

## No. III.

Between our epistle and the history the accordancy in many points is circumstantial and complete. The history relates, that, after Paul and Silas had been beaten with many stripes at Philippi, shut up in the inner prison, and their feet made fast in the stocks, as soon as they were discharged from their confinement they departed from thence; and, when they had passed through Amphipolis and Apollonia, came to Thessalonica, where Paul opened and alleged that Jesus was the Christ; Acts xvi. 23, etc. The epistle written in the name of Paul and Sylvanus (Silas), and of Timotheus, who also appears to have been along with them at Philippi, (*vide Phil. No. iv.*) speaks to the church of Thessalonica thus: "Even after that we had suffered before, and were shamefully entreated, as ye know, at Philippi, we were bold in our God to speak unto you the Gospel of God with much contention." (ch. ii. 2.)

The history relates, that after they had been some time at Thessalonica, "the Jews who believed not set all the city on an uproar, and assaulted the house of Jason, where Paul and Silas were, and sought to bring them out to the people." Acts xvii. 5. The epistle declares, "when we were with you, we told you before that we should suffer tribulation; even *as it came to pass, and ye know.*" (chap. iii. 4.)

The history brings Paul and Silas and Timothy together at Corinth, soon after the preaching of the Gospel at Thessalonica: "And when Silas and Timotheus were come from Macedonia (to Corinth), Paul was pressed in the spirit." Acts xviii. 5. The epistle is written in the name of these three persons, who consequently must have been together at the time, and speaks

throughout of their ministry at Thessalonica as a recent transaction: "We, brethren, *being taken from you for a short time* in presence, not in heart, endeavoured the more abundantly to see your face with great desire." (chap. ii. 170)

The harmony is indubitable; but the points of history in which it consists are so expressly set forth in the narrative, and so directly referred to in the epistle, that it becomes necessary for us to show that the facts in one writing were not copied from the other. Now amidst some minuter discrepancies, which will be noticed below, there is one circumstance which mixes itself with all the allusions in the epistle, but does not appear in the history any where; and that is of a visit which St. Paul had intended to pay to the Thessalonians during the time of his residing at Corinth: "Wherefore we would have come unto you, even I Paul, once and again; but Satan hindered us." (ch. ii. 18.) "Night and day praying exceedingly that we might see your face, and might, perfect that which is lacking in your faith. Now God himself and our Father, and our Lord Jesus Christ, direct our way unto you." (ch. iii. 10, 11.) Concerning a design which was not executed, although the person himself, who was conscious of his own purpose, should make mention in his letters, nothing is more probable than that his historian should be silent, if not ignorant. The author of the epistle could not, however, have learnt this circumstance from the history, for it is not there to be met with; nor, if the historian had drawn his materials from the epistle, is it likely that he would have passed over a circumstance, which is amongst the most obvious and prominent of the facts to be collected from that source of information.

## No. IV.

Chap. iii. 1—7. "Wherefore when we could no longer forbear, we thought it good to be left at Athens alone; and sent Timotheus, our brother, and minister of God, to establish you, and to comfort you concerning your faith:—but now when Timotheus came from you unto us, and brought us good tidings of your faith and charity, we were comforted over you in all our affliction and distress by your faith."

The history relates, that when Paul came out of Macedonia to Athens, Silas and Timothy stayed behind at Berea: "The brethren sent away Paul to go as it were to the sea: but Silas and Timotheus abode there still. And they that conducted Paul brought him to Athens." Acts xvii. 14, 15. The history farther relates, that after Paul had tarried some time at Athens, and had proceeded from thence to Corinth, whilst he was exercising his ministry in that city, Silas and Timothy came to him from Macedonia. Acts xviii. ,5. But to reconcile the history with the clause in the epistle, which makes St. Paul say, "we thought it good to be left at Athens alone, and to send Timothy unto you," it is necessary to suppose that Timothy had come up with St. Paul at Athens: a circumstance which the history does not mention. I remark therefore, that, although the history does not expressly notice this arrival, yet it contains intimations which render it extremely probable that the fact took place. First, as soon as Paul had reached Athens, he sent a message back to Silas and Timothy, "for to come to him with all speed." Acts xvii. 1,5. Secondly his stay at Athens was on purpose that they might join him there: "Now while Paul waited for them at Athens, his spirit

was stirred in him." Acts xvii. 10. Thirdly, his departure from Athens does not appear to have been in any sort hastened or abrupt. It is said, "after these things," viz. his disputation with the Jews, his conferences with the philosophers, his discourse at Areopagus, and the gaining of some converts, "he departed from Athens and came to Corinth." It is not hinted that he quitted Athens before the time that he had intended to leave it; it is not suggested that he was driven from thence, as he was from many cities, by tumults or persecutions, or because his life was no longer safe. Observe then the particulars which the history *does* notice—that Paul had ordered Timothy to follow him without delay, that he waited at Athens on purpose that Timothy might come up with him, that he stayed there as long as his own choice led him to continue. Laying these circumstances which the history does disclose together, it is highly probable that Timothy came to the apostle at Athens: a fact which the epistle, we have seen, virtually asserts, when it makes Paul send Timothy back from Athens to Thessalonica. The *sending lack of Timothy into Macedonia* accounts also for his not coming to Corinth till after Paul had been fixed in that city for some considerable time. Paul had found out Aquila and Priscilla, abode with them and wrought, being of the same craft; and reasoned in the synagogue every sabbath day, and persuaded the Jews and the Greeks. Acts xviii. 1—5. All this passed at Corinth before Silas and Timotheus were come from Macedonia. Acts xviii. 5. If this was the first time of their coming up with him after their separation at Berea, there is nothing to account for a delay so contrary to what appears from the history itself to have been St. Paul's plan and expectation. This

is a conformity of a peculiar species. The epistle discloses a fact which is not preserved in the history; but which makes what is said in the history more significant, probable, and consistent. The history bears marks of an omission; the epistle, by reference, furnishes a circumstance which supplies that omission.

### No. V.

Chap. ii. 14. "For ye, brethren, became followers of the churches of God which in Judea are in Christ Jesus: for ye also have suffered like things *of your own countrymen*, even as they have of the Jews."

To a reader of the Acts of the Apostles, it might seem, at first sight, that the persecutions which the preachers and converts of Christianity underwent, were suffered at the hands of their old adversaries the Jews. But if we attend carefully to the accounts there delivered, we shall observe, that, though the opposition made to the Gospel usually *originated* from the enmity of the Jews, yet in almost all places the Jews went about to accomplish their purpose, by stirring up the Gentile inhabitants against their converted countrymen. Out of Judea they had not power to do much mischief in any other way. This was the case at Thessalonica in particular: "The Jews which believed not, moved with envy, set all the city on an uproar." Acts xvii. 5. It was the same a short time afterwards at Berea: "When the Jews of Thessalonica had knowledge that the word of God was preached of Paul at Berea, they came thither also, and stirred up the people." Acts xvii. 13. And before this our apostle had met with a like species of persecution, in his progress through the Lesser Asia: in every city "the unbelieving Jews stirred up the Gentiles, and made

their minds evil-affected against the brethren." Acts xiv. 2. The epistle therefore represents the case accurately as the history states it. It was the Jews always who set on foot the persecutions against the apostles and their followers. He speaks truly therefore of them, when he says in this epistle, "they both killed the Lord Jesus and their own prophets, and have *persecuted us*—forbidding us to speak to the Gentiles." (chap. ii. 15, 16.) But out of Judea it was at the hands of the Gentiles, it was "of their own countrymen," that the injuries they underwent were immediately sustained: "Ye have suffered like things of your own countrymen, even as they have of the Jews."

## No. VI.

The apparent discrepancies between our epistle and the history, though of magnitude sufficient to repel the imputation of confederacy or transcription, (in which view they form a part of our argument,) are neither numerous, nor very difficult to reconcile.

One of these may be observed in the ninth and tenth verses of the second chapter: "For ye remember, brethren, our labour and travail: for labouring night and day, because we would not be chargeable unto any of you, we preached unto you the Gospel of God. Ye are witnesses, and God also, how holily and justly and unblameably we behaved ourselves among you that believe." A person who reads this passage is naturally led by it to suppose, that the writer had dwelt at Thessalonica for some considerable time; yet of St. Paul's ministry in that city, the history gives no other account than the following: that "he came to Thessalonica, where was a synagogue of the Jews:

that, as his manner was, he went in unto them, and *three sabbath days* reasoned with them out of the Scriptures: that some of them believed, and consorted with Paul and Silas." The history then proceeds to tell us, that the Jews which believed not set the city on an uproar, and assaulted the house of Jason, where Paul and his companions lodged; that the consequence of this outrage was, that the "brethren immediately sent away Paul and Silas by night unto Berea." Acts xvii. 1—10. From the mention of his preaching three sabbath days in the Jewish synagogue, and from the want of any farther specification of his ministry, it has usually been taken for granted that Paul did not continue at Thessalonica more than three weeks. This, however, is inferred without necessity. It appears to have been St. Paul's practice, in almost every place that he came to, upon his first arrival to repair to the synagogue. He thought himself bound to propose the Gospel to the Jews first, agreeably to what he declared at Antioch in Pisidia; "it was necessary that the word of God should first have been spoken to you." Acts xiii. 46. If the Jews rejected his ministry, he quitted the synagogue, and betook himself to a Gentile audience. At Corinth, upon his first coming there, he reasoned in the synagogue every sabbath; "but when the Jews opposed themselves, and blasphemed, he departed thence," expressly telling them, "from henceforth I will go unto the Gentiles:—and he remained in that city a year and six months." Acts xviii. 6—11. At Ephesus, in like manner, for the space of three months, he went into the synagogue; but "when divers were hardened, and believed not, but spake evil of that way, he departed from them, and separated the disciples, disputing daily in the school of

one Tyrannus. And this continued by the space of two years." Acts xix. 9, 10. Upon inspecting the history, I see nothing in it which negatives the supposition, that St. Paul pursued the same plan at Thessalonica which he adopted in other places; and that, though he resorted to the synagogue only three sabbath days, yet he remained in the city, and in the exercise of his ministry among the Gentile citizens, much longer; and until the success of his preaching had provoked the Jews to excite the tumult and insurrection by which he was driven away.

Another seeming discrepancy is found in the ninth verse of the first chapter of the epistle: "For they themselves show of us what manner of entering in we had unto you, and how *ye turned to God from idols* to serve the living and true God." This text contains an assertion, that, by means of St. Paul's ministry at Thessalonica, many idolatrous Gentiles had been brought over to Christianity. Yet the history, in describing the effects of that ministry, only says, that "some of the Jews believed, and of the devout Greeks a great multitude, and of the chief women not a few." (chap. xvii. 4.) The devout Greeks were those who already worshipped the one true God; and therefore could not be said, by embracing Christianity, "to be turned to God from idols."

This is the difficulty. The answer may be assisted by the following observations: The Alexandrine and Cambridge manuscripts read (for ***twn sebomenwn Ellhnwn poluplhqoj twn sebomenwn kai Ellhnwn poluplhqoj***: in which reading they are also confirmed by the Vulgate Latin. And this reading is, in my opinion, strongly supported by the considerations, first, that ***oi sebomenoi*** alone, i. e. without '***Ellhnej***, is used in this sense in the

same chapter—Paul being come to Athens, ***dielegeto en th sunagwgh toij Ioudaioij kai tois sebomenoij.*** Secondly, that *sebomenoi* and 'Ellhnej nowhere come together. The expression is redundant. The *oi sebomenoi*, must be 'Ellhnej. Thirdly, that the *kai* is much more likely to have been left out incuria manus than to have been put in. Or, after all, if we be not allowed to change the present reading, which is undoubtedly retained by a great plurality of copies, may not the passage in the history be considered as describing only the effects of St. Paul's discourses during the three sabbath days in which he preached in the synagogue? and may it not be true, as we have remarked above, that his application to the Gentiles at large, and his success amongst them, was posterior to this?

CHAPTER X.  
THE SECOND EPISTLE TO THE THESSALONIANS.  
No. I.

IT may seem odd to allege obscurity itself as an argument, or to draw a proof in favour of a writing from that which is naturally considered as the principal defect in its composition. The present epistle, however, furnishes a passage, hitherto unexplained, and probably inexplicable by us, the existence of which, under the darkness and difficulties that attend it, can be accounted for only by the supposition of the epistle being genuine; and upon that supposition is accounted for with great ease. The passage which I allude to is found in the second chapter: "That day shall not come, except

there come a falling away first, and that man of sin be revealed, the son of perdition; who opposeth and exalteth himself above all that is called God, or that is worshipped; so that he as God sitteth in the temple of God, showing himself that he is God. Remember ye not, that, WHEN i WAS YET WITH you, i TOLD YOU THESE THINGS? *And now ye know what withholdeth that he might be revealed in his time.* For the mystery of iniquity doth already work: *only he who now letteth will let, until he be taken out of the way.* And then shall that Wicked be revealed, whom the Lord shall consume with the spirit of his mouth, and shall destroy with the brightness of his coming." It were superfluous to prove, because it is in vain to deny, that this passage is involved in great obscurity, more especially the clauses distinguished by italics. Now the observation I have to offer is founded upon this, that the passage expressly refers to a conversation which the author had previously holden with the Thessalonians upon the same subject: "Remember ye not, that, when I was yet with you, *I told you these things? And now ye know what withholdeth.*" If such conversation actually passed; if, whilst "he was yet with them, he *told* them those things," then it follows that the epistle is authentic. And of the reality of this conversation it appears to be a proof, that what is said in the epistle might be understood by those who had been present at such conversation, and yet be incapable of being explained by any other. No man writes unintelligibly on purpose. But it may easily happen, that a part of a letter which relates to a subject, upon which the parties had conversed together before, which refers to what had been before *said*, which is in truth a portion or continuation of a former discourse, may be utterly without meaning to a

stranger who should pick up the letter upon the road, and yet be perfectly clear to the person to whom it is directed, and with whom the previous communication had passed. And if, in a letter which thus accidentally fell into my hands, I found a passage expressly referring to a former conversation, and difficult to be explained without knowing that conversation, I should consider this very difficulty as a proof that the conversation had actually passed, and consequently that the letter contained the real correspondence of real persons.

## No. II.

Chap. iii. 8. "Neither did we eat any man's bread for nought; but wrought with labour and travail night and day, that we might not be chargeable to any of you: not because we have not power, but to make ourselves an ensample unto you to follow us."

In a letter, purporting to have been written to another of the Macedonian churches, we find the following declaration:

"Now, ye Philippians, know also, that in the beginning of the Gospel, when I departed from Macedonia, *no church communicated with me as concerning giving and receiving, but ye only.*"

The conformity between these two passages is strong and plain. They confine the transaction to the same period. The Epistle to the Philippians refers to what passed "in the beginning of the Gospel," that is to say, during the first preaching of the Gospel on that side of the AEgean sea. The Epistle to the Thessalonians speaks of the apostle's conduct in that city upon "his first entrance in unto them," which the history informs us was in the course of his first visit to the peninsula of Greece.

As St. Paul tells the Philippians, "that no church communicated with him as concerning giving and receiving, but they only," he could not, consistently with the truth of this declaration, have received any thing from the neighbouring church of Thessalonica. What thus appears by general implication in an epistle to another church, when he writes to the Thessalonians themselves, is noticed expressly and particularly: "neither did we eat any man's bread for nought; but wrought night and day, that we might not be chargeable to any of you."

The texts here cited farther also exhibit a mark of conformity with what St. Paul is made to say of himself in the Acts of the Apostles. The apostle not only reminds the Thessalonians that he had not been chargeable to any of them, but he states likewise the motive which dictated this reserve: "not because we have not power, but to make ourselves an ensample unto you to follow us." (chap. iii. 9.) This conduct, and, what is much more precise, the end which he had in view by it, was the very same as that which the history attributes to St. Paul in a discourse which it represents him to have addressed to the elders of the church of Ephesus: "Yea, ye yourselves know, that these hands have ministered unto my necessities, and to them that were with me. I have *Showed* you all things, how *that so labouring ye ought to support the weak.*" Acts xx. 34. The sentiment in the epistle and in the speech is in both parts of it so much alike, and yet the words which convey it show so little of imitation or even of resemblance, that the agreement cannot well be explained without supposing the speech and the letter to have really proceeded from the same person.

## No. III.

Our reader remembers the passage in the First Epistle to the Thessalonians, in which St. Paul spoke of the coming of Christ: "This we say unto you by the word of the Lord, that we which are alive and remain unto the coming of the Lord shall not prevent them which are asleep. For the Lord himself shall descend from heaven, and the dead in Christ shall rise first: then we which are alive and remain shall be caught up together with them in the clouds; and so shall we ever be with the Lord—But ye, brethren, are not in darkness, that that day should overtake you as a thief." 1 Thess. iv. 15—17, and chap. v. 4. It should seem that the Thessalonians, or some however amongst them, had from this passage conceived an opinion, (and that not very unnaturally,) that the coming of Christ was to take place instantly, *oti enesthken*:\* and that this persuasion had produced, as it well might, much agitation in the church. The apostle therefore now writes, amongst other purposes, to quiet this alarm, and to rectify the misconstruction that had been put upon his words: "Now we beseech you, brethren, by the coming of our Lord Jesus Christ, and by our gathering together unto him, that ye be not soon shaken in mind, or be troubled, neither by spirit, nor by word, *nor by letter as from us*, as that the day of Christ is at hand." If the allusion which we contend for be admitted, namely, if it be admitted, that the passage in the second epistle relates to the passage in the first, it amounts to a considerable proof of the genuineness of both epistles. I have no conception, because I know no example, of such a device

\* '**Oti enesthken**, nempe hoc anno, says Grotius; **enesthken** hic dicitur de re praesenti, ut Rom. viii. 38. 1 Cor. iii. 22. Gal. 1. 4, Heb. ix. 9.

in a forgery, as first to frame an ambiguous passage in a letter, then to represent the persons to whom the letter is addressed as mistaking the meaning of the passage, and, lastly, to write a second letter in order to correct this mistake.

I have said that this argument arises out of the text, *if* the allusion be admitted; for I am not ignorant that many expositors understand the passage in the second epistle as referring to some forged letters, which had been produced in St. Paul's name, and in which the apostle had been made to say that the coming of Christ was then at hand. In defence, however, of the explanation which we propose, the reader is desired to observe,

1. The strong fact, that there exists a passage in the first epistle, to which that in the second is capable of being referred, i. e. which accounts for the error the writer is solicitous to remove. Had no other epistle than the second been extant, and had it under these circumstances come to be considered, whether the text before us related to a forged epistle or to some misconstruction of a true one, many conjectures and many probabilities might have been admitted in the inquiry, which can have little weight when an epistle is produced, containing the very sort of passage we were seeking, that is, a passage liable to the misinterpretation which the apostle protests against.

2. That the clause which introduces the passage in the second epistle bears a particular affinity to what is found in the passage cited from the first epistle. The clause is this: "We beseech you, brethren, by the coming of our Lord Jesus Christ, and *by our gathering together unto him.*" Now in the first epistle the description of the coming of Christ is accompanied with

the mention of this very circumstance of his saints being collected round him. "The Lord himself shall descend from heaven with a shout, with the voice of the archangel, and with the trump of God: and the dead in Christ shall rise first: then we which are alive and remain shall be caught up together with them in the clouds, *to meet the Lord in the air.*" 1 Thess. iv. 16, 17. This I suppose to be the "gathering together unto him" intended in the second epistle; and that the author, when he used these words, retained in his thoughts what he had written on the subject before.

3. The second epistle is written in the joint name of Paul, Silvanus, and Timotheus, and it cautions the Thessalonians against being misled "by letter as from us," (**wj di h̄fwn**). Do not these words, **di h̄fwn** appropriate the reference to some writing which bore the name of these three teachers? Now this circumstance, which is a very close one, belongs to the epistle at present in our hands; for the epistle which we call the First Epistle to the Thessalonians contains these names in its superscription.

4. The words in the original, as far as they are material to be stated, are these: **eij to nh taxewj saleughnai ūhaj apo tou nooj, nh te groeisqai, nh te dia pneumatoj, nh te dia logou, nn te di epistolhj, wf di h̄fwn, wf oti enesthken n hm̄era tou Xristou.** Under the weight of the preceding observations, may not the words **nh te dia logou, nh te di epistolhj, wf di h̄fwn,** be construed to signify *quasi nos quid tale aut dixerimus aut scripserimus,\* intimating*

\* Should a contrary interpretation be preferred, I do not think that it implies the conclusion that a false epistle had then been published in the apostle's name. It will completely satisfy the allusion in the text to allow, that some one or other at Thessalonica had pretended to have been told by St. Paul and his companions, or to have seen a letter from them, in which they had said, that the day of Christ was at hand. In like manner as Acts xv. 1, 24, it is recorded, that

that their words had been mistaken, and that they had in truth said or written no such thing?

#### CHAPTER XL THE FIRST EPISTLE TO TIMOTHY.

FROM the third verse of the first chapter, "as I besought thee to abide still at Ephesus, when I went into Macedonia," it is evident that this epistle was written soon after St. Paul had gone to Macedonia from Ephesus. Dr. Benson fixes its date to the time of St. Paul's journey recorded in the beginning of the twentieth chapter of the Acts: "And after the uproar (excited by Demetrius at Ephesus) was ceased, Paul called unto him the disciples, and embraced them, and departed for to go into Macedonia." And in this opinion Dr. Benson is followed by Michaelis, as he was preceded by the greater part of the commentators who have considered the question. There is, however, one objection to the hypothesis, which these learned men appear to me to have overlooked; and it is no other than this, that the superscription of the Second Epistle to the Corinthians seems to prove, that at the time St. Paul is supposed by them to have written this epistle to Timothy, Timothy in truth was with St. Paul in Macedonia. Paul, as it is related in the Acts, left Ephesus "for to go into Macedonia." When he had got into

---

some had pretended to have received instructions from the church at Jerusalem, which had been received, "to whom they gave no such commandment." And thus Dr. Benson interpreted the passage ***nhte qroeisqai, nhtedia pneumatoj, nhtedia logou, nhtedi epistolhj, wf di hewn,*** "nor be dismayed by any revelation, or discourse, or epistle, which any one shall pretend to have heard or received from us."

Macedonia, he wrote his Second Epistle to the Corinthians. Concerning this point there exists little variety of opinion. It is plainly indicated by the contents of the epistle. It is also strongly implied that the epistle was written *soon* after the apostle's arrival in Macedonia; for he begins his letter by a train of reflection, referring to his persecutions in Asia as to recent transactions, as to dangers from which he had lately been delivered. But in the salutation with which the epistle opens, *Timothy was joined with St. Paul*, and consequently could not at that time be "left behind at Ephesus." And as to the only solution of the difficulty which can be thought of, viz. that Timothy, though he was left behind at Ephesus upon St. Paul's departure from Asia, yet might follow him so soon after as to come up with the apostle in Macedonia, before he wrote his epistle to the Corinthians; that supposition is inconsistent with the terms and tenor of the epistle throughout: for the writer speaks uniformly of his intention to return to Timothy at Ephesus, and not of his expecting Timothy to come to him in Macedonia: "These things write I unto thee, *hoping to come unto thee shortly*: but if I tarry long, that thou mayest know how thou oughtest to behave thyself." chap. iii. 14, 15. "*Till I come*, give attendance to reading, to exhortation, to doctrine." chap. iv. 13.

Since, therefore, the leaving of Timothy behind at Ephesus, when Paul went into Macedonia, suits not with any journey into Macedonia recorded in the Acts, I concur with Bishop Pearson in placing the date of this epistle, and the journey referred to in it, at a period subsequent to St. Paul's first imprisonment at Rome, and consequently subsequent to the sera up to which the Acts of the Apostles brings his history. The only

difficulty which attends our opinion is, that St. Paul must, according to us, have come to Ephesus after his liberation at Rome, contrary, as it should seem, to what he foretold to the Ephesian elders, "that they should see his face no more." And it is to save the infallibility of this prediction, and for no other reason of weight, that an earlier date is assigned to this epistle. The prediction itself, however, when considered in connexion with the circumstances under which it was delivered, does not seem to demand so much anxiety. The words in question are found in the twenty-fifth verse of the twentieth chapter of the Acts: "And now, behold, I know that ye all, among whom I have gone preaching the kingdom of God, shall see ray face no more." In the twenty-second and twenty-third verses of the same chapter, i. e. two verses before, the apostle makes this declaration: "And now, behold, I go bound in the spirit unto Jerusalem, not knowing the things that shall befall me there: save that the Holy Ghost witnesseth in every city, saying that bonds and afflictions abide me." This "witnessing of the Holy Ghost" was undoubtedly prophetic and supernatural. But it went no farther than to foretell that bonds and afflictions awaited him. And I can very well conceive, that this might be all which was communicated to the apostle by extraordinary revelation, and that the rest was the conclusion of his own mind, the desponding inference which he drew from strong and repeated intimations of approaching danger. And the expression "I know," which St. Paul here uses, does not, perhaps, when applied to future events affecting himself, convey an assertion so positive and absolute as we may at first sight apprehend. In the first chapter of the Epistle to the Philippians and the twenty-fifth verse, "I know," says he, "that I shall

abide and continue with you all for your furtherance and joy of faith." Notwithstanding this strong declaration, in the second chapter and the twenty-third verse of this same epistle, and speaking also of the very same event, he is content to use a language of some doubt and uncertainty: "Him therefore I hope to send presently, so soon *as I shall see how it will go with me*. But *I trust* in the Lord that I also myself shall come shortly." And a few verses preceding these, he not only seems to doubt of his safety, but almost to despair; to contemplate the possibility at least of his condemnation and martyrdom: "Yea, and if I be offered upon the sacrifice and service of your faith, I joy, and rejoice with you all."

### No. I.

But can we show that St. Paul visited Ephesus after his liberation at Rome? or rather, can we collect any hints from his other letters which make it probable that he did? If we can, then we have a *coincidence*; if we cannot, we have only an unauthorized supposition, to which the exigency of the case compels us to resort. Now, for this purpose, let us examine the Epistle to the Philippians and the Epistle to Philemon. These two epistles purport to be written whilst St. Paul was yet a prisoner at Rome. To the Philippians he writes as follows: "I trust in the Lord that I also myself shall come shortly." To Philemon, who was a Colossian, he gives this direction: "But withal prepare me also a lodging: for I trust that through your prayers I shall be given unto you." An inspection of the map will show us that Colosse was a city of the Lesser Asia, lying eastward, and at no great distance from Ephesus. Philippi was on the other, i. e. the western, side of the

Ægean sea. If the apostle executed his purpose; if, in pursuance of the intention expressed in his letter to Philemon, he came to Colosse soon after he was set at liberty at Rome, it is very improbable that he would omit to visit Ephesus, which lay so near to it, and where he had spent three years of his ministry. As he was also under a promise to the church of Philippi to see them "shortly;" if he passed from Colosse to Philippi, or from Philippi to Colosse, he could hardly avoid taking Ephesus in his way.

## No. II.

Chap. v. 9. "Let not a widow be taken into the number under threescore years old."

This accords with the account delivered in the sixth chapter of the Acts. "And in those days, when the number of the disciples was multiplied, there arose a murmuring of the Grecians against the Hebrews, *because their widows were neglected in the daily ministration*" It appears that, from the first formation of the Christian church, provision was made out of the public funds of the society for the indigent *widows* who belonged to it. The history, we have seen, distinctly records the existence of such an institution at Jerusalem, a few years after our Lord's ascension; and is led to the mention of it very incidentally, viz. by a dispute, of which it was the occasion, and which produced important consequences to the Christian community. The epistle, without being suspected of borrowing from the history, refers, briefly indeed, but decisively, to a similar establishment, subsisting some years afterwards at Ephesus. This agreement indicates that both writings were founded upon real circumstances.

But, in this article, the material thing to be noticed is the mode of expression: "Let not a widow be taken into the number." No previous account or explanation is given, to which these words, "into the number," can refer; but the direction comes concisely and unpreparedly. "Let not a widow be taken into the number." Now this is the way in which a man writes, who is conscious that he is writing to persons already acquainted with the subject of his letter; and who, he knows, will readily apprehend and apply what he says by virtue of their being so acquainted: but it is not the way in which a man writes upon any other occasion; and least of all, in which a man would draw up a feigned letter, or introduce a supposititious fact.\*

### No. III.

Chap. iii. 2—4. "A bishop then must be blameless,

\* It is not altogether unconnected with our general purpose to remark, in the passage before us, the selection and reserve which St. Paul recommends to the governors of the church of Ephesus in the bestowing relief upon the poor, because it refutes a calumny which has been insinuated, that the liberality of the first Christians was an artifice to catch converts; or one of the temptations, however, by which the idle and mendicant were drawn into this society: "Let not a widow be taken into the number under threescore years old, having been the wife of one man, well reported of for good works; if she have brought up children, if she have lodged strangers, if she have "washed the saints' feet, if she have relieved the afflicted, if she have diligently followed every good work. But the younger widows refuse." (chap. v. 9—11.) And, in another place, "If any man or woman that believeth have widows, let them relieve them, and let not the church be charged; that it may relieve them that are widows indeed." And to the same effect, or rather more to our present purpose, the apostle writes in the Second Epistle to the Thessalonians: "Even when we were with you, this we commanded you, that if any would not work, neither should he eat," i. e. at the public expense. "For we hear that there are some which walk among you disorderly, *working not at all*, but are busybodies. Now them that are such we command and exhort by our Lord Jesus Christ, that with quietness they work, and eat their own bread." Could a designing or dissolute poor take advantage of bounty regulated with so much caution? or could the mind which dictated those sober and prudent directions be influenced in his recommendations of public charity by any other than the properest motives of beneficence?

the husband of one wife, vigilant, sober, of good behaviour, given to hospitality, apt to teach; not given to wine, no striker, not greedy of filthy lucre; but patient, not a brawler, nor covetous; one that ruleth well his own house."

"*No striker:*" That is the article which I single out from the collection as evincing the antiquity at least, if not the genuineness, of the epistle; because it is an article which no man would have made the subject of caution who lived in an advanced aera of the church. It agreed with the infancy of the society, and with no other state of it. After the government of the church had acquired the dignified form which it soon and naturally assumed, this injunction could have no place. Would a person who lived under a hierarchy, such as the Christian hierarchy became when it had settled into a regular establishment, have thought it necessary to prescribe concerning the qualification of a bishop, "that he should be no striker?" And this injunction would be equally alien from the imagination of the writer, whether he wrote in his own character, or personated that of an apostle.

#### No. IV.

Chap. v. 23. "Drink no longer water, but use a little wine for thy stomach's sake and thine often infirmities."

Imagine an impostor sitting down to forge an epistle in the name of St. Paul. Is it credible that it should come into his head to give such a direction as this; so remote from every thing of doctrine or discipline, every thing of public concern to the religion or the church, or to any sect, order, or party in it, and from every purpose with which such an epistle could be written? It seems to me that nothing but reality, that is, the

real valetudinary situation of a real person, could have suggested a thought of so domestic a nature.

But if the peculiarity of the advice be observable, the place in which it stands *is* more so. The context is this: "Lay hands suddenly on no man, neither be partaker of other men's sins: keep thyself pure. Drink no longer water, but use a little wine for thy stomach's sake and thine often infirmities. Some men's sins are open beforehand, going before to judgment; and some men they follow after." The direction to Timothy about his diet stands between two sentences, as wide from the subject as possible. The train of thought seems to be broken to let it in. Now when does this happen? It happens when a man writes as he remembers; when he puts down an article that occurs the moment it occurs, lest he should afterwards forget it. Of this the passage before us bears strongly the appearance. In actual letters, in the negligence of real correspondence, examples of this kind frequently take place; seldom, I believe, in any other production. For the moment a man regards what he writes as a *composition*, which the author of a forgery would, of all others, be the first to do, notions of order, in the arrangement and succession of his thoughts, present themselves to his judgment, and guide his pen.

#### No. V.

Chap. i. 15, 16. "This is a faithful saying, and worthy of all acceptation, that Christ Jesus came into the world to save sinners; of whom I am chief. Howbeit for this cause I obtained mercy, that in me first Jesus Christ might show forth all longsuffering, for a pattern to them which should hereafter believe on him to life everlasting."

What was the mercy which St. Paul here commemorates, and what was the crime of which he accuses himself, is apparent from the verses immediately preceding: "I thank Christ Jesus our Lord, who hath enabled me, for that he counted me faithful, putting me into the ministry; *who was before a blasphemer, mid a persecutor, and injurious*: but I obtained *mercy*, because I did it ignorantly in unbelief." (ch. i. 12, 13.) The whole quotation plainly refers to St. Paul's original enmity to the Christian name, the interposition of Providence in his conversion, and his subsequent designation to the ministry of the Gospel; and by this reference affirms indeed the substance of the apostle's history delivered in the Acts. But what in the passage strikes my mind most powerfully, is the observation that is raised out of the fact. "For this cause I obtained mercy, that in me first Jesus Christ might show forth all long-suffering, for a pattern to them which should hereafter believe on him to life everlasting." It is a just and solemn reflection, springing from the circumstances of the author's conversion, or rather from the impression which that great event had left upon his memory. It will be said, perhaps, that an impostor, acquainted with St. Paul's history, may have put such a sentiment into his mouth; or, what is the same thing, into a letter drawn up in his name. But where, we may ask, is such an impostor to be found? The piety, the truth, the benevolence of the thought, ought to protect it from this imputation. For, though we should allow that one of the great masters of the ancient tragedy could have given to his scene a sentiment as virtuous and as elevated as this is, and at the same time as appropriate, and as well suited to the particular situation of the person who delivers it; yet whoever is conversant

in these inquiries will acknowledge, that to do this in a fictitious production is beyond the reach of the understandings which have been employed upon any *fabrications* that have come down to us under Christian names.

## CHAPTER XII.

### THE SECOND EPISTLE TO TIMOTHY.

No. I.

IT was the uniform tradition of the primitive church, that St. Paul visited Rome twice, and twice there suffered imprisonment; and that he was put to death at Rome at the conclusion of his second imprisonment. This opinion concerning St. Paul's *two* journeys to Rome is confirmed by a great variety of hints and allusions in the epistle before us, compared with what fell from the apostle's pen in other letters purporting to have been written from Rome. That our present epistle was written whilst St. Paul was a *prisoner*, is distinctly intimated by the eighth verse of the first chapter: "Be not thou therefore ashamed of the testimony of our Lord, nor of me his prisoner." And whilst he was a prisoner *at Rome*, by the sixteenth and seventeenth verses of the same chapter: "The Lord give mercy unto the house of Onesiphorus; for he oft refreshed me, and was not ashamed of my chain: but when he was in Rome he sought me out very diligently, and found me." Since it appears from the former quotation that St. Paul wrote this epistle in confinement, it will hardly admit of doubt that the word *chain*, in the latter quotation, refers to that confinement; the chain by

which he was *then* bound, the custody in which he was then kept. And if the word "chain" designate the author's confinement at the time of writing the epistle, the next words determine it to have been written from Rome: "He was not ashamed of my chain: but when he was in Home he sought me out very diligently." Now that it was not written during the apostle's first imprisonment at Rome, or during the same imprisonment in which the epistles to the Ephesians, the Colossians, the Philippians, and Philemon, were written, may be gathered, with considerable evidence, from a comparison of these several epistles with the present.

I. In the former epistles the author confidently looked forward to his liberation from confinement, and his speedy departure from Rome. He tells the Philippians, (ch. ii. 24.) "I trust in the Lord that I also myself shall come shortly." Philemon he bids to prepare for him a lodging; "for I trust," says he, "that through your prayers I shall be given unto you." (ver. 22.) In the epistle before us he holds a language extremely different: "I am now ready to be offered, and the time of my departure is at hand. I have fought a good fight, I have finished my course, I have kept the faith: henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous judge, shall give me at that day." (chap. iv. 6—8.)

II. When the former epistles were written from Rome, Timothy was with St. Paul; and is joined with him in writing to the Colossians, the Philippians, and to Philemon. The present epistle, implies that he was absent.

III. In the former epistles, Demas was with St. Paul at Rome: "Luke, the beloved physician, and Demas, greet you." In the epistle now before us: "Demas

hath forsaken me, having loved this present world, and is departed unto Thessalonica."

IV. In the former epistles, Mark was with St. Paul, and joins in saluting the Colossians, In the present epistle, Timothy is ordered to bring him with him, "for he is profitable to me for the ministry." (chap. iv. 11.)

The case of Timothy and of Mark might be very well accounted for, by supposing the present epistle to have been written *before* the others; so that Timothy, who is here exhorted "to come shortly unto him," (chap. iv. 9.) might have arrived, and that Mark, "whom he was to bring with him," (ch. iv. 11.) might have also reached Rome in sufficient time to have been with St. Paul when the four epistles were written; hut then such a supposition is inconsistent with what is said of Demas, by which the posteriority of this to the other epistles is strongly indicated: for in the other epistles Demas was with St. Paul, in the present he hath "forsaken him, and is departed unto Thessalonica." The opposition also of sentiment, with respect to the event of the persecution, is hardly reconcilable to the same imprisonment.

The two following considerations, which were first suggested upon this question by Ludovicus Capellus, are still more conclusive.

1. In the twentieth verse of the fourth chapter, St. Paul informs Timothy, "that Erastus abode at Corinth," *Epastoj emeinen en Korinqw*. The form of expression implies, that Erastus had stayed behind at Corinth, when St. Paul left it. But this could not be meant of any journey from Corinth which St. Paul took prior to his first imprisonment at Rome; for when Paul departed from Corinth, as related in the twentieth chapter of the Acts, Timothy was with him: and this was the last

time the apostle left Corinth before his coming to Rome, because he left it to proceed on his way to Jerusalem; soon after his arrival at which place he was taken into custody, and continued in that custody till he was carried to Caesar's tribunal. There could be no need therefore to inform Timothy that "Erastus stayed behind at Corinth" upon this occasion, because, if the fact was so, it must have been known to Timothy, who was present, as well as to St. Paul.

2. In the same verse our apostle also states the following article: "Trophimus have I left at Miletum sick." When St. Paul passed through Miletum on his way to Jerusalem, as related Acts xx., Trophimus was not left behind, but accompanied him to that city. He was indeed the occasion of the uproar at Jerusalem in consequence of which St. Paul was apprehended; for "they had seen," says the historian, "before with him in the city Trophimus an Ephesian, whom they supposed that Paul had brought into the temple." This was evidently the last time of Paul's being at Miletus before his first imprisonment; for, as hath been said, after his apprehension at Jerusalem, he remained in custody till he was sent to Rome.

In these two articles we have a journey referred to, which must have taken place subsequent to the conclusion of St. Luke's history, and of course after St. Paul's liberation from his first imprisonment. The epistle, therefore, which contains this reference, since it appears from other parts of it to have been written while St. Paul was a prisoner at Rome, proves that he had returned to that city again, and undergone there a second imprisonment.

I do not produce these particulars for the sake of the support which they lend to the testimony of the fathers

concerning St. Paul's *second* imprisonment, but to remark their consistency and agreement with one another. They are all resolvable into one supposition: and although the supposition itself be in some sort only negative, viz. that the epistle was not written during St. Paul's first residence at Rome, but in some future imprisonment in that city; yet is the consistency not less worthy of observation: for the epistle touches upon names and circumstances connected with the date and with the history of the first imprisonment, and mentioned in letters written during that imprisonment, and so touches upon them, as to leave what *is* said of one consistent with what is said of others, and consistent also with what is said of them in different epistles. Had one of these circumstances been so described as to have fixed the date of the epistle to the first imprisonment, it would have involved the rest in contradiction. And when the number and particularity of the articles which have been brought together under this head are considered, and when it is considered also, that the comparisons we have formed amongst them were in all probability neither provided for, nor thought of, by the writer of the epistle, it will be deemed something very like the effect of truth, that no invincible repugnancy is perceived between them.

## No. II.

In the Acts of the Apostles, in the sixteenth chapter and at the first verse, we are told that Paul "came to Derbe and Lystra; and, behold, a certain disciple was there, named Timotheus, the son of a certain woman, which was a Jewess, and believed; but his father was a Greek." In the epistle before us, in the first chapter and at the fourth verse, St. Paul writes to Timothy

thus: "Greatly desiring to see thee, being mindful of thy tears, that I may be filled with joy; when I call to remembrance the unfeigned faith that is in thee, which dwelt first in thy grandmother Lois, *and thy mother Eunice*; and I am persuaded that in thee also." Here we have a fair unforced example of coincidence. In the history, Timothy was the "son of a Jewess *that believed*:" in the epistle, St. Paul applauds "the *faith* which dwelt in his mother Eunice." In the history it is said of the mother, "that she was a Jewess, and believed:" of the father, "that he was a Greek." Now when it is said of the mother *alone* "that she believed," the father being nevertheless mentioned in the same sentence, we are led to suppose of the father that he did not believe, i. e. either that he was dead, or that he remained unconverted. Agreeably hereunto, whilst praise is bestowed in the epistle upon one parent, and upon her sincerity in the faith, no notice is taken of the other. The mention of the grandmother is the addition of a circumstance not found in the history; but it is a circumstance which, as well as the names of the parties, might naturally be expected to be known to the apostle, though overlooked by his historian.

## No. III.

Chap. iii. 15. "And that from a child thou hast known the holy Scriptures, which are able to make thee wise unto salvation."

This verse discloses a circumstance which agrees exactly with what is intimated in the quotation from the Acts, adduced in the last number. In that quotation it is recorded of Timothy's mother, "that she was a Jewess." This description is virtually, though, I am satisfied, undesignedly, recognized in the epistle, when

Timothy is reminded in it, "that from a child he had known the holy Scriptures." "The holy Scriptures" undoubtedly meant the Scriptures of the Old Testament. The expression bears that sense in every place in which it occurs. Those of the New had not yet acquired the name; not to mention, that in Timothy's childhood, probably, none of them existed. In what manner then could Timothy have known "from a child" the Jewish Scriptures, had he not been born, on one side or on both, of Jewish parentage? Perhaps he was not less likely to be carefully instructed in them, for that his mother alone professed that religion.

## No. IV.

Chap. ii. 22. "Flee also *youthful* lusts: but follow righteousness, faith, charity, peace, with them that call on the Lord out of a pure heart."

"*Flee also youthful lusts.*" The suitableness of this precept to the age of the person to whom it is addressed, is gathered from 1 Tim. iv. 12: "Let no man despise thy youth." Nor do I deem the less of this coincidence, because the propriety resides in a single epithet; or because this one precept is joined with, and followed by, a train of others, not more applicable to Timothy than to any ordinary convert. It is in these transient and cursory allusions that the argument is best founded. When a writer dwells and rests upon a point in which some coincidence is discerned, it may be doubted whether he himself had not fabricated the conformity, and was endeavouring to display and set it off. But when the reference is contained in a single word, unobserved perhaps by most readers, the writer passing on to other subjects, as unconscious that he had hit upon a correspondence, or unsolicitous whether it were remarked

or not, we may be pretty well assured that no fraud was exercised, no imposition intended.

## No. V.

Chap. iii. 10, 11. "But thou hast fully known my doctrine, manner of life, purpose, faith, long-suffering, charity, patience, persecutions, afflictions, which came unto me *at Antioch, at Iconium, at Lystra*; what persecutions I endured: but out of them all the Lord delivered me."

The Antioch here mentioned was not Antioch the capital of Syria, where Paul and Barnabas resided "a long time;" but Antioch in Pisidia, to which place Paul and Barnabas came in their first apostolic progress, and where Paul delivered a memorable discourse, which is preserved in the thirteenth chapter of the Acts. At this Antioch, the history relates that the "Jews stirred up the devout and honourable women, and the chief men of the city, *and raised persecution against Paul and Barnabas*, and expelled them out of their coasts. But they shook off the dust of their feet against them, and came unto *Iconium*.—And it came to pass in Iconium, that they went both together into the synagogue of the Jews, and so spake, that a great multitude both of the Jews and also of the Greeks believed. But the unbelieving Jews stirred up the Gentiles, and made their minds evil affected against the brethren. Long time therefore abode they speaking boldly in the Lord, which gave testimony unto the word of his grace, and granted signs and wonders to be done by their hands. But the multitude of the city was divided: and part held with the Jews, and part with the apostles. And when there was an assault made both of the Gentiles, and also of the Jews with their rulers, *to use them*

*despitefully, and to stone them,* they were ware of it, and fled unto *Lystra* and *Derbe*, cities of Lycaonia, and unto the region that lieth round about: and there they preached the Gospel—And there came thither certain Jews from Antioch and Iconium, who persuaded the people, and, having stoned Paul, drew him out of the city, supposing he had been dead. Howbeit, as the disciples stood round about him, he rose up, and came into the city: and the next day he departed with Barnabas to Derbe. And when they had preached the Gospel to that city, and had taught many, they returned again to Lystra, and to Iconium, and Antioch." This account comprises the period to which the allusion in the epistle is to be referred. We have so far therefore a conformity between the history and the epistle, that St. Paul is asserted in the history to have suffered persecutions in the three cities, his persecutions at which are appealed to in the epistle; and not only so, but to have suffered these persecutions both in immediate succession, and in the order in which the cities are mentioned in the epistle. The conformity also extends to another circumstance. In the apostolic history, Lystra and Derbe are commonly mentioned together: in the quotation from the epistle, Lystra is mentioned and not Derbe. And the distinction will appear on this occasion to be accurate; for St. Paul is here enumerating his persecutions: and although he underwent grievous persecutions in each of the three cities through which he passed to Derbe, at Derbe itself he met with none: "The next day he departed," says the historian, "to Derbe; and when they had preached the Gospel to that city, and had taught many, they returned again to Lystra." The epistle, therefore, in the names of the cities, in the order in which they are enumerated, and

in the place at which the enumeration stops, corresponds exactly with the history.

But a second question remains, namely, how these persecutions were "known" to Timothy, or why the apostle should recall these in particular to his remembrance, rather than many other persecutions with which his ministry had been attended. When some time, probably three years, afterwards, (*vide* Pearson's *Annales Paulinas.*) St. Paul made a second journey through the same country, "in order to go again and visit the brethren in every city where he had preached the word of the Lord," we read, *Acts* xvi. 1, that, "when he came to Derbe and Lystra, behold, a certain disciple was there, named Timotheus." One or other, therefore, of these cities was the place of Timothy's abode. We read moreover that he was well reported of by the brethren that were at Lystra and Iconium; so that he must have been well acquainted with these places. Also again, when Paul came to Derbe and Lystra, Timothy was already a disciple: "Behold, a certain disciple was there, named Timotheus." He must therefore have been converted *before*. But since it is expressly stated in the epistle, that Timothy was converted by St. Paul himself, that he was "his own son in the faith;" it follows that he must have been converted by him upon his former journey into those parts, which was the very time when the apostle underwent the persecutions referred to in the epistle. Upon the whole, then, persecutions at the several cities named in the epistle are expressly recorded in the *Acts*: and Timothy's knowledge of this part of St. Paul's history, which knowledge is appealed to in the epistle, is fairly deduced from the place of his abode, and the time of his conversion. It may farther be observed, that it is probable

from this account, that St. Paul was in the midst of those persecutions when Timothy became known to him. No wonder then that the apostle, though in a letter written long afterwards, should remind his favourite convert of those scenes of affliction and distress under which they first met.

Although this coincidence, as to the names of the cities, be more specific and direct than many which we have pointed out, yet I apprehend there is no just reason for thinking it to be artificial: for had the writer of the epistle sought a coincidence with the history upon this head, and searched the Acts of the Apostles for the purpose, I conceive he would have sent us at once to Philippi and Thessalonica, where Paul suffered persecution, and where, from what is stated, it may easily be gathered that Timothy accompanied him, rather than have appealed to persecutions as known to Timothy, in the account of which persecutions Timothy's presence is not mentioned; it not being till after one entire chapter, and in the history of a journey three years future to this, that Timothy's name occurs in the Acts of the Apostles for the first time,

### CHAPTER XIII.

#### THE EPISTLE TO TITUS.

No. I.

A VERY characteristic circumstance in this epistle, is the quotation from Epimenides, chap. i. 12: "One of themselves, even a prophet of their own, said, The Cretans are alway liars, evil beasts, slow bellies." ***Kphtej aej yeustai, kaka qnria, gasterej argai.***

I call this quotation characteristic, because no writer in the New Testament, except St. Paul, appealed to heathen testimony; and because St. Paul repeatedly did so. In his celebrated speech at Athens, preserved in the seventeenth chapter of the Acts, he tells his audience, that "in God we live, and move, and have our being; as certain also of your own poets have said, For we are also his offspring."

—*tou gar kai genoj esmen.*

The reader will perceive much similarity of manner in these two passages. The reference in the speech is to a heathen poet; it is the same in the epistle. In the speech the apostle urges his hearers with the authority of a poet *of their own*; in the epistle he avails himself of the same advantage. Yet there is a variation, which shows that the hint of inserting a quotation in the epistle was not, as it may be suspected, borrowed from seeing the like practice attributed to St. Paul in the history; and it is this, that in the epistle the author cited is called a *prophet*—"one of themselves, even a *prophet* of their own." Whatever might be the reason for calling Epimenides a prophet; whether the names of poet and prophet were occasionally convertible; whether Epimenides in particular had obtained that title, as Grotius seems to have proved; or whether the appellation was given to him, in this instance, as having delivered a description of the Cretan character, which the future state of morals among them verified: whatever was the reason, (and any of these reasons will account for the variation, supposing St. Paul to have been the author,) one point is plain, namely, if the epistle had been forged, and the author had inserted a quotation in it merely from having seen an example of

the same kind in a speech ascribed to St. Paul, he would so far have imitated his original, as to have introduced his quotation in the same manner; that is, he would have given to Epimenides the title which he saw there given to Aratus. The other side of the alternative is, that the history took the hint from the epistle. But that the author of the Acts of the Apostles had not the Epistle to Titus before him, at least that he did not use it as one of the documents or materials of his narrative, is rendered nearly certain by the observation that the name of Titus does not once occur in his book.

It is well known, and was remarked by St. Jerome, that the apophthegm in the fifteenth chapter of the Corinthians, "Evil communications corrupt good manners," is an iambic of Menander's:

*Fqeirousin hqh xrhsq φhilai kakai.*

Here we have another unaffected instance of the same turn and habit of composition. Probably there are some hitherto unnoticed; and more, which the loss of the original authors renders impossible to be now ascertained.

## No. II.

There exists a visible affinity between the Epistle to Titus and the First Epistle to Timothy. Both letters were addressed to persons left by the writer to preside in their respective churches during his absence. Both letters are principally occupied in describing the qualifications to be sought for, in those whom they should appoint to offices in the church; and the ingredients of this description are in both letters nearly the same. Timothy and Titus are likewise cautioned against the same prevailing corruptions, and in particular against

the same misdirection of their cares and studies. This affinity obtains, not only in the subject of the letters, which, from the similarity of situation in the persons to whom they were addressed, might be expected to be somewhat alike, but extends, in a great variety of instances, to the phrases and expressions. The writer accosts his two friends with the same salutation, and passes on to the business of his letter by the same transition.

"Unto Timothy, *my own son in the faith*: Grace, mercy, and peace, from God our Father and Jesus Christ our Lord. *As I besought thee to abide still at Ephesus, when I went into Macedonia,*" etc. 1 Tim. i. 2, 3.

"To Titus, *mine own son after the common faith*: Grace, mercy, and peace, from God the Father and the Lord Jesus Christ our Saviour. *For this cause left I thee in Crete.*" Tit. i. 4, 5.

If Timothy was not to "*give heed to fables* and endless *genealogies*, which minister *questions*," (1 Tim. i. 4,) Titus also was to "avoid foolish *questions*, and *genealogies*, and contentions," (chap. iii. 9,) and was to "rebuke them sharply, *not giving heed to Jewish fables*." (chap. i. 14.) If Timothy was to be a pattern (**tupoj**), (1 Tim. iv. 12,) so was Titus, (chap. ii. 7.) If Timothy was to "let no man despise his youth," (1 Tim. iv. 12,) Titus also was to "let no man despise him." (en. ii. 15.) This verbal consent is also observable in some very peculiar expressions, which have no relation to the particular character of Timothy or Titus.

The phrase, "it is a faithful saying," (**pistoj oIlogoj**.) made use of to preface some sentence upon which the writer lays a more than ordinary stress, occurs three times in the First Epistle to Timothy, once in the

Second, and once in the epistle before us, and in no other part of St. Paul's writings; and it is remarkable that these three epistles were probably all written towards the conclusion of his life; and that they are the only epistles which were written after his first imprisonment at Rome.

The same observation belongs to another singularity of expression, and that is in the epithet "*sound*" (*ugiaiwn*,) as applied to words or doctrine. It is thus used, twice in the First Epistle to Timothy, twice in the Second, and three times in the Epistle to Titus, beside two cognate expressions, *ugainontaj th pistei*, and *logon ugin*; and it is found, in the same sense, in no other part of the New Testament.

The phrase, "God our Saviour," stands in nearly the same predicament. It is repeated three times in the First Epistle to Timothy, as many in the Epistle to Titus, and in no other book of the New Testament occurs at all, except once in the Epistle of Jude.

Similar terms, intermixed indeed with others, are employed in the two epistles, in enumerating the qualifications required in those who should be advanced to stations of authority in the church.

"A bishop then must be blameless, *the husband of one wife*, vigilant, *sober*, of good behaviour, *given to hospitality*, apt to teach; *not given to wine*, *no striker*, *not greedy of filthy lucre*; but patient, not a brawler, not covetous; one that ruleth well his own house, having his children in subjection with all gravity."\* 1 Tim. iii. 2—4.

"If any be *blameless*, *the husband of one wife*,

\* "*Deioun ton episkopon anepilhpton einai, miaj gunuikoj andra, nhfalion, swfrona, kosmion, filozonen, didaktikon, nh paroinon, nh plhkthn, nh aisxrokerdh: all' epieikh, amazon, afilarguron. tou idiou oikou kalws proistamenon, tekna exonta en uftagh meta pashj semnothtoj.*"

having faithful children, not accused of riot, or unruly. For a bishop must be blameless, as the steward of God; not selfwilled, not soon angry, *not given to wine, no striker, not given to filthy lucre; but a lover of hospitality*, a lover of good men, sober, just, holy, temperate."\* Titus i. 6—8.

The most natural account which can be given of these resemblances, is to suppose that the two epistles were written nearly at the same time, and whilst the same ideas and phrases dwelt in the writer's mind. Let us inquire, therefore, whether the notes of time, extant in the two epistles, in any manner favour this supposition.

We have seen that it was necessary to refer the First Epistle to Timothy to a date subsequent to St. Paul's first imprisonment at Rome, because there was no journey into Macedonia prior to that event, which accorded with the circumstance of leaving "Timothy behind at Ephesus." The journey of St. Paul from Crete, alluded to in the epistle before us, and in which Titus "was left in Crete to set in order the things that were wanting," must, in like manner, be carried to the period which intervened between his first and second imprisonment. For the history, which reaches, we know, to the time of St. Paul's first imprisonment, contains no account of his going to Crete, except upon his voyage as a prisoner to Rome; and that this could not be the occasion referred to in our epistle is evident from hence, that when St. Paul wrote this epistle, he appears to have been at liberty; whereas after that

\* "*Ei tij estin anegklhtoj, miaj gunaikoj anhr, tekna exwn pista, nn en kathgoria aswtiaj, hlanupotakta. Dei gar ton episkopon anegklhton einai, wj Qeou oikononon, nh auqadh, nh orgilon, nn paroinon, nh pl hkt hn, nh aisxrokerdh : alla filocenoi, filagaqon, swf rona, dikaiion, o\$ion, egkrath.*"

voyage, he continued for two years at least in confinement. Again, it is agreed that St. Paul wrote his *First Epistle to Timothy* from Macedonia: "As I besought thee to abide still at Ephesus, when I went (or came) into Macedonia." And that he was in these parts, i. e. in this peninsula, when he wrote the Epistle to Titus, is rendered probable by his directing Titus to come to him to Nicopolis: "When I shall send Artemas unto thee, or Tychicus, be diligent (make haste) to come unto me to Nicopolis: for I have determined there to winter." The most noted city of that name was in Epirus, near to Actium. And I think the form of speaking, as well as the nature of the case, renders it probable that the writer was at Nicopolis, or in the neighbourhood thereof, when he dictated this direction to Titus.

Upon the whole, if we may be allowed to suppose that St. Paul, after his liberation at Rome, sailed into Asia, taking Crete in his way; that from Asia and from Ephesus, the capital of that country, he proceeded into Macedonia, and crossing the peninsula in his progress, came into the neighbourhood of Nicopolis; we have a route which falls in with every thing. It executes the intention expressed by the apostle of visiting Colosse and Philippi as soon as he should be set at liberty at Rome. It allows him to leave "Titus at Crete," and "Timothy at Ephesus, as he went into Macedonia;" and to write to both not long after from the peninsula of Greece, and probably the neighbourhood of Nicopolis: thus bringing together the dates of these two letters, and thereby accounting for that affinity between them, both in subject and language, which our remarks have pointed out. I confess that the journey which we have thus traced out for St. Paul is, in a great measure, hypo-

thetic: but it should be observed, that it is a species of consistency, which seldom belongs to falsehood, to admit of an hypothesis, which includes a great number of independent circumstances without contradiction.

## CHAPTER XIV.

## THE EPISTLE TO PHILEMON.

## No. I.

THE singular correspondency between this epistle and that to the Colossians has been remarked already. An assertion in the Epistle to the Colossians, viz. that "Onesimus was one of them," is verified, not by any mention of Colosse, any the most distant intimation concerning the place of Philemon's abode, but singly by stating Onesimus to be Philemon's servant, and by joining in the salutation Philemon with Archippus; for this Archippus, when we go back to the Epistle to the Colossians, appears to have been an inhabitant of that city, and, as it should seem, to have held an office of authority in that church. The case stands thus. Take the Epistle to the Colossians alone, and no circumstance is discoverable which makes out the assertion, that Onesimus was "one of them." Take the Epistle to Philemon alone, and nothing at all appears concerning the place to which Philemon or his servant Onesimus belonged. For any thing that is said in the epistle, Philemon might have been a Thessalonian, a Philippian, or an Ephesian, as well as a Colossian. Put the two epistles together, and the matter is clear. The reader perceives a *junction* of circumstances, which ascertains the conclusion at once. Now, all that is necessary to

be added in this place is, that this correspondency evinces the genuineness of one epistle as well as of the other. It is like comparing the two parts of a cloven tally. Coincidence proves the authenticity of both.

## No. II.

And this coincidence is perfect; not only in the main article of showing, by implication, Onesimus to be a Colossian, but in many dependent, circumstances.

1. "I beseech thee for my son Onesimus, whom I *have sent* again." (ver. 10—12.) It appears from the Epistle to the Colossians, that, in truth, Onesimus was sent at that time to Colosse: "All my state shall Tychicus declare, whom I have sent unto you for the same purpose, *with Onesimus*, a faithful and beloved brother." Colos. iv. 7—9.

2. "I beseech thee for my son Onesimus, *whom I have begotten in my bonds*" (ver. 10.) It appears from the preceding quotation, that Onesimus was with St. Paul when he wrote the Epistle to the Colossians; and that he wrote that epistle *in imprisonment* is evident from his declaration in the fourth chapter and third verse: "Praying also for us, that God would open unto us a door of utterance, to speak the mystery of Christ, for which I am also in bonds"

3. St. Paul bids Philemon prepare for him a lodging: "For I trust," says he, "that through your prayers I shall be given unto you." This agrees with the expectation of speedy deliverance, which he expressed in another epistle written during the same imprisonment: "Him" (Timothy) "I hope to send presently, so soon as I shall see how it will go with me: *but I trust in the Lord that I also myself shall come shortly.*" Phil. ii. 23, 21.

4. As the letter to Philemon and that to the Colossians were written at the same time, and sent by the same messenger, the one to a particular inhabitant, the other to the church of Colosse, it may be expected that the same or nearly the same persons would be about St. Paul, and join with him, as was the practice, in the salutations of the epistle. Accordingly we find the names of Aristarchus, Marcus, Epaphras, Luke, and Demas, in both epistles. Timothy, who is joined with St. Paul in the superscription of the Epistle to the Colossians, is joined with him in this. Tychicus did not salute Philemon, because he accompanied the epistle to Colosse, and would undoubtedly there see him. Yet the reader of the Epistle to Philemon will remark one considerable diversity in the catalogue of saluting friends, and which shows that the catalogue was not copied from that to the Colossians. In the Epistle to the Colossians, Aristarchus is called by St. Paul his fellow-prisoner, Colos. iv. 10; in the Epistle to Philemon, Aristarchus is mentioned without any addition, and the title of fellow-prisoner is given to Epaphras.\*

And let it also be observed, that, notwithstanding the close and circumstantial agreement between the two epistles, this is not the case of an opening left in a genuine writing, which an impostor is induced to fill up; nor of a reference to some writing not extant, which sets a sophist at work to supply the loss, in like manner as, because St. Paul was supposed (Colos. iv. 16) to allude to an epistle written by him to the Laodiceans,

\* Dr. Benson observes, and perhaps truly, that the appellation of fellow-prisoner, as applied by St. Paul to Epaphras, did not imply that they were imprisoned together *at the time*, any more than your calling a person your fellow-traveller imports that you are then upon your travels. If he had, upon any former occasion, travelled with you, you might afterwards speak of him under that title. It is just so with the term fellow-prisoner.

some person has from thence taken the hint of uttering a forgery under that title. The present, I say, is not that case; for Philemon's name is not mentioned in the Epistle to the Colossians; Onesimus' servile condition is no where hinted at, any more than his crime, his flight, or the place or time of his conversion. The story therefore of the epistle, if it be a fiction, *is a* fiction to which the author could not have been guided by any thing he had read in St. Paul's genuine writings.

### No. III.

Ver. 4, 5, "I thank my God, making mention of thee always in my prayers, hearing of thy love and faith, which thou hast toward the Lord Jesus, and toward all saints."

"*Hearing of thy love and faith*" This is the form of speech which St. Paul was wont to use towards those churches which he had not seen, or then visited: see Rom. i. 8; Ephes. i. 15; Col. i. 3, 4. Toward those churches and persons with whom he was previously acquainted, he employed a different phrase; as, "I thank my God always on your behalf," (1 Cor. i. 4; 2 Thess. i. 3); or, "upon every *remembrance* of you," (Phil. i. 3; 1 Thess. i. 2, 3; 2 Tim. i. 3); and never speaks of *hearing of them*. Yet I think it must be concluded, from the nineteenth verse of this epistle, that Philemon had been converted by St. Paul himself: "Albeit I do not say to thee how *thou owest unto me* even thine own self besides." Here then is a peculiarity. Let us inquire whether the epistle supplies any circumstance which will account for it. We have seen that it may be made out, not from the epistle itself, but from a comparison of the epistle with that to the Colos-

sians, that Philemon was an inhabitant of Colosse: and it farther appears from the Epistle to the Colossians, that St. Paul had never been in that city; "I would that ye knew what great conflict I have for you, and for them at Laodicea, and for as many as have not seen my face in the flesh." Col. ii. 1. Although, therefore, St. Paul had formerly met with Philemon at some other place, and had been the immediate instrument of his conversion, yet Philemon's faith and conduct afterwards, inasmuch as he lived in a city which St. Paul had never visited, could only be known to him by fame and reputation.

## No. IV.

The tenderness and delicacy of this epistle have long been admired: "Though I might be much bold in Christ to enjoin thee that which is convenient, yet for love's sake I rather beseech thee, being such an one as Paul the aged, and now also a prisoner of Jesus Christ. I beseech thee for my son Onesimus, whom I have begotten in my bonds." There is something certainly very melting and persuasive in this and every part of the epistle. Yet, in my opinion, the character of St. Paul prevails in it throughout. The warm, affectionate, authoritative teacher is interceding with an absent friend for a beloved convert. He urges his suit with an earnestness, befitting perhaps not so much the occasion, as the ardour and sensibility of his own mind. Here also, as every where, he shows himself conscious of the weight and dignity of his mission; nor does he suffer Philemon for a moment to forget it: "*I might* be much bold in Christ to enjoin thee that which is convenient." He is careful also to recall, though obliquely, to Philemon's memory, the sacred obligation under which he had laid

him, by bringing to him the knowledge of Jesus Christ: "I do not say to thee how thou owest unto me even thine own self besides." Without laying aside, therefore, the apostolic character, our author softens the imperative style of his address, by mixing with it every sentiment and consideration that could move the heart of his correspondent. Aged and in prison, he is content to supplicate and entreat. Onesimus was rendered dear to him by his conversion and his services: the child of his affliction, and "ministering unto him in the bonds of the Gospel." This ought to recommend him, whatever had been his fault, to Philemon's forgiveness: "Receive him as myself, as my own bowels." Every thing, however, should be voluntary. St. Paul was determined that Philemon's compliance should flow from his own bounty: "Without thy mind would I do nothing, that thy benefit should not be as it were of necessity, but willingly;" trusting nevertheless to his gratitude and attachment for the performance of all that he requested, and for more: "Having confidence in thy obedience I wrote unto thee, knowing that thou wilt also do more than I say."

St. Paul's discourse at Miletus; his speech before Agrippa; his Epistle to the Romans, as hath been remarked, (No. viii.); that to the Galatians, iv. 11—20; to the Philippians, i. 29—ii. 2; the Second to the Corinthians, vi. 1—13; and indeed some part or other of almost every epistle, exhibit examples of a similar application to the feelings and affections of the persons whom he addresses. And it is observable, that these pathetic effusions, drawn for the most part from his own sufferings and situation, usually precede a command, soften a rebuke, or mitigate the harshness of some disagreeable truth.

## CHAPTER XV.

## THE SUBSCRIPTIONS OF THE EPISTLES.

Six of these *subscriptions* are false or improbable; that is, they are either absolutely contradicted by the contents of the epistle, or are difficult to be reconciled with them.

I. The subscription of the First Epistle to the Corinthians states that it was written from Philippi, notwithstanding that, in the sixteenth chapter and the eighth verse of the epistle, St. Paul informs the Corinthians that he will "tarry at Ephesus until Pentecost;" and notwithstanding that he begins the salutations in the epistle by telling them "the churches of Asia salute you;" a pretty evident indication that he himself was in Asia at this time.

II. The Epistle to the Galatians is by the subscription dated from Home; yet, in the epistle itself, St. Paul expresses his surprise "that they were *so soon* removing from him that called them;" whereas his journey to Rome was ten years posterior to the conversion of the Galatians. And what, I think, is more conclusive, the author, though speaking of himself in this more than any other epistle, does not once mention his bonds, or call himself a prisoner; which he had not failed to do in every one of the four epistles written from that city, and during that imprisonment.

III. The First Epistle to the Thessalonians was written, the subscription tells us, from Athens; yet the epistle refers expressly to the coming of Timotheus from Thessalonica, (chap. iii. C): and the history informs us,

Acts xviii. 5, that Timothy came out of Macedonia to St. Paul at *Corinth*.

IV. The Second Epistle to the Thessalonians is dated, and without any discoverable reason, from Athens also. If it be truly the *second*; if it refer, as it appears to do, (ch. ii. 2,) to the first, and the first was written from Corinth, the place must be erroneously assigned, for the history does not allow us to suppose that St. Paul, after he had reached Corinth, went back to Athens.

V. The First Epistle to Timothy the subscription asserts to have been sent from Laodicea; yet, when St. Paul writes, "I besought thee to abide still at Ephesus, *poreuomenoj ej Makedonian*, (when I set out for Macedonia,") the reader is naturally led to conclude, that he wrote the letter upon his arrival in that country.

VI. The Epistle to Titus is dated from Nicopolis in Macedonia, whilst no city of that name is known to have existed in that province.

The use, and the only use, which I make of these observations, is to show how easily errors and contradictions steal in where the writer is not guided by original knowledge. There are only eleven distinct assignments of date to St. Paul's Epistles, (for the four written from Rome may be considered as plainly contemporary); and of these, six seem to be erroneous. I do not attribute any authority to these subscriptions. I believe them to have been conjectures founded sometimes upon loose traditions, but more generally upon a consideration of some particular text, without sufficiently comparing it with other parts of the epistle, with different epistles, or with the history. Suppose then that the subscriptions had come down to us as authentic

parts of the epistles, there would have been more contrarieties and difficulties arising out of these final verses, than from all the rest of the volume. Yet, if the epistles had been forged, the whole must have been made up of the same elements as those of which the subscriptions are composed, viz. tradition, conjecture, and inference: and it would have remained to be accounted for, how, whilst so many errors were crowded into the concluding clauses of the letters, so much consistency should be preserved in other parts.

The same reflection arises from observing the oversights and mistakes which learned men have committed, when arguing upon allusions which relate to time and place, or when endeavouring to digest scattered circumstances into a continued story. It is indeed the same case; for these subscriptions must be regarded as ancient scholia, and as nothing more. Of this liability to error I can present the reader with a notable instance; and which I bring forward for no other purpose than that to which I apply the erroneous subscriptions. Ludovicus Capellus, in that part of his *Historica Apostolica Illustrata* which is entitled *De Ordine Epist. Paul.*, writing upon the Second Epistle to the Corinthians, triumphs unmercifully over the want of sagacity in Baronius, who, it seems, makes St. Paul write his Epistle to Titus from Macedonia upon his second visit into that province; whereas it appears from the history, that Titus, instead of being at Crete, where the epistle places him, was at that time sent by the apostle from Macedonia to Corinth. "Animadvertere est," says Capellus, "magnam hominis illius ableiyian, qui vult Titum a Paulo in Cretam abductum, illicque relictum, cum inde Nicopolim navigaret, quern tamen agnoscit a Paulo ex Macedonia missum esse

Corinthum." This probably will be thought a detection of inconsistency in Baronius. But what is the most remarkable, is, that in the same chapter in which he thus indulges his contempt of Baronius's judgment, Capellus himself falls into an error of the same kind, and more gross and palpable than that which he reproves. For he begins the chapter by stating the Second Epistle to the Corinthians and the First Epistle to Timothy to be nearly contemporary; to have been both written during the apostle's second visit into Macedonia; and that a doubt subsisted concerning the immediate priority of their dates: "Posterior ad eosdem Corinthios Epistola, et prior ad Timotheum certant de prioritate, et sub judice lis est; utraque autem scripta est paulo postquam Paulus Epheso discessisset, adeoque dum Macedonian! peragraret, sed ultra tempore praecedat, non liquet." Now, in the first place, it is highly improbable that the two epistles should have been written either nearly together, or during the same journey through Macedonia; for, in the Epistle to the Corinthians, Timothy appears to have been *with* St. Paul; in the epistle addressed to him, to have been left behind at Ephesus, and not only left behind, but directed to continue there, till St. Paul should return to that city. In the second place, it is inconceivable, that a question should be proposed concerning the priority of date of the two epistles; for when St. Paul, in his Epistle to Timothy, opens his address to him by saying, "as I besought thee to abide still at Ephesus when I went into Macedonia," no reader can doubt but that he here refers to the *last* interview which had passed between them; that he had not seen him since; whereas if the epistle be posterior to that to the Corinthians, yet written

upon the same visit into Macedonia, this could not be true; for as Timothy was along with St. Paul when he wrote to the Corinthians, he must, upon this supposition, have passed over to St. Paul in Macedonia after he had been left by him at Ephesus, and must have returned to Ephesus again before the epistle was written. What misled Ludovicus Capellus was simply this—that he had entirely overlooked Timothy's name in the superscription of the Second Epistle to the Corinthians. Which oversight appears not only in the quotation which we have given, but from his telling us, as he does, that Timothy came from Ephesus to St. Paul at *Corinth*; whereas the superscription proves that Timothy was already with St. Paul when he wrote to the Corinthians from Macedonia.

## CHAPTER XVI.

### THE CONCLUSION.

IN the outset of this inquiry, the reader was directed to consider the Acts of the Apostles and the thirteen epistles of St. Paul as certain ancient manuscripts lately discovered in the closet of some celebrated library. We have adhered to this view of the subject. External evidence of every kind has been removed out of sight; and our endeavours have been employed to collect the indications of truth and authenticity, which appeared to exist in the writings themselves, and to result from a comparison of their different parts. It is not however necessary to continue this supposition longer. The testimony which other remains of contemporary, or the monuments of adjoining ages afford to the reception,

notoriety, and public estimation of a book, form, no doubt, the first proof of its genuineness. And in no books whatever is this proof more complete, than in those at present under our consideration. The inquiries of learned men, and, above all, of the excellent Lardner, who never overstates a point of evidence, and whose fidelity in citing his authorities has in no one instance been impeached, have established, concerning these writings, the following propositions:

I. That in the age immediately posterior to that in which St. Paul lived, his letters were publicly read and acknowledged.

Some of them are quoted or alluded to by almost every Christian writer that followed; by Clement of Rome, by Hernias, by Ignatius, by Polycarp, disciples or contemporaries of the apostles; by Justin Martyr, by the churches of Gaul, by Irenaeus, by Athenagoras, by Theophilus, by Clement of Alexandria, by Hermias, by Tertullian, who occupied the succeeding age. Now when we find a book quoted or referred to by an ancient author, we are entitled to conclude, that it was read and received in the age and country in which that author lived. And this conclusion does not, in any degree, rest upon the judgment or character of the author making such reference. Proceeding by this rule, we have, concerning the First Epistle to the Corinthians in particular, within forty years after the epistle was written, evidence, not only of its being extant at Corinth, but of its being known and read at Rome. Clement, bishop of that city, writing to the church of Corinth, uses these words: "Take into your hands the epistle of the blessed Paul the apostle. What did he at first write unto you in the beginning of the Gospel? Verily he did by the Spirit admonish you

concerning himself, and Cephas, and Apollos, because that even then you did form parties."<sup>\*</sup> This was written at a time when probably some must have been living at Corinth, who remembered St. Paul's ministry there and the receipt of the epistle. The testimony is still more valuable, as it shows that the epistles were preserved in the churches to which they were sent, and that they were spread and propagated from them to the rest of the Christian community. Agreeably to which natural mode and order of their publication, Tertullian, a century afterwards, for proof of the integrity and genuineness of the apostolic writings, bids "any one, who is willing to exercise his curiosity profitably in the business of their salvation, to visit the apostolical churches, in which their very authentic letters are recited, ipsae authenticae literae eorum rccitantur." Then he goes on: "Is Achaia near you? You have Corinth. If you are not far from Macedonia, you have Philippi, you have Thessalonica. If you can go to Asia, you have Ephesus; but if you are near to Italy, you have Rome." † I adduce this passage to show, that the distinct churches or Christian societies, to which St. Paul's epistles were sent, subsisted for some ages afterwards; that his several epistles were all along respectively read in those churches; that Christians at large received them from those churches, and appealed to those churches for their originality and authenticity.

Arguing in like manner from citations and allusions, we have, within the space of a hundred and fifty years from the time that the first of St. Paul's epistles was written, proofs of almost all of them being read, in Palestine, Syria, the countries of Asia Minor, in Egypt, in that part of Africa which used the Latin tongue, in

\* Lardner, vol. xii. p. 22.

† Lardner, vol. ii. p. 598.

Greece, Italy, and Gaul.\* I do not mean simply to assert, that within the space of a hundred and fifty years St. Paul's epistles were read in those countries, for I believe that they were read and circulated from the beginning; but that proofs of their being- so read occur within that period. And when it is considered how few of the primitive Christians wrote, and of what was written how much is lost, we are to account it extraordinary, or rather as a sure proof of the extensiveness of the reputation of these writings, and of the general respect in which they were held, that *so many* testimonies, and of such antiquity, are still extant. "In the remaining works of Irenaeus, Clement of Alexandria, and Tertullian, there are perhaps more and larger quotations of the small volume of the New Testament, than of all the works of Cicero, in the writings of all characters for several ages." † We must add, that the epistles of Paul come in for their full share of this observation; and that all the thirteen epistles, except that to Philemon, which is not quoted by Irenasus or Clement, and which probably escaped notice merely by its brevity, are severally cited, and expressly recognised as St. Paul's, by each of these Christian writers. The Ebionites, an early though inconsiderable Christian sect, rejected St. Paul and his epistles; ‡ that is, they rejected these epistles, not because they were not, but because they were St. Paul's; and because, adhering to the obligation of the Jewish law, they chose to dispute his doctrine and authority. Their suffrage as to the genuineness of the epistles does not contradict that of other Christians. Marcion, an heretical writer in the former part of the second century, is said by Tertullian to have rejected

\* Lardner's Recapitulation, vol. xii. p. 53.

† Ibid.

‡ Lardner, vol. ii. p. 808.

three of the epistles which we now receive, viz. the two Epistles to Timothy and the Epistle to Titus. It appears to me not improbable, that Marcion might make some such distinction as this, that no apostolic epistle was to be admitted which was not read or attested by the church to which it was sent; for it is remarkable that, together with these epistles to private persons, he rejected also the catholic epistles. Now the catholic epistles and the epistles to private persons agree in the circumstance of wanting this particular species of attestation. Marcion, it seems, acknowledged the epistle to Philemon, and is upbraided for his inconsistency in doing so by Tertullian,\* who asks, "why, when he received a letter written to a single person, he should refuse two to Timothy and one to Titus, composed upon the affairs of the church?" This passage so far favours our account of Marcion's objection, as it shows that the objection was supposed by Tertullian to have been founded in something which belonged to the nature of a private letter.

Nothing of the works of Marcion remains. Probably he was, after all, a rash, arbitrary, licentious critic, (if he deserved indeed the name of critic,) and who offered no reason for his determination. What St. Jerome says of him intimates this, and is besides founded in good sense: speaking of him and Basilides, "If they assigned any reasons," says he, "why they did not reckon these epistles," viz. the First and Second to Timothy and the Epistle to Titus, "to be the apostle's, we would have endeavoured to have answered them, and perhaps might have satisfied the reader: but when they take upon them, by their own authority, to pronounce one epistle to be Paul's and another not, they can only be replied to in

\* Lardner, vol. xiv. p. 455.

the same manner."<sup>\*</sup> Let it be remembered, however, that Marcion received ten of these epistles. His authority, therefore, even if his credit had been better than it is, forms a very small exception to the uniformity of the evidence. Of Basilides we know still less than we do of Marcion. The same observation, however, belongs to him, viz. that his objection, as far as appears from this passage of St. Jerome, was confined to the three private epistles. Yet is this the only opinion which can be said to disturb the consent of the first two centuries of the Christian *sera*: for as to Tatian, who is reported by Jerome alone to have rejected some of St. Paul's epistles, the extravagant or rather delirious notions into which he fell, take away all weight and credit from his judgment.—If, indeed, Jerome's account of this circumstance be correct; for it appears from much older writers than Jerome, that Tatian owned and used many of these epistles. †

II. They who in those ages disputed about so many other points, agreed in acknowledging the Scriptures now before us. Contending sects appealed to them in their controversies, with equal and unreserved submission. When they were urged by one side, however they might be interpreted or misinterpreted by the other, their authority was not questioned. "Reliqui omnes," says Irenæus, speaking of Marcion, "falso scientiae nomine inflati, scripturas quidem confitentur, interpretationes vero convertunt." ‡

III. When the genuineness of some other writings which were in circulation, and even of a few which are now received into the canon, was contested, these were never called into dispute. Whatever was the objection,

\* Lardner, vol. xiv. p. 458.

† Lardner, vol. i. p. 313.

‡ Iren. advers. Haer. quoted by Lardner, vol. xv. p. 425.

or whether in truth there ever was any real objection, to the authenticity of the Second Epistle of Peter, the Second and Third of John, the Epistle of James, or that of Jude, or to the book of the Revelation of St. John; the doubts that appeared to have been entertained concerning them, exceedingly strengthen the force of the testimony as to those writings about which there was no doubt; because it shows, that the matter was a subject, amongst the early Christians, of examination and discussion; and that where there was any room to doubt, they did doubt.

What Eusebius hath left upon the subject is directly to the purpose of this observation. Eusebius, it is well known, divided the ecclesiastical writings which were extant in his time into three classes; the "*anantirrhta*, contradicted," as he calls them in one chapter; or, "scriptures universally acknowledged," as he calls them in another: the "controverted, yet well known and approved by many;" and "the spurious." What were the shades of difference in the books of the second, or of those in the third class; or what it was precisely that he meant by the term *spurious*, it is not necessary in this place to inquire. It is sufficient for us to find, that the thirteen epistles of St. Paul are placed by him in the first class, without any sort of hesitation or doubt.

It is farther also to be collected from the chapter in which this distinction is laid down, that the method made use of by Eusebius, and by the Christians of his time, viz. the close of the third century, in judging concerning the sacred authority of any books, was to inquire after and consider the testimony of those who lived near the age of the apostles.\*

#### IV. That no ancient writing, which is attested as

\* Lardner, vol. viii p. 106.

these epistles are, hath had its authenticity disproved, or is in fact questioned. The controversies which have been moved concerning suspected writings, as the epistles, for instance, of Phalaris, or the eighteen epistles of Cicero, begin by showing that this attestation is wanting. That being proved, the question is thrown back upon internal marks of spuriousness or authenticity; and in these the dispute is occupied. In which disputes it is to be observed, that the contested writings are commonly attacked by arguments drawn from some opposition which they betray to "authentic history," to "true epistles," to the "real sentiments or circumstances of the author whom they personate;"\* which authentic history, which true epistles, which real sentiments themselves, are no other than ancient documents, whose early existence and reception can be proved, in the manner in which the writings before us are traced up to the age of their reputed author, or to ages near to his. A modern who sits down to compose the history of some ancient period, has no stronger evidence to appeal to for the most confident assertion, or the most undisputed fact that he delivers, than writings whose genuineness is proved by the same medium through which we evince the authenticity of ours. Nor, whilst he can have recourse to such authorities as these, does he apprehend any uncertainty in his accounts, from the suspicion of spuriousness or imposture in his materials.

V. It cannot be shown that any forgeries, properly so called, † that is, writings published under the name

\* See the tracts written in the controversy between Tunstal and Middleton, upon certain suspected epistles ascribed to Cicero.

† I believe that there is a great deal of truth in Dr. Lardner's observation, that comparatively few of those books which we call apocryphal were strictly and originally forgeries. See Lardner, vol. xii. p. 167.

of the person who did not compose them, made their appearance in the first century of the Christian aera, in which century these epistles undoubtedly existed. I shall set down under this proposition the guarded words of Lardner himself: "There are no quotations of any books of them (spurious and apocryphal books) in the apostolical fathers, by whom I mean Barnabas, Clement of Rome, Hennas, Ignatius, and Polycarp, whose writings reach from the year of our Lord *JO* to the year 108. *I say this confidently, because I think it has been proved*" Lardner, vol. xii. p. 158.

Nor when they did appear were they much used by the primitive Christians. "Irenaeus quotes not any of these books. He mentions some of them, but he never quotes them. The same may be said of Tertullian: he has mentioned a book called 'Acts of Paul and Thecla,' but it is only to condemn it. Clement of Alexandria and Origen have mentioned and quoted several such books, but never as authority, and sometimes with express marks of dislike. Eusebius quoted no such books in any of his works. He has mentioned them indeed, but how? Not by way of approbation, but to show that they were of little or no value, and that they never were received by the sounder part of Christians." Now, if with this, which is advanced after the most minute and diligent examination, we compare what the same cautious writer had before said of our received Scriptures, "that in the works of three only of the above-mentioned fathers, there are more and larger quotations of the small volume of the New Testament, than of all the works of Cicero in the writers of all characters for several ages;" and if with the marks of obscurity or condemnation, which accompanied the mention of the several apocryphal Christian writings, when

they happened to be mentioned at all, we contrast what Dr. Lardner's work completely and in detail makes out concerning the writings which we defend, and what, having so made out, he thought himself authorized in his conclusion to assert, that these books were not only received from the beginning, but received with the greatest respect; have been publicly and solemnly read in the assemblies of Christians throughout the world, in every age from that time to this; early translated into the languages of divers countries and people; commentaries writ to explain and illustrate them; quoted by way of proof in all arguments of a religious nature; recommended to the perusal of unbelievers, as containing the authentic account of the Christian doctrine: when we attend, I say, to this representation, we perceive in it not only full proof of the early notoriety of these books, but a clear and sensible line of discrimination, which separates these from the pretensions of any others.

The epistles of St. Paul stand particularly free of any doubt or confusion that might arise from this source. Until the conclusion of the fourth century, no intimation appears of any attempt whatever being made to counterfeit these writings; and then it appears only of a single and obscure instance. Jerome, who flourished in the year 392, has this expression: "Legunt quidam et ad Laodices; sed ab omnibus exploditur;" there is also an Epistle to the Laodiceans, but it is rejected by every body.\* Theodoret, who wrote in the year 423, speaks of this epistle in the same terms. † Beside these, I know not whether any ancient writer mentions it. It was certainly unnoticed during the first three centuries of the church; and when it came afterwards to be

\* Lardner, vol. x. p. 103.

† Lardner, vol. xi. p. 88.

mentioned, it was mentioned only to show, that, though such a writing did exist, it obtained no credit. It is probable that the forgery to which Jerome alludes, is the epistle which we now have under that title. If so, as hath been already observed, it is nothing more than a collection of sentences from the genuine epistles; and was perhaps, at first, rather the exercise of some idle pen, than any serious attempt to impose a forgery upon the public. Of an Epistle to the Corinthians under St. Paul's name, which was brought into Europe in the present century, antiquity is entirely silent. It was unheard of for sixteen centuries; and at this day, though it be extant, and was first found in the Armenian language, it is not, by the Christians of that country, received into their Scriptures. I hope, after this, that there is no reader who will think there is any competition of credit, or of external proof, between these and the received epistles; or rather, who will not acknowledge the evidence of authenticity to be confirmed by the want of success which attended imposture.

When we take into our hands the letters which the suffrage and consent of antiquity hath thus transmitted to us, the first thing that strikes our attention is the air of reality and business, as well as of seriousness and conviction, which pervades the whole. Let the sceptic read them. If he be not sensible of these qualities in them, the argument can have no weight with him. If he be; if he perceive in almost every page the language of a mind actuated by real occasions, and operating upon real circumstances, I would wish it to be observed, that the proof which arises from this perception is not to be deemed occult or imaginary, because it is incapable of being drawn out in words, or of being conveyed to the

apprehension of the reader in any other way than by sending him to the books themselves.

And here, in its proper place, comes in the argument which it has been the office of these pages to unfold. St. Paul's Epistles are connected with the history by their particularity, and by the numerous circumstances which are found in them. When we descend to an examination and comparison of these circumstances, we not only observe the history and the epistles to be independent documents unknown to, or at least unconsulted by, each other, but we find the substance, and oftentimes very minute articles, of the history, recognised in the epistles, by allusions and references, which can neither be imputed to *design*, nor, without a foundation in truth, be accounted for by accident; by hints and expressions, and single words dropping as it were fortuitously from the pen of the writer, or drawn forth, each by some occasion proper to the place in which it occurs, but widely removed from any view to consistency or agreement. These, we know, are effects which reality naturally produces, but which, without reality at the bottom, can hardly be conceived to exist.

When, therefore, with a body of external evidence, which is relied upon, and which experience proves may safely be relied upon, in appreciating the credit of ancient writings, we combine characters of genuineness and originality which are not found, and which, in the nature and order of things, cannot be expected to be found, in spurious compositions; whatever difficulties we may meet with in other topics of the Christian evidence, we can have little in yielding our assent to the following conclusions: That there was such a person as St. Paul; that he lived in the age which we ascribe to him; that he went about preaching the religion of which Jesus

Christ was the founder; and that the letters which we now read were actually written by him upon the subject, and in the coarse of that his ministry.

And if it be true that we are in possession of the very letters which St. Paul wrote, let us consider what confirmation they afford to the Christian history. In my opinion they substantiate the whole transaction. The great object of modern research is to come at the epistolary correspondence of the times. Amidst the obscurities, the silence, or the contradictions of history, if a letter can be found, we regard it as the discovery of a land-mark; as that by which we can correct, adjust, or supply the imperfections and uncertainties of other accounts. One cause of the superior credit which is attributed to letters is this, that the facts which they disclose generally come out *incidentally*, and therefore without design to mislead the public by false or exaggerated accounts. This reason may be applied to St. Paul's epistles with as much justice as to any letters whatever. Nothing could be farther from the intention of the writer than to record any part of his history. That his history was *in fact* made public by these letters, and has by the same means been transmitted to future ages, is a secondary and unthought-of effect. The sincerity, therefore, of the apostle's declarations, cannot reasonably be disputed; at least we are sure that it was not vitiated by any desire of setting himself off to the public at large. But these letters form a part of the muniments of Christianity, as much to be valued for their contents as for their originality. A more inestimable treasure the care of antiquity could not have sent down to us. Beside the proof they afford of the general reality of St. Paul's history, of the knowledge which the author of the Acts of the Apostles had obtained of

that history, and the consequent probability that he was, what he professes himself to have been, a companion of the apostle's; beside the support they lend to these important inferences, they meet specifically some of the principal objections upon which the adversaries of Christianity have thought proper to rely. In particular they show,

I. That Christianity was not a story set on foot amidst the confusions which attended and immediately preceded the destruction of Jerusalem; when many extravagant reports were circulated, when men's minds were broken by terror and distress, when amidst the tumults that surrounded them inquiry was impracticable. These letters show uncontestedly that the religion had fixed and established itself before this state of things took place.

II. Whereas it hath been insinuated, that our Gospels may have been made up of reports and stories which were current at the time, we may observe, that with respect to the Epistles this is impossible. A man cannot write the history of his own life from reports; nor, what is the same thing, be led by reports to refer to passages and transactions in which he states himself to have been immediately present and active. I do not allow that this insinuation is applied to the historical part of the New Testament with any colour of justice or probability; but I say, that to the Epistles it is not applicable at all.

III. These letters prove that the converts to Christianity were not drawn from the barbarous, the mean, or the ignorant set of men which the representations of infidelity would sometimes make them. We learn from letters the character not only of the writer, but, in some measure, of the persons to whom they are written.

To suppose that these letters were addressed to a rude tribe, incapable of thought or reflection, is just as reasonable as to suppose Locke's Essay on the Human Understanding to have been written for the instruction of savages. Whatever may be thought of these letters in other respects, either of diction or argument, they are certainly removed as far as possible from the habits and comprehension of a barbarous people.

IV. St. Paul's history, I mean so much of it as may be collected from his letters, is so *implicated* with that of the other apostles, and with the substance indeed of the Christian history itself, that I apprehend it will be found impossible to admit St. Paul's story (I do not speak of the miraculous part of it) to be true, and yet to reject the rest as fabulous. For instance, can any one believe that there was such a man as Paul, a preacher of Christianity, in the age which we assign to him, and *not* believe that there was also at the same time such a man as Peter, and James, and other apostles, who had been companions of Christ during his life, and who after his death published and avowed the same things concerning him which Paul taught? Judea, and especially Jerusalem, was the scene of Christ's ministry. The witnesses of his miracles lived there. St. Paul, by his own account, as well as that of his historian, appears to have frequently visited that city; to have carried on a communication with the church there; to have associated with the rulers and elders of that church, who were some of them apostles; to have acted, as occasions offered, in correspondence, and sometimes in conjunction with them. Can it after this be doubted, but that the religion and the general facts relating to it, which St. Paul appears by his letters to have delivered to the several churches which he established at a distance,

were at the same time taught and published at Jerusalem itself, the place where the business was transacted; and taught and published by those who had attended the founder of the institution in his miraculous, or pretendedly miraculous ministry?

It is observable, for so it appears both in the Epistles and from the Acts of the Apostles, that Jerusalem, and the society of believers in that city, long continued the centre from which the missionaries of the religion issued, with which all other churches maintained a correspondence and connexion, to which they referred their doubts, and to whose relief, in times of public distress, they remitted their charitable assistance. This observation I think material, because it proves that this was not the case of giving our accounts in one country of what is transacted in another, without affording the hearers an opportunity of knowing whether the things related were credited by any, or even published, in the place where they are reported to have passed.

V. St. Paul's letters furnish evidence (and what better evidence than a man's own letters can be desired?) of the soundness and sobriety of his judgment. His caution in distinguishing between the occasional suggestions of inspiration, and the ordinary exercise of his natural understanding, is without example in the history of human enthusiasm. His morality is every where calm, pure, and rational; adapted to the condition, the activity, and the business of social life, and of its various relations; free from the over-scrupulousness and austerities of superstition, and from what was more perhaps to be apprehended, the abstractions of quietism, and the soarings and extravagancies of fanaticism. His judgment concerning a hesitating conscience; his opinion of the moral indifferency of many actions, yet of the

prudence and even the duty of compliance, where non-compliance would produce evil effects upon the minds of the persons who observed it, is as correct and just as the most liberal and enlightened moralist could form at this day. The accuracy of modern ethics has found nothing to amend in these determinations.

What Lord Lyttelton has remarked of the preference ascribed by St. Paul to inward rectitude of principle above every other religious accomplishment is very material to our present purpose. "In his First Epistle to the Corinthians, chap. xiii. 1—3, St. Paul has these words: 'Though I speak with the tongues of men and of angels, and have not charity, I am become as sounding brass, or a tinkling cymbal. And though I have the gift of prophecy, and understand all mysteries, and all knowledge; and though I have all faith, so that I could remove mountains, and have not charity, I am nothing. And though I' bestow all my goods to feed the poor, and though I give my body to be burned, and have not charity, it profiteth me nothing.' Is this the language of enthusiasm? Did ever enthusiast prefer that universal benevolence which comprehendeth all moral virtues, and which, as appeareth by the following verses, is meant by charity here? did ever enthusiast, I say, prefer that benevolence" (which we may add is attainable by every man) "to faith and to miracles, to those religious opinions which he had embraced, and to those supernatural graces and gifts which he imagined he had acquired; nay, even to the merit of martyrdom? Is it not the genius of enthusiasm to set moral virtues infinitely below the merit of faith? and of all moral virtues to value that least which is most particularly enforced by St. Paul, a spirit of candour, moderation, and peace? Certainly neither the temper nor the

opinions of a man subject to fanatic delusions are to be found in this passage."<sup>\*</sup>

I see no reason therefore to question the integrity of his understanding. To call him a visionary because he appealed to visions, or an enthusiast because he pretended to inspiration, is to take the whole question for granted. It is to take for granted that no such visions or inspirations existed; at least it is to assume, contrary to his own assertions, that he had no other proofs than these to offer of his mission, or of the truth of his relations.

One thing I allow, that his letters every where discover great zeal and earnestness in the cause in which he was engaged; that is to say, he was convinced of the truth of what he taught; he was deeply impressed, but not more so than the occasion merited, with a sense of its importance. This produces a corresponding animation and solicitude in the exercise of his ministry. But would not these considerations, supposing them to be well founded, have holden the same place, and produced the same effect, in a mind the strongest and the most sedate?

VI. These letters are decisive as to the sufferings of the author; also as to the distressed state of the Christian church, and the dangers which attended the preaching . of the Gospel.

"Whereof I Paul am made a minister; who now rejoice in my sufferings for you, and fill up that which is behind of the afflictions of Christ in my flesh for his body's sake, which is the church." Col. i. 24.

"If in this life only we have hope in Christ, we are of all men most miserable." 1 Cor. xv. 19.

"Why stand we in jeopardy every hour? I protest

\* Lord Lyttelton's Considerations on the Conversion, etc.

by your rejoicing which I have in Christ Jesus our Lord, I die daily. If after the manner of men I have fought with beasts at Ephesus, what advantageth it me, if the dead rise not?" 1 Cor. xv. 30—32.

"If children, then heirs; heirs of God, and joint-heirs with Christ; if so be that we suffer with him, that we may be also glorified together. For I reckon that the sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us." Rom. viii. 17, 18.

"Who shall separate us from the love of Christ? shall tribulation, or distress, or persecution, or famine, or nakedness, or peril, or sword? As it is written, For thy sake we are killed all the day long; we are accounted as sheep for the slaughter." Rom. viii. 35, 36.

"Rejoicing in hope; *patient in tribulation*; continuing instant in prayer." Rom. xii. 12.

"Now concerning virgins I have no commandment of the Lord: yet I give my judgment, as one that hath obtained mercy of the Lord to be faithful. I suppose therefore that this is good *for the present distress*, I say, that it is good for a man so to be." 1 Cor. vii. 2.5, 26.

"For unto you it is given in the behalf of Christ, not only to believe on him, but also to suffer for his sake; having the same conflict which ye saw in me, and now hear to be in me." Phil. i. 29, 30.

"God forbid that I should glory, save in the cross of our Lord Jesus Christ, by whom the world is crucified unto me, and I unto the world."

"From henceforth let no man trouble me: for I bear in my body the marks of the Lord Jesus." Gal. vi. 14—17.

"Ye became followers of us, and of the Lord, having

received the word in much affliction, with joy of the Holy Ghost." 1 Thess. i. 6.

"We ourselves glory in you in the churches of God for your patience and faith in all your persecutions and tribulations that ye endure." 2 Thess. i. 4.

We may seem to have accumulated texts unnecessarily; but beside that the point which they are brought to prove is of great importance, there is this also to be remarked in every one of the passages cited, that the allusion is drawn from the writer by the argument or the occasion; that the notice which is taken of his sufferings, and of the suffering condition of Christianity, is perfectly incidental, and is dictated by no design of stating the facts themselves. Indeed they are not stated at all: they may rather be said to be assumed. This is a distinction upon which we have relied a good deal in former parts of this treatise; and, where the writer's information cannot be doubted, it always, in my opinion, adds greatly to the value and credit of the testimony.

If any reader require from the apostle more direct and explicit assertions of the same thing, he will receive full satisfaction in the following quotations.

"Are they ministers of Christ? (I speak as a fool) I am more; in labours more abundant, in stripes above measure, in prisons more frequent, in deaths oft. Of the Jews five times received I forty stripes save one. Thrice was I beaten with rods, once was I stoned, thrice I suffered shipwreck, a night and a day I have been in the deep; in journeyings often, in perils of waters, in perils of robbers, in perils by mine own countrymen, in perils by the heathen, in perils in the city, in perils in the wilderness, in perils in the sea, in perils among false brethren; in weariness and painful-ness, in watchings often, in hunger and thirst, in

fastings often, in cold and nakedness." 2 Cor. xi. 23—27.

Can it be necessary to add more? "I think that God hath set forth us the apostles last, as it were appointed to death: for we are made a spectacle unto the world, and to angels, and to men.—Even unto this present hour we both hunger, and thirst, and are naked, and are buffeted, and have no certain dwelling place; and labour, working with our own hands: being reviled, we bless; being persecuted, we suffer it: being defamed, we entreat: we are made as the filth of the earth, and are the offscouring of all things unto this day." 1 Cor. iv. 9—13. I subjoin this passage to the former, because it extends to the other apostles of Christianity much of that which St. Paul declared concerning himself.

In the following quotations, the reference to the author's sufferings is accompanied with a specification of time and place, and with an appeal for the truth of what he declares to the knowledge of the persons whom he addresses: "Even after that we had suffered before, and were shamefully entreated, *as ye know, at Philippi*, we were bold in our God to speak unto you the Gospel of God with much contention." 1 Thess. ii. 2.

"But *thou hast fully known* my doctrine, manner of life, purpose, faith, longsuffering, persecutions, afflictions, which came unto me *at Antioch, at Iconium, at Lystra*; what persecutions I endured: but out of them all the Lord delivered me." 2 Tim. iii. 10, 11.

I apprehend that to this point, as far as the testimony of St. Paul is credited, the evidence from his letters is complete and full. It appears under every form in which it could appear, by occasional allusions and by direct assertions, by general declarations and by specific examples.

VII. St. Paul in these letters asserts, in positive and unequivocal terms, his performance of miracles strictly and properly so called.

"He therefore that ministereth to you the Spirit, and worketh miracles (***energwn dunameij***) among you, doeth he it by the works of the law, or by the hearing of faith?" Gal. Hi. 5.

"For I will not dare to speak of any of those things which Christ hath not wrought by me,\* to make the Gentiles obedient, by word and deed, through mighty signs and wonders, (*en dunamei shmeiwn kai teratwn*,) by the power of the Spirit of God; so that from Jerusalem, and round about unto Illyricum, I have fully preached the Gospel of Christ." Rom. xv. 18, 19.

"Truly the signs of an apostle were wrought among you in all patience, in signs, and wonders, and mighty deeds," (***en shmeioij kai terasi kai dunamesi.***) † 2 Cor. xii. 12.

These words, signs, wonders, and mighty deeds, (***shmeia, kai terata, kai dunameij***,) are the specific appropriate terms throughout the New Testament, employed

\* That is, "I will speak of nothing but what Christ hath wrought by *me*;" or as Grotius interprets it, "Christ hath wrought so great things by me, that I will not dare to say what he hath not wrought."

† To these may be added the following indirect allusions, which, though if they had stood alone, i. e. without plainer texts in the same writings, they might have been accounted dubious; yet, when considered in conjunction with the passages already cited, can hardly receive any other interpretation than that which we give them.

"My speech and my preaching was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power: that your faith should not stand in the wisdom of men, but in the power of God." 1 Cor. ii. 4, 5.

"The Gospel, whereof I was made a minister, according to the gift of the grace of God given unto me by the effectual working of his power." Ephes. iii. 6, 7.

"For he that wrought effectually in Peter to the apostleship of the circumcision, the same was mighty in me toward the Gentiles." Gal. ii. 8.

"For our Gospel came not unto you in word only, but also in power, and in the Holy

when public sensible miracles are intended to be expressed. This will appear by consulting, amongst other places, the texts referred to in the note;\* and it cannot be known that they are ever employed to express any thing else.

Secondly, these words not only denote miracles as opposed to natural effects, but they denote visible, and what may be called external miracles, as distinguished,

First, from *inspiration*. If St. Paul had meant to refer only to secret illuminations of his understanding, or secret influences upon his will or affections, he could not, with truth, have represented them as "signs and wonders *wrought* by him," of "signs and wonders and mighty deeds *wrought amongst* them."

Secondly, from *visions*. These would not, by any means, satisfy the force of the terms, "signs, wonders, and mighty deeds;" still less could they be said to be "*wrought* by him," or, "*wrought amongst* them:" nor are these terms and expressions any where applied to visions. When our author alludes to the supernatural communications which he had received, either by vision or otherwise, he uses expressions suited to the nature of the subject, but very different from the words which we have quoted. He calls them revelations, but never signs, wonders, or mighty deeds. "I will come," says he, "to visions and *revelations* of the Lord;" and then proceeds to describe a particular instance, and afterwards adds, "lest I should be exalted above measure through the abundance of the revelations, there was given to me a thorn in the flesh."

Upon the whole, the matter admits of no softening qualification, or ambiguity whatever. If St. Paul did

\* Mark xvi. 20. Luke xxiii. 8. John ii. 11—23; iii. 2; iv. 48—54; xi. 49. Acts ii. -2-2; iv. 3; v. 12; vi. 8; vii. 16; xiv. 3; xv. 12. Heb. ii. 4.

not work actual, sensible, public miracles, he has knowingly, in these letters, borne his testimony to a falsehood. I need not add, that, in two also of the quotations, he has advanced his assertion in the face of those persons amongst whom he declares the miracles to have been wrought.

Let it be remembered that the Acts of the Apostles described various particular miracles wrought by St. Paul, which in their nature answer to the terms and expressions which we have seen to be used by St. Paul himself.

---

Here then we have a man of liberal attainments, and in other points of sound judgment, who had addicted his life to the service of the Gospel. We see him, in the prosecution of his purpose, travelling from country to country, enduring every species of hardship, encountering every extremity of danger, assaulted by the populace, punished by the magistrates, scourged, beat, stoned, left for dead; expecting, wherever he came, a renewal of the same treatment, and the same dangers, yet, when driven from one city, preaching in the next; spending his whole time in the employment, sacrificing to it his pleasures, his ease, his safety; persisting in this course to old age, unaltered by the experience of perverseness, ingratitude, prejudice, desertion; unsubdued by anxiety, want, labour, persecutions; unwearied by long confinement, undismayed by the prospect of death. Such was St. Paul. We have his letters in our hands; we have also a history purporting to be written by one of his fellow-travellers, and appearing, by a comparison with these letters, certainly to have been written by some person well acquainted with the transactions of his life. From the letters, as well as from the history, we

gather not only the account which we have stated of *him*, but that he was one out of many who acted and suffered in the same manner; and that of those who did so, several had been the companions of Christ's ministry, the ocular witnesses, or pretending to be such, of his miracles, and of his resurrection. We moreover find this same person referring in his letters to his supernatural conversion, the particulars and accompanying circumstances of which are related in the history, and which accompanying circumstances, if all or any of them be true, render it impossible to have been a delusion. We also find him positively, and in appropriated terms, asserting that he himself worked miracles, strictly and properly so called, in support of the mission which he executed; the history, meanwhile, recording various passages of his ministry, which come up to the extent of this assertion. The question is, whether falsehood was ever attested by evidence like this? Falsehoods, we know, have found their way into reports, into tradition, into books; but is an example to be met with, of a man voluntarily undertaking a life of want and pain, of incessant fatigue, of continual peril; submitting to the loss of his home and country, to stripes and stoning, to tedious imprisonment, and the constant expectation of a violent death, for the sake of carrying about a story of what was false, and of what, if false, he must have known to be so?

A DEFENCE  
OF  
THE CONSIDERATIONS  
ON THE  
*PROPRIETY OF REQUIRING*  
A SUBSCRIPTION TO ARTICLES OF FAITH;  
IN REPLY TO A LATE  
ANSWER FROM THE CLARENDON PRESS.

A DEFENCE  
OF  
THE CONSIDERATIONS,  
ETC.

THE fair way of conducting a dispute is to exhibit one by one the arguments of your opponent, and with each argument the precise and specific answer you are able to give it. If this method be not so common, nor found so convenient, as might be expected, the reason is, because it suits not always with the designs of a writer, which are no more perhaps than to make a *book*; to confound some arguments, and to keep others out of sight; to leave what is called an impression upon the reader, without any care to inform him of the proofs or principles by which his opinion should be governed. With such views it may be consistent to despatch objections, by observing of some "that they are old," and therefore, like certain drugs, have lost, we may suppose, their strength: of others, that "they have long since received an answer;" which implies, to be sure, a confutation: to attack straggling remarks, and decline the main reasoning, as "mere declamation:" to pass by one passage because it is "long-winded," another because the answerer "has neither leisure nor inclination to enter into the discussion of it:" to produce extracts and quotations, which, taken alone, imperfectly, if at all, express their author's meaning: to dismiss a stubborn

difficulty with a "reference," which ten to one the reader never looks at: and, lastly, in order to give the whole a certain fashionable air of candour and moderation, to make a concession\* or two which nobody thanks him for, or yield up a few points which it is no longer any credit to maintain.

How far the writer with whom we have to do is concerned in this description, his readers will judge; he shall receive, however, from us that justice which he has not shown the author of the "Considerations," to have his arguments fully and distinctly stated and examined.

After complaining, as is usual on these occasions, of disappointment and dissatisfaction; the answerer sets out with an argument which comprises, we are told, in a "narrow compass," the whole merits of the question betwixt us; and which is neither more nor less than this, that "it is necessary that those who are to be ordained teachers in the church should be sound in the faith, and consequently that they should give to those who ordain them some proof and assurance that they are so, and that the method of this proof should be settled by public authority." Now the perfection of this sort of reasoning is, that it comes as well from the mouth of the pope's professor of divinity in the university of Bologna, as from the Clarendon press. A church has only, with our author, to call her creed the "faithful word," and it follows from Scripture that "we must hold it fast." Her dissatisfied sons, let her only denominate, as he does, † "vain talkers and deceivers," and St. Paul himself commands us "to stop their mouths." Every one that questions or opposes

\* Such as, that "if people keep their opinions to themselves, no man will hurt them," and the like. Answer, p. 45.

† Page 18.

her decisions she pronounces, with him, a heretic, and "a man that is a heretic, after the first and second admonition, reject." In like manner, calling her tenets "sound doctrine," or taking it for granted that they are so, (which the conclave at Rome can do as well as the convocation at London,) and "soundness in the faith being a necessary qualification in a Christian teacher," there is no avoiding the conclusion, that every "Christian teacher" (in, and out of the church too, if you can catch him, "soundness in the faith" being alike "necessary" in all) must have these tenets strapped about his neck by oaths and subscriptions. An argument which thus fights in any cause, or on either side, deserves no quarter. I have said, that this reasoning, and these applications of Scripture, are equally competent to the defenders of popery—they are more so. The popes, when they assumed the power of the apostles, laid claim also to their infallibility; and in this they were consistent. Protestant churches renounce with all their might this infallibility, whilst they apply to themselves every expression that describes it, and will not part with a jot of the authority which is built upon it. But to return to the terms of the argument—"Is it necessary that a Christian teacher should be sound in the faith?"

1. Not in nine instances out of ten to which the test is now extended. Nor,
- <sup>c</sup>2. If it were, is this the way to make him so; there being as little probability that the determinations of a set of men whose good fortune had advanced them to high stations in the church should be right, as the conclusions of private inquirers. Nor,
3. Were they actually right, is it possible to conceive how they can, upon this author's principles, produce the effect contended for, since "we set them not up as a

rule of faith;\* since "they do not decide matters for us, nor bind them upon us;" since "they tie no man up from altering his opinion," are "no ways inconsistent with the right of private judgment," are, in a word, of no more authority than an old sermon; nor, consequently, much more effectual, either for the producing or securing of "soundness in the faith."

The answerer, not trusting altogether to the strength of his "argument," endeavours next to avail himself of a "concession" which he has gained, he imagines, from his adversary, and which he is pleased to look upon "as in a manner giving up the main point." Our business, therefore, will be to show what this concession, as he calls it, amounts to, and wherein it differs from the "main point," the requisition of subscription to established formularies. It is objected to the Articles of the Church of England, that they are at variance with the actual opinions both of the governors and members of that church; so much so, that the men who most faithfully and explicitly maintain these articles get persecuted for their singularity, excluded from orders, driven from universities, and are compelled to preach the established religion in fields and conventicles. Now this objection, which must cleave to every *fixed* formulary, might, we conceive, be removed if a test was substituted, supposing any test to be insisted upon, which could adapt itself to the opinions, and keep pace with the improvements of each succeeding age. This, in some measure, would be the case, if the governors of the church for the time being were authorized to receive from candidates for orders, declarations of their religious principles in their own words, and allowed, at their discretion, to admit them into the ministry. Bishops being

\* Pages 10, 11, 13, 29.

taken out of the lump of the community will generally be of the same leaven, and partake both of the opinions and moderation of the times they live in. This is the most that can be made of the concession; and how this gives up the "main point," or indeed any thing, it is not easy to discover.

The next paragraph of the Answer attacks the account which the Considerations have given of the "rise" and "progress" of the custom in question; "the reverse of which," the answerer tells us, "is the truth," and by way of proof gives his own account of the matter, which, so far from being the "reverse," is in effect, or very nearly, the same.

The reader shall see the two accounts side by side, and is desired to judge whether the author of the Considerations, so far from being confuted in this point, is even contradicted.

"The protestants, aware how greatly they were misrepresented and abused, began to think it necessary to repel the various calumnies that had been cast upon them, by setting forth some public Constitutions or Confessions, as a declaration of their faith and worship. And to make such declaration still more authentic, they likewise engaged themselves in a mutual bond of conformity to all these constitutions." Considerations, page 6.

"As some who set up for reformers had broached many erroneous and pestilent doctrines; the Lutherans first, and, after their example, other protestant churches, thought fit to draw up Confessions of Faith. And this they did, partly to acquit themselves of the scandal of abetting wild and seditious enthusiasts, and declaring what were their real doctrines; partly" (observe how tenderly this is introduced) "to prevent such enthusiasts on the one hand, and popish emissaries on the other, from intruding themselves into the ministry." Answer, pages 6, 7.

Now were the "origin" of a custom of more conse-

quence than it is to a question concerning the "propriety" of it, can any one doubt, who credits even the answerer's own account, but that the motive assigned in the Considerations both did exist, and was the principal motive? There is one account, indeed, of the "origin" of this custom, which, were it true, would directly concern the question. "This practice," our author tells us in another part of his Answer,\* "is said to be derived from the apostles themselves." I care not what "is said." It is impossible that the practice complained of, the imposition of articles of faith by "fallible" men, could originate from the "apostles," who, under the direction by which they acted, were "infallible."!

But this practice, from whatever "root of bitterness" it sprung, has been one of the chief causes, we assert, of the divisions and distresses which we read of in ecclesiastical history. The matter of fact our author does not, because he cannot, deny. He rather chooses to insinuate that "such divisions and disturbances were

\* Page 19.

† How a creed is to be made, as the Considerations recommend, in which all parties shall agree, our author cannot understand. I will tell him how; by adhering to Scripture terms: and this will suit the best idea of a Creed, (a summary or compendium of a larger volume,) and the only fair purpose of one, *instruction*.

It is observed in the Considerations, that the multiplicity of the propositions contained in the Thirty-nine Articles is alone sufficient to show the impossibility of that consent which the Church supposes and requires.—Now, what would any man guess is the answer to this? Why, "that there are no less than three propositions in the very first verse of St. John's Gospel." Had there been "three thousand," it would have been nothing to the purpose: where propositions are received upon the authority of the proposer, it matters not how many of them there are; the doubt is not increased with the number; the same reason which establishes one establishes all. But is this the ease with a system of propositions which derives no evidence from the proposer? which must each stand upon its own separate and intrinsic proof?—We thought it necessary to oppose note to note in the place in which we found it; though neither here nor in the Answer is it much connected with the text.

not owing to the governors of the church, but to the perverse disputings of heretics and schismatics." He *must* know that there is oppression as well as resistance, provocation as well as resentment, abuse of power as well as opposition to it: and it is too much to take for granted, without one syllable of proof, that those in possession of power have been always in the right, and those who withstood them in the wrong. "Divisions" and "disturbances" have in fact, and in all ages, arisen on this account; and it is a poor shift to say, because it may always be said, that such only are chargeable with these mischiefs as refused to submit to whatever their superiors thought proper to impose.\*

Nor is it much better when he tells us, "that these subtleties of metaphysical debate which we complain of in our Articles, were introduced by the several heretics of those times;" especially as it is evident that whoever first introduced, it is the governors of the church who still continue them.

But our author cannot conceive what all this, as relating to "creeds" only and "confessions," to the "terms of communion" rather than of admission into the ministry, is to the purpose. Will he then give up "creeds" and "confessions?" or will his church thank him for it if he does? a church which, by transfusing the substance of her Articles into the form of her public worship, has in effect made the "terms of communion" and of admission into the ministry the same.

\* The following sentiment of our author is too curious to be omitted: "Possibly too he (the author of the Considerations) may think that insurrections and rebellions in the state are not owing to the unruliness of factious subjects, but to kings and rulers; but most reasonable men, I believe, will think otherwise."—A common reader may think this observation of the answerer a little beside the question. But the answerer may say, with Cicero and Dr. King, "Suscepto negotio, majus mihi quiddam proposui, in quo meam in rempublicam voluntatem populus perspicere posset."—Motto to Dr. K.'s Oration in 1749.

This question, like every other, however naked you may strip it by abstraction, must always be considered with a reference to the practice you wish to reform.

The author of the Considerations contends very properly, that it is one of the first duties a Christian owes to his Master, "to keep his mind open and unbiassed" in religious inquiries. Can a man be said to do this, who must bring himself to assent to opinions proposed by another? who enters into a profession where both his subsistence and success depend upon his continuance in a particular persuasion? In answer to this we are informed, that these Articles are no "rule of faith;" (what not to those who subscribe them?) that "the church deprives no man of his right of private judgment;" (she cannot—she hangs, however, a dead weight upon it;) that it is a "very unfair state of the case, to call subscription a declaration of our full and final persuasion in matters of faith;" though if it be not a "full" persuasion, what is it? and ten to one it will be "final," when such consequences attend a change. That "no man is hereby tied up from impartially examining the word of God," i. e. with the "impartiality" of a man who must "eat" or "starve," according as the examination turns out; an "impartiality" so suspected, that a court of justice would not receive his evidence under half of the same influence: "nor from altering his opinion if he finds reason so to do;" which few, I conceive, will "find," when the alteration must cost them so dear. If one could give credit to our author in what he says here, and in some other passages of his Answer, one would suppose that, in his judgment at least, subscription restrained no man from adopting what opinion he pleased, provided "he does not think himself bound

openly to maintain it:" that "men may retain their preferments, if they will but keep their opinions to themselves." If this be what the Church of England means, let her say so. This is indeed what our author admits here, and yet, from the outcry he has afterwards raised against all who continue in the church whilst they dissent from her Articles, one would not suppose there was a pardon left for those who "keep even to themselves an opinion" inconsistent with any one proposition they have subscribed. The fact is, the gentleman has either shifted his opinion in the course of writing the Answer, or had put down these assertions, not expecting that he should have occasion afterwards to contradict them.

It seemed to add strength to this objection, that the judgment of most thinking men being in a progressive state, their opinions of course must many of them change; the evil and iniquity of which the answerer sets forth with great pleasantry, but has forgot at the same time to give us any remedy for the misfortune, except the old woman's receipt, to leave off thinking for fear of thinking wrong.

But our church "preaches," it seems, "no other Gospel than that which she received," nor "propounds any other Articles for Gospel," nor "fixes any standards or criterions of faith, separate from this Gospel: and so she herself fully declares;" and we are to take her "word" for it, when the very complaint is, that she has never "acted" up to this declaration, but in direct contradiction to it. When she puts forth a system of propositions conceived in a new dialect, and in unscriptural terms; when she ascribes to these the same evidence and certainty as to Scripture itself, or decrees and acts as if they were equally evident and certain; she incurs, we

apprehend, the charge which these expressions imply. She claims indeed "authority in controversies of faith," but "only so far," says her apologist, as "to judge for herself what should be her own terras of communion, and what qualifications she shall require in her own ministers." All which, in plainer English, comes to this; that two or three men, betwixt two and three centuries ago, fixed a multitude of obscure and dubious propositions, which many millions after must bring themselves to believe, before they be permitted to share in the provision which the state has made (and to which all of every sect contribute) for regular opportunities of public worship, and the giving and receiving of public instruction. And this our author calls the magistrate's "judging for himself,"\* and exercising the "same right as all other persons have to judge for themselves." For the reasonableness of it, however, he has nothing to offer, but that it "is no more than what other churches, popish" too, to strengthen the argument, "as well as protestant," have done before. He might have added, seeing "custom" is to determine the matter, that it had been "customary" too from early ages for Christians to anathematize and burn each other for difference of opinion in some points of faith, and for difference of practice in some points of ceremony.

We now accompany the learned answerer to what he is pleased to call the "main question," and which he is so much "puzzled to keep in sight." The argument! in favour of subscription, and the arbitrary exclusion of men from the church or ministry, drawn from the nature of a society and the rights incidental to society, our

\* Page 26.

† What would any man in his wits think of this argument, if upon the strength of it they were to make a Jaw, that none but red-haired people should be admitted into orders, or even into churches?

author resigns to its fate, and to the answer which has been given it in the Considerations. He contends only, that the conduct of the apostles in admitting the eunuch and the centurion upon a general profession of their faith in Christ, "has nothing to do with the case of subscription," as they were admitted, not into the ministry, but only the communion of the church. Now, in the first place, suppose the eunuch or centurion had taken upon them, as probably they did, to teach Christianity, would' they have been inhibited by the apostles as not having given sufficient "proof or assurance of their soundness in the faith?" And if not, what becomes of the necessity of such "assurances from a Christian teacher?" In the second place, suppose you consider the church as one society, and its teachers as another, is it probable that those who were so tender in keeping any one out of the first, would have thought the argument we were encountering, or any thing else, a pretence for a right of arbitrary exclusion from the latter? The case of Cornelius, says our author, is "extraordinary: while St. Peter was preaching to him, the Holy Ghost fell upon all them which heard the word." And is not this author ashamed to own, that any are excluded from the communion, or even ministry of the church, who would have been entitled by their faith "to the gifts of the Holy Ghost?"

The answerer in the next paragraph acknowledges, that to admit converts into the church upon this one article of faith, that Jesus is the Messiah, was indeed the practice of the apostles;\* but then he tells us, what

\* Although the question, whether to believe that Jesus is the Messiah, he not the only necessary article of faith, is a question in which we have no *concern*; our author, with the best inclination in the world, not being able to fix such an opinion upon us; yet I cannot help observing, that he has put two of

must sound a little odd to a Christian ear, and comes the more awkwardly from this author, whom, if you turn over a page, you will find quoting the "practice of the apostles" with a vengeance: he tells us, I say, "that no argument can be drawn from the practice of the apostles."<sup>\*</sup> Now with regard to the "practice of the apostles," and the application of it to ourselves, the case seems to be this, (the very reverse, observe, of our author's rule,) that we are always bound not "to go beyond" the precedent, though, for want of the same authority, we may not always "advance up to it." It surely at least becomes us to be cautious of "proceeding," where they, in the plenitude of their commission, thought proper to "stop."

It is alleged in the Considerations, that annexing emoluments to the profession of particular opinions is a strong and dangerous inducement to prevarication; and the danger is the greater, as prevarication in one instance has a tendency to relax the most sacred obligations, and make way for perfidy in every other. But "this," it seems, "has nothing to do with the question." † Why, it is the very question, Whether the magistrate ought to confine the provision he makes for religion to those who assent, or declare their assent, to a particular system of controverted divinity? and this is one direct objection against it. But "must the magistrate, then," exclaims our alarmed adversary, "establish no tithes, no rich benefices, no dignities, or bishoprics?" As many

the oddest constructions upon the terms of the propositions that ever entered into the fancy of man to conceive. One is, which you may be sure he intends for his adversaries, "that it is necessary to believe Jesus to be a true prophet, yet not necessary to believe one doctrine that he has taught." Page 16. The other, which he means for himself, is, that "by the Messiah we are to understand the only begotten Son of God, anointed, and sent by the Father to make propitiation for the sins of the whole world."

\* Page 16.

† Page 19. 20.

as he pleases, only let him not convert them into snares and traps by idle and unnecessary conditions. "But must he admit all persons indiscriminately to these advantages?" The author of the Considerations has told him, that he may require conformity to the liturgy, rites, and offices he shall prescribe: he may trust his officers with a discretion as to the religious principles of candidates for orders, similar to what they now exercise with regard to their qualifications: he may censure extravagant preaching when it "appears;" precautions surely sufficient either to keep the "wildest sectaries" out of the church, or prevent their doing any mischief if they get in. The exclusion of papists is a separate consideration. The laws against popery, as far as they are justifiable, proceed upon principles with which the author of the Considerations has nothing to do. Where, from the particular circumstances of a country, attachments and dispositions hostile and dangerous to the state are accidentally or otherwise connected with certain opinions in religion, it may be necessary to lay encumbrances and restraints upon the profession or propagation of such opinions. Where a great part of any sect or religious order of men are enemies to the constitution, and you have no way of distinguishing those who are not so, it is right perhaps to fence the whole order out of your civil and religious establishment: it is the right at least of self-defence, and of extreme necessity. But even this is not on account of the religious opinions themselves, but as they are probable marks, and the only marks you have, of designs and principles which it is necessary to disarm. I would observe, however, that in proportion as this connexion between the civil and religious principles of the papists is dissolved, in the same proportion ought the state to mitigate the

hardships and relax the restraints to which they are made subject.

If we complain of severities, of pains and penalties, the answerer cannot discover "whom or what we mean:" and lest his reader should, by a figure extremely well known in the craft of controversy, he proposes a string of questions in the person of his adversary, to which he gives his own peremptory and definitive NO.\* We will take a method, not altogether so compendious, but, we trust, somewhat more satisfactory. We will repeat the same questions, and let the church and state answer for themselves. First then,

"Does our church or our government inflict any corporeal punishment, or levy any fines or penalties on those who will not comply with the terms of her communion?"—"Be it enacted, that all and every person or persons that shall neglect or refuse to receive the sacrament of the Lord's Supper according to the usage of the Church of England, and yet, after such neglect or refusal, shall execute any office or offices, civil or military, after the times be expired wherein he or they ought to have taken the same, shall, upon conviction thereof, besides the loss of the office, forfeit the sum of five hundred pounds." † Stat. 25 Car. II. c. 2. Now, although starving be no "corporeal punishment," nor the loss of all a man has a "fine" or "penalty," yet depriving men of the common benefits of society, and rights even of lay subjects, because "they will not comply with the terms of church communion," is a "severity" that might have deserved from our author some other apology besides the mere suppression of the fact.

\* Page 21.

† This and the Corporation Act, an otherwise excellent person calls the laws which secure both our civil and religious liberties. Blackstone's Comm. vol. iv. p. 43-2.

2. "Doth it deny them the right or privilege of worshipping God in their own way?"—"Whoever shall take upon him to preach or teach in any meeting, assembly, or conventicle, and shall thereof be convicted, shall forfeit for the first offence twenty pounds, and for every other offence forty pounds." Stat. 22 Car. II. c. 1.—"No person shall presume to consecrate or administer the sacrament of the Lord's Supper before he be ordained priest, after the manner of the Church of England, on pain of forfeiting one hundred pounds for every such offence." Stat. 13 and 14 Car. II. c. 4. These laws are in full force against all who do not subscribe to the Thirty-nine Articles of the Church of England, except the 34th, 35th, and 36th, and part of the 20th Article.

3. "Are men denied the liberty of free debate?"—"If any person, having been educated in, or at any time having made profession of, the Christian faith within the realm, shall by writing, printing, teaching, or advised speaking, deny any one of the Persons of the Holy Trinity to be God—he shall for the first offence be disabled to hold any office or employment, or any profit appertaining thereto; for the second offence shall be disabled to prosecute any action or information in any court of law or equity, or to be guardian of any child, or executor or administrator of any person, or capable of any legacy or deed of gift, or to bear any office for ever within this realm, and shall also suffer imprisonment for the space of three years from the time of such conviction." Stat. 9 and 10 Will. III. c. 32.

It has been thought to detract considerably from the pretended use of these subscriptions, that they excluded none but the conscientious; a species of men more wanted, we conceive, than formidable to any religious

establishment. This objection applies equally, says our answerer,\* to the "oaths of allegiance and supremacy;" and so far as it does apply, it ought to be attended to; and the truth is, these oaths might in many instances be spared without either danger or detriment to the community. There is, however, an essential difference between the two cases: a scruple concerning the oath of allegiance implies principles which may excite to acts of hostility against the state: a scruple about the truth of the Articles implies no such thing. †

Our author, good man, "is well persuaded, that the generality of the clergy, when they offer themselves for ordination, consider seriously what office they take upon them, and firmly believe what they subscribe to." I am persuaded much otherwise. But as this is a "fact," the reader, if he be wise, will neither take the answerer's word for it nor mine, but form his own judgment from his own observation. Bishop Burnet complained above sixty years ago, that "the greater part," even then, "subscribed the Articles without ever examining them, ‡ and others did it because they must do it." Is it probable, that in point either of seriousness or orthodoxy, the clergy are much mended since?

The pleas offered in support of this practice of subscription come next to be considered. "One of these is drawn from the sacred writings being capable of such a variety of senses, that men of widely different persuasions shelter themselves under the same forms of expression." Our author, after quarrelling with this representation of the plea, gives his readers, in its stead,

\* Page 22.

† The answerer might have found a parallel below in some other oaths, which he does not care to speak of, viz. the case of college statutes, page 34 of the Considerations.

‡ Burnet's History of his Own Times—Conclusion.

a long quotation from the archdeacon of Oxford's charge\* What, he is to gain by the change, or the quotation, I cannot perceive, as the same first query still recurs, "Is it true, that the Scriptures are in reality so differently interpreted in points of real consequence?" In answer to which, the archdeacon of Oxford, we are told, "has shown that points of real consequence are differently interpreted," and "the plainest texts explained away," and has "instanced in the first chapter of St. John's Gospel." The plea, we conceive, is not much indebted to the archdeacon of Oxford. But be these Scriptures interpreted as they will, each man has still a right to interpret them for himself. The Church of Rome, who always pushed her conclusions with a courage and consistency unknown to the timid patrons of protestant imposition, saw immediately, that as the laity had no right to interpret the Scriptures, they could have no occasion to read them, and therefore very properly locked them up from the intrusion of popular curiosity. Our author cites the above-mentioned query from the Considerations as the *first* query, which would lead his reader to expect a *second*. The reader, however, may seek that second for himself, the answerer is not obliged to produce it—it stands thus: Suppose the Scriptures thus variously interpreted, does subscription mend the matter? The reader too is left to find an answer for himself.

The next, the strongest, the only tolerable plea for subscription is, "that all sorts of pestilent heresies might be taught from the pulpit, if no such restraint as this was laid upon the preacher."<sup>†</sup> How far it is probable that this would be the consequence of

\*See this whole Charge answered in the London Chronicle, by Priscilla. The Lord hath sold Sisera into the hand of a woman!

† Page 26.

removing the subscription, and by what other means it might be guarded against, has been hinted already, and will again be considered in another place. We will here only take notice of one particular expedient suggested in the Considerations, and which has often indeed elsewhere been proposed, namely, "that the church, instead of requiring subscription beforehand, to the present, or to any other Articles of faith, might censure her clergy afterwards, if they opposed or vilified them in their preaching." The advantage of which scheme above the present is manifest, if it was only for this reason, that you distress and corrupt thousands now, for one that you would ever have occasion to punish. Our author, nevertheless, "is humbly of opinion, that it is much better to take proper precautions beforehand:" he must, with all his "humility," know, that when it has been proposed to take proper precautions of the press, by subjecting authors to an *imprimatur before* publication, instead of punishment *after* it, the proposal has been resented, as an open attack upon the rights and interests of mankind. The common sense and spirit of the nation could see and feel this distinction and the importance of it, in the case of publishers; and why preachers should be left in a worse situation, is not very easy to say.

The example of the Arminian confession is, upon this occasion, recommended by the author of the Considerations; a confession which was compiled for the edification and instruction of the members of that church, without peremptorily insisting upon any one's assent to it. But it is the misfortune of the Arminian to be no national church—the misfortune, alas! of Christianity herself in her purest period; when she was under the government of the apostles; without alliance with the

states of this world; when she composed, nevertheless, a church as real, we conceive, and as respectable, as any national church that has existed since.

Our author, who can much sooner make a distinction than see one, does not comprehend, it seems, any difference between confessions of faith and preaching, as to the use of unscriptural terms. Did a preacher, when he had finished his sermon, call upon his congregation to subscribe their names and assent to it, or never to come more within the doors of his church, there would, indeed, be some sort of resemblance betwixt the two cases: but as the hearers are at liberty to believe preachers or no, as they see, or he produces, reasons for what he says; there can be no harm, and there is a manifest utility, in trusting him with the liberty of explaining his own moaning in his own terms.

We now come, and with the tenderest regret, to the case of those who continue in the church without being able to reconcile to their belief every proposition imposed upon them by subscription; over whose distress our author is pleased to indulge a wanton and ungenerous triumph. They had presumed, it seems, that it was some apology for their conduct, that they sincerely laboured to render to religion their best services, and thought their present stations the fairest opportunities of performing it. This may not, perhaps, amount to a complete vindication: it certainly does not fully satisfy even their own scruples; else where would be the cause of complaint? What need of relief, or what reason for their petitions? It might have been enough, however, to have exempted them from being absurdly and indecently compared with faithless hypocrites, with Papists and Jesuits, who, for other purposes, and with even opposite designs, are supposed to creep into the church

through the same door. For the fullest and fairest representation of their case, I refer our author to the excellent Hoadly; or, as Hoadly possibly may be no book in our author's library, will it provoke his "raillery" to ask, what he thinks might be the consequence, if all were at once to withdraw themselves from the church who were dissatisfied with her doctrines? Might not the church lose, what she can ill spare, the service of many able and industrious ministers? Would those she retained be such as acquiesced in her decisions from inquiry and conviction? Would not many or most of them be those who keep out of the way of religious scruples by lives of secularity and voluptuousness? by mixing with the crowd in the most eager of their pursuits after pleasure or advantage? One word with the answerer, before we part, upon this head. Whence all this great inquisitiveness, this solicitude to be acquainted with the person, the opinions, and associates of his adversary? Whence that impudent wish that he had been "more explicit, in particular with regard to the doctrine of the Trinity?" Is it out of a pious desire to fasten some heresy, or the imputation of it, upon him? Is he "called out of the clouds" to be committed to the flames? \*

The 40th page of the Answer introduces a paragraph of considerable length, the sum, however, and substance

\* We were unwilling to decline the defence of the persons here described, though the expression in the Considerations which brought on the attack manifestly related to a different subject. The author of the Considerations speaks of "being bound" to "keep up" these forms until relieved by proper authority; of "ministerially" complying with what we are not able to remove; alluding, no doubt, to the case of church governors, who are the instruments of imposing a subscription which they may disapprove. But the answerer, taking it for granted, that " ministerially complying" meant the compliance of ministers, i. e. of clergymen officiating in their functions, has, by a quibble, or a blunder, transferred the passage to a sense for which it was not intended.

of which is this—that if subscription to articles of faith were removed, confusion would ensue; the people would be distracted with the disputes of their teachers, and the pulpits filled with controversy and contradiction. Upon this "fact" we join issue, and the more readily as this is a sort of reasoning we all understand. The extent of the legislator's right may be an abstruse inquiry; but whether a law does more good or harm, is a plain question which every man can ask. Now, that distressing many of the clergy, and corrupting others; that keeping out of churches good Christians and faithful citizens; that making parties in the state, by giving occasion to sects and separations in religion; that these are inconveniences, no man in his senses will deny. The question therefore is, what advantage do you find in the opposite scale to balance these inconveniences? The simple advantage pretended is, that you hereby prevent "wrangling" and contention in the pulpit. Now, in the first place. I observe, that allowing this evil to be as grievous and as certain as you please, the most that can be necessary for the prevention of it is, to enjoin your preachers, as to such points, silence and neutrality. In the next place, I am convinced that the danger is greatly magnified. We hear little of these points at present in our churches and public teaching, and it is not probable that leaving them at large would elevate them into more importance, or make it more worth men's while to quarrel about them. They would sleep in the same grave with many other questions, of equal importance with themselves, or sink back into their proper place, into topics of speculation, or matters of debate from the press. None but men of some reflection would be forward to engage in such subjects, and the least reflection would teach a man that preaching is not the

proper vehicle of controversy. Even at present, says our author, "we speak and write what we please with impunity." And where is the mischief? or what worse could ensue if subscription were removed? Nor can I discover any thing in the disposition of the petitioning clergy that need alarm our apprehensions. If they are impatient under the yoke, it is not from a desire to hold forth their opinions to their congregations, but that they may be at liberty to entertain them themselves, without offence to their consciences, or ruin to their fortunes.

Our author has added, by way of make-weight to his argument, "that many common Christians," he believes, "would be greatly scandalized if you take away their creeds and catechisms, and strike out of the liturgy such things as they have always esteemed essential."<sup>\*</sup> Whatever reason there may be for this belief at present, there certainly was much greater at the Reformation, as the popish ritual, which was then "taken away," had a fascination and antiquity which ours cannot pretend to. Many were probably "scandalized" at parting with their beads and their mass-books, that lived afterwards to thank those who taught them better things. Reflection, we hope, in some, and time, we are sure, in all, will reconcile men to alterations established in reason. If there be any danger, it is from some of the clergy, who, with the answerer, would rather suffer the "vineyard" to be overgrown with "weeds," than "stir the ground," or, what is worse, call these weeds "the fairest flowers in the garden." Such might be ready enough to raise a hue and cry against all innovators in religion, as "overturners of churches" and spoilers of temples.

But the cause which of all others stood most in the

\* Page 42.

way of the late petitions for relief, was an apprehension that religious institutions cannot be disturbed without awakening animosities and dissensions in the state, of which no man knows the consequence. Touch but religion, we are told, and it bursts forth into a flame. Civil distractions may be composed by fortitude and perseverance; but neither reason nor authority can control, there is neither charm nor drug which will assuage, the passions of mankind when called forth in the cause and to the battles of religion. We were concerned to hear this language from some who, in other instances, have manifested a constancy and resolution which no confusion, nor ill aspect of public affairs, could intimidate. After all, is there any real foundation for these terrors? Is not this whole danger, like the lion of the slothful, the creature of our fears, and the excuse of indolence? Was it proposed to make articles instead of removing them, there would be room for the objection. But it is obvious that subscription to the Thirty-nine Articles might be altered or withdrawn upon general principles of justice and expediency, without reviving one religious controversy, or calling into dispute a single proposition they contain. Who should excite disturbances? Those who are relieved will not; and unless subscription were like a tax, which, being taken from one, must be laid with additional weight upon another, is it probable that any will complain that they are oppressed, because their brethren are relieved? or that those who are so "strong in the faith" will refuse to "bear with the infirmities of the weak?" The few who upon principles of this sort opposed the application of the dissenters, were repulsed from parliament with disdain, even by those who were no friends to the application itself.

The question concerning the object of worship is attended, I confess, with difficulty: it seems almost directly to divide the worshippers. But let the Church pare down her excrescences till she comes to this question; let her discharge from her liturgy controversies unconnected with devotion; let her try what may be done for all sides, by worshipping God in that generality\* of expression in which he himself has left some points; let her dismiss many of her Articles, and convert those which she retains into terms of peace; let her recall the terrors she suspended over freedom of inquiry; let the toleration she allows to dissenters be made "absolute;" let her invite men to search the Scriptures; let her governors encourage the studious and learned of all persuasions:—Let her do this—and she will be secure of the thanks of her own clergy, and, what is more, of their sincerity. A greater consent may grow out of inquiry than many at present are aware of; and the few who, after all, shall think it necessary

\* If a Christian can think it an intolerable thing to worship one God through one mediator Jesus Christ, in company with any such as differ from him in their notions about the metaphysical nature of Christ, or of the Holy Ghost, or the like; I am sorry for it. I remember the like objection made at the beginning of the Reformation by the Lutherans against the lawfulness of communicating with Zuinglius and his followers, because they had not the same notion with them of the elements in the sacrament. And there was the same objection once against holding communion with any such as had not the same notions with themselves about the secret decrees of God relating to the predestination and reprobation of particular persons. But whatever those men may please themselves with thinking who are sure they are arrived at the perfect knowledge of the most abstruse point", this they may be certain of; that in the present state of the church, even supposing only such as are accounted orthodox to be joined together in one visible communion, they communicate together with a very great variety and confusion of notions, either comprehending nothing plain and distinct, or differing from one another as truly and essentially as others differ from them all; nay, with more certain difference with relation to the object of worship than if all prayers were directed (as bishop Bull says almost all were in the first ages) to God or the Father, through the Son.—Hoadly's Answer to Dr. Hare's Sermon.

to recede from our communion, will acknowledge the necessity to be inevitable; will respect the equity and moderation of the established church, and live in peace with all its members.

I know not whether I ought to mention, among so many more serious reasons, that even the governors of the church themselves would find their ease and account in consenting to an alteration. For besides the difficulty of defending those decayed fortifications, and the indecency of deserting them, they either are, or will soon find themselves, in the situation of a master of a family whose servants know more of his secrets than it is proper for them to know, and whose whispers and whose threats must be bought off at an expense which will drain the "apostolic chamber" dry.

Having thus examined in their order, and, as far as I understood them, the several answers\* given by our author to the objections against the present mode of subscription, it now remains, by way of summing up the evidence, to bring "forward" certain other

\* In his last note, our author breaks forth into "astonishment" and indignation, at the "folly, injustice, and indecency" of comparing our church to the Jewish in our Saviour's time, and even to the "tower of Babel," mistaking the church, in this last comparison, for one of her monuments (which indeed, with most people of his complexion, stands for the same thing) erected to prevent our dispersion from that grand centre of catholic dominion, or, in the words of a late celebrated castle-builder, "to keep us together." If there be any "indecency" in such a comparison, it must be chargeable on those who lead us to it, by making use of the same terms with the original architects, and to which the author of the Considerations evidently alludes. This detached note is concluded with as detached, and no less curious, an observation, which the writer thinks may be a "sufficient answer" to the whole, namely, that the author of the Considerations "has wrought no miracles for the conviction of the answerer and his associates." For what purpose this observation can be "sufficient" it is not easy to guess, except it be designed to insinuate, what may perhaps really be the case, that no less than a miracle will serve to cast out that kind of spirit which has taken so full possession of them, or ever bring them to a sound mind, and a sincere love of truth.

arguments contained in the Considerations, to which no answer has been attempted. It is contended, then,

- I. That stating any doctrine in a confession of faith with a greater degree of "precision" than the Scriptures have done, is in effect to say, that the Scriptures have not stated it with "precision" enough; in other words, that the Scriptures are not sufficient.—"Mere declamation."
- II. That this experiment of leaving men at liberty, and points of doctrine at large, has been attended with the improvement of religious knowledge, where and whenever it has been tried. And to this cause, so far as we can see, is owing the advantage which protestant countries in this respect possess above their popish neighbours.—No answer.
- III. That keeping people out of churches who might be admitted consistently with every end of public worship, and excluding men from communion who desire to embrace it upon the terms that God prescribes, is certainly not encouraging, but rather causing men to forsake, the assembling of themselves together.—No answer.
- IV. That men are deterred from searching the Scriptures by the fear of finding there more or less than they look for; that is, something inconsistent with what they have already given their assent to, and must at their peril abide by—No answer.
- V. That it is not giving truth a fair chance, to decide points at one certain time, and by one set of men, which had much better be left to the successive inquiries of different ages and different persons.—No answer.

VI. That it tends to multiply infidels amongst us, by exhibiting Christianity under a form and in a system which many are disgusted with, who yet will not be at the pains to inquire after any other.—No answer.

At the conclusion of his pamphlet, our author is pleased to acknowledge, what few, I find, care any longer to deny, "that there are some things in our Articles and Liturgy which he should be glad to see amended, many which he should be willing to give up to the scruples of others, but that the heat and violence with which redress has been pursued, preclude all hope of accommodation and tranquillity—that "we had better wait, therefore, for more peaceable times, and be contented with our present constitution as it is," until a fairer prospect shall appear of changing it for the better. After returning thanks, in the name of the "fraternity," to him and to all who touch the burden of subscription with but one of their fingers, I would wish to leave with them this observation: that as the man who attacks a flourishing establishment writes with a halter round his neck; few ever will be found to attempt alterations but men of more spirit than prudence, of more sincerity than caution, of warm, eager, and impetuous tempers; that, consequently, if we are to wait for improvement till the cool, the calm, the discreet part of mankind begin it, till church governors solicit, or ministers of state propose it—I will venture to pronounce, that (without *His* interposition with whom nothing is impossible) we may remain as we are till the "renovation of all things."

REASONS FOR CONTENTMENT,  
ADDRESSED TO THE  
LABOURING PART OF THE BRITISH PUBLIC.

## REASONS FOR CONTENTMENT.

HUMAN life has been said to resemble the situation of spectators in a theatre, where, whilst each person is engaged by the scene which passes before him, no one thinks about the place in which he is seated. It is only when the business is interrupted, or when the spectator's attention to it grows idle and remiss, that he begins to consider at all, who is before him or who is behind him, whether others are better accommodated than himself, or whether many be not much worse. It is thus with the various ranks and stations of society. So long as a man is intent upon the duties and concerns of his own condition, he never thinks of comparing it with any other; he is never troubled with reflections upon the different classes and orders of mankind, the advantages and disadvantages of each, the necessity or non-necessity of civil distinctions, much less does he feel within himself a disposition to covet or envy any of them. He is too much taken up with the occupations of his calling, its pursuits, cares, and business, to bestow unprofitable meditations upon the circumstances in which he sees others placed. And by this means a man of a sound and active mind has, in his very constitution, a remedy against the disturbance of envy and discontent. These passions gain no admittance into his breast, because there is no leisure there or vacancy for the trains of

thought which generate them. He enjoys, therefore, ease in this respect, and ease resulting from the best cause, the power of keeping his imagination at home; of confining it to what belongs to himself, instead of sending it forth to wander amongst speculations which have neither limits nor use, amidst views of unattainable grandeur, fancied happiness, of extolled because unexperienced privileges and delights.

The wisest advice that can be given is, never to allow our attention to dwell upon comparisons between our own condition and that of others, but to keep it fixed upon the duties and concerns of the condition itself. But since every man has not this power; since the minds of some men will be busy in contemplating the advantages which they see others possess; and since persons in laborious stations of life are wont to view the higher ranks of society with sentiments which not only tend to make themselves unhappy, but which are very different from the truth; it may be an useful office to point out to them some of those considerations which, if they *will* turn their thoughts to the subject, they should endeavour to take fairly into the account.

And, first; we are most of us apt to murmur, when we see exorbitant fortunes placed in the hands of single persons; larger, we are sure, than they can want, or, as we think, than they can use. This is so common a reflection, that I will not say it is not natural. But whenever the complaint comes into our minds, we ought to recollect, that the thing happens in consequence of those very rules and laws which secure to ourselves our property, be it ever so small. The laws which accidentally cast enormous estates into one great man's possession, are, after all, the self-same laws which

protect and guard the poor man. Fixed rules of property are established for one as well as another, without knowing, before-hand, whom they may affect. If these rules sometimes throw an excessive or disproportionate share to one man's lot, who can help it? It is much better that it should be so, than that the rules themselves should be broken up: and you can only have one side of the alternative or the other. To abolish riches, would not be to abolish poverty; but, on the contrary, to leave it without protection or resource. It is not for the poor man to repine at the effects of laws and rules, by which he himself is benefited every hour of his existence; which secure to him his earnings, his habitation, his bread, his life; without which he, no more than the rich man, could either eat his meal in quietness, or go to bed in safety. Of the two, it is rather more the concern of the poor to stand up for the laws, than of the rich; for it is the law which defends the weak against the strong, the humble against the powerful, the little against the great; and weak and strong, humble and powerful, little and great, there would be, even were there no laws whatever. Beside, what, after all, is the mischief? The owner of a great estate does not eat or drink more than the owner of a small one. His fields do not produce worse crops, nor does the produce maintain fewer mouths. If estates were more equally divided, would greater numbers be fed, or clothed, or employed? Either, therefore, large fortunes are not a public evil, or, if they be in any degree an evil, it is to be borne with, for the sake of those fixed and general rules concerning property, in the preservation and steadiness of which all are interested.

Fortunes, however, of any kind, from the nature of

the thing, can only fall to the lot of a few. I say, "from the nature of the thing." The very utmost that can be done by laws and government, is to enable every man, who hath health, to procure a healthy subsistence for himself and a family. Where this is the case, things are at their perfection. They have reached their limit. Were the princes and nobility, the legislators and counsellors of the land, all of them the best and wisest men that ever lived, their united virtue and wisdom could do no more than this. They, if any such there be, who would teach you to expect more, give you no instance where more has ever been attained.

But Providence, which foresaw, which appointed, indeed, the necessity to which human affairs are subjected, (and against which it were impious to complain,) hath contrived, that whilst fortunes are only for a few, the rest of mankind may be happy without them. And this leads me to consider the comparative advantages and comforts which belong to the condition of those who subsist, as the great mass of every people do and must subsist, by personal labour, and the solid reasons they have for contentment in their stations. I do not now use the terms poor and rich: because that man is to be accounted poor, of whatever rank he be, and suffers the pains of poverty, whose expenses exceed his resources; and no man is, properly speaking, poor but he. But I, at present, consider the advantages of those laborious conditions of life which compose the great portion of every human community.

And, first; it is an inestimable blessing of such situations, that they supply a constant train of employment both to body and mind. A husbandman, or a manufacturer, or a tradesman, never goes to bed at night

without having his business to rise up to in the morning. He would understand the value of this advantage, did he know that the want of it composes one of the greatest plagues of the human soul; a plague by which the rich, especially those who inherit riches, are exceedingly oppressed. Indeed it is to get rid of it, that is to say, it is to have something to do, that they are driven upon those strange and unaccountable ways of passing their time, in which we sometimes see them, to our surprise, engaged. A poor man's condition supplies him with that which no man can do without, and with which a rich man, with all his opportunities, and all his contrivance, can hardly supply himself; regular engagement, business to look forward to, something to be done for every day, some employment prepared for every morning. A few of better judgment can seek out for themselves constant and useful occupation. There is not one of you takes the pains in his calling which some of the most independent men in the nation have taken, and are taking, to promote what they deem to be a point of great concern to the interests of humanity, by which neither they nor theirs can ever gain a shilling, and which, should they succeed, those who are to be benefited by their service will neither know nor thank them for it. I only mention this to show, in conjunction with what has been observed above, that, of those who are at liberty to act as they please, the wise prove, and the foolish confess, by their conduct, that a life of employment is the only life worth leading; and that the chief difference between their manner of passing their time and yours is, that they can choose the objects of their activity, which you cannot. This privilege may be an advantage to some, but for nine out of ten it is fortunate that occupation is provided to their hands, that they

have it not to seek, that it is imposed upon them by their necessities and occasions; for the consequence of liberty in this respect would be, that, lost in the perplexity of choosing, they would sink into irrecoverable indolence, inaction, and unconcern; into that vacancy and tiresomeness of time and thought which are inseparable from such a situation. A man's thoughts must be going. Whilst he is awake, the working of his mind is as constant as the beating of his pulse. He can no more stop the one than the other. Hence if our thoughts have nothing to act upon, they act upon ourselves. They acquire a corrosive quality. They become in the last degree irksome and tormenting. Wherefore that sort of equitable engagement which takes up the thoughts sufficiently, yet so as to leave them capable of turning to any thing more important, as occasions offer or require, is a most invaluable blessing. And if the industrious be not sensible of the blessing, it is for no other reason than because they have never experienced, or rather suffered, the want of it.

Again; some of the necessities which poverty (if the condition of the labouring part of mankind must be so called) imposes are not hardships, but pleasures. Frugality itself is a pleasure. It is an exercise of attention and contrivance, which, whenever it is successful, produces satisfaction. The very care and forecast that are necessary to keep expenses and earnings upon a level, form, when not embarrassed by too great difficulties, an agreeable engagement of the thoughts. This is lost amidst abundance. There is no pleasure in taking out of a large unmeasured fund. They who do that, and only that, are the mere conveyers of money from one hand to another.

A yet more serious advantage which persons in

inferior stations possess, is the ease with which they provide for their children. All the provision which a poor man's child requires is contained in two words, "industry and innocence." With these qualities, though without a shilling to set him forwards, he goes into the world prepared to become an useful, virtuous, and happy man. Nor will he fail to meet with a maintenance adequate to the habits with which he has been brought up, and to the expectations which he has formed; a degree of success sufficient for a person of any condition whatever. These qualities of industry and innocence, which, I repeat again, are all that are absolutely necessary, every parent can give to his children without expense, because he can give them by his own authority and example; and they are to be communicated, I believe, and preserved, in no other way, I call this a serious advantage of humble stations; because, in what we reckon superior ranks of life, there is a real difficulty in placing children in situations which may in any degree support them in the class and in the habits in which they have been brought up by their parents: from which great and oftentimes distressing perplexity the poor are free. With health of body, innocence of mind, and habits of industry, a poor man's child has nothing to be afraid of; nor his father or mother any thing to be afraid of for him.

The labour of the world is carried on by *service*; that is, by one man working under another man's direction. I take it for granted that this is the best way of conducting business, because all nations and ages have adopted it. Consequently service is the relation which, of all others, affects the greatest numbers of individuals, and in the most sensible manner. In whatever country, therefore, this relation is well and equitably regulated,

in that country the poor will be happy. Now how is the matter managed with us? Except apprenticeships, the necessity of which every one, at least every father and mother, will acknowledge, as the best, if not the only practicable way of gaining instruction and skill, and which have their foundation in *nature*, because they have their foundation in the *natural* ignorance and imbecility of youth; except these, service in England is, as it ought to be, voluntary and by contract; a fair exchange of work for wages; an equal bargain, in which each party has his rights and his redress; wherein every servant chooses his master. Can this be mended? I will add, that a continuance of this connexion is frequently the foundation of so much mutual kindness and attachment, that very few friendships are more cordial, or more sincere; that it leaves oftentimes nothing in servitude except the name; nor any distinction but what one party is as much pleased with, and sometimes also as proud of, as the other.

What then (for this is the fair way of calculating) is there in higher stations to place against these advantages? What does the poor man see in the life or condition of the rich, that should render him dissatisfied with his own?

Was there as much in sensual pleasures, I mean in the luxuries of eating and drinking, and other gratifications of that sort, as some men's imaginations would represent them to be, but which no man's experience finds in them, I contend that, even in these respects, the advantage is on the side of the poor. The rich, who addict themselves to indulgence, lose their relish. Their desires are dead. Their sensibilities are worn and tired. Hence they lead a languid satiated existence. Hardly any thing can amuse, or rouse, or gratify

them. Whereas the poor man, if something extraordinary fall in his way, comes to the repast with appetite; is pleased and refreshed; derives from his usual course of moderation and temperance a quickness of perception and delight which the unrestrained voluptuary knows nothing of. Habits of all kinds are much the same. Whatever is habitual becomes smooth and indifferent, and nothing more. The luxurious receive no greater pleasures from their dainties than the peasant does from his homely fare. But here is the difference:—the peasant, whenever he goes abroad, finds a feast; whereas the epicure must be sumptuously entertained to escape disgust. They who spend every day in diversions, and they who go every day about their usual business, pass their time much alike. Attending to what they are about, wanting nothing, regretting nothing, they are both, whilst engaged, in a state of ease; but then, whatever suspends the pursuits of the man of diversion distresses him; whereas to the labourer, or the man of business, every pause is a recreation. And this is a vast advantage which they possess who are trained and inured to a life of occupation, above the man who sets up for a life of pleasure. Variety is soon exhausted. Novelty itself is no longer new. Amusements are become too familiar to delight, and he is in a situation in which he can never change but for the worse.

Another article which the poor are apt to envy in the rich is their *ease*. Now here they mistake the matter totally. They call inaction ease, whereas nothing is farther from it. Rest is ease. That is true; but no man can rest who has not worked. Rest is the cessation of labour. It cannot therefore be enjoyed, or even tasted, except by those who have known fatigue. The

rich see, and not without envy, the refreshment and pleasure which rest affords to the poor, and choose to wonder that they cannot find the same enjoyment in being free from the necessity of working at all. They do not observe that this enjoyment must be purchased by previous labour, and that he who will not pay the price cannot have the gratification. Being without work is one thing; reposing from work is another. The one is as tiresome and insipid as the other is sweet and soothing. The one, in general, is the fate of the rich man; the other is the fortune of the poor. I have heard it said, that if the face of happiness can any where be seen, it is in the summer evening of a country village; where, after the labours of the day, each man at his door, with his children, amongst his neighbours, feels his frame and his heart at rest, every thing about him pleased and pleasing, and a delight and complacency in his sensations far beyond what either luxury or diversion can afford. The rich want this; and they want what they must never have.

As to some other things which the poor are disposed to envy in the condition of the rich, such as their state, their appearance, the grandeur of their houses, dress, equipage and attendance, they only envy the rich these things because they do not know the rich. They have not opportunities of observing with what neglect and insensibility the rich possess and regard these things themselves. If they could see the great man in his retirement, and in his actual manner of life, they would find him, if pleased at all, taking pleasure in some of those simple enjoyments which they can command as well as he. They would find him amongst his children, in his husbandry, in his garden, pursuing some rural diversion, or occupied with some trifling exercise;

which are all gratifications, as much within the power and reach of the poor man as of the rich, or rather more so.

To learn the art of contentment is only to learn what happiness actually consists in. Sensual pleasures add little to its substance. Ease, if by that be meant exemption from labour, contributes nothing. One, however, constant spring of satisfaction, and almost infallible support of cheerfulness and spirits, is the exercise of domestic affections; the presence of objects of tenderness and endearment in our families, our kindred, our friends. Now have the poor any thing to complain of here? Are they not surrounded by their relatives as generally as others? The poor man has his wife and children about him; and what has the rich more? He has the same enjoyment of their society, the same solicitude for their welfare, the same pleasure in their good qualities, improvement, and success: their connexion with Mm is as strict and intimate, their attachment as strong, their gratitude as warm. I have no propensity to envy any one, least of all the rich and great; but if I were disposed to this weakness, the subject of my envy would be a healthy young man, in full possession of his strength and faculties, going forth in a morning to work for his wife and children, or bringing them home his wages at night.

But was difference of rank or fortune of more importance to personal happiness than it *is*, it would be ill purchased by any sudden or violent change of condition. An alteration of circumstances, which breaks up a man's habits of life, deprives him of his occupation, removes him from his acquaintance, may be called an elevation of fortune, but hardly ever brings with it an addition of enjoyment. They to whom accidents

of this sort have happened never found them to answer their expectations. After the first hurry of the change is over, they are surprised to feel in themselves listlessness and dejection, a consciousness of solitude, vacancy, and restraint, in the place of cheerfulness, liberty, and ease. They try to make up for what they have lost, sometimes by a beastly sottishness, sometimes by a foolish dissipation, sometimes by a stupid sloth; all which effects are only so many confessions, that changes of this sort were not made for man. If any public disturbance should produce, not an equality, (for that is not the proper name to give it,) but a jumble of ranks and professions amongst us, it is not only evident what the rich would lose, but there is also this further misfortune, that what the rich lost the poor would not gain. I (God knows) could not get my livelihood by labour, nor would the labourer find any solace or enjoyment in my studies. If we were to exchange conditions to-morrow, all the effect would be, that we both should be more miserable, and the work of both be worse done. Without debating, therefore, what might be very difficult to decide, which of our two conditions was better to begin with, one point is certain, that it is best for each to remain in his own. The change, and the only change, to be desired, is that gradual and progressive improvement of our circumstances which is the natural fruit of successful industry; when each year is something better than the last; when we are enabled to add to our little household one article after another of new comfort or conveniency, as our profits increase, or our burthen becomes less; and what is best of all, when we can afford, as our strength declines, to relax our labours, or divide our cares. This may be looked forward to, and is practicable by great numbers, in a

state of public order and quiet; it is absolutely impossible in any other.

If, in comparing the different conditions of social life, we bring religion into the account, the argument is still easier. Religion smooths all inequalities, because it unfolds a prospect which makes all earthly distinctions nothing. And I do allow that there are many cases of sickness, affliction, and distress, which Christianity alone can comfort. But in estimating the mere diversities of station and civil condition, I have not thought it necessary to introduce religion into the inquiry at all; because I contend, that the man who murmurs and repines, when he has nothing to murmur and repine about, but the mere want of independent property, is not only irreligious, but unreasonable in his complaint; and that he would find, did he know the truth, and consider his case fairly, that a life of labour, such, I mean, as is led by the labouring part of mankind in this country, has advantages in it which compensate all its inconveniences. When compared with the life of the rich, it is better in these important respects:—It supplies employment; it promotes activity. It keeps the body in better health, the mind more engaged, and, of course, more quiet. It is more sensible of ease, more susceptible of pleasure. It is attended with greater alacrity of spirits, a more constant cheerfulness and serenity of temper. It affords easier and more certain methods of sending children into the world in situations suited to their habits and expectations. It is free from many heavy anxieties which rich men feel; it is fraught with many sources of delight which they want.

If to these reasons for contentment, the reflecting husbandman or artificer adds another very material one, that changes of condition, which are attended with a

breaking up and a sacrifice of our ancient course and habit of living, never can be productive of happiness; he will perceive, I trust, that to covet the stations or fortunes of the rich, or so, however, to covet them, as to wish to seize them by force, or through the medium of public uproar and confusion, is not only wickedness, but folly, as mistaken in the end as in the means; *that it is not only to venture out to sea in a storm, but to venture for nothing.*

THE  
CLERGYMAN'S COMPANION  
  
IN  
VISITING THE SICK.

CONTAINING.

- I. RULES FOR VISITING THE SICK.
- II. THE OFFICE FOR THE VISITATION OF THE SICK.
- III. THE COMMUNION OF THE SICK.
- IV. A GREAT VARIETY OF OCCASIONAL PRAYERS FOR THE SICK;  
COLLECTED FROM THE WRITINGS OF SOME OF THE MOST  
EMINENT DIVINES OF THE CHURCH OF ENGLAND.

TO WHICH ARE ADDED, *THE*  
OFFICES OF PUBLIC AND PRIVATE BAPTISM,  
WITH  
ADDITIONS AND ALTERATIONS.

## PREFACE.

THIS collection has been so much esteemed, that it has passed through nine editions. Having now become exceedingly scarce, it was thought proper to reprint it.

The Rules for Visiting the Sick, in five sections, are extracted chiefly from the works of Bishop Taylor. The occasional prayers are taken from the devotional tracts of Bishop Patrick, Mr. Kettlewell, and other pious and judicious divines. But in this edition, the antiquated style of those writers is corrected and improved; at the same time, a spirit of rational piety and unaffected simplicity are carefully preserved.

A prayer by Dr. Stonehouse, and four by Mr. Merrick, the celebrated translator of the Psalms, are added to the old collection.

The offices of Public and Private Baptism, though no ways relating to the Visitation of the Sick, are retained; as, in the present form, they will be convenient for the Clergy in the course of their parochial duty.

## CANON LXVII.

### MINISTERS TO VISIT THE SICK.

WHEN any person is dangerously sick in any parish, the minister or curate, having knowledge thereof, shall resort unto him or her, (if the disease be not known, or probably suspected, to be infectious,) to instruct and comfort them in their distress, according to the order of Communion, if he be no preacher; or, if he be a preacher, then as he shall think most needful and convenient.

It is recommended to the Clergy to write out the prayers which are to be used by the sick themselves, or by the persons whose devotions they wish to assist, and to leave the copies with them.

THE MANNER  
OF  
VISITING THE SICK;  
OR,  
THE ASSISTANCE THAT IS TO BE GIVEN TO SICK AND DYING PERSONS  
BY THE MINISTRY OF THE CLERGY.

SECTION I.

IN all the days of our spiritual warfare, from our baptism to our burial, God has appointed his servants the ministers of the church, to supply the necessities of the people, by ecclesiastical duties; and prudently to guide, and carefully to judge concerning souls committed to their charge.

And, therefore, they who all their lifetime derive blessings from the Fountain of Grace, by the channels of ecclesiastical ministers, ought then more especially to do it in the time of their sickness, when their needs are more prevalent, according to that known apostolical injunction, "Is any man sick among you, let him send for the elders of the church, and let them pray over him," etc.

The sum of the duties and offices respectively implied in these words, may be collected from the following rules.

## SECTION II.

*Rules for the Manner of Visiting the Sick.*

1. LET the minister be sent to, not when the sick is in the agonies of death, as it is usual to do, but before his sickness increases too much upon him; for when the soul is confused and disturbed by the violence of the distemper, and death begins to stare the man in the face, there is little reason to hope for any good effect from the spiritual man's visitation. For how can any regular administration take place when the man is all over in a disorder? how can he be called upon to confess his sins when his tongue falters and his memory fails him? how can he receive any benefit by the prayers which are offered up for him when he is not able to give attention to them? or how can he be comforted upon any sure grounds of reason or religion when his reason is just expiring, and all his notions of religion together with it? or when the man, perhaps, had never any real sentiments of religion before?

It is, therefore, a matter of sad consideration, that the generality of the world look upon the minister, in the time of their sickness, as the sure forerunner of death; and think his office so much relates to another world that he is not to be treated with as long as there is any hope of living in this. Whereas it is highly requisite the minister be sent for when the sick person is able to be conversed with and instructed; and can understand, or be taught to understand, the case of his soul, and the rules of his conscience, and all the several bearings of religion, with respect to God, his neighbour, and himself. For to prepare a

soul for its change is a work of great difficulty; and the intercourses of the minister with the sick have so much variety in them, that they are not to be transacted at once. Sometimes there is need of special remedies against impatience, and the fear of death; not only to animate, but to make the person desirous and willing to die. Sometimes it is requisite to awaken the conscience by "the terrors of the Lord;" to open by degrees all the labyrinths of sin, (those innumerable windings and turnings which insensibly lead men into destruction,) which the habitual sensualist can never be able to discover, unless directed by the particular grace of God, and the assistance of a faithful and judicious guide. Sometimes there is need of the balm of comfort, to pour in "oil and wine" (with the good Samaritan) into the bleeding wound, by representing the tender mercies of God, and the love of his Son Jesus Christ, to mankind; and at other times it will be necessary to "reprove, rebuke, and exhort, with all long-suffering and doctrine;" so that a clergyman's duty, in the visitation of the sick, is not over at once: but at one time he must pray; at another, he must assist, advise, and direct; at another, he must open to him the nature of repentance, and exhort him to a confession of his sins, both to God and man, in all those cases which require it; and, at another time, he must give him absolution, and the sacrament of the body and blood of our Lord.

And, indeed, he that ought to watch all the periods of his life, in the days of his health, lest he should be surprised and overcome, had need, when he is sick, be assisted and called upon, and reminded of the several parts of his duty in every instant of his temptation.

The want of this makes the visitations of the clergy fruitless, because they are not suffered to imprint those proper effects upon the sick which are needful in so important a ministration.

2. When the minister is come, let him discourse concerning the causes of sickness, and by a general argument move him to a consideration of his condition. Let him call upon him first, in general terms, "to set his house in order," "to trim and adorn his lamp," and "to prepare himself for another world;" and then let him perform the customary duties of prayer, and afterwards descend to all other particulars, as occasion shall offer, and circumstances require.

3. According to the condition of the man, and the nature of his sickness, every act of the visitation is to be proportioned. If his condition be full of pain and infirmity, the exhortation ought to be shortened, and the minister more "instant in prayer;" and the little service the sick man can do for himself should be supplied by the charitable care of his guide, who is in such a case to speak more to God for him than to talk to him: "Prayer of the righteous," when it is "fervent," hath a promise to "prevail much in behalf of the sick" person; but exhortations must prevail by their own proper weight, and not by the passion of the speaker; and, therefore, should be offered when the sick is able to receive them. And even in this assistance of prayer, if the sick man joins with the minister, the prayers should be short, fervent, and ejaculatory, apt rather to comply with his weak condition, than wearisome to his spirits, in tedious and long offices. But in case it appears he hath sufficient strength to go along with the minister, he is then more at liberty to offer up long petitions for him.

After the minister hath made this preparatory entrance to this work of much time and deliberation, he may descend to the particulars of his duty in the following method.

### SECTION III.

#### *Of Instructing the Sick Man in the Nature of Repentance and Confession*

THE first duty to be rightly stated to the sick man is that of repentance; in which the minister cannot be more serviceable to him than by laying before him a regular scheme of it, and exhorting him at the same time to a free and ingenuous declaration of the state of his soul. For unless they know the manner of his life, and the several kinds and degrees of those sins which require his penitential sorrow or restitution, either they can do nothing at all, or nothing of advantage and certainty. Wherefore the minister may move him to this in the following manner:

#### *Arguments and Exhortations to move the Sick man to Repentance and Confession of his Sins.*

1. That repentance, is a duty indispensably necessary to salvation. That to this end, all the preachings and endeavours of the prophets and apostles are directed. That our Saviour "came down from heaven" on purpose "to call sinners to repentance."\* That as it is a necessary duty at all times, so more especially in the time of sickness, when we are commanded in a particular manner to "set our house in order." That it is a work of great difficulty, consisting in general of a "change

\* Matt. ix. 13.

of mind," and "a change of life." Upon which account it is called in Scripture, "a state of regeneration, or new birth;" a "conversion from sin to God;" a "being renewed in the spirit of our minds;" a "putting off the old man, which is corrupt according to the deceitful lusts of the flesh," and a "putting on the new man, which is created in righteousness and true holiness." That so great a change as this is not to be effected at once, but requires the utmost self-denial and resolution to put it in execution, consisting in general of the following particulars.—1. A sorrowful sense of our sins. 2. An humble confession of them. 3. An unfeigned abhorrence and forsaking of them, and turning to the Lord our God with all our hearts. 4. A patient continuance in well doing to the end of our lives.

These are the constituent and essential parts of a true repentance; which may severally be displayed from the following motives of reason and Scripture, as opportunity shall serve, and the sick man's condition permit.

The first part of a true repentance is a sorrowful sense of our sins, which naturally produceth this good effect, as we may learn from St. Paul, (2 Cor. vii. 10,) where he tells us, that "godly sorrow worketh repentance." Without it, to be sure, there can be no such thing; for, how can a man repent of that which he is not sorry for? or, how can any one sincerely ask pardon and forgiveness for what he is not concerned or troubled about?

A sorrowful sense, then, of our sins, is the first part of a true repentance, the necessity whereof may be seen from the grievous and abominable nature of sin; as, 1. That it made so wide a separation betwixt God and man that nothing but the blood of his only begotten

Son could suffice to atone for its intolerable guilt. 2. That it carries along with it the basest ingratitude, as being done against our heavenly Father, "in whom we live, and move, and have our being." 3. That the consequence of it is nothing less than eternal ruin, in that "the wrath of God is revealed against all impenitent sinners;" and "the wages of sin is death,"—not only temporal but eternal.

From these and the like considerations, the penitent may further learn, that to be sorry for our sins is a great and important duty. That it does not consist in a little trivial concern, a superficial sigh, or tear, or calling ourselves sinners, etc.; but in a real, ingenuous, purgent, and afflicting sorrow: for, can that which cast our parents out of Paradise at first, that brought down the Son of God afterwards from heaven, and put him at last to such a cruel and shameful death, be now thought to be done away by a single tear or a groan? Can so base a piece of ingratitude as rebelling against the Lord of glory, who gives us all we have, be supposed to be pardoned by a slender submission? Or can that which deserves the torment of hell be sufficiently atoned for by a little indignation and superficial remorse?

True repentance, therefore, is ever accompanied with a deep and afflicting sorrow; a sorrow that will make us so irreconcilable to sin, as that we shall choose rather to die than to live in it. For so the bitterest accents of grief are all ascribed to a true repentance in Scripture; such as a "weeping sorely," or "bitterly;" a "weeping day and night;" a "repenting in dust and ashes;" a "putting on sackcloth;" "fasting and prayer," etc. Thus holy David: "I am troubled; I am bowed down greatly, I go mourning all the day long,

and that by reason of mine iniquities which are gone over my head, and, as a heavy burden, are too heavy for me to bear." (Psal. xxxviii. 4, 6.) Thus Ephraim could say: "After that I was instructed, I smote upon my thigh: I was ashamed, yea, even confounded, because I did bear the reproach of my youth." Jer. xxxi. 19-

And this is the proper satisfaction for sin which God expects, and hath promised to accept; as, Psalm li. 17- "The sacrifices of God are a broken spirit: a broken and a contrite heart, O God, thou wilt not despise."

2. The next thing requisite in a true repentance is confession of sins, which naturally follows the other; for if a man be so deeply afflicted with sorrow for his sins, he will be glad to be rid of them as soon as he can; and the way for this is humbly to confess them to God, who hath promised to forgive us if we do. "I said, I will confess my sins unto the Lord," saith the Psalmist, "and so thou forgavest the wickedness of my sin." (Psal. xxxii. 6.) So, Prov. xxviii. 13, and 1 John i. 9- "If we confess our sins, God is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness." So the returning prodigal went to his father with an humble confession of his baseness, and was received into favour again. Luke xv. 18, 19-

And because the number of our sins are like the hairs of our head or the sand of the sea, and almost as various too in their kinds as their numbers; confession must needs be a very extensive duty, and requires the strictest care and examination of ourselves: for "who can tell how oft he offendeth?" saith David: "O cleanse thou me from my secret faults!"

The penitent, therefore, should be reminded that his confession be as minute and particular as it can; since

the more particular the confession is, to be sure, the more sincere and safe the repentance.

3. A third thing requisite in a true repentance is an unfeigned abhorrence and forsaking of sin, and turning to the Lord our God with all our hearts.

For so we find them expressly joined together by St. Paul, when he *charges* those whom by vision he was sent to convert, to change\* their mind, and "turn to God, and do works meet for repentance." (Acts xxvi. 20.) And a little before he says, he was sent "to open their eyes, and turn them from darkness to light, and from the power of Satan unto God, that they may receive forgiveness of sins." (ver. 18.) And we shad always find, when we are commanded to cease from evil, it is in order to do good.

The penitent, therefore, must be reminded not only to *confess* and be *sorry* for his sins, but likewise to *forsake* them. For it is he only "who confesseth and forsaketh his sins that shall have mercy." (Prov. xxviii. 13.) And this forsaking must not be only for the present, during his sickness, or for a week, a month, or a year; but for his whole life, be it never so protracted; which is the

4. Last thing requisite in a true repentance, viz. "a patient continuance in well doing to the end of our lives." For as the holy Jesus assures us, that "he that endureth unto the end shall be saved;" so does the Spirit of God profess, that "if any man draw back, his soul shall have no pleasure in him. (Heb. x. 38.) Hence we are said to "be partakers of Christ if we hold the beginning of our confidence steadfast to the end," (Heb. iii. 14,) but not else; for it is to "him only that overcometh and keepeth his works to the

\* *Aphggelion metanoein.*

end" that our Saviour hath promised a reward. (Rev. ii. 26.) Hence our religion is said to be a continual warfare, and we must be constantly "pressing forward toward the mark of our high calling," with the apostle, lest we fail of the prize.

And this it is which makes a death-bed repentance so justly reckoned to be very full of hazard; such as none who defer it till then can depend upon with any real security. For let a man be never so seemingly penitent in the day of his visitation, yet none but God can tell whether it be sincere or not; since nothing is more common than for those who expressed the greatest signs of a lasting repentance upon a sick bed to forget all their vows and promises of amendment as soon as God had removed the judgment, and restored them to their former health. "It happened to them according to the true proverb," as St. Peter says, "The dog is turned to his own vomit again, and the sow that was washed to her wallowing in the mire." (2 Pet. ii. 22.)

The sick penitent, therefore, should be often reminded of this:—that nothing will be looked upon as true repentance but what would terminate in a holy life; that, therefore, he ought to take great heed that his repentance be not only the effect of his present danger, but that it be lasting and sincere, "bringing forth works meet for repentance," should it please God mercifully to prove him by a longer life.

But here it is much to be feared, that after all his endeavours to bring men to a sight of themselves, and to repent them truly of their sins, the spiritual man will meet with but very little encouragement: for if we look round the world we shall find the generality of men to be of a rude indifference, and a seared conscience, and

mightily ignorant of their condition with respect to another world, being abused by evil customs and principles, apt to excuse themselves, and to be content with a certain general and indefinite confession; so that if you provoke them never so much to acknowledge their faults, you shall hardly ever extort any thing farther from them than this, viz. "That they are sinners, as every man hath his infirmity, and they as well as any; but, God be thanked! they have done no injury to any man, but are in charity with all the world." And perhaps they will tell you, "they are no swearers, no adulterers, no rebels, etc. but that, God forgive them! they must needs acknowledge themselves to be sinners in the main," etc. And if you can open their breast so far, it will be looked upon as sufficient: to go any farther will be to do the office of an accuser, not of a friend.

But, which is yet worse, there are a great many persons who have been so used to an habitual course of sin that the crime is made natural and necessary to them, and they have no remorse of conscience for it, but think themselves in a state of security very often when they stand upon the brink of damnation. This happens in the cases of drunkenness, and lewd practices, and luxury, and idleness, and mispending of the Sabbath, and in lying and vain jesting, and slandering of others; and particularly in such evils as the laws do not punish, nor public customs shame, but which are countenanced by potent sinners, or wicked fashions, or goodnature and mistaken civilities.

In these and the like cases, the spiritual man must endeavour to awaken their consciences by such means as follow:—

*Arguments and general Heads of Discourse, by way of Consideration, to awaken a stupid Conscience, and the careless Sinner.*

1. And here let the minister endeavour to affect his conscience by representing to him—

That Christianity is a holy and strict religion: that the promises of heaven are so great, that it is not reasonable to think a small matter and a little duty will procure it for us: that religious persons are always the most scrupulous; and that to feel nothing is not a sign of life but of death: that we live in an age in which that which is called and esteemed a holy life, in the days of the apostles and primitive Christianity would have been esteemed indifferent, sometimes scandalous, and always cold: that when we have "done our best, all our righteousness is but as filthy rags;" and we can never do too much to make our calling and election sure: that every good man ought to be suspicious of himself, fearing the worst, that he may provide for the best: that even St. Paul, and several other remarkable saints, had, at some times, great apprehensions of failing of the "mighty prize of their high calling:" that we are commanded to "work out our salvation with fear and trembling;" inasmuch as we shall be called to an account, not only for our sinful words and deeds, but even for our very thoughts: that if we keep all the commandments of God, and "yet offend in one point, (i. e. wilfully and habitually,) we are guilty of all;" (James, ii. 10:) that no man can tell how oft he offendeth, the best of lives being full of innumerable blemishes in the sight of God, however they may appear before men: that no man ought to judge of the state of his soul by the character he has in the world; for a great many persons go to hell who

have lived in a fair reputation here; and a great many, on the other hand, go to heaven who have been loaded with infamy and reproach: that the work of religion is a work of great difficulty, trial, and temptation: that "many are called, but few are chosen;" that "strait is the gate and narrow is the way that leadeth to life, and few there be that find it:" and lastly, that, "if the righteous themselves shall scarcely be saved," there will be no place for the unrighteous and sinner to appear in but of horror and amazement.

By these and such like motives to consideration, the spiritual man is to awaken the careless sinner, and to bring him to repentance and confession of his sins: and if, either of himself or by this means, the sick man is brought to a right sense of his condition; then,

2. Let the minister proceed to assist him in understanding the number of his sins, i. e. the several kinds of them, and the various ways of prevaricating with the Divine commandments. Let him make him sensible how every sin is aggravated, more or less, according to the different circumstances of it; as by the greatness or smallness of the temptation, the scandal it gives to others, the dishonour it does to religion, the injury it brings along with it to those whom it more immediately concerns; the degrees of boldness and impudence, the choice in acting it, the continuance in it, the expense, desires, and habit of it, etc.

3. Let the sick man, in the scrutiny of his conscience and confession of his sins, be carefully reminded to consider those sins which are no where condemned but in the *court of conscience*: for there are certain secret places of darkness, artificial blinds of the devil, which he uses to hide our sins from us, and to incorporate

them into our affections by the general practice of others, and the mistaken notions of the world: as, 1. Many sins before men are accounted honourable; such as fighting a duel, returning evil for evil, blow for blow, etc. 2. Some things are not forbidden by the law of man, as lying in ordinary discourse, jeering, scoffing, intemperate eating, ingratitude, circumventing another in contracts, outwitting and overreaching in bargains, extorting and taking advantage of the necessities or ignorance of other people, importunate entreaties and temptations of persons to many instances of sin, as intemperance, pride, and ambition, etc.; all which, therefore, do strangely blind the understanding and captivate the affections of sinful men, and lead them into a thousand snares of the devil which they are not aware of. 3. Some others do not reckon that they sin against God if the laws have seized upon the person: and many who are imprisoned for debt think themselves disengaged from payment; and when they pay the penalty think they owe nothing for the scandal and disobedience. 4. Some sins are thought not considerable, but go under the titles of sins of infirmity, or inseparable accidents of mortality; such as idle thoughts, foolish talking, loose revellings, impatience, anger, and all the events of evil company. ,5. Lastly, Many things are thought to be no sins; such as mispending of their time, whole days or months of useless or impertinent employment, long gaming, winning men's money in great portions, censuring men's actions, curiosity, equivocating in the prices of buying and selling, rudeness in speech or behaviour, speaking uncharitable truths, and the like.

These are some of those artificial veils and coverings, under the dark shadow of which the enemy of mankind

makes very many to lie hid from themselves, blinding them with false notions of honour, and the mistaken opinions and practices of the world, with public permission and impunity, or (it may be) a temporal penalty; or else with prejudice, or ignorance and infirmity, and direct error in judgment.

Now, in all these cases, the ministers are to be inquisitive and strictly careful that such kind of fallacies prevail not over the sick; but that those things which passed without observation before may now be brought forth, and pass under the severity of a strict and impartial censure, religious sorrow, and condemnation.

4. To this may be added a general display of the neglect and omission of our duty; for in them lies the bigger half of our failings: and yet, in many instances, they are undiscerned; because our consciences have not been made tender and perceptible of them. But whoever will cast up his accounts, even with a superficial eye, will quickly find that he hath left undone, for the generality, as many things which he ought to have done, as he hath committed those he ought not to have done: such as the neglect of public or private prayer, of reading the Scriptures, and instructing his family or those that are under him in the principles of religion: the not discountenancing sin to the uttermost of his power, especially in the personages of great men: the not "redeeming the time," and "growing in grace," and doing all the good he can in his generation: the frequent omissions of the great duty of charity, in visiting the sick, relieving the needy, and comforting the afflicted: the want of obedience, duty, and respect to parents: the doing the work of God negligently, or not discharging himself with that fidelity, care, and

exactness which is incumbent upon him in the station wherein the providence of God hath placed him, etc.

5. With respect to those sins which are committed against man, let the minister represent to the sick man that he can have no assurance of his pardon, unless he is willing to make all suitable amends and satisfaction to his offended and injured brethren; as, for instance, if he hath lived in enmity with any, that he should labour to be reconciled to them; if he is in debt, that he should do his utmost to discharge it; or if he hath injured any one in his substance or credit, that he should endeavour to make restitution in kind for the one, and all possible satisfaction for the other, by humbling himself to the offended person, and beseeching him to forgive him.

6. If the sick person be of evil report, the minister should take care, some way or other, to make him sensible of it, so as to show an effectual sorrow and repentance. This will be best done by prudent hints and insinuations, of recalling those things to his mind whereof he is accused by the voice of fame, or to which the temptations, perhaps, of his calling more immediately subject him. Or if he will not understand, when he is secretly prompted, he must be asked in plain terms concerning these matters. He must be told of the evil things which are spoken of him in public, and of the usual temptations of his calling.

And it concerns the minister to follow this advice, without partiality, or fear, or interest, or respect of persons, in much simplicity and prudence, having no other consideration before him but the conscientious discharge of his duty and the salvation of the person under his care.

7. The sick person is likewise to be instructed

concerning his faith, whether he has a reasonable notion of the articles of the Christian religion, as they are excellently summed up in the Apostles' Creed.

8. With respect to his temporal concerns, the sick is to be advised to set every thing in order, and (if he hath not already) to make his will as soon as he can. For if he recovers, this cannot be detrimental; but if he dies, it will be of great comfort and satisfaction to him. And here it must be remembered, that he distribute every thing according to the exact rules of justice, and with such a due care as to prevent all lawsuits and contentions for the future: and, if he be able, he is to be admonished to do something likewise out of charity, and for the sake of his poor brethren.

9. In all the course of his visitation, the minister should frequently be exhorting the sick man to patience and a blessed resignation to the will of God; and not to look upon his sickness as barely the effect of second causes, but as inflicted on him by Divine Providence for several wise and good ends: as, for the trial of his faith; the exercise of his patience; the punishment of his sins; the amendment of his life; or for the example of others, who, seeing his good behaviour in such a day of calamity, may glorify their Father which is in heaven: or else, that it is for the increase of his future welfare, in order to raise him the higher in glory hereafter, by how much the lower he hath been depressed here.

10. When the spiritual man hath thus discharged his duty, and the sick hath made himself capable of it, by a religious and holy conformity to all the fore-mentioned particulars respecting his condition and circumstances, he may then give him the sacrament of the Lord's Supper. And it is the minister's office

to invite sick and dying persons to this holy sacrament, provided they discover a right sense of their duty. And,

*Note*, That the Holy Sacrament is not to be administered to dying persons, when they have no use of their reason to join the minister in his celebration of it. For the sacraments operate not of themselves, but as they are made efficacious by the joint consent and will, and religious acts and devotion of the party that receives them. And therefore all fools, and distracted persons, and children, and lethargical and apoplectical people, or that are any ways senseless and incapable of human and reasonable acts, are to be assisted only by prayers.

*Note also*, That in cases of necessity, where the sacrament cannot be so conveniently administered, the sick may be admonished to receive it spiritually; i. e. by representing the symbols of the body and blood of our Lord to his mind, and applying them to himself by faith, with the same preparations of faith and repentance as if they were really present. For no doubt but God, in such a case, who considers all things with exact justice, and chiefly respects the sincerity of our hearts and intentions, will excuse the absence of the outward and visible sign, when necessity, and not contempt or neglect, was the occasion of it.

#### SECTION IV.

##### *Of applying Spiritual Remedies to the unreasonable Fears and Dejections of the Sick.*

IT sometimes happens that good men, especially such as have tender consciences, impatient of the least sin, to which they are arrived by a long habit of grace and a continual observation of their ways, overact their part,

and turn their tenderness into scruples, and are too much dejected and doubtful concerning their future salvation. In such a case, the minister is to represent to them, that the man who is jealous of himself is always in the safest condition; that if he fears on his death-bed, it is but what happens to most considering men; and that therefore to fear nothing then is either a singular felicity or a dangerous presumption.

But to restrain the extravagance of fear, let him be reminded of the terms of the Gospel:—that it is a covenant of grace and mercy to all: that "Christ Jesus came into the world to save sinners:" that he continues "our Advocate in heaven," and daily "intercedes" with his Father for us: that the whole heavenly host rejoices at the conversion of a sinner: that the angels are deputed by God to be our guardians against violent surprises and temptations: that there are different degrees of glory in heaven; so that, if we arrive not at the greatest, we may yet hope, by divine mercy, that we should not be excluded the less: that God hath promised to hear the "prayers of the righteous" for his servants: that he labours with us by his Spirit, and as it were "beseeches us, in Christ's stead, to be reconciled to him;" (2 Cor. v. 20): that, of all his attributes, he glories in none so much as in the titles of mercy and forgiveness: that therefore we do injustice to the Father of mercies, if we retain such hard thoughts and suspicions of him: that God calls upon us to forgive our brother "seventy times seven;" and yet all that *is* but like the forgiving "a hundred pence" for his sake, who forgives us "ten thousand talents:" and therefore if we are ordered to show such an unrestrained temper of forgiveness, it is only to animate us to trust in God's much more abounding mercy.

By these and the like arguments, the spiritual man may raise the drooping spirits of good men in their causeless dejections. But because there are many other cases of the like nature, which the physician of souls will meet with in visiting his neighbours, especially such as are of melancholy dispositions, it may not be improper to mark the principal of them here, and to prescribe the remedies.

*Considerations to be offered to Persons under Religious Melancholy.*

1. Some truly religious persons are under sad apprehensions of not being in the favour of God, because they find their devotions to be very often cold, their prayers distracted, and their delight in spiritual matters not to be so great and permanent as their pleasure and satisfaction are in the things of the world.

Now to such as have made religion the great business of their lives, who have endeavoured to cure those distracted thoughts they complain of, and to inflame their souls with divine love, it may be offered, that the different degrees of affection with which men serve God do very often depend upon the difference of their tempers and constitutions; since some are naturally so dull and heavy as to be little affected with any thing; whilst others are of such a tender make as to be affected almost with every thing, so as to be soon exalted with joy or depressed with sorrow: that sickness, losses, and all afflictions, and even religion itself, in its long and continual exercise of self-denial and thoughtfulness, do naturally produce such a tenderness of spirit that the best of men have never been able at all times to keep their affections at an equal height: that the zeal and warmth with which some are affected is not always an

argument of their goodness: that a sensible pleasure in religious exercises, wherein the passions are affected, is not so acceptable to God as a reasonable service: that distraction of thought in the service of God is owing, for the most part, to bodily weakness; and therefore, if we do not give way to it, but do all we can to suppress those wandering thoughts, we may be assured we shall never be blamed for being subject to that which, by reason of the weakness of our nature, we cannot help: that the first motions of our mind, as it is impossible to hinder them, are reckoned by all divines not to be sinful, provided we do not encourage them.

2. Some are extremely dejected, because, upon strict examination of themselves, they find, as they think, all their religion to be owing to their fears; and fear being a slavish and sordid passion, they are apt to conclude, that all those services which are not the result of a more noble principle will be rejected by God, since, as he is all love, and goodness, and perfection, he will not be pleased, they think, with any sacrifice but what is offered by love.

And to this sad purpose some have interpreted Rev. xxi. 8. to belong to them; where the fearful are joined together with the most abominable, who shall have their part in the lake which burneth with fire and brimstone.

To cure the depraved and unhappy notions of such as these, it may be argued, that it is plain from Scripture, that the first beginnings of, or movements towards, a holy life are usually owing to the passion of fear: that to this, both our Saviour and his apostles do all along address themselves in their earnest entreaties of mankind to turn from the ways of sin to God: – "Fear him," saith our Saviour, "who is able to destroy both soul

and body in hell," Matt. x. 28; so chap. vi. 15; Mark xvi. 16. And to this purpose the apostle says, "Work out your salvation with fear and trembling," Phil. ii. 12; and 2 Cor. v. 11, "Knowing the terrors of the Lord," saith he, "we persuade men." And in most of the Scripture proofs we shall find the chief argument of religion to be urged from a fear of punishment for the neglect thereof: so that to be dejected and render our lives comfortless on this account were the most unreasonable extravagance; since this were to suppose that God hath implanted the passion of fear in us in vain; or, what is worse, only to vex and torment us; and that our Saviour and his apostles, persuading us to be religious from the terrors of the Lord, had deceived and misled us.

And as for that text, Rev. xxi. 8, "The fearful, and unbelieving, and the abominable, and murderers, and whoremongers, and sorcerers, and idolaters, and all liars, shall have their part in the lake which burneth with fire and brimstone," etc.; it is plain, that by the fearful in this place is meant, either such as refuse to embrace the Christian religion, or who, having embraced it, are afraid to continue steadfast to the end, on account of the cross; and therefore cannot be supposed to have any reference to those who are "working out their salvation with fear and trembling," according to the direction of the Gospel. Not but that we are to intermix with this fear an entire love and affection to God, to the utmost of our powers.

3. Some very pious but unhappy persons are grievously tormented with wicked and blasphemous thoughts, so as to fall under the greatest agonies of mind; and often to be so near distraction as to choose death rather than life.

For the relief and comfort of these, the minister should suggest to them that such horrid and frightful thoughts are either occasioned through melancholy prevailing over their spirits, and disordering the frame of their minds; or else from the malice of the devil and the spirits of darkness, who do all they can to shake our faith and to imbitter the Christian life.

If to the former we ascribe such horrid thoughts, they may be comforted upon assurance that they will not be imputed to them as their sin, any more than a fever or any bodily distemper will, which they did not willingly procure, and which they have tried all means to remove.

If to the latter, they may be encouraged rather to rejoice; as nothing is a greater sign of their being high in the favour of God than when they are under the most violent temptations of the devil. "My brethren, count it all joy," saith St. James, "when ye fall into divers temptations;" chap. i. 2. To that effect they may be taught to consider that the way to heaven is justly said to be by the gates of hell: that the "same afflictions are accomplished in their brethren which are in the world, "who in various kinds are tempted of the tempter; 1 Pet. v. 9: that Satan "desired to have St. Peter, to sift him as wheat;" Luke xxii. 81: that our Saviour himself was tempted by him, and the best of men have always been most obnoxious to his malice; and that to live in carnal security, without any molestations from him, is the most dangerous state: that the being so much concerned and afflicted at such evil thoughts is a certain argument of a good disposition, since the wicked and profane are rather pleased than tormented with them.

Arguments of this kind are the most proper to be

offered to such unhappy persons: but in case their faith and hope be totally overcome by the devil, and they fall into direct despair, it will be necessary then to endeavour the cure of so great an evil and temptation by the addition of the following exercise.

*An Exercise against Despair.*

Let the minister suggest to them, that God is not willing that *any should perish*, but desirous that all should come to his glory: that for this end we were created: that he is so far from being "extreme to mark what is done amiss," that he will not refuse the returning prodigal, nor reject the worst of criminals upon their sincere repentance: that the thief upon the cross is a demonstrable proof of this, and a standing example to prevent the greatest sinner from despair: that if God is so merciful and condescending to the vilest transgressors, much rather may we hope to be pardoned for our weakness and infirmities; for, he "knoweth whereof we are made, he remembereth that we are but dust;" nay, he hath assured us that he "will not break the bruised reed, nor quench the smoking flax:" that all sins shall be forgiven the sons of men, except one, which is the sin against the Holy Ghost; "the sin unto death," as St. John calls it.

But that no man commits a sin against the Holy Ghost, if he be afraid he hath, or desires that he may not; for such penitential passions are against the very nature and definition of that sin: that although forgiveness of sins is consigned to us in baptism, and baptism is but once; yet, forgiveness of sins being the special grace of the Gospel, it is secured to us for our life, and ebbs and flows according as we discompose or renew the performance of our baptismal vow; therefore it is

certain that no man ought to despair of pardon, but he who hath voluntarily renounced his baptism, or willingly estranged himself from that covenant: that if it were not so, then all preaching and prayers were in vain, and all the conditions of the Gospel invalid; and there could be no such thing as repentance, nor indeed scarce a possibility of any one's being saved, if all were to be concluded in a state of damnation who had committed sin after baptism.

To have any fears, therefore, on this account, were the most extravagant madness; for Christ "died for sinners," and "God hath comprehended all under sin, that" through him "he might have mercy upon all;" Rom. xi. 32. And it was concerning baptized Christians that St. John said, "If any man sin, we have an advocate with the Father, and he is the propitiation for our sins:" and concerning lapsed Christians, St. Paul gave instruction, that "if any man be overtaken in a fault, ye which are spiritual restore such a man in the spirit of meekness, considering lest ye also be tempted." The Corinthian Christian committed incest, and was pardoned; and Simon Magus, after he was baptized, offered to commit the sin we call simony, and yet Peter bade him pray for pardon: and St. James tells us that "if the sick man send for the elders of the church, and they pray over him, and he confess his sins, they shall be forgiven him." chap. v. 14.

That even in the case of very great sins, and great judgments inflicted upon sinners, wise and good men have declared their sense to be, that God vindicated his justice in that temporal punishment; and so it was supposed to have been done in the case of Ananias, etc.: that nothing can be more absurd than to think that so great and good a God, who is so desirous of saving

all, as appears by his word, by his sending his Son, by his oaths and promises, by his very nature, and daily overtures of mercy, should condemn any, without the greatest provocations of his majesty, and perseverance in them.

Upon the strength of these arguments the despairing person may be further taught to argue thus with himself:—

I consider that the ground of my trouble is my sin; and were it not for that I should have no reason to be troubled: but since the "whole world lieth in wickedness," and since there cannot be a greater demonstration of a man's abhorrence of sin than to be so deeply affected with sorrow for it; I therefore will erect my head with a holy hope, and think that God will also be merciful to me a sinner, as he is to the rest of mankind. I know that the mercies of God are infinite; that he sent his Son into the world on purpose to redeem such as myself; and that he hath repeatedly promised "to give to them that ask, and to be found of them that seek him;" and therefore I will not distrust his goodness, nor look upon the great God of heaven and earth to be worse than his word. Indeed, if from myself I were to derive my title to heaven, then my sins were a just argument of despair; but now that they bring me to Christ, that they drive me to an appeal to God's mercy, they cannot infer a just cause of despair. I am sure it is a stranger thing that the Son of God should come down from heaven, and take upon him our nature, and live and die in the most ignominious state of it, than that a sinful man, washed by the blood of Christ, and his own tears and humiliation, should be admitted to pardon, and made "partaker of the kingdom of heaven:" and it were stranger yet that he should do so

much for man, and that a man that desires, that labours after it to the utmost of his power, that sends up strong cries and prayers, and is still within the covenant of grace, should inevitably miss that end for which our Saviour did and suffered so much.

It is certain that of all the attributes that belong to God, there is none more essential to his nature, and which he takes more delight in, than his mercy; and it is as certain also, there must be proper objects for this boundless and immense attribute of God; and the most proper, if not only objects of mercy in the creation are the children of men; and of men, surely those who are most grieved and wearied with the burden of their sins. I, therefore, who am as pitiful an object of mercy as any, will cheerfully hope that God will both forgive me here, and give me the blessing of eternal life hereafter: for I know that *eternal life* is purely the *gift of God*, and therefore have less reason still to despair. For if my sins were fewer, and my unworthiness of such a glory were less, yet still I could not receive it but as a free gift and donation of God, and so I may now; and it is not expectation beyond the hopes of possibility, to look and wait for such a gift at the hands of the God of mercy. The best of men deserve it not; and I, who am the worst, may have it given me. I know that I have sinned grievously and frequently against my heavenly Father: but I have repented, I have begged pardon, I have confessed and forsaken my sins, and have done all that is possible for me to make atonement. I cannot undo what is done; and I perish, if there be no such thing as a remedy, or remission of sins. But then I know my religion must perish together with my hope, and the word of God itself must fail as well as I. But I cannot, I dare not entertain such a thought.

I firmly believe that most encouraging<sup>1</sup> article of faith, *the remission of sins*; and since I do that which all good men call repentance, I will also humbly hope for a remission of mine, and a joyful resurrection.

I know that the devil is continually lying in wait to seduce and destroy the souls of men; wherefore I will fortify my spirits, and redouble my guard, and call upon God to enable me to resist all the fiery darts of this malicious adversary.

Or perhaps this exceeding dejection, or malady of mind, may arise from the distemper and weakness of my body; or at most, I hope, it *is* only a disease of judgment, not an intolerable condition, I am fallen into; and since I have heard of a great many others who have been in the same condition with myself, and yet recovered, I will also take courage to hope that God will relieve me in his good time, and not leave my soul for ever in this hell of depraved fancy and wicked imagination. In fine, I will raise up my dejected spirits, and cast all my care upon God, and depend upon him for the event, which I am sure will be just; and I cannot but think, from the same reason, full of mercy. However, now I will use all the spiritual arts of reason and religion to make me more and more desirous of loving God; that if I miscarry, charity also shall fail, and something that loves God shall perish and be damned; which if it be impossible, (as I am sure it is,) then I may have just reason to hope I shall do well.

These considerations may be of service to "bind up the broken-hearted," and to strengthen the "bruised reed" of a good man's spirit, in so great and terrible a dejection. But as cases of this nature are very rare, so the arguments here made use of are rarely to be

insisted upon; and never but to well-disposed persons, or reformed penitents, or to such as, in the general course of their life, have lived pretty strictly, and conformably to the rules of religion. For if the man be a vicious person, and hath gone on in a continual course of sin to the time of his sickness, these considerations are not proper. Let him inquire, in the words of the first disciples after Pentecost, "Men and brethren, what shall we do to be saved?" And if we can but entertain so much hope as to enable him to do as much of his duty as he can for the present, it is all that can be provided for him. And the minister must be infinitely careful that he does not attempt to comfort vicious persons with the comfort of God's elect, lest he prostitute holy things, and encourage vice, and render his discourses deceitful; and the man unhappily find them to be so when he descends into the regions of darkness.

But because very few are tempted with too great fears of miscarrying, but the generality, even of the most profligate sort, are rather inclined to unwarrantable assurances of their future salvation, it will highly concern the ministers to prevent in time so great and reigning an imposition of the devil.

Wherefore to the former considerations to awaken the careless sinner and a stupid conscience, the following may be added, upon occasion, to check the overweening thoughts of the presumptuous.

## SECTION V.

### *Considerations against Presumption.*

AND here let the bold and arrogant sinner further

know, that a man cannot think too meanly of himself, but may very easily run into the contrary extreme: that the growths in grace are long, difficult, uncertain, often interrupted, consisting of great variety, and almost innumerable parts and distinctions, which a careless person can never discover: that the more a man presumes, the greater reason he hath to fear; because the confidence of such men is generally like that of children and young people, who have no other reason, but that they understand not the dangers and follies of their self-conceits: that "the heart of man is deceitful above all things, and desperately wicked;" deceiving itself and deceiving others, in innumerable instances; and being often "in the gall of bitterness," when the man appears with fairest outside to the world: that it is certain, all "have sinned and come short of the glory of God;" but not so certain that any one's repentance is real, and effective to salvation: that virtue and vice are oftentimes so near neighbours that we pass into each other's borders without observation, and think we do justice when we are cruel; or call ourselves liberal when we are loose and foolish in our expenses, etc.

That the self-accusing publican was justified rather than the self-confident Pharisee: that if Adam in Paradise, David in his house, Solomon in the temple, Peter in the family of Christ, Judas among the twelve apostles, and Nicholas among the deacons, and if the angels in heaven itself did fall so atrociously, then we have all the reason in the world "not to be high minded, but to fear;" and when we are most confident of ourselves, "to take heed lest we fall;" there being nothing so likely to occasion it as pride and a great opinion of ourselves, which ruined the angels, which God resists, which all men despise, and which betray us into

carelessness, and a wretched, undiscerning, and unwary spirit.

These are the main parts of ecclesiastical duties and offices in the visitation of the sick: which being severally performed, as occasion requires, it remains only that the minister pray over the sick, and remind him to do all the good actions he is capable of; to call upon God for pardon, to put his whole trust in him; to be patient and resigned; and even to renounce every ill thought or word or indecent action, which the violence of his sickness may have caused in him; to beg of God to give him his Holy Spirit, to guide him in his agony, and to send his holy angels to guard him in his passage.

Whatsoever is besides this concerns the standers by, that they do all in their respective offices diligently and temperately: that they join in prayer with the minister, with much charity and devotion: that they make no outcries or exclamations on the departure of the soul; nor any positive judgment concerning the dying man—by his dying quietly or violently, with great fears or a cheerful confidence, with sense or without, like a lamb or like a lion, with convulsions and terrible agonies, or like the silent and well-spent flame of an expiring taper. For these may happen severally, according to the constitution of the persons, and the nature of the distemper that befalls them; or else according as God pleases to dispense the grace or the punishment, for reasons only known to himself.

Let us lay our hand upon our mouth, and adore the mysteries of the divine wisdom and providence, and pray to God to give the dying man rest and pardon; and to ourselves grace to live well, and the blessings of a holy and happy death.

THE ORDER  
FOR THE  
VISITATION OF THE SICK.

When *any* person is sick, notice shall be given thereof to the Minister of the parish, who, coming into the sick person's house, shall say,

PEACE be to this house, and to all that dwell in it.

When he cometh into the sick man's presence, he shall say, kneeling down,

Remember not, Lord, our iniquities, nor the iniquities of our forefathers. Spare us, good Lord, spare thy people, whom thou hast redeemed with thy most precious blood, and be not angry with us for ever.

*Answer.* Spare us, good Lord.

Then the Minister shall say, Let us pray.

*Lord, have mercy upon us.*

Christ, have mercy upon us.

*Lord, have mercy upon us.*

Our Father, which art in heaven, Hallowed be thy name. Thy kingdom come. Thy will be done in earth, as it is in heaven. Give us this day our daily bread. And forgive us our trespasses, as we forgive them that trespass against us. And lead us not into temptation; but deliver us from evil. *Amen.*

*Minister.* O Lord, save thy servant,  
*Answer.* Which putteth *his* trust in thee.  
*Min.* Send *him* help from thy holy place;  
*Answ.* And evermore mightily defend *him*.  
*Min.* Let the enemy have no advantage of *him*;  
*Answ.* Nor the wicked approach to hurt *him*.  
*Min.* Be unto *him*, O Lord, a strong tower,  
*Answ.* From the face of *his* enemy.  
*Min.* O Lord, hear our prayers:  
*Answ.* And let our cry come unto thee.

Minister.

O Lord, look down from heaven; behold, visit, and relieve this thy servant. Look upon *him* with the eyes of thy mercy; give *him* comfort and sure confidence in thee; defend *him* from the danger of the enemy, and keep *him* in perpetual peace and safety, through Jesus Christ our Lord. *Amen.*

Hear us, Almighty and most merciful God and Saviour; extend thy accustomed goodness to this thy servant, who is grieved with sickness. Sanctify, we beseech thee, this thy fatherly correction to *him*; that the sense of *his* weakness may add strength to *his* faith, and seriousness to *his* repentance: that, if it shall be thy good pleasure to restore *him* to *his* former health, *he* may lead the residue of *his* life in thy fear, and to thy glory: or else give *him* grace so to take thy visitation, that, after this painful life is ended, *he* may dwell with thee in life everlasting; through Jesus Christ our Lord. *Amen.*

Then shall the Minister exhort the sick person after this form, or other like.

Dearly beloved, know this, that Almighty God is

the Lord of life and death, and of all things to them pertaining, as youth, strength, health, age, weakness, and sickness. Wherefore, whatsoever your sickness is, know you certainly that it is God's visitation. And for what cause soever this sickness is sent unto you; whether it be to try your patience; for the example of others; and that your faith may be found in the day of the Lord, laudable, glorious, and honourable, to the increase of glory and endless felicity; or else it be sent unto you, to correct and amend in you whatsoever doth offend the eyes of your heavenly Father: know you certainly, that if you truly repent of your sins, and bear your sickness patiently, trusting in God's mercy for his dear Son Jesus Christ's sake, and render unto him humble thanks for his fatherly visitation, submitting yourself wholly unto his will, it shall turn to your profit, and help you forward in the right way that leadeth unto everlasting life.

If the person visited be very sick, then the Curate may end his exhortation in this place, or else proceed.

Take, therefore, in good part the chastisement of the Lord; for, (as St. Paul saith, in the twelfth chapter to the Hebrews,) "whom the Lord loveth he chasteneth, and scourgeth every son whom he receiveth. If ye endure chastening, God dealeth with you as with sons; for what son is he whom the father chasteneth not? But if ye be without chastisement, whereof all are partakers, then are ye bastards, and not sons. Furthermore we have had fathers of our flesh which corrected us, and we gave them reverence: shall we not much rather be in subjection unto the Father of spirits, and live? For they verily for a few days chastened us after their own pleasure; but he for our profit, that we might

be partakers of his holiness." These words (*good brother*) are written in holy Scriptures for our comfort and instruction, that we should patiently and with thanksgiving bear our heavenly Father's correction, whensoever, by any manner of adversity, it shall please his gracious goodness to visit us. And there should be no greater comfort to Christian persons than to be made like unto Christ, by suffering patiently adversities, troubles, and sicknesses. For he himself went not up to joy, but first he suffered pain: He entered not into his glory before he was crucified. So, truly, our way to eternal joy is to suffer here with Christ; and our door to enter into eternal life is gladly to die with Christ, that we may rise again from death, and dwell with him in everlasting life. Now therefore, taking your sickness, which is thus profitable for you, patiently; I exhort you, in the name of God, to remember the profession which you made unto God in your baptism. And forasmuch as, after this life, there is an account to be given unto the righteous Judge, by whom all must be judged without respect of persons; I require you to examine yourself, and your estate, both towards God and man; so that, accusing and condemning yourself, and your own faults, you may find mercy at your heavenly Father's hand for Christ's sake, and not be accused and condemned in that fearful judgment. Therefore I shall rehearse to you the Articles of our Faith, that you may know whether you believe as a Christian man should or no.

Here the Minister shall rehearse the Articles of the Faith, saying thus:

Dost thou believe in God the Father Almighty, Maker of heaven and earth?

And in Jesus Christ his only begotten Son, our Lord? And that he was conceived by the Holy Ghost; born of the Virgin Mary; that he suffered under Pontius Pilate, was crucified, dead, and buried; that he went down into hell, and also did rise again the third day; that he ascended into heaven, and sitteth at the right hand of God the Father Almighty, and from thence shall come again, at the end of the world, to judge the quick and the dead?

And dost thou believe in the Holy Ghost; the holy Catholic church; the communion of saints; the remission of sins; the resurrection of the flesh; and everlasting life after death?

The sick person shall answer.

All this I steadfastly believe.

Then shall the Minister examine whether he repent him truly of his sins, and be in charity with all the world; exhorting him to forgive, from the bottom of *his* heart, all persons that have offended him, and, if he have offended any other, to ask them forgiveness; and where he hath done injury or wrong to any man, that he make amends to the utmost of his power. And if he hath not before disposed of his goods, let him then be admonished to make his will, and to declare his debts, what he oweth, and what is owing unto him; for the better discharge of his conscience, and the quietness of his executors. But men should often be put in remembrance to take order for settling of their temporal estates, whilst they are in health.

These words, before rehearsed, may be said before the Minister begins his prayer, as he shall see cause.

The Minister should not omit earnestly to move such sick persons as are of ability, to be liberal to the poor.

Here shall the sick person be moved to make a special confession of his sins, if he feel his conscience troubled with any weighty matter. After which confession, the Priest shall absolve him (if he humbly and heartily desire it) after this sort:

Our Lord Jesus Christ, who hath left power to his church to absolve all sinners, who truly repent, and believe in him, of his great mercy forgive thee thine offences! And by his authority committed to me, I absolve thee from all thy sins, in the name of the Father, and of the Son, and of the Holy Ghost. *Amen.*

And then the Priest shall say the collect following:

Let us pray.

O most merciful God, who, according to the multitude of thy mercies, dost so put away the sins of those who truly repent, that thou rememberest them no more; open thine eye of mercy upon this thy servant, who most earnestly desireth pardon and forgiveness. Renew in *him*, most loving Father, whatsoever hath been decayed by the fraud and malice of the devil, or by *his* own carnal will and frailness; preserve and continue this sick member in the unity of the church; consider *Id*s contrition, accept *his* tears, assuage *his* pain, as shall seem to thee most expedient for *him*. And, forasmuch as *he* putteth *his* full trust only in thy mercy, impute not unto *him* his former sins, but strengthen *him* with thy blessed Spirit; and when thou art pleased to take *him* hence, take *him* unto thy favour, through the mercies of thy most dearly beloved Son Jesus Christ our Lord. *Amen.*

Then shall the Minister say this Psalm.

*In te, Domine, speravi*—Psalm lxxi.

In thee, O Lord, have I put my trust; let me never be put to confusion: but rid me, and deliver me in thy righteousness; incline thine ear unto me, and save me.

Be thou a strong hold, whereunto I may alway resort: thou hast promised to help me, for thou art my house of defence, and my castle.

Deliver me, O my God, out of the hand of the ungodly; out of the hand of the unrighteous and cruel man.

For thou, O Lord, art the thing that I long for: thou art my hope, even from my youth.

Through thee have I been holden up ever since I was born: thou art he that took me out of my mother's womb; my praise shall always be of thee.

I am become as it were a monster to many; but my sure trust is in thee.

O let my mouth be filled with thy praise; that I may sing of thy glory and honour all the day long.

Cast me not away in the time of age: forsake me not when my strength faileth me.

For mine enemies speak against me; and they that lay wait for my soul take their counsel together, saying, God hath forsaken him; persecute him, and take him, for there is none to deliver him.

Go not far from me, O God: my God, haste thee to help me.

Let them be confounded and perish that are against my soul: let them be covered with shame and dishonour that seek to do me evil.

As for me, I will patiently abide always; and will praise thee more and more.

My mouth shall daily speak of thy righteousness and salvation: for I know no end thereof.

I will go forth in the strength of the Lord God; and will make mention of thy righteousness only.

Thou, O God, hast taught me from my youth up until now: therefore will I tell of thy wondrous works.

Forsake me not, O God, in mine old age, when I am gray-headed, until I have showed thy strength unto this generation, and thy power to all them that are yet for to come.

Thy righteousness, O God, is very high, and great things are they that thou hast done: O God, who is like unto thee?

Glory be to the Father, and to the Son, and to the Holy Ghost;

As it was in the beginning, is now, and ever shall be, world without end. *Amen.*

Adding this:

O Saviour of the world, who by thy cross and precious blood hast redeemed us, save us, and help us, we humbly beseech thee, O Lord.

Then shall the minister say:

The Almighty Lord, who is a most strong tower to all them that put their trust in him; to whom all things in heaven, in earth, and under the earth, do bow and obey; be now and evermore thy defence, and make thee know and feel, that there is no other name under heaven given to man, in whom, and through whom, thou mayest receive health and salvation, but only the name of the Lord Jesus Christ. *Amen.*

And after that shall say:

Unto God's gracious mercy and protection we commit thee. The Lord bless thee, and keep thee. The Lord make his face to shine upon thee, and be gracious unto thee. The Lord lift up his countenance upon thee, and give thee peace, both now and evermore. *Amen.*

THE  
COMMUNION OF THE SICK.

FORASMUCH as all mortal men be subject to many sudden perils, diseases, and sicknesses, and ever uncertain what time they shall depart out of this life; therefore, to the intent they may be always in readiness to die, whensoever it shall please Almighty God to call them, the Curates shall diligently, from time to time, (but especially in time of pestilence, or other infectious sickness,) exhort their parishioners to the often receiving the Holy Communion of the body and blood of our Saviour Christ, when it shall be publicly administered in the church; that, so doing, they may, in case of sudden visitation, have the less cause to be disquieted for lack of the same. But if the sick person be not able to come to the church, and yet is desirous to receive the Communion in his house; then he must give timely notice to the Curate, signifying also how many there are to communicate with him, (which shall be three, or two at the least,) and having a convenient place in the sick man's house, with all things necessary, so prepared, that the Curate may reverently minister, he shall there celebrate the Holy Communion, beginning with the Collect, Epistle, and Gospel, here following:

*The Collect.*

Almighty and everlasting God, maker of mankind, who dost correct those whom thou dost love, and chastisest every one whom thou dost receive; we beseech thee to have mercy upon this thy servant visited

with thine hand, and to grant that *he* may take *his* sickness patiently, and recover *his* bodily health, (if it be thy gracious will); and whenever *his* soul shall depart from the body, it may be without spot presented unto thee, through Jesus Christ our Lord. *Amen.*

*The Epistle, Heb. xii. 5.*

My son, despise not thou the chastening of the Lord, nor faint when thou art rebuked of him: for whom the Lord loveth, he chasteneth; and scourgeth every son whom he receiveth.

*The Gospel, St. John v. 24.*

Verily, verily, I say unto you, he that heareth my word, and believeth on him that sent me, hath everlasting life, and shall not come into condemnation; but is passed from death unto life.

After which, the Priest shall proceed according to the form prescribed for the Holy Communion, beginning at these words: [Ye that do truly.]

At the time of the distribution of the Holy Sacrament, the Priest shall first receive the Communion himself, and afterward minister unto them that are appointed to communicate with the sick, and last of all to the sick person.

But if a man, either by reason of extremity of sickness, or for want of warning in due time to the Curate, or for lack of company to receive with him, or by any other just impediment, do not receive the Sacrament of Christ's body and blood, the Curate shall instruct him, that if he do truly repent him of his sins, and steadfastly believe Jesus Christ hath suffered death upon the cross for him, and shed his blood for his redemption, earnestly remembering the benefits he hath thereby, and giving him hearty thanks therefore, he doth eat and drink the body and blood of our Saviour Christ profitably to his soul's health, although he do not receive the sacrament with his mouth.

When the sick person is visited, and receiveth the Holy

Communion all at one time, then the Priest, for more expedition, shall cut off the form of the visitation, at the Psalm, [In thee, O Lord, have *I* put my trust,] and go straight to the Communion.

In the time of the plague, sweat, or other suchlike contagious times of sickness or diseases, when none of the parish or neighbours can be gotten to communicate with the sick in their houses, for fear of the infection; upon special request of the diseased, the Minister only may communicate with him.

At the time of the celebration of the Communion, the communicants being conveniently placed for receiving of the Holy Sacrament, the Priest shall say this exhortation:

Dearly beloved in the Lord, ye that mind to come to the Holy Communion of the body and blood of our Saviour Christ, must consider how St. Paul exhorteth all persons diligently to try and examine themselves, before they presume to eat of that bread, and drink of that cup. For as the benefit is great, if with a true penitent heart and lively faith we receive that Holy Sacrament, (for then we spiritually eat the flesh of Christ, and drink his blood; then we dwell in Christ, and Christ in us; we are one with Christ, and Christ with us); so is the danger great, if we receive the same unworthily: for then we are guilty of the body and blood of Christ our Saviour; we eat and drink our own damnation, not considering the Lord's body; we kindle God's wrath against us; we provoke him to plague us with divers diseases, and sundry kinds of death. Judge therefore yourselves, brethren, that ye be not judged of the Lord; repent ye truly for your sins past; have a lively and steadfast faith in Christ our Saviour; amend your lives, and be in perfect charity with all men; so shall ye be meet partakers of these holy mysteries. And above all things, ye must give most humble and hearty thanks to God the Father, the Son, and the Holy Ghost, for the

redemption of the world by the death and passion of our Saviour Christ, both God and man, who did humble himself even to the death upon the cross, for us miserable sinners, who lay in darkness and the shadow of death, that he might make us the children of God, and exalt us to everlasting life. And to the end that we should always remember the exceeding great love of our Master and only Saviour Jesus Christ, thus dying for us, and the innumerable benefits which by his precious blood shedding he hath obtained to us, he hath instituted and ordained holy mysteries as pledges of his love, and for a continual remembrance of his death to our great and endless comfort. To Him, therefore, with the Father, and the Holy Ghost, let us give (as we are most bounden) continual thanks; submitting ourselves wholly to his holy will and pleasure, and studying to serve him in true holiness and righteousness all the days of our life. *Amen.*

Then shall the Priest say to them that come to receive the Holy Communion,

Ye that do truly and earnestly repent you of your sins, and are in love and charity with your neighbours, and intend to lead a new life, following the commandments of God, and walking from henceforth in his holy ways; draw near with faith, and take this Holy Sacrament to your comfort; and make your humble confession to Almighty God, meekly kneeling upon your knees.

Then shall this general confession be made, in the name of all those that are minded to receive the Holy Communion, by one of the Ministers, both he and all the people kneeling humbly upon their knees, and saying;

Almighty God, Father of our Lord Jesus Christ,

maker of all things, judge of all men, we acknowledge and bewail our manifold sins and wickedness which we from time to time most grievously have committed, by thought, word, and deed, against thy Divine Majesty, provoking most justly thy wrath and indignation against us. We do earnestly repent, and are heartily sorry for these our misdoings; the remembrance of them is grievous to us, the burden of them is intolerable. Have mercy upon us, have mercy upon us, most merciful Father: for thy Son our Lord Jesus Christ's sake, forgive us all that is past; and grant we may ever hereafter serve and please thee in newness of life, to the honour and glory of thy name, through Jesus Christ; our Lord. *Amen.*

Then shall the Priest (or the Bishop, being present) stand up, and, turning himself to the people, pronounce this absolution:

Almighty God our heavenly Father, who of his great mercy hath promised forgiveness of sins to all them that with hearty repentance and true faith turn unto him, have mercy upon you, pardon and deliver you from all your sins, confirm and strengthen you in all goodness, and bring you to everlasting life, through Jesus Christ our Lord. *Amen.*

Then shall the Priest say,

Hear what comfortable words our Saviour Christ saith unto all that truly turn to him:

Come unto me, all ye that travail and are heavy laden, and I will refresh you. Matt. xi. 28.

So God loved the world, that he gave his only begotten Son, to the end that all that believe in him should not perish, but have everlasting life. John iii. 16.

Hear also what St. Paul saith:

This is a true saying, and worthy of all men to be received, That Jesus Christ came into the world to save sinners. 1 Tim. i. 15.

Hear also what St. John saith:

If any man sin, we have an advocate with the Father, Jesus Christ the righteous; and he is the propitiation for our sins. 1 John ii. 1, 2.

After which, the Priest shall proceed, saying,

Lift up your hearts.

*Answ.* We lift them up unto the Lord.

*Priest.* Let us give thanks unto our Lord God.

*Answ.* It is meet and right so to do.

Then shall the Priest say,

It is very meet, right, and our bounden duty that we should, at all times and in all places, give thanks unto thee, O Lord, Holy Father,\* Almighty, Everlasting God.

Here shall follow the proper preface, according to the time, if there be any specially appointed; or else immediately shall follow,

Therefore with angels and archangels, and with all the company of heaven, we laud and magnify thy glorious name, evermore praising thee, and saying, Holy, holy, holy, Lord God of hosts! heaven and earth are full of thy glory. Glory be to thee, O Lord most high. *Amen.*

\* These words [ Holy Father] must be omitted on Trinity Sunday.

## PROPER PREFACES.

*On CHRISTMAS-DAY, and seven days after.*

BECAUSE thou didst give Jesus Christ, thine only Son, to be born as at this time for us, who, by the operation of the Holy Ghost, was made very man of the substance of the Virgin Mary his mother, and that without spot of sin, to make us clean from all sin: therefore with angels, etc.

*On EASTER-DAY, and seven days after.*

But chiefly are we bound to praise thee for the glorious resurrection of thy Son Jesus Christ our Lord: for he is the very paschal lamb which was offered for us, and hath taken away the sins of the world; who by his death hath destroyed death, and by his rising to life again hath restored us to everlasting life: therefore, etc.

*On ASCENSION-DAY, and seven days after.*

Through thy most dearly beloved Son, Jesus Christ our Lord, who, after his most glorious resurrection, manifestly appeared to all his apostles, and in their sight ascended up into heaven to prepare a place for us; that where he is, thither we might also ascend, and reign with him in glory: therefore, etc.

*On WHITSUNDAY, and six days after.*

Through Jesus Christ our Lord, according to whose most true promise the Holy Ghost came down as at this time from heaven, with a sudden great sound, as it had been a mighty wind, in the likeness of fiery tongues, lighting upon the apostles, to teach them, and

to lead them to all truth, giving them both the gift of divers languages, and also boldness with fervent zeal constantly to preach the Gospel unto all nations, whereby we have been brought out of darkness and error into the clear light and true knowledge of thee, and of thy Son Jesus Christ: therefore, etc.

*On the FEAST of TRINITY only.*

Who art one God, one Lord; not one only Person, but three Persons in one substance. For that which we believe of the glory of the Father, the same we believe of the Son, and of the Holy Ghost, without any difference or inequality: therefore, etc.

After each of which prefaces shall immediately be sung or said:

Therefore with angels and archangels, and with all the company of heaven, we laud and magnify thy glorious name, evermore praising thee, and saying, Holy, holy, holy, Lord God of hosts! heaven and earth are full of thy glory. Glory be to thee, O Lord most high. *Amen.*

Then shall the Priest, kneeling down at the Lord's table, say, in the name of all them that shall receive the Communion, this prayer following:

We do not presume to come to this thy table, O merciful Lord, trusting in our own righteousness, but in thy manifold and great mercies. We are not worthy so much as to gather up the crumbs under thy table. But thou art the same Lord, whose property is always to have mercy: grant us, therefore, gracious Lord, so to eat the flesh of thy dear Son Jesus Christ, and to drink his blood, that our sinful bodies may be made clean by his body, and our souls washed through his

most precious blood, and that we may evermore dwell in him, and he in us. *Amen.*

When the Priest, standing before the table, hath so ordered the bread and wine, that he may with the more readiness and decency break the bread before the people, and take the cap into his hands, he shall say the prayer of Consecration, as followed):

Almighty God, our heavenly Father, who of thy tender mercy didst give thine only Son Jesus Christ to suffer death upon the cross for our redemption, who made there (by his one oblation of himself once offered) a full, perfect, and sufficient sacrifice, oblation, and satisfaction for the sins of the whole world, and did institute, and in his holy gospel command us to continue a perpetual memory of that his precious death until his coming again; hear us, O merciful Father, we most humbly beseech thee, and grant that we, receiving these thy creatures of bread and wine, according to thy Son our Saviour Jesus Christ's holy institution, in remembrance of his death and passion, may be partakers of his most blessed body and blood; who, in the same night that he was betrayed,\* took bread, and when he had given thanks, † he brake it, and gave it to his disciples, saying, Take, eat; ‡ this is my body which is given for you: do this in remembrance of me. Likewise after supper,§ he took the cup, and when he had given thanks, he gave it to them, saying, Drink ye all of this; for this|| is my blood of the New Testament, which is shed for you, and for many, for the remission of sins; do

\* Here the Priest is to take the paten into his hands,

† And here to break the bread.

‡ And here to lay his hands on all the bread.

§ Here he is to take the cup into his hand.

|| And here to lay his hand upon every vessel (be it chalice or flaggon) in which there is any wine to be consecrated.

this, as oft as ye shall drink it, in remembrance of me. *Amen.*

Then shall the Minister first receive the Communion in both kinds himself, and then proceed to deliver the same to the Bishops, Priests, and Deacons, in like manner, (if any be present,) and after that to the people also in order, into their hands, all meekly kneeling. And when he delivcreth the bread to any one, he shall say:

The body of our Lord Jesus Christ, which was given for thee, preserve thy body and soul unto everlasting life! Take and cat this in remembrance that Christ died for thee; and feed on him in thy heart by faith with thanksgiving.

And the Minister that delivereth the cup to any one, shall say:

The blood of our Lord Jesus Christ, which was shed for thee, preserve thy body and soul unto everlasting life! Drink this in remembrance that Christ's blood was shed for thee, and be thankful.

If the consecrated bread or wine be all spent before all have communicated, the Priest is to consecrate more, according to the form before prescribed; beginning at [Our Saviour Christ in the same night, etc.] for the blessing of the bread, and (Likewise after supper, etc.) for the blessing of the cup.

When all have communicated, the Minister shall return to the Lord's table, and reverently place upon it what remaineth of the consecrated elements, covering the same with a fair linen cloth.

Then shall the Priest say the Lord's Prayer, the people repeating after him every petition.

Our Father which art in heaven; Hallowed be thy name. Thy kingdom come. Thy will be done on earth as it is in heaven. Give us this day our daily bread. And forgive us our trespasses, as we forgive them that trespass against us. And lead us not into

temptation; but deliver us from evil. For thine is the kingdom, the power, and the glory, for ever and ever. *Amen.*

After this shall be said as followeth:

O Lord and heavenly Father, we thy humble servants entirely desire thy fatherly goodness mercifully to accept this our sacrifice of praise and thanksgiving; most humbly beseeching thee to grant, that by the merits and death of thy Son Jesus Christ, and through faith in his blood, we and all thy whole church may obtain remission of our sins, and all other benefits of his passion. And here we offer and present unto thee, O Lord, ourselves, our souls and bodies, to be a reasonable, holy, and lively sacrifice unto thee; humbly beseeching thee, that all we who are partakers of this holy communion may be filled with thy grace and heavenly benediction. And although we be unworthy, through our manifold sins, to offer unto thee any sacrifice; yet we beseech thee to accept this our bounden duty and service; not weighing our merits, but pardoning our offences, through Jesus Christ our Lord; by whom, and with whom, in the unity of the Holy Ghost, all honour and glory be unto thee, O Father Almighty, world without end. *Amen.*

Or this:

Almighty and everlasting God, we most heartily thank thee, for that thou dost vouchsafe to feed us, who have duly received these holy mysteries with the spiritual food of the most precious body and blood of thy Son our Saviour Jesus Christ; and dost assure us thereby of thy favour and goodness towards us; and that we are very members incorporate in the mystical body of thy Son, which is the blessed company of all faithful people; and are also heirs through hope of thy

everlasting kingdom, by the merits of the most precious death and passion of thy dear Son. And we most humbly beseech thee, O heavenly Father, so to assist us with thy grace, that we may continue in that holy fellowship, and do all such good works as thou hast prepared for us to walk in, through Jesus Christ our Lord; to whom, with thee and the holy Ghost, be all honour and glory, world without end. *Amen.*

Then shall be said or sung:

Glory be to God on high, and in earth peace, good will towards men. We praise thee, we bless thee, we worship thee, we glorify thee, we give thanks to thee, for thy great glory, O Lord God, heavenly King, God the Father Almighty.

O Lord, the only begotten Son Jesus Christ; O Lord God, Lamb of God, Son of the Father, that takest away the sins of the world, have mercy upon us: thou that takest away the sins of the world, have mercy upon us: thou that takest away the sins of the world, receive our prayer: thou that sittest at the right hand of God the Father, have mercy upon us:

For thou only art holy, thou only art the Lord; thou only, O Christ, with the Holy Ghost, art most high in the glory of God the Father. *Amen.*

Then the Priest, or Bishop, (if he be present,) shall let them depart with this blessing:

The peace of God, which passeth all understanding, keep your hearts and minds in the knowledge and love of God, and of his Son Jesus Christ our Lord; and the blessing of God Almighty, the Father, the Son, and the Holy Ghost, be among you, and remain with you always. *Amen.*

## PROPER COLLECTS

## FOR THE SICK.

LET thy merciful ears, O Lord, be open to the prayers of thy humble servants; and, that we may obtain our petitions, make us to ask such things as shall please thee, through Jesus Christ our Lord.

In the midst of life we are in death: of whom may we seek for succour, but of thee, O Lord, who for our sins art justly displeased? Yet, O Lord God most holy, O Lord most mighty, O holy and most merciful Saviour, deliver us not into the bitter pains of eternal death. Thou knowest, Lord, the secrets of our heart; shut not thy merciful ears to our prayers; but spare us, Lord most holy, O God most mighty, O holy and merciful Saviour, thou most worthy Judge Eternal, suffer us not at the last hour, for any pains of death, to fall from thee. *Amen.*

O merciful God, the Father of our Lord Jesus Christ, who is the resurrection and the life, we beseech thee to raise us from the death of sin to the life of righteousness, that, at the general resurrection in the last day, we may be found acceptable in thy sight, and may have our perfect consummation and bliss, both in body and soul, in thy eternal glory; through Jesus Christ our Lord.

Grant, we beseech thee, Almighty God, that we, who for our evil deeds do worthily deserve to be

punished, by the comfort of thy grace may mercifully be relieved, through our Lord and Saviour Jesus Christ.

O most mighty God, and merciful Father, who hast compassion upon all men, and hatest nothing that thou hast made, who wouldest not the death of a sinner, but that he should rather turn from his sin, and be saved; mercifully forgive us our trespasses; relieve and comfort us, who are grieved and wearied with the burden of our sins. Thy property is always to have mercy; to thee only it appertaineth to forgive sins: Spare us therefore, good Lord, spare us, whom thou hast redeemed. Enter not into judgment with thy servants, who are vile earth and miserable sinners; but so turn thine anger from us, who meekly acknowledge our vile-ness, and truly repent us of our faults, and "so make haste to help us in this world, that we may ever live with thee in the world to come; through Jesus Christ our Lord.

O God, the Creator and Preserver of all mankind, we humbly beseech thee for all sorts and conditions of men, that thou wouldest be pleased to make thy ways known unto them, thy saving health among all nations. More especially we pray for the good estate of the Catholic church, that it may be so guided and governed by thy good Spirit, that all who profess and call themselves Christians may be led into the way of truth, and hold the faith in unity of spirit, in the bond of peace, and in righteousness of life. Finally, we commend to thy fatherly goodness all those who are any ways afflicted in mind, body, or estate, (especially *him* for whom our prayers are desired); that it may please

thee to comfort and relieve them according to their several necessities, giving them patience under their sufferings, and a happy issue out of all their afflictions: and this we beg for Jesus Christ his sake.

Almighty and everlasting God, who art always more ready to hear than we to pray, and art wont to give more than either we desire or deserve; pour down upon us the abundance of thy mercy, forgiving us those things whereof our conscience is afraid, and giving us those good things which we are not worthy to ask, but through the merits and mediation of Jesus Christ our Lord.

O God, merciful father, that despisest not the sighing of a contrite heart, nor the desire of such as be sorrowful; mercifully assist our prayers that we make before thee in all our troubles and adversities whensoever they oppress us; and graciously hear us, that those evils which the craft and subtlety of the devil or man worketh against us be brought to nought, and by the providence of thy goodness they may be dispersed; that we thy servants, being hurt by no persecutions, (or afflictions,) may evermore give thanks unto thee in thy holy church; through Jesus Christ our Lord.

We beseech thee, O Father, mercifully to look upon our infirmities, and for the glory of thy name turn from us all those evils that we most righteously have deserved; and grant that in all our troubles we may put our whole trust and confidence in thy mercy, and evermore serve thee in holiness and pureness of living, to thy honour and glory; through our only mediator and advocate, Jesus Christ our Lord.

Almighty and everlasting God, who of thy tender love to mankind hast sent thy Son our Saviour Jesus Christ, to take upon him our flesh, and to suffer death upon the cross, that all mankind should follow the example of his great humility; mercifully grant that we may both follow the example of his patience, and also be made partakers of his resurrection; through Jesus Christ our Lord.

Almighty God, the fountain of all wisdom, who knowest our necessities before we ask, and our ignorance in asking, we beseech thee to have compassion upon our infirmities; and those things which for our unworthiness we dare not, and for our blindness we cannot ask, vouchsafe to give us for the worthiness of thy Son, Jesus Christ our Lord. *Amen.*

#### PRAYERS FOR THE SICK.

*A general Prayer for the Acceptance of our Devotions for the Sick.*

(From Bishop Andrews.)

O LORD, it is a great presumption that one sinner should dare to commend another to thy Divine Majesty. And who would not fear to undertake it? But thy commandment it is, "That we should pray for the sick members of thy church, and mourn with them that mourn;" and thou hast promised that our prayers thus made, thou wilt receive. And now, behold, O Lord, we that are no way meet, but unworthy, utterly unworthy to ask for aught for ourselves, charity and compassion so binding us, are enforced to become suitors

to thee for others, even for this thy servant, now afflicted by thee. Of thee we hope; of thee we desire; to thee we pray, in the most meek and humble manner, and even from the bottom of our hearts. O Lord, that which thou mightest justly deny to our unworthiness, deny not, we beseech thee, to thine own gracious goodness. O Lord, forgive us our sins; O Lord, forgive us our sins, our great and grievous sins, oft and many times committed, long and many years continued; so that we may be meet to pray for others, and our prayers be made unto thee in an acceptable time.

Graciously look upon our afflictions.

Pitifully behold the sorrows of our hearts.

Mercifully forgive the sins of thy people.

Favourably with mercy hear our prayers.

Both now and ever vouchsafe to hear us, O Christ.

Graciously hear us, O Christ; graciously hear us, O Lord Christ. *Amen.*

*Particular Prayers for the Sick.*

(From Bishop Patrick.)

O most gracious God, who by thy Son Jesus Christ hast united us all in one body, that we should love one another, and if one member suffers, all the members should suffer with it; we humbly implore thy tender mercies towards this thy servant, of whose afflicted condition we desire to have a compassionate sense and feeling.

Look graciously upon *him*, O Lord, and visit *him* with thy salutation. Vouchsafe *him* such consolations from above, as we should desire for ourselves were we in *his* extremity. Give *him* a true penitent heart for all the offences that *he* hath at any time committed; together with a lively faith in thy Son Jesus, who came

into the world to save sinners. Give *him* the comfort of a holy hope, that thou acceptest *his* repentance, and faithful devotion to thee. Support *him* by this hope under all *his* pain, and enable *him* patiently to submit to thy fatherly correction. Send *him* help now in time of need, both for *his* soul and for *his* body. Bless the means *for his* recovery; and, if it be thy good pleasure, restore *him* speedily to *his* former health, and inspire *him* with a serious resolution to serve thee more zealously all *his* days,

Or if thou hast otherwise resolved in thy wise counsels, deliver *him* from the fear of death, assist *him* in *his* last agony, give *him* an easy and cheerful passage out of this life, and send thy holy angels to conduct *him* into rest and peace with our Lord Jesus, for the same Jesus Christ's sake. *Amen.*

(From Bishop Taylor.)

I.

Almighty God, Father of mercies, the God of peace and comfort, of rest and pardon, we thy servants, in duty to thee and charity to our *brother*, humbly beg mercy of thee for *him*, to descend upon *his* body and *his* soul. We come to thee in the name of Jesus, praying thee to pardon the sins of this thy servant and to bury them in the grave of Him that died for us, that they may never rise up in judgment against *him*, nor bring *him*, in the day of trial, to shame and confusion of face. *Amen.*

II.

Give thy servant, O Lord, patience in *his* sorrows, comfort in *his* sickness, and restore *him* to health, if it

seem good to thee. And, however thou shalt determine concerning *him*, yet make *his* repentance perfect, and *his* faith strong, and *his* hope steadfast, and *his* passage safe; that when thou shalt call *his* soul from the body, it may enter into the rest of the sons of God, and the bosom of blessedness, and be with the holy Jesus. *Amen.*

## III.

O Lord, thou knowest all the necessities, and all the infirmities of thy servant: fortify *his* soul with spiritual joys and perfect resignation; and take from *him* all inordinate affections to this world; and enlarge *his* heart with desires of being with thee, in thy heavenly kingdom.

## IV.

Lord, let not any pain or passion discompose the order of *his* thoughts or *his* duty; and lay no more upon thy servant than thou wilt make *him* able to bear; and, together with the temptation, do thou provide a way to escape; even by the mercies of a longer and more holy life, or by the mercies of a blessed death; even as it pleaseth thee, O Lord, so let it be. *Amen.*

## V.

Lord, let the tenderness of *his* conscience and the Spirit of God call to mind *his* sins, that they may be confessed and repented of; and let thy powerful grace remove from *his* soul every root of bitterness; and in the union of the holy Jesus, and in the love of God, and in the communion of all the saints, let *his* soul be presented to thee blameless, and entirely pardoned, through Jesus Christ our Lord. *Amen.*

*A larger Form of Prayer for the Sick.*

(From Bishop Patrick.)

O Lord, the Father of our spirits, who givest us life, and breath, and all things, and hast not thought a crown of everlasting life too much to promise us; we believe that thou wilt not deny us what is needful and fit for us, both for our souls and our bodies, in our passage through this world, to that of honour, glory, and immortality. In this confidence we more particularly recommend this thy sick servant to thy infinite and most compassionate mercy. Settle in *his* soul a steadfast faith, that thou dost not willingly grieve the children of men, but intendest good to *him* by this thy fatherly correction. And now, since all other pleasures and enjoyments fail *him*, represent thyself more effectually unto *him*, as the only support and stay of his hope, and rock of salvation. Wherein soever he hath neglected thee, or committed any offence against thee, make *him* deeply sensible of it, and heartily sorrowful for all his transgressions. And as *he* earnestly desires pardon and forgiveness of thee, so work in *him* a serious resolution to live more circumspectly and righteously for the time to come. Assist *him* graciously, O Lord, that *he* may give a proof of *his* sincere intentions hereafter to submit *himself* in all things to thy will, by *his* patient submission to thy fatherly correction. O, that *he* may so quietly, so meekly, so humbly, and cheerfully resign *his* will unto thee, to suffer what thou inflictest, that *he* may be the more disposed to do readily whatsoever thou commandest. For which end make *him* thoroughly apprehensive of thy sovereign power and authority over all creatures. Possess *him* with a

great reverence of thy wisdom and justice, with an entire confidence in thy goodness and love, with a thankful remembrance of all thy past mercies to *him*, that so *he* may the better endure what thou layest upon *him* at present, and may ever follow thy directions, and submit to thy orders, and delight to do thy will, O God.

Bless the remedies which are used for restoring *him* to *his* former health, that *he* may live to perform *his* duty with greater care: or, if thou hast otherwise appointed, accept graciously of *his* purposes of amendment, and dispose *him* to return back AM spirit willingly unto thee who gavest it; and with great humility and deep sense of *his* own undeservings, to expect thy mercy declared in Christ Jesus. Fix *his* mind steadfastly upon him, who hath led the way through the grave unto heaven, that *he* may not be affrighted with the approaches of death, but, looking beyond it to that high and holy place where the Lord Jesus is, may rejoice in hope of eternal glory.

And grant that every one of us, in our best state of health, may consider perpetually how frail and weak we are; that so we may not abuse ourselves by an intemperate use of any sensual pleasures, nor load our minds with the cares of this life, nor spend our days in a vain pursuit of the honour and glory of this world; but may pass all the time of our sojourning here in fear; and may live so righteously and soberly in this present world, as becomes those who expect shortly to give an account to thee, who wilt judge all men according to their works. Hear us, O Lord, we most humbly beseech thee, through Christ Jesus our merciful and compassionate Redeemer. Amen.

Assist us mercifully, O Lord, in these our supplica-

tions. and prayers, and dispose the way of thy servants towards the attainment of everlasting salvation, that, among all the changes and chances of this mortal life, they may ever be defended by thy most gracious and ready help; through Jesus Christ our Lord. *Amen.*

(From Doctor Hammond.)

O Lord, bless, keep, and defend this thy servant with thy heavenly grace and benediction, that *he* may continue thine for ever, and daily increase in thy Holy Spirit more and more, until *he* comes to thy everlasting kingdom.

Let thy mighty hand and out-stretched arm, O Lord, be ever *his* defence; thy mercy and loving-kindness in Jesus Christ thy dear Son, *his* salvation; thy true and holy word, *his* instruction; thy grace and Holy Spirit, *his* comfort and consolation, both now and at the hour of death.

Now the God of peace, that brought again from the dead our Lord Jesus, that great Shepherd of the sheep, through the blood of the everlasting covenant, make you perfect in every good work to do his will, working in you that which is well pleasing in his sight, through Jesus Christ; to whom be glory for ever and ever.\* *Amen.*

#### PROPER PSALMS FOR THE SICK.

##### I.

O LORD, rebuke me not in thine indignation: neither chasten me in thy displeasure. Psalm vi. 1.

2. Have mercy upon me, O Lord, for I am weak: O Lord, heal me, for my bones are vexed. Psalm vi. 2.

\* Heb. xiii. 20, 21.

3. My soul also is sore troubled: but, Lord, how long wilt thou punish me? Psalm vi. 3.

4. Thine arrows stick fast in me: and thy hand presseth me sore. Psalm xxxviii. 2.

5. There is no health in my flesh, because of thy displeasure: neither is there any rest in my bones, by reason of my sin. Psalm xxxviii. 3.

6. For my wickednesses are gone over my head, and are like a sore burden too heavy for me to bear. Psalm xxxviii. 4.

7. I am feeble and sore smitten: I have roared for the very disquietness of my heart. Psalm xxxviii. 8.

8. My heart panteth, my strength hath failed me, and the sight of mine eyes is gone from me. Psalm xxxviii. 10.

9. Therefore is my spirit vexed within me; my heart within me is desolate. Psalm cxliii. 4.

10. Turn thee, O Lord, and deliver my soul: O save me for thy mercies' sake. Psalm vi. 4.

11. Hide not thy face from me in the time of my trouble: incline thine ears unto me when I call; O hear me, and that right soon. Psalm cii. 2.

12. For my days are consumed away like smoke; my heart is smitten down and withered like grass. Psalm cii. 3, 4.

13. And that because of thine indignation and wrath; for thou hast lifted me up, and cast me clown. Psalm cii. 10.

14. But I said, O my God, take me not away in the midst of my age; forsake me not when my strength faileth me. Psalm cii. 24.

15. Wherefore in thee, O Lord, have I put my trust: let me never be put to confusion. Psalm lxxi. 1.

## II.

## PSALM LI.

Have mercy upon me, O God, after thy great goodness: according to the multitude of thy mercies, do away mine offences.

2. Wash me thoroughly from mine iniquity: and cleanse me from my sin.
3. For I acknowledge my faults; and my sin is ever before me.
4. Against thee only have I sinned, and done this evil in thy sight: that thou mightest be justified in thy saying, and clear when thou art judged.
5. Behold, I was shapen in wickedness, and in sin hath my mother conceived me.
6. But, lo, thou requirest truth in the inward parts: and thou shalt make me to understand wisdom secretly.
7. Thou shalt purge me with hyssop, and I shall be clean: thou shalt wash me, and I shall be whiter than snow.
8. Thou shalt make me hear of joy and gladness: that the bones which thou hast broken may rejoice.
9. Turn thy face from my sins: and put out all my misdeeds.
10. Make me a clean heart, O God: and renew a right spirit within me.
11. Cast me not away from thy presence: and take not thy Holy Spirit from me.
12. O, give me the comfort of thy help again; and stablish me with thy free Spirit.
13. Then shall I teach thy ways unto the wicked: and sinners shall be converted unto thee.

## III.

Hear my prayer, O Lord, and consider my desire: hearken unto me for thy truth and righteousness' sake. Psalm cxliii. 1.

2. And enter not into judgment with thy servant: for in thy sight shall no man living be justified. Psalm cxliii. 2.

3. The sacrifice of God is a troubled spirit: a broken and contrite heart, O God, thou wilt not despise. Psalm li. 17.

4. Lord, thou knowest all my desire: and my groaning is not hid from thee. Psalm xxxviii. 9.

5. I stretch forth my hands unto thee: my soul gaspeth unto thee as a thirsty land. Psalm cxliii. 6.

6. Hear me, O Lord, and that soon, for my spirit waxeth faint: hide not thy face from me, lest I be like unto them that go down into the pit. Psalm cxliii. 7-

7- Haste thee to help me, O Lord God of my salvation. Psalm xxxviii. 22.

8. For thou art a place to hide me in: thou shalt preserve me from trouble: thou shalt compass me about with songs of deliverance. Psalm xxxii. 8.

9. Into thy hands I commend my spirit: for thou hast redeemed me, O Lord God of truth. Psalm xxxi. 5.

Glory be to the Father, etc. As it was in the beginning, etc.

*A Declaration of Forgiveness,*

(From Bishop Cosins.)

I do most humbly desire all and every one whom I have offended, that they would vouchsafe to forgive

me: and I do freely and heartily forgive all the world, whereinsoever any hath offended me, or done me any manner of injury whatsoever, even as I desire to be forgiven of God, and to be absolved from my sins, for the merits of my blessed Redeemer.

## OCCASIONAL PRAYERS FOR THE SICK.

*A Prayer for a Person in the Beginning of his Sickness.*

(From Bishop Taylor.)

O ALMIGHTY GOD, merciful and gracious, who in thy justice didst send sorrow and tears, sickness and death into the world, as a punishment for man's sins, and hast comprehended all under sin, and this sad covenant of sufferings—not to destroy us, but that thou mightest have mercy on all, making thy justice to minister to mercy, short afflictions to an eternal weight of glory; as thou hast been pleased to turn the sins of this thy servant into sickness, so turn, we beseech thee, *his* sickness to the advantage of holiness and religion, of mercy and pardon, of faith and hope, of grace and glory. Thou hast now called *him* to suffer. Lord, relieve *his* sorrow and support *his* spirit, direct *his* thoughts and sanctify *his* sickness, that the punishment of *his* sin may be to *him* a school of virtue. Make *him* behave as a son under discipline, humbly and obediently, evenly and patiently, that *he* may be brought by this means nearer to thee; that if *he* shall recover *his* former health, he may return to the world with greater strength of spirit, to run a new race of stricter holiness, and more severe religion; or if he shall pass hence through the

gates of death, *he* may rejoice in the hope of being admitted into that heavenly society, in which all thy saints and servants shall be comprehended to eternal ages. Grant this, for Jesus Christ's sake, our blessed Lord and Saviour. *Amen.*

*A Prayer for Thankfulness in Sickness.*

O God, wonderful both in thy mercies and judgments, grant that the sense of thy servant's present afflictions may not cause *him* to forget thy former mercies, which thou hast bestowed upon *him*: O, therefore, let the remembrance of those many and great blessings that he hath so long enjoyed at thy hand be now the proper motives and incentives to the virtues of patience and humility, causing *him* cheerfully to resign *himself* to thy blessed will under all the dispensations of thy providence, though ever so hard; and patiently to wait for the return of thy loving-kindness in Jesus, which is better than life. *Amen.*

*A Prayer for a Blessing on the Means used for a Sick Person's Recovery.*

(From Mr. Kettlewell.)

O gracious Lord, by whose word man lives, and not by any human means alone; direct, we pray thee, the counsels of those who prescribe to this thy servant, and prosper the medicines which are used to procure *him* ease and strength; but let not *his* confidence in them lessen any thing of *his* dependence on thee, but make *him* sensible that every good gift is from thee, and that it is thou that givest us help in time of need. To whom, therefore, but to thee should we flee in the day of our visitation? since it is thy blessing only that maketh the means we use effectual; and, however vain

the use of them is without thee, if thou biddest them, the things or accidents which we do not think of or regard shall recover us. O, therefore, as their part who administer to *him* is the care, so let thine, O God, be the blessing, and *his* the comfort: and as *he* regards them as thy instruments, so let *him* own thee for the Author of *his* mercies, and to thee give thanks, and pay *his* vows and services: through our Lord and Saviour Jesus Christ. Amen.

*A Prayer for a Sick Person when there appears some Hope of Recovery.*

(From Bishop Patrick.)

We thank thee, O Father, Lord of heaven and earth, that thou hast heard our prayers for thine afflicted servant, and given *him* some respite and hopes of recovery from this great illness. Blessed be thy goodness, that *he* hath not made *his* bed in the dust, but is likely to continue still amongst us in the land of the living. Blessed be thy goodness for so great (and lately unexpected) mercy to *him*.

And, O thou Preserver of man! who hast begun to revive and quicken *him* again; go on to perfect *his* cure, and forsake not the work of thy own hands. Repair all the decays in *his* outward man, that *his* mind may also recover its former strength, to praise and bless thy goodness to *him*.

And visit *him*, in the mean time, with thy heavenly consolation from above. Fill *him* with comfortable thoughts of thy love, and of the tender compassionate care which our Lord Jesus takes of all his afflicted servants. Endue *him* still with more patient submission to thy will, and enable *him* both quietly to wait upon thee till thou hast finished *his* recovery, and also

to continue steadfastly resolved to serve thee more faithfully with *his* restored strength; through Jesus Christ, our blessed Saviour and Redeemer. *Amen.*

*Another, in Behalf of the Sick Person, when he finds any Abatement  
of his Distemper.*

Accept, O Lord, of the unfeigned thanks of thy servant for abating the fury of *his* present distemper, and giving *him* some hopes of raising *him* up again to praise thee in the great congregation.

It is a great mercy, O Lord, and owing to thy goodness only, that *his* senses are preserved entire, and that *he* hath some respite, after so much uneasiness and pain, through the violence of *his* illness.

O perfect, if it be thy blessed will, what thou hast begun in *him*, and say to the distemper, "It is enough."

Teach *him* hence to look up to thee continually as the rock of *his* salvation, whence only he is to expect comfort and support: and give *him* grace always to make such a right use of thy favours, that he may daily find *himself* surrounded by the light of thy countenance, and enjoy the blessings of thy heavenly benediction in all *his* ways, whether in adversity or prosperity, in sickness or in health. Even so, blessed Lord, continue to assist, strengthen, comfort, and bless *him*, both now and for evermore, through Jesus Christ our Lord.

*A Prayer for One who is dangerously Ill.*

O Almighty God, "gracious, and merciful, and long-suffering, whose compassions fail not;" look down, we beseech thee, upon the low and distressed state of thy servant, now lying in the extremity of sickness. The harder *his* illness presses upon *him*, the louder

does it call upon thee for help. O be merciful therefore unto *him*, according to the necessity of *his* case, and according to the multitude of thy tender mercies in Jesus Christ. Rebuke the distemper, that it prevail not over *him* to death; but turn its malevolent aspect into a joyous expectation of life. In as great danger as *he* is, yet if thou wilt, O Lord, we know thou canst make *him* whole; if thou speakest the word, it shall be done. In submission, therefore, to thy most wise and good disposal of all things, we beg this mercy at thy hands, that thou wouldest let "this" bitter "cup pass away" from thy servant, and cause "a way for" *him* "to escape" out of this dangerous condition. "O spare *him* a little and *his* soul shall live." Amen.

*A Prayer for a Sick Person when Sickness continues  
long upon him.*

(From Bishop Patrick.)

Look down, O Lord, we humbly beseech thee, with an eye of compassion on thy poor distressed servant, who hath lain so long under this severe affliction; and by how much the outward man is decayed and brought low by the tediousness of the distemper's continuing on *him*, by so much the more do thou be pleased to support *him* in the inner man by the gracious assistance of thy Holy Spirit. Give *him* unfeigned repentance for all the errors of *his* past life, and steadfast faith in thy Son Jesus Christ; a comfortable assurance of the truth of all his precious promises, a lively hope of that immortal bliss in which he reigns for evermore, and a strong sense of thy fatherly love to *him*, and care over *him*, which may make *him* heartily love thee, and entirely confide in thee, and absolutely resign both soul and body to thy wise disposal.

We know there is nothing too hard for thee; but that if thou wilt thou canst bring *him* up even from the gates of death, and grant *him* a longer continuance among us. May it be thy good pleasure, O most gracious God, still to continue *him* here; spare *him*, *O* Lord, and deliver *him* also speedily from this misery, under which *he* hath so long groaned. Bless all the means that are used for *his* recovery and for the support of *his* spirits, and give *him* refreshment during this tedious sickness. Release *him* from *his* pain, or grant *him* some ease, or else increase and strengthen -*his* patience. Help *him*, in remembrance of thy past loving-kindness, to trust in thy goodness and submit to thy wisdom, and bear with an equal mind what thou thinkest fit to lay upon *him*; so that, approving *himself* to thee in these and all other virtues, while thou triest *him* by so sore an affliction, he may say at the last, with the holy Psalmist, "It was good for me that I was in trouble."

Unto thy infinite mercies we recommend him, and to the compassionate kindness of our Lord Jesus Christ, who we hope will hear all the prayers of *his* friends for *him* every where, and send his Holy Spirit to be *his* comforter, and his good angels to be *his* guardians, and direct those who are to advise and prescribe the means of *his* restoration, and bring *him* to praise thee again in the assemblies of thy saints upon earth; or (if thou hast otherwise disposed in thy wise counsels) to praise thee in the great assembly of saints and angels in heaven; through Jesus Christ our Lord and only Saviour, to whom, with thee and the Holy Spirit, be all praise, love, and obedience, world without end. *Amen.*

*Prayer for the Grace of Patience, and a suitable Behaviour in a  
Sick Person to Friends and Attendants.*

Help thy servant, O them merciful Redeemer and lover of souls, to undergo this load of affliction which thou hast laid upon *him* with patience. "Lead *him*" gently by the hand to "the waters of comfort," and let "thy rod" and "thy staff support" *him*, now that *he* is obliged to "walk in the valley and shadow of death."

Let *him* consider thee, O blessed Jesus, in all thy weary pilgrimage and sufferings here upon earth, before thou enteredst into glory, "that *he* be not weary and faint in *his* mind."

If relief does not come from thee so soon as he expects or desires, enable *him* still to hold out with long suffering, and to wait with patience for it. And whatsoever thou doest with *him*, O Lord, let *him* be "dumb, and not open *his* mouth" to murmur or repine, because it is "thy doing." Make *him* acquiesce and rest satisfied, even in the bitterest dispensations of thy providence; and let no pains or sufferings ever drive *him* from thee, considering that no "temptation hath befallen *him*" but "what is common to men."

And, together with this patience towards thee, give *him* patience, O merciful Lord, towards all those who kindly and charitably minister to *him*, and attend about *him*.

Keep *him* from being humoursome, and showing crossness to their good counsels, or from being causelessly angry and exceptious against their kind endeavours. If any evil accidents or indiscretions happen, let *him* not presently be outrageous to aggravate them,

or break out into any reproachful or unseemly behaviour against them; but let *him* be pleased with the least expression of their kindness, and interpret every thing favourably; and on all occasions let *him* make it *his* study to oblige those who are obliging to *him* in this time of necessity, receiving with thankfulness their good offices, and praying God to reward them for his Son Jesus Christ's sake. *Amen.*

*A Prayer for Spiritual Improvement by Sickness.*

(From Dr. Inet.)

O merciful Father, who scourgest those whom thou lovest, and chastest those whom thou wilt receive; let thy loving correction purify thy servant, and make *him* great in thy favour by *his* present humiliation.—O let *him* learn "thy statutes" in this school of "affliction;" let *him* "seek thee early" in it; and when *his* "heart is overwhelmed, lead *him* to the rock of salvation."

Let thy "rod" awaken *him* from *his* former security in sin, and let *him* sensibly find that thou "chastest *him* for *his* profit, that *he* may be partaker of thy holiness."

Teach *him*, by this proof of thy fatherly correction, to be more dutiful for the time to come; to repent of *his* former offences, and to "redeem the time past," by a double diligence for the future, if thou shalt in mercy raise *him* up again. Let the remainder of *his* life be thine, and let nothing separate *him* from thy love and service; but let it be *his* whole care and study to provide oil for *his* lamp, and prepare for eternity; that so "all the days of *his* appointed time *he* may wait till *his* change come," and be ready whosoever *his* Lord shall call *him*. *Amen.*

*For a Sick Person who is about to make his Will.*

O Lord, who puttest into our hearts good desires, and hast inclined thy servant to "set *his* house in order," as well in relation to *his* temporal as *his* spiritual concerns, grant that *he* may do it with exact justice, according to the rules of our own religion and the dictates of right reason. *He* unfeignedly thanks thee for thy great mercies, in having so liberally provided for *him*, that he may be rather helpful than chargeable to any, and die a benefactor, and not in debt.

We charitably hope that what *he* is now about to dispose of was all procured by fair and righteous dealings, that *he* may comfortably feel that "it is more blessed to give than to receive."

Let *him* be ready, with good Zaccheus, to make restitution in the best manner *he* is able, and to say with Samuel:

"Behold, here I am: witness against me before the Lord: whose ox have I taken? or whose ass have I taken? or whom have I defrauded? whom have I oppressed? or of whose hand have I received any bribe to blind mine eyes therewith? and I will restore it."

Lord, give *him* strength to order all things in as due and regular a manner as if *he* were well. Let *his* memory be perfect and *his* judgment sound, and *his* heart so rightly disposed that *he* may do nothing amiss, or through partiality, but that justice and integrity may be seen through the whole conduct of *his* will.

(If rich, add this.)

Let the light of *his* charity likewise shine gloriously before men, that out of the abundance thou hast been

pleased to bless *him* with, he may plentifully give to the poor and distressed, though no otherwise related to *him* but as they are members of Jesus Christ, and brethren and sisters of the same communion.

Let *him*, O let *him*, now, O Lord, and at all times, if thou shouldst graciously continue *him* here any longer, make to "*himself* such friends of the unrighteous mammon, that when these fail, they may receive *him* into everlasting habitations." Amen.

*A Prayer for a Sick Penitent.*

(From Mr. Kettlewell.)

Righteous art thou, O God, in all the pains and sorrows which punish our sins and try our patience, and we have none to accuse and complain of for the same but ourselves. This is the acknowledgment which thy servant makes, whom thou hast now afflicted. *He* receives it as the chastisement of a sinner, and is willing to bear chastisement for *his* sins, that *fie* may thereby be reclaimed from them. Correct *him*, O Lord, that thou mayest not condemn *him*; and let *him* be judged by thee for *his* sins, and judge *himself* for them here, that *he* may have nothing but mercy without judgment to receive at thine hands hereafter.

But judge *him*, O God, with mercy, and not in thine anger. Judge *him* not according as *his* sins have deserved, but according as *his* weakness can bear, and according as thy compassions are wont to mitigate thy judgments: and let *his* afflictions work in *him* a true repentance, "not to be repented of," and prove a happy means, in the hand of thy mercy, to reclaim *him* perfectly from all the errors into which *he* hath fallen; and to confer that rest and peace upon

*his soul, which is denied to his body; for our dear Lord and Saviour Jesus Christ's sake.*

Thou smitest *him*, O gracious God, that thou mayest cure *him*; and punishest *his* sin, that thou mayest thereby amend and reclaim the sinner: and *he* is weary of *his* sins, which have brought upon *him* all these sorrows, and which, as *he* seems now deeply sensible, will bring infinitely worse, unless *he* prevent the same by *his* timely and sincere repentance.

Help *him*, therefore, to search them out; and when *he* sees them, let *him* not stop at any one, but steadfastly resolve to renounce and amend all. Let thy love make *him* hate every evil way, and render *his* purposes against them strong and resolute, and *his* care in fulfilling the same vigilant and patient; and grant that the remainder of *his* days may be one continual amendment of *his* former errors, and dedication of *himself* to thy service. *He* desires life, only that *he* may serve thee: Lord, continue and confirm *him* in this purpose.

Lord, cure *his* folly by *his* misery; and teach *him*, by the loss of *his* case, to purchase the blessing of true repentance, and the comfortable hopes of thy merciful acceptance thereof; through our Lord and Saviour Jesus Christ. Amen.

*A Prayer for a Sick Person who intends to receive the blessed  
Sacrament.*

O thou infinite and eternal Spirit, from whom every good motion of our hearts proceedeth; who both quickenest the dead, and after thou hast given life, givest the increase: increase, we beseech thee, the good seeds of thy grace, which thou hast sown in the

heart of thy servant, by inclining *him* to receive the sacrament of the body and blood of our Lord, in which thou art more immediately present, to illuminate the faithful, and to comfort and refresh all that are "weary and heavy laden with their sins."

O, cause thy face thus comfortably to shine upon thy distressed servant, who now intends to draw near to thee in this sacrament, as thou hast commanded *him*.

Help *him*, in the mean time, O Lord, to fit and prepare *himself* for this holy communion: fill *his* soul with reverence and godly fear; with earnest desires and longings after divine life; with serious repentance for all *his* past offences, and hearty resolutions of living for ever after unto Jesus, who died for *him*. O, let *him* meditate upon *his* bleeding Saviour with a "broken and a contrite heart," which thou hast promised "not to despise:" forgive *him* all that is past, and give *him* grace for the future, to "live more soberly, righteously, and piously, in this present world," if it shall be thy good pleasure to continue *him* in it.

*A Prayer for a Sick Person that wants Sleep.*

(From Bishop Patrick.)

Adored be thy love, thy wonderful love, O most gracious God, who hast so many ways expressed thy bounty towards us. Thy mercies in Christ Jesus surpass all our thoughts; we are not able to number all the other blessings thou hast bestowed upon us. How much do we owe thee for the quiet sleep of but one night! We see, in this thy poor afflicted servant, how much we ought to thank thee for this single blessing, that our eyes, when we would close them, are not held waking.

Pardon, good Lord, our ingratitude for this and all the rest of thy undeserved mercies: and be pleased graciously also to visit *him*, who still languishes on *his* sick-bed, looking up to thee from whom cometh our help. Renew *his* wasted spirits with comfortable sleep; compose *him* to a sweet and undisturbed rest; refresh *him* thereby so sensibly that *he* may be restored to such a degree of strength as may make *him* able, in some measure, affectionately to acknowledge thy goodness, when thou hast dealt so bountifully with *him*: or if thou delayest to bestow that blessing on *him*, in the multitude of *his* thoughts within *him*, let thy comforts delight *his* soul. If *he* still continues without any rest, grant that *his* mind may rest, and repose itself in the bosom of thy dearest love, and may feel the most sensible consolations from heaven, not only quieting, but greatly rejoicing *his* heart. Preserve the use of *his* understanding, and let the enemy have no advantage of *him*; but make *him* able to say, "I will wait patiently for the Lord, till he incline his ear unto me, and hear my cry—O, hear *his* prayer, O Lord, and give ear unto *his* cry: O, spare *him*, that *he* may recover strength before *he* go hence;"\* for Jesus Christ's sake. Amen.

*A Prayer to be said when the Sick Person grows light headed.*

(From Bishop Patrick.)

O Lord, look down from heaven, in pity and compassion, upon this thine afflicted servant, who is not able now to look up to thee: the more sorrowful *his* condition grows, the fitter object *he* is of thine infinite mercies; who acceptest, we humbly hope, of the submission he made of *himself*, in the beginning of *his*

\* Psalm xl. 1, and xxxix. 12, 13.

sickness, to thine almighty wisdom and goodness. And therefore, since it is thy pleasure to suffer *his* distemper to proceed to this dangerous extremity, do thou no less graciously love *him*, and delight in *him*, than if *he* could still give up *himself* to thy blessed will.

And hear, O most merciful Father, our prayers in *his* behalf, when *he* can no longer commend *himself* to thy mercies. Pardon, good Lord, pardon all *his* sins; impute not to *him* any of *his* former follies; lay not to *his* charge *his* not improving or misusing *his* reason and understanding, which we earnestly, but humbly, entreat thee to restore to *him*, together with such a measure of thy divine grace, as may quicken and assist *him* to employ *his* thoughts to the best purposes, especially in meditating on thy mercies, in studying thy praise, and in exhorting all others to love thee, to trust in thee, and sincerely obey thee.

And while *he* remains thus deprived of *his* reason, be pleased to quiet and compose *his* spirits, or to prevent all furious motions there, or quickly to abate such violent passions, if any arise: for which end, be pleased to remove all frightful imaginations far from *him*, and suffer not the evil one to approach *him*; preserve *him* from doing any harm, either to *himself* or to any others. "Forsake *him* not, O Lord our God, be not far from *him*. Make haste to help *him*, O Lord our salvation."\*

"So will we give thanks unto thee for ever."

"We will still be praising thee, and showing forth thy loving-kindness to those who succeed us:"

"That they may set their hope in thee our God, and not forget thy works, but keep thy commandments." *Amen.*

\* Psalm xxxviii. 21, 22.

*A Prayer for a Person when Danger is apprehended by  
excessive Sleep.*

(From Mr. Kettlewell.)

O merciful God, let not this deep sleep, which is fallen on thy servant, prove the sleep of death: make it the sleep of a recovering person, to relieve and revive *him*; and awake *him* out of it in thy due time, to offer thee praise, and to labour still among us in doing thee honour and service.

But if thou art pleased to take *him* to thyself, Lord, remember and accept of all *his* former prayers and repentance, faith and patience.

Look not upon *his* sins, but to pardon them; nor on *his* weaknesses, but to pity them: and when *he* awakes in the next world, let *him* find *himself* surrounded with light and bliss, instead of gloominess and sorrow, and awake to eternal life.

Lord, hear us for this thy weak servant in distress. Hear our prayers for *him*, who seems not able now to offer up any prayers to thee for *himself*. And accept both *him* and us to the blessed enjoyment of thy love; through Jesus Christ our Lord. Amen.

*A Prayer for a Person lying insensible on a Sick-bed.*

O thou Preserver of men, who knowest the frailty of our constitutions; how soon our senses may fail us, and our understanding depart from us; to what accidents, distempers, and decays our weak nature is subject; even such as may make the most acute and judicious quickly become as fools; and the ablest and strongest, weak and insensible; O look down, we beseech thee, upon thy servant, who now lies in such a weak and insensible condition.

The less able *he* is to assist *himself*, the more need hath *he* of our prayers, and of thy tender mercy to *him*. O thou great Creator of the world, who broughtest light out of darkness, and madest all things out of nothing, and canst restore our dead bodies again after they are mouldered into dust, be pleased to repel the clouds of darkness which now have taken away the light of our *brother's* understanding, and rendered *him* a companion for the dead.

Quicken *him* again, O Lord, and restore *him* to *his* former senses, that *his* soul may bless and praise thy holy name.

Hear our petitions, O Lord, and receive our prayers for our *brother*, that this image of death may not be converted into death itself, but that *he* may live to proclaim thy power, and to celebrate thy praises longer upon earth.

But if it be thy will to remove *him* hence in this insensible condition, O pardon, we beseech thee, all *his* offences, and accept of the preparation and repentance that *he* was able to make before the distemper prevailed upon *him* in so deadly a manner. Receive *him*, O Lord, into the arms of thy mercy, and accept *him*, for thy well-beloved Son's sake; that so this short night may quickly be turned into everlasting day; and after these dark shadows are removed, *he* may find *himself* in a heaven of happiness, where, "in thy light, *he* may see light" for ever. Amen.

*A Prayer for One who hath been a notoriously wicked Liver.*

O Lord God, of infinite goodness and compassion, whose mercies are over all thy works; who makest the sun to shine and the rain to descend upon the

"unjust" as well as the "just," and art kind even to the most unthankful; we humbly beseech thee to look down in mercy upon this thy unworthy servant, who hath so long "trampled upon the riches of thy goodness, not knowing that it should lead to repentance."

Let thy rod, therefore, awaken *him* now to a sense of *his* condition, whom thy goodness hath not reclaimed, and let *him* still find mercy at thy hands, notwithstanding *his* continual abuse of it.

Thou hast promised, O Lord, that, "when the wicked man turneth away from his wickedness which he hath committed, and doeth that which is lawful and right, he shall save his soul alive." O make good this thy promise to thy servant here, who stands in so much need of it.

"Hide thy face from *his* sins, and blot out all *his* iniquities:" though they be "red as scarlet," yet do thou make them "white as snow" by repentance, which we beg of thee to give *him*, and to accept, though late, through thine infinite mercies.

Simon Magus, though in the "gall of bitterness and the bond of iniquity," was exhorted to repent, and to pray for pardon: and therefore we hope the gate of life is still open for our *brother*, though *he* hath so long shut *himself out* of it by going on in a course that leadeth to the "chambers of death."

Blessed Lord, let thy terrors at length awaken *him* out of this lethargical condition, before *he* is overtaken by thy judgments. Afflict *him* here, that thou mayest spare *him* hereafter. Soften *his* heart, that *he* may bewail *his* ill-spent life, like Mary Magdalen, with tears of contrition. i

O quicken *him* to a sense of *his* duty, and of *his* danger, before it be too late: and when thou hast brought *him* to *his* right mind, receive *him*, we beseech thee, as

the compassionate father did his prodigal son, or the shepherd his lost sheep.

Thou, O Lord, who didst pardon the thief upon the cross, hear our prayers for our *brother* in these *his* great and, for any thing we know, *his* last agonies.

And, as the forementioned instances are lively significations of thine unbounded goodness, and were written for our comfort and instruction, that none should despair of pardon; so with the greatest confidence we now recommend this our distressed *brother* to thy divine protection, beseeching thee to forgive all that is past, and to receive *him* at last into thine "everlasting habitation." *Amen.*

*A Prayer for One who is hardened and impenitent.*

Lord God Almighty, who art the "Father of our spirits," and who "turnest the hearts of men as thou pleasest; who hast mercy on whom thou wilt have mercy, and whom thou wilt thou hardenest;" let thy merciful ears be open, we pray thee, to the supplications which we now offer to thy Divine Majesty, in the behalf of this thy servant, who appears insensible of *his* sin and folly, and on whom all means to lead *him* to repentance have hitherto seemed vain and ineffectual. Take from *him*, we humbly entreat thee, all ignorance and hardness of heart: remove from *him* all prejudice against and contempt of thy sacred word and ministry: let *him* no longer "make a mock of sin," but be sensible that the wisdom he has hitherto gloried in is the greatest and most dangerous folly. Open thou *his* eyes that *he* may "see the wonderful things of thy law. Show thy mercy upon *him*, and grant *him* thy salvation. Convince *him* of the vanity and madness as well as danger of *his* past ways.

*His* understanding, wo fear, is now darkened, and *his* heart hardened through the deceitfulness of sin: O, do thou enlighten *his* dark mind, and let *him* at last see the beauties of holiness which have so long been hidden from *his* eyes. Take from *him* this "stony heart, and give *him* a heart of flesh." Awaken *his* slumbering and inattentive soul, that it may delight in things agreeable to its nature, and be employed in things that make for its everlasting peace. O give *him* understanding; and *he* shall yet live. Thou that canst revive souls which are dead in sin and trespasses, and make even such as lie in the grave of corruption to become glorious saints and even martyrs for religion, hear our prayers for our *brother*, who seems to be on the brink of destruction; and pity poor sinners that have not pity on themselves.

It is the unhappiness of being long accustomed to sin that we are not soon made sensible of our errors, nor easily made to know them. It is the pride of our nature to be unwilling to acknowledge our faults, and to confess our sins: but let thy grace, O God, teach us to deny this ungodly lust. Do thou humble in us all high and vain imaginations; suppress all proud thoughts and haughty opinions of ourselves. Give us all (and particularly thy servant for whom we are now interceding) a sense of our own vileness; give us unfeigned repentance for all the errors of our life past; that, being cast down, thou mayest raise us up, and become merciful to us, miserable sinners.

Let us all find, by blessed experience, that "we grow in grace, and in the knowledge of our Lord Jesus Christ;" and that "his commandments" are not "grievous" to us, but rather the delight and desire of our souls; that so at last we may be presented to

him "holy and unblamable, and unreprovable in his sight." *Amen.*

*A Prayer for a Sick Woman that is with Child.*

O God, the help of all that put their trust in thee, the support of the weak, and the relief of the needy; look with pity upon this woman, thy servant, who at best acknowledged herself but a weak and helpless creature, but much more so now in her present condition, when thou hast added weakness to weakness, and made her to travail with much sickness, together with the burden of childbearing.

O Lord, be thou graciously pleased to proportion thy strength to her weakness, and as pains and sorrow take hold upon her, inspire her with fresh vigour and courage to rely upon thee, her only support in time of need, and the rock of her salvation.

Let her not be disquieted with fear of any evil, since none can happen unto her without thy permission; but give her grace patiently to resign herself to thy blessed will in all things, who knowest what is best for her, and wilt lay no more upon her, we trust, than thou wilt enable her to bear.

Bring strength, O Lord, out of weakness, and health out of sickness; and make her, in thy good time, a joyful mother of a hopeful child, which may do good in its generation, and be an instrument of thy glory here, and a blessed inhabitant of thy heavenly kingdom hereafter. *Amen.*

*A Prayer for a Woman in the time of her Travail.*

(From Bishop Patrick.)

O most mighty Lord, who hast given us innumerable pledges of thy love, and encouraged us to trust in thee

for ever, and to expect with quiet and patient minds the issue of thy wise and good providence; we most humbly commend thy servant, in this her extremity, to thy care and blessing; beseeching thee to give her a gracious deliverance, and to ease her of the burden wherewith she labours. We ourselves are monuments of that mercy which we beg of thee. Thou didst preserve our weak and imperfect frame before we were born. Thou hast succoured and supported us ever since, many times beyond our hopes, and always beyond our deservings. We commit ourselves and every thing belonging to us most heartily into thy hands; remembering that thou hast the same power and goodness still by which we came into the light of the living. We cannot desire to be better provided for than as thy infinite wisdom judgeth most convenient for us: unto that we refer ourselves, beseeching thee, if it be thy good pleasure, that her deliverance may be as speedy as her cries unto thee; or her patience as great and long as her pains. Thou who ripenest the fruits of the earth, and then givest us the gathering of them to our comfort, blast not, we beseech thee, the fruit of the womb; but bring it to maturity, and deliver it safe into thy servant's hand as a new pledge of thy goodness to her, to be an instrument of thy glory, and a future comfort and blessing to thy servant, who travails in so much pain with it now. Or if thou hast otherwise determined, Lord, give her grace to submit to thy holy will, and to rest satisfied in thy wise appointments, and never to distrust thy goodness and care over her. Hear us, O Father of mercies, and pardon hers and all our offences, and pity our infirmities; make us more thankful for what we have received, and more fit for the blessing which we now request;

and prepare us for all thy future mercies, either in this life or in the next, through thy infinite love and compassion declared to us, in Christ Jesus our Lord. *Amen.*

*A Prayer for a Woman who cannot be delivered without  
Difficulty and Hazard.*

O Lord God of all comfort and consolation, who art the refuge of the distressed, and the help of all that depend upon thee; we thy unworthy servants do now offer up our supplications at the throne of thy majesty, in the behalf of this thy servant, who is in great pain and misery. Thou hast been pleased to bring the child to the birth, but there is not strength to bring forth. On this account thy servant is in violent agonies, crying out in her pangs, and pouring out her soul to thee in prayer. O grant that "it may be in an acceptable time."

"Thou art our salvation; thou shalt preserve us from trouble; thou shalt compass us about with songs of deliverance." O let thy servant feel these blessed effects of thy goodness; and as thou hast brought to the birth, enable her, we beseech thee, to bring forth, that she may rejoice in the workmanship of thy hands, and tell of all thy wondrous works.

Consider the low estate of thine handmaid, and deliver her soul from death, her eyes from tears, and her feet from falling. "Gracious art thou, O Lord, and righteous; thou preservest the simple, and helpest those that are in misery." Help thy servant therefore now, we humbly entreat thee, who stands in so much need of it. Accept her tears, and assuage her pain, as shall seem most expedient for her. And forasmuch as she putteth her whole trust in thee, give her strength

and patience proportionable to all her pains and agonies. Support her spirits under them, and, if thou pleasest, carry her safely through the same, and "make her to hear of joy and gladness, that the bones which thou hast broken may rejoice."

"Restore unto her, O Lord, the joy of thy salvation, and uphold her with thy free Spirit; then shall she teach transgressors thy way, and sinners shall be converted unto thee. Deliver her" from this great affliction, "O God, thou God of her salvation, and her tongue shall sing aloud of thy righteousness."

Thy mercies and power are still the same, and will be the same for ever. O let them now be shown in this thy servant's delivery, as they have been formerly on the like occasion; that so, by having fresh instances of thy lovingkindness, she may still praise thee more and more.\*

O perfect her repentance, and pardon her sins. Give her patience while she lives, and peace when she dies; and after death, the happiness of a blessed eternity, which thou hast promised and prepared for all that love and fear thee; through Jesus Christ our Lord. *Amen.*

*A Prayer for Grace and Assistance for a Woman after Delivery,*

*but still in Danger.*

(From Mr. Kettlewell.)

O Father of mercies, what thanks can we worthily give unto thee for thine unspeakable goodness to this thy servant, and her helpless infant, and for the wondrous things which thou hast done for her! The pangs of death compassed her, and she found trouble

\* This is to be omitted if it be the first child.

and sorrow. The mouth of the pit was opened, and ready to shut itself upon her: but thou hast graciously assuaged her pains, and turned her sorrows into joy.

Lord, we will ever adore and magnify thy mercy, which has dealt so lovingly with her, and praise thy truth and faithfulness, which have not suffered her hopes to fail. We will never forget how mindful thou hast been of the low estate of thy handmaid; for she has been supported by thy power, O blessed God, in her greatest weakness. She has tasted thy goodness in the midst of all her pangs and sorrows.

Perfect, O Lord, that deliverance to her which thou hast most graciously begun, and let her not be lost, after the wonders which thou hast already done for her.

Continue her patience and her humble dependence on thee, under the pains and accidents to which she is still exposed. Support her spirits, and raise her up again in thy due time. Thy mercy and power are still the same, and will be the same for ever. O let them still be shown for her recovery, as they have been already for her delivery; let them be shown upon her, that she may praise thee more and more.

But if, in thy paternal providence, whereunto we pray she may willingly commit herself, thou hast determined otherwise concerning her, thy blessed will be done. Dispose her either to life or death, as thou pleasest, only in both to thy mercy: and whether living or dying, let her still please thee, and be thou her portion. O perfect her repentance, and give her patience whilst she lives, and peace when she dies, and after that, the happiness of a blessed eternity, which thou hast prepared for all that truly fear thee; through Jesus Christ our Lord. *Amen.*

If the Child be living, this may be added:

Preserve likewise her tender infant, O Father of mercies, and let its own weakness and our cries commend it to thy care.

Keep it also afterwards in health and safety, and as it increases in years and stature, let it increase in wisdom, and in thy fear. We beg not for it wealth or greatness, but wisdom to know and to serve thee. For, O Lord, we do not desire life either for ourselves or it, but that we may live to thee, and grow daily in love and thankfulness for all thy mercies, and in faith and patience, and all holy obedience, which may fit us for the happiness which thou hast promised; through Jesus Christ our only Saviour and Redeemer. *Amen.*

*Prayers for a Sick Child.*

(Visitation Office.)

O Almighty God and merciful Father, to whom alone belong the issues of life and death; look down from heaven, we humbly beseech thee, with the eyes of mercy upon this child, now lying upon the bed of sickness: visit *him*, O Lord, with thy salvation; deliver *him* in thy good appointed time from *his* bodily pain, and save *his* soul for thy mercy's sake; that if it shall be thy good pleasure to prolong *his* days here on earth, *he* may live to thee, and be an instrument of thy glory, by serving thee faithfully, and doing good in *his* generation; or else receive *him* into those heavenly habitations, where the souls of them that sleep in the Lord Jesus enjoy perpetual rest and felicity. Grant this, for thy mercy's sake; through Jesus Christ our Lord. *Amen.*

(From Mr. Kettlewell.)

Lord, pity the troubles and weakness of this infant, and pity our sorrows, who are afflicted with it and for it. Ease it of its pains, and strengthen it when it lies struggling for life. Raise it up again, if it shall please thee, to grow in years and stature, in wisdom and virtue; and thereby to comfort us and glorify thee.

We believe, O Almighty Father, that thou knowest best what is fit both for it and us, and wilt do what is fit for both; and therefore we leave it to thee, to dispose of it as thou pleasest. But whether it be to life or death, let it be thine in both, and either preserve it to be thy true and faithful servant here on earth, or take it to the blessedness of thy children in the kingdom of heaven; through our Lord and Saviour Jesus Christ. Amen.

*A Prayer for a Person who, from a State of Health, is  
suddenly seized with the Symptoms of Death.*

O most gracious Father, Lord of heaven and earth, Judge of the living and of the dead, behold thy servants turning to thee for pity and mercy, in behalf of ourselves and this thy servant. It was but lately that we beheld *him* in as promising a state of health and life as any one of us seems to be in at present, and therefore our concern is so much the greater to behold so sudden a change, and so unlocked for an instance of our mortality.

We know, O Lord, thou canst bring back from the brink of the grave, and as suddenly raise thy servant again as thou hast cast *him* down, and therefore we think it not too late to implore thy mercy upon *him* for

*his* recovery; at least we beg of thee to spare *him* a little, that he may recover *his* strength, and have time to make *his* peace with thee, "before *he go* hence, and be no more seen." But if it be thy will to remove *him* at this time into another world, O let the miracles of thy compassion, and thy wonderful mercy, supply to *him* the want of the usual measures of time, that *he* may fit *himself* for eternity. And let the greatness of *his* calamity be a means to procure *his* pardon for those defects and degrees of unreadiness which this sudden stroke hath caused. And teach us all, we beseech thee, from this unexpected fate of our *brother*, to be continually upon our guard, and to watch and pray, since we know not the hour when the "Master of the house cometh," whether "in the evening, or at midnight, or in the morning."

Lord, thou hast now called thy servant before *he* was aware of it; Oh, give *him* such a great and effectual repentance in this exigence, that in a short time it may be sufficient to do the work of many days. Thou regardest, O Lord, the sincerity of our hearts more than the measures of time in our conversion; accept, therefore, we beseech thee, the few minutes of thy servant's unfeigned tears and humiliation for *his* sins, as if they were hours and days of a longer preparation; and let it be thy pleasure to rescue *him* from all the evils *he* deserves, and all the evils *he* fears, that in the songs of eternity which angels and saints shall sing to the glory of thy name, this also may be reckoned amongst thine invaluable mercies, that thou hast redeemed *his* soul from death, and made *him* partaker of eternal life; through Jesus Christ our Lord. Amen.

*A Prayer for a Sick Person when there appeareth  
small Hope of Recovery.  
(Visitation Office.)*

O Father of mercies and God of all comfort, our only help in time of need; we fly unto thee for succour in behalf of this thy servant, here lying under thy hand in great weakness of body. Look graciously upon *him*, O Lord; and the more the outward man decayeth, strengthen *him*, we beseech thee, so much the more continually with thy grace and Holy Spirit in the inner man. Give *him* unfeigned repentance for all the errors of *his* life past, and steadfast faith in thy Son Jesus, that *his* sins may be forgiven, and *his* pardon sealed in heaven before *he* go hence, and be no more seen. We know, O Lord, that there is no work impossible with thee, and that if thou wilt thou canst even yet raise *him* up, and grant *him* a longer continuance among us. Yet forasmuch as in all appearance the time of *his* dissolution draweth near, so fit and prepare *him*, we beseech thee, against the hour of death, that after *his* departure hence in peace, and in thy favour, *his* soul may be received into thine everlasting kingdom; through the mediation of Jesus Christ thy Son, our Saviour. Amen.

*A general Prayer for Preparation and Readiness to die.*

Lord, "what is our life but a vapour, which appeareth for a little time, and then vanisheth away?" Even at the longest, how short and transitory! and when we think ourselves most secure, yet we know not what a day may bring forth; nor how soon thou mayest come, before we are aware, to call us to our last account.

Quickly shall we be as water spilt on the ground which cannot be gathered up again. Quickly shall we be

snatched away hence, and our place here shall know us no more.

Our bodies shall soon lie down in the grave, and our souls be summoned to appear before the tribunal of Christ, to receive our everlasting doom! And yet, O Lord, how do the generality of mankind live in this world as if they were never to leave it! How unmindful are we all of our departure! how improvident of our time! how careless of our souls, and negligent in our preparations for eternity! so that thou mightest justly cut us off in the midst of our sins, and our unprepared-ness to appear before thee. But, O God of all comfort and mercy, remember not our sins against thee, but remember thy own love to us in Jesus Christ, and thy tender mercies which have been ever of old. O, remember how short our time is, and "so teach us to number our days, that we may apply our hearts unto wisdom."

In the days of our health and prosperity, let us, from the example of our *brother's* weakness, remember our own approaching fate; and let *him*, from the sudden change of health to sickness, consider how few and evil all *his* days have been, and that there is no satisfaction in any thing but in knowing thee, O God. Lord, what have we to do in this world, but to devote ourselves wholly to thy service, and to make ready for the world to come? O, that we may all of us be mindful of this "one thing necessary," that we may finish our "work" before we finish our "course."

Quicken thy servant, O Lord, into a powerful and serious consideration of these things, now thou hast brought *him* into more intimate acquaintance with them. Instruct and assist *him* in this great work of preparation to die. Show *him* how to do it, and help *him* with good

success to perform it; that when the time of *his* dissolution draweth near, he may have nothing else to do but to resign *himself* willingly and cheerfully into thy hands, as into the hands of a merciful Creator, there to remain with thee for ever in that blessed place where sin and sickness and death shall be no more. *Amen.*

*A Commendatory Prayer for a Sick Person at the Point of  
Departure.  
(Visitation Office.)*

O Almighty God, with whom do live the spirits of just men made perfect; we humbly commend the soul of this thy servant our dear *brother* into thy hands, as into the hands of a faithful Creator and most merciful Saviour; humbly beseeching thee, that it may be acceptable in thy sight. And teach us, who survive, by this and other daily instances of mortality, to see how frail and uncertain our own condition is, and so to number our days that we may seriously apply our hearts to that holy and heavenly wisdom which may bring us to life everlasting; through Jesus Christ thy Son, our Lord. *Amen.*

*A Litany for a Sick Person at the Time of Departure.  
(From Bishop Andrews.)*

O God, the Father of heaven,  
Have mercy upon *him*:  
Keep and defend *him*.

O God the Son, Redeemer of the world,  
Have mercy upon *him*:  
Save and deliver *him*.

O God the Holy Ghost, proceeding from the Father and the Son,  
Have mercy upon *him*:  
Strengthen and comfort *him*.

O holy, blessed, and glorious Trinity,

Have mercy upon *him*.

Remember not, Lord, *his* offences; call not to mind the offences of *his* forefathers; but spare *him*, good Lord, spare thy servant, whom thou hast redeemed with thy precious blood, and be not angry with *him* for ever.

From thy wrath and indignation; from the fear of death; from the guilt and burden of *his* sins: and from the dreadful sentence of the last judgment;

Good Lord, deliver *him*.

From the sting of conscience; from impatience, distrust, or despair; and from the extremity of sickness or agony, which may any ways withdraw his mind from thee;

Good Lord, deliver *him*.

From the powers of darkness; from the illusions and assaults of our ghostly enemy; and from the bitter pangs of eternal death;

Good Lord, deliver *him*.

From all danger and distress; from all terrors and torments; from all pains and punishments, both of the body and of the soul;

Good Lord, deliver *him*.

By thy manifold and great mercies; by the manifold and great mercies of Jesus Christ thy Son; by his agony and bloody sweat; by his strong crying and tears; by his bitter cross and passion; by his resurrection and ascension; by his intercession and mediation; and by the graces and comforts of the Holy Ghost;

Good Lord, deliver *him*.

In this time of extremity; in *his* last and greatest need; in the hour of death, and in the day of judgment; Good Lord, deliver *him*.

We sinners do beseech thee to hear us, O Lord God; that it may please thee to be *his* defender and keeper; to remember *him* with the favour thou bearest unto thy people, and to visit *him* with thy salvation:

We beseech thee to hear us, Good Lord. That it may please thee to save and deliver *his* soul from the power of the enemy, to receive it to thy mercy, and to give *him* a quiet and joyful departure: We beseech thee to hear us, Good Lord. That it may please thee to be merciful, and to forgive all the sins and offences which at any time of *ft is* life *he* hath committed against thee:

We beseech thee to hear us, Good Lord. That it may please thee not to lay to *his* charge what in the lust of the flesh, or in the lust of the eye, or in the pride of life, *he* hath committed against thee:

We beseech thee to hear us, Good Lord. That it may please thee not to lay to *his* charge what in the fierceness *of his* wrath, or in vain and idle words, *he* hath committed against thee:

We beseech thee to hear us, Good Lord. That it may please thee to make *him* partaker of all thy mercies and promises in Christ Jesus:

We beseech thee to hear us, Good Lord. That it may please thee to grant *his* body rest and peace, and a part in the blessed resurrection of life and glory:

We beseech thee to hear us, Good Lord. That it may please thee to vouchsafe *his* soul the enjoyment of everlasting happiness, with all the blessed saints, in thy heavenly kingdom:

We beseech thee to hear us Good Lord. Son of God, we beseech thee to hear us.

O Lamb of God, that takest away the sins of the world;  
Grant *him* thy peace.

O Lamb of God, that takest away the sins of the world;  
Have mercy upon *him*.

O Saviour of the world, etc.

as in p. 402.

Unto thy gracious, etc.

*Form of recommending the Soul to God in her Departure  
from the Body.*

(From Bishop Cosins.)

Into thy merciful hands, O Lord, we commend the soul of this thy servant, now departing from the body. Receive *him*, we humbly beseech thee, into the arms of thy mercy, into the glorious society of thy saints in heaven. *Amen.*

God the Father, who hath created thee; God the Son, who hath redeemed thee; God the Holy Ghost, who hath infused his grace into thee; be now and evermore thy defence, assist thee in this thy last trial, and bring thee to everlasting life. *Amen.*

(From Bishop Taylor.)

I.

O holy and most gracious Jesus, we humbly recommend the soul of thy servant into thy hands, thy most merciful hands: let thy blessed angels stand in ministry about thy servant, and protect *him* in *his* departure. *Amen.*

II.

Lord receive the soul of this thy servant: enter not into judgment with *him*: spare *him* whom thou hast

redeemed with thy most precious blood, and deliver *him* from all evil and mischief, from the crafts and assaults of the devil, from the fear of death, and from everlasting condemnation. *Amen.*

### III.

Lord impute not unto *him* the follies of *his* youth, nor any of the errors of *his* life; but strengthen *him* in *his* agony, and carry *him* safely through the last distress. Let not *his* faith waver, nor *his* hope fail, nor *his* charity be diminished; let *him* die in peace, and rest in hope, and rise in glory. *Amen.*

O Saviour of the world, who by thy cross and precious blood hast redeemed us; save and help this thy departing servant, we humbly beseech thee, O Lord. *Amen.*

Unto thy gracious mercy and protection we commit *him*. O Lord, bless *him*, and keep *him*. Make thy face to shine upon *him*, and be gracious unto *him*. Lift up thy countenance upon *him*, and give *him* peace, both now and evermore. *Amen.*

*A Consolatory Form of Devotion that may be used with the Friends or Relations of the Deceased.*

"Sorrow not, brethren, for them which are asleep, even as others, who have no hope.

"For if we believe that Jesus died and rose again; even so them also which sleep in Jesus will God bring with him." 1 Thess. iv. 13, 14.

"It is the Lord, let him do what seemeth good unto him." 1 Sam. iii. 18.

"The righteous is taken away from the evil to come." Isaiah lvii. 1.

"Though the righteous be prevented with death, yet shall he be in rest.

"The honourable age is not that which standeth in length of days, nor that which is measured by number of years:

"But wisdom is the grey hair unto men, and an unspotted life is old age." Wisd. iv. 7—9,

"Precious in the sight of the Lord is the death of his saints." Psalm cxvi. 15.

"Yea, blessed are the dead which die in the Lord; even so saith the Spirit; for they rest from their labours." Rev. xiv. 13.

Let us pray.

Lord, have mercy upon us. Christ, have mercy upon us. Lord, have mercy upon us.

Our Father which art in heaven: hallowed be thy name. Thy kingdom come. Thy will be done in earth as it is in heaven. Give us this day our daily bread. And forgive us our trespasses, as we forgive them that trespass against us. And lead us not into temptation, but deliver us from evil. *Amen.*

Lord, thou hast been our refuge from one generation to another.

Before the mountains were brought forth, or ever the earth and the world were made, thou art God from everlasting, and world without end.

Thou turnest man to destruction; again thou sayest, Come again, ye children of men.

For a thousand years in thy sight are but as yesterday, seeing that is past as a watch in the night.

As soon as thou scatterest them, they are even as a sleep, and fade away suddenly like the grass.

In the morning it is green, and groweth up; but in the evening it is cut down, dried up, and withered.

For we consume away in thy displeasure, and are afraid of thy wrathful indignation.

Thou hast set our misdeeds before thee, and our secret sins in the light of thy countenance.

For when thou art angry, all our days are gone; we bring our years to an end, as it were a tale that is told.

So teach us to number our days, that we may apply our hearts unto wisdom.

Turn thee again at last, and be gracious to thy servants.

Comfort *them* again, now after the time that thou hast afflicted *them*, *and for the present occasion*, wherein *they* suffer adversity.

O satisfy *them* with thy mercy, and that soon; so shall *they* rejoice, and be glad all the days of *their* life.

Most just art thou, O God, in all thy dealings with us; "our punishment is less than our iniquities deserve;" and therefore we desire to submit, with all humility and patience, to this dispensation of thy divine providence. Be pleased so to sanctify it to this family, that thy grace and mercy may more abundantly flow upon thy servants. Thy property is to bring good out of evil: O turn that evil, which is now befallen this house, to the benefit of every one of us, that so we may be able to say, from happy experience, that "the house of mourning is better than the house of feasting," while the death of our *brother*, through thy blessing, shall conduce and minister to our spiritual advantage.

Let the sight of *his* change make us the more mindful of our own, and the sense of our loss make us cleave

more steadfastly to thee, O God. Let the remembrance of *his* virtues make us follow *Ins* example, and the hope we have of *his* being blessed cause us to "press," with the more earnestness, "towards the mark for the prize of our high calling in Christ Jesus."

Thou knowest, O Lord, the weakness and frailty of our nature, and therefore we beseech thee to give thy servants, who are more nearly concerned in this visitation, a constant supply of thy good Spirit, to enable them to bear it with humility, patience, resignation, and submission to thy divine will, as becometh the gospel of Jesus Christ. O that no repining thoughts may rise in their hearts to discompose their duty towards thee, or towards their neighbour: but help them rather to think wherein they have offended thee, and carefully to amend it; to place their affections more steadfastly on those immovable things which are above, and freely resign all their thoughts and desires unto thee; saying, with holy Job, "The Lord gave, and the Lord hath taken away, blessed be the name of the Lord." And let the death of thy servant strike us all with such a lively sense of our mortality as may cause us so thoroughly to die to sin, and live to grace, that when we die we may rest in him, as our hope is this our *brother* doth.

We evidently see "that death is the end of all men;" grant us therefore grace to lay it to heart, to despise the world, "to abhor that which is evil, and cleave to that which is good;" to delight in thy word, to study thy will, to observe thy law, and to take all possible care to promote thy honour, and our own salvation; that when "we go the way of all earth we may be comforted by thy presence," and admitted into thy heavenly kingdom. *Amen.*

Assist us mercifully, O Lord, in these our supplications and prayers, and dispose the way of thy servants towards the attainment of everlasting salvation; that, among all the changes and chances of this mortal life, they may ever be defended by thy most gracious and ready help; through Jesus Christ our Lord. *Amen.*

The Lord bless us and keep us, the Lord lift up the light of his countenance upon us, and give us peace, now and for evermore. *Amen.*

OCCASIONAL PRAYERS AND DEVOTIONS  
FOR THE  
SICK AND UNFORTUNATE IN EXTRAORDINARY CASES.

*A Prayer for a Person whose Illness is chiefly brought on him by some calamitous Disaster or Loss, as of Estate, Relations, or Friends, etc.*

(From Bishop Patrick.)

O MOST gracious and glorious God, supreme Judge and Governor of the world, "in whom we live, and move, and have our being," and from whom all the blessings we enjoy, and "every good and perfect gift cometh," grant us, we humbly beseech thee, such a measure of thy grace, that whenever thou art pleased to remove any of thy blessings from us, we may bear it with a perfect resignation to thy divine will; and with all patience, humility, and contentedness of spirit, consider how unworthy we are of the least of thy mercies.

More particularly, O Lord, we beseech thee to give this peaceableness and contentedness of mind to this thy servant, whom thou hast so sensibly afflicted, by taking so near and dear a blessing from *him*. O give

*him* such a portion of thy blessed Spirit, and such a lively sense of *his* duty, that *he* may have power to surmount all the difficulties *he* labours under, and freely to resign all *his* thoughts and desires unto thee, submitting *himself* entirely to thy good providence, and resolving, by thy gracious assistance, to rest contented with whatsoever thou in thy wisdom appointest for *him*. Thou knowest, O Lord, the weakness and frailty of our nature, and therefore be pleased to comfort *him* in this bed of sickness; establish *him* with the light of thy countenance; and grant that no repining thoughts may increase *his* illness, or discompose *his* duty towards thee, or *his* neighbour: but enable *him* to think wherein *he* hath offended thee, and carefully to amend *his* errors; to set *his* affections on things above, and not on things below, and to lay up for *himself* treasures in heaven, even the treasures of a good life, which no disasters or calamities shall ever be able to take from *him*. Grant this, O heavenly Father, through Jesus Christ our Lord. Amen.

*A Prayer for a Person who by any calamitous Disaster hath broken any of his Bones, or is very much bruised and hurt in his Body.*

(From Mr. Jenks.)

O Lord, the only disposer of all events, thou hast taught us that "affliction cometh not forth of the dust, neither doth trouble spring out of the ground;" but that the disasters which befall us are by thy appointment. Thou art just in all thou bringest upon us: and though thy "judgments are far above out of our sight," yet we know "that they are right, and that it is in very faithfulness thou causest us to be afflicted." "Why then should a living man complain, a man for the punishment

of his sins?" Let these considerations prevail with thy servants to submit to thy dispensations. Make *him* resolve to bear the effects of thy displeasure, and to consider it as the just desert of *his* sins. O Lord, give *him* patience, and strength, and grace proportionable to this great trial; and enable *him* so to conduct *himself* under it, that after the affliction is removed *he* may find cause to say, "it was good for him to be afflicted." Thou that hast torn and smitten, thou art able to heal and to comfort. Be pleased to remember *him* in this *his* low estate. Cause *him* to "search and try *his* ways, and turn to thee, and bring forth fruits meet for repentance."

We know, O Lord, thou canst raise *him* up from the deepest affliction: O, let it be thy gracious will to glorify thy power and mercy in *his* recovery; or, however thou shalt think fit to dispose of this "vile body," grant *him*, O God, a mind entirely resigned to thy will, and satisfied with thy dispensations. O, make this calamity the messenger of thy love to *his* soul, and the happy means of *his* conversion; through Jesus Christ. Amen.

*A Prayer for a Person that is afflicted with grievous Pains of  
his Body.*

(From Mr. Jenks.)

O Lord, thou art a merciful God, and dost not willingly afflict the children of men; but when necessity requires, thou chastisest us for our profit, that we may be partakers of thy holiness. Remove, we beseech thee, this affliction from thy servant, or enable *him* to bear what thou art pleased to lay upon *him*. Lord, all *his* desire is before thee, and *his* groaning is not hid from thee. Regard *his* affliction, when thou nearest

*his* cry. Enter not into judgment with *him*, nor deal with *kirn* according to *his* sins, but according to thy mercy in Jesus Christ. O gracious Father, sanctify to *him* what thou hast laid upon *him*, that *his* present affliction may work out for *him* an eternal weight of glory. Support *him* under *his* pains till it shall please thee to grant *I dm* ease and comfort. And, however thou shalt deal with *him*, let *him* not repine at thy correction, nor sin in charging thee foolishly. Make *him* sensible that thou doest nothing but what is wise and just; nothing but what thy servant shall one day have cause to bless and praise thee for doing. And let this consideration teach *him* to glorify thee in the time of *his* visitation, by an humble submission to thy will, and a sincere reformation under thy providential dispensations; that thou mayest visit *him* in mercy and love, show *him* the joy of thy salvation; through Jesus Christ our Lord. Amen.

*A Prayer for One who is troubled with acute Pains of the  
Gout, Stone, Colic, or any other bodily Distemper.*

(From Mr. Spinkes.)

O blessed God, just and holy, who dost not willingly afflict the children of men; withhold not, we beseech thee, thy assistance from this thy servant in the extremity of *his* pain. *His* sorrows are increased, and *his* soul is full of trouble. *He* has none to flee unto for the ease and mitigation of *his* agonies, but to thee, O Lord. *He* freely owns that *his* sufferings are infinitely less than *he* has deserved; yet, since they pierce deep, and are become almost too heavy for *him* to bear, we presume to call upon thee for aid; and to entreat thee not to punish *him* according to *his* deserts. "For if thou shouldest be extreme to mark what is done

amiss, O Lord, who may abide it?" Spare *him*, therefore, for thy mercy's sake; and correct *him* "not in thine anger, lest thou bring- *him* to nothing." Endue *him* with that patience which may enable *him* cheerfully to submit to thy chastisement; and grant *him* an unfeigned repentance for all *his* sins. Comfort *his* soul, which melteth away for very heaviness, and let thy loving mercy come unto *him*. Sanctify this thy fatherly correction to *him*, that it may be for thy glory and *his* advantage. And when thy gracious ends in afflicting *him* shall be accomplished, which we know are not for "thy pleasure," but for *his* profit, give *him*, we beseech thee, a fresh occasion to rejoice in thy saving health; through Jesus Christ our Lord. Amen.

A Prayer for a Person in the Small Pox, or any such like raging infectious Disease.

O gracious and merciful Father, the only giver of health, look down, we beseech thee, with an eye of compassion upon thy miserable and disconsolate servant, from whom thou hast taken this great and valuable blessing; and, instead of it, hast filled every part of *his* body with a sore disease.

Teach *him*, O Lord, and teach us all, from hence to consider how soon the beauty of life is blasted like a flower, and our "strength dried up like a potsherd," that we may not put our trust in any of these transitory things, but in thee only, the living God, who art able to save and to destroy, to kill and to make alive.

Our *brother*, whom we now behold a spectacle of misery, was lately, like one of us, in perfect health. But now "thou makest *his* beauty to consume away, as it were a moth fretting a garment. Thine arrows stick fast in *him*, and thy hand presseth *him* sore: so

that there is no soundness in *his* flesh, because of thine anger; neither is there any rest in *his* bones by reason of *his* sin.

"O reject *him* not utterly, but take thy plague away from *him*. Return, O Lord, and that speedily, for *his* spirit faileth. O leave *him* not in *his* distress; for though the world may forsake *him*, *his* sure trust is in thee. To thee, O Lord, does *he* cry; to thee doth *he* stretch forth *his* hands; *his* soul thirsteth after thee as a barren and dry land. Lord, all *his* desire is before thee, and *his* groaning is not hid from thee. Comfort *him* therefore again now after the time that thou hast afflicted *him*, and for the days wherein *he* hath suffered adversity."

Put a stop, O Lord, we beseech thee, to this raging infection, and say to the destroying angel, "It is enough." Protect us under the shadow of thy wings, that we may not "be afraid of any terror by night; nor for the arrow that flieth by day; nor for the pestilence that walketh in darkness; nor for the sickness that destroyeth in the noonday;" but that, with ease in our minds and health in our bodies, we may serve thee cheerfully all the days of our life; through Jesus Christ our Lord. *Amen.*

*A Prayer for a Person in a Consumption, or any lingering Disease.*

(From Mr. Jenks.)

O merciful God, thou hast long kept thy servant under thy chastening hand; thou hast made *him* acquainted with grief; and *his* sickness is even become *his* familiar companion: yet, O blessed Lord, grant that *he* may not be impatient under thy chastisement, who art pleased to wait so long for the return of a

sinner; but let *him* remember that thou hast kind intentions, even in thy bitterest dispensations; that thou "chastenest him whom thou lovest, and scourgest every son whom thou receivest."—Teach *him*, O gracious Father, to see love in thy rod, and justice in all thy dealings; that he may humble *himself* under thy mighty hand; that he may think it good for *him* to have been afflicted, and patiently wait for thy loving-kindness.

Yet, that *his* faith may not fail, nor *his* patience be overcome, give *him* ease and relaxation from *his* pain, and a happy conclusion of this long visitation. In the mean time, grant that *he* may neither despise thy chastening, nor faint under thy rebukes; but employ the time which thou lendest, and improve the affliction which thou continuest, as a gracious opportunity for *his* spiritual advantage; that, under the decays of the body, the inner man may be renewed day by day; and that whatever appertains to *his* everlasting salvation, may be promoted and perfected through the riches of thy grace, and the multitude of thy mercies in Jesus Christ. *Amen.*

*A Prayer for a Person who is lame in his Sickness.*

(From Mr. Lewis.)

O Almighty God, who "art eyes to the blind and feet to the lame," have pity, we entreat thee, on thy servant: help *him* in *his* distress, and bless, we pray thee, the means made use of for *his* cure. Make *him* sensible of thy design in visiting *him* with this affliction; cause *him* to remember how in *his* strength and health *he* followed *his* own devices, and the desire of *his* own heart; and let *him* see that thou hast lifted up thy hand against *him*, for this very purpose, that *he*

may learn to walk more humbly with thee, and turn *his* feet to thy testimonies. Deliver *him* from the painful confinement under which *he* labours, and grant *him* again the happiness of enjoying the comforts of life, and of worshipping thee in thy sanctuary, with the "voice of joy and praise." But, O Lord, not our will, but thine be done. Thou knowest better what is good for us than we ourselves; and it is in wisdom that thou afflictest us. Give thy servant patience, that *he* may bear *his* pains without murmuring, and wait the time of *his* deliverance from them without uneasiness; satisfy *him* of thy care over *him*, and thy tender regard to *him*: and in thy good time restore *him* to *his* former strength and vigour, that *he* may give thanks to thee in the great congregation; through Jesus Christ our Saviour. Amen.

*A Prayer for One that is bedridden.*

(From Mr. Lewis.)

O Lord our God, the Father of mercies, and the God of all comfort, have compassion, we entreat thee, on the helpless condition of thy servant: support *his* spirits, which are ready to droop under affliction; refresh *his* mind, which is apt to be uneasy and melancholy at the thought of perpetual confinement. Give sleep to *his* eyes, and rest to *his* weary thoughts. Cause *him* to meditate on thee in the night watches; to "commune with *his* own heart;" and, in *his* solitude, "to search and try *his* ways," that *he* may see wherein *he* hath erred, and may turn unto thee with all *his* soul and with all *his* strength. Let this affliction be the means of preparing *him* for the enjoyment of thy presence, in which is fulness of joy; and let *him* be the more patient under it for that reason. Make *him* thankful that thou hast by this expedient preserved *kirn*

from the company of those whose evil communication might have corrupted *his* heart, and hast taken *him* out of a world, by the snares and temptations of which *he* might have been prevailed upon to forsake thee, and turn from the way of thy commandments. Grant, O Lord, that *he* may not render *himself* unworthy of thy favour, by murmuring and repining; but that *he* may use the leisure and opportunity now given *him* to make *his* peace with thee, and be fitted for the enjoyment of an inheritance among the saints in light; through thy mercy in Jesus Christ, our Saviour and Redeemer. Amen.

*A Prayer for a Person troubled in Mind or in  
Conscience.  
(Visitation Office.)*

O blessed Lord, the Father of mercies, and the God of all comforts, we beseech thee, look down in pity and compassion upon this thine afflicted servant. Thou writest bitter things against *him*, and makest *him* to possess *his* former iniquities: thy wrath lieth hard upon *him*, and *his* soul is full of trouble. But, O merciful God, who hast given us thy holy word for our learning, that we through patience and comfort of the Scriptures might have hope; give *him* a right understanding of *himself*, and of thy threatenings and promises; that *he* may neither cast away *his* confidence in thee, nor place it any where but in thee. Give *him* strength against all temptations, and heal all *his* infirmities. Break not the bruised reed, nor quench the smoking flax. Shut not up thy tender mercies in displeasure, but make *him* hear of joy and gladness, that the bones which thou hast broken may rejoice. Deliver *him* from the fear of the enemy; lift up the light of thy countenance upon *him*,

and give *him* peace, through the mediation of Jesus Christ our Lord. *Amen.*

*Another for the same, or for One under deep Melancholy and  
Dejection of Spirit.*

(From Mr. Jenks.)

O most gracious Lord, thou knowest our frame, and art full of compassion to thy servants under their trouble and oppression; look down upon us, we humbly beseech thee, with thy wonted pity, and remember the work of thy hands, our disconsolate *brother*. Thy wrath lies hard upon *him*; and all thy waves are gone over *him*; thy terrors oppress *his* mind, and disturb *his* reason. O thou that speakest the winds and waves into obedience and calmness, settle and quiet *his* discomposed thoughts; speak peace and satisfaction to *his* troubled mind, and give *him* comfort and sure confidence in the sense of thy pardon and love. Lord, help *his* unbelief, and increase *his* faith. Though *he* walk in the valley and shadow of death, let "thy rod and thy staff support and protect *him*." In the multitude of the thoughts and sorrows that *he* hath in *his* heart, let thy comfort refresh *his* soul. Let in a beam of thy heavenly light, to dispel the clouds and darkness in which *his* mind is involved. O, direct to the means most proper for *his* help, and so bless and prosper them, that they may effectually promote *his* recovery out of this deplorable state. Incline *his* ears to wholesome counsels, and dispose *his* heart to receive due impressions. O gracious Father, pity *his* frailty, forgive *his* sin, and rebuke *his* distemper, that *his* disquieted soul may return to its rest. O, raise *him* up, and show thy mercy upon *him*, for the sake of Jesus Christ, our blessed Saviour and Redeemer. *Amen.*

*For the same.*

(From Bishop Patrick.)

Preserve this thy servant, O gracious Father, from dishonouring thee and *his* religion, by distrusting thy power or thy goodness.

Remove all troublesome imaginations from *him*, and give *him* a clear understanding of thee, and of *himself*, that no causeless fears and jealousies may overwhelm *him*, nor *his* heart sink within *him* from any sadness and dejection of spirit. Compose, we beseech thee, *Ids* disturbed thoughts; quiet *his* disordered mind, and appease all the tumults of *Ids* soul, by a sweet sense of thy tender mercies, and of the love of thy Son Jesus Christ to mankind. Keep *him* from forming any rash conclusions concerning thy providence; and give *him* so much light and judgment amid all the darkness and confusion of *his* thoughts, that *he* may not think *himself* forsaken by thee; but may firmly believe that if *he* does the best *he* can, thou requirest no more. And enable *him*, O Lord, to look forwards to that region of light and glory, whither our Saviour is gone before, to prepare a place for all thy faithful servants.

Strengthen *his* weak and feeble endeavours. Support *his* fainting spirit, and cause it humbly to hope in thee. Confirm and establish every good thought, desire, and purpose, which thou hast wrought in *him*. Make *him* to grow in wisdom, faith, love, and willing obedience. Conduct *him* hereafter so easily and steadily, peaceably and quietly, so cheerfully and securely in thy ways, that *he* may glorify thee whilst *he* lives, and when *he* leaves this troublesome world, may resign *Ids* soul into thy merciful hands, with a pious confidence and a hope of a joyful resurrection; through the merits of thy Son Jesus Christ our Lord. *Amen.*

*A Prayer for One under Fears and Doubts concerning his spiritual Condition, or under perplexing Thoughts and Scruples about his Duty.*

(From Mr. Kettlewell.)

O Lord our God, we offer up our humble supplication to thee in behalf of this thy servant, whose soul is disquieted within *him* by *his* fears and anxiety respecting the safety of *his* condition. Remove from *him*, we entreat thee, all frightful apprehensions, all perplexing doubts and scruples about *his* duty.—Make *him* satisfied and settled in a right understanding of all thy precepts, and careful in the observance of them; and dispel, by the light of thy countenance, all that darkness which obscures *his* soul, that *he* may not be unnecessarily dejected, and distrustful of *himself*, or dishonourably jealous of thee. Deliver *him* from all those offences which make *him* so much a stranger to peace and comfort; and cause *him* to place *his* chief satisfaction and delight in obeying thy commandments, and in meditating on thy mercy; through Jesus Christ our Lord.

*A Prayer for One who is disturbed with wicked and blasphemous Thoughts.*

(From Mr. Lewis.)

O Lord God, the Father of our spirits, to whom all hearts are open, and all desires known; we humbly entreat thee to succour and relieve this thy servant, who labours under the burden of wicked thoughts Let thy power and goodness be shown in healing *hi*, disordered mind. Cleanse the thoughts of *his* heart by the inspiration of thy Holy Spirit. Suffer them not to be defiled by any profane or blasphemous suggestions, but heal thy soul of thy servant, by enabling

*him* to stifle and suppress all such thoughts as tend to rob *him* of *his* peace, or deprive *him* of the comforts of religion. Enable *him* to be of an equal and steady temper, to be mild and gentle in *his* behaviour, and to keep *his* hopes and fears within due bounds. Make *him* sensible of the wise and kind reasons of these afflictions; that if they are duly improved, they may be powerful preservatives of *his* soul against the prevailing sins of a licentious age; may lessen *his* inclinations to the enjoyments of this life, and deaden *his* appetite to sensual pleasure, and the perishing goods of this world; that these afflictions may dispose *him* to compassionate the sufferings of others, and make *him* more thoroughly feel *his* own infirmities, and the want of divine assistance. Open *his* eyes, that *he* may see and know the wise and gracious dispensations of thy providence; and, by humbling *himself* under them, may at length be lifted up and made a partaker of that peace and joy which thou bestowest on all thy faithful servants. Grant this for the sake of Jesus Christ, our only Mediator and Redeemer.

*A Prayer for One who is afflicted with a profane Mistrust of Divine Truths, and  
blasphemous Thoughts.*

(From Mr. Kettlewell.)

O most gracious God, in whose hand is the soul of every living creature; protect this thy servant, we humbly and earnestly entreat thee, against all doubts and mistrusts of thy truth, against all irreligious thoughts and suggestions.

Never suffer them, O Lord, to weaken *his* faith, or to hinder *him* from performing *his* duty. Preserve *him* not only from the sin, but, if it seem good to thine infinite wisdom, from the temptation and the sorrow which may attend them.

But, if it be thy blessed will to continue these terrifying thoughts for *his* trial and humiliation, Lord, make *him* sensible that they will not be imputed to *him* as sin, if, as soon as *he* perceives them, *he* rejects them with horror and indignation.

During *his* trial let *him* learn to depend upon thee, that, as often as these profane thoughts arise in *his* mind, *he* may find grace to overcome them, and without the least indulgence or delay to cast them out; and that *he* may learn to show patience under them, as under every other affliction and trial of thy appointment, trusting to thy grace to assist *him*, and to thy goodness to deliver *him*; through Jesus Christ our Saviour. Amen.

*A Prayer for One under the dread of God's Wrath and  
everlasting Damnation.*

(From Mr. Lewis.)

O Almighty God, the aid of all that need, and the helper of all that flee to thee for succour, accept, we beseech thee, our humble supplications for this thy servant, labouring under the dismal apprehensions of thy wrath.

O Lord, enter not into judgment with *him*: make *him* sensible that, though the wages of sin are death, the gift of God is eternal life; that thou Latest the death of a sinner, and art not willing that any should perish; that thou always punishest less than we deserve, and in the midst of judgment rememberest mercy. Revive *his* soul with a sense of thy love, and the hopes of obtaining thy pardon, and the joy of thy salvation; that he may be raised from this dejection, and show with gladness what thou hast done for *his* soul. All this we humbly beg for Jesus Christ's sake. Amen.

*A Prayer for a Lunatic.*

(From Mr. Jenks.)

O Lord, the only wise God, from whom we have received all the faculties of our souls; thou art holy and righteous in all thy dispensations, though the reason of them is frequently unknown to us. Dispel, we humbly beseech thee, if it be agreeable to thine infinite wisdom, the clouds in which the soul of thy servant is now involved; that *he* may regain *his* understanding, and the right use of *his* faculties. Heal *his* disordered mind; settle and quiet *his* passions; pacify and compose *his* imagination.

O prosper the means which are used for *his* recovery. Make *him* tractable in the use of remedies, and willing to comply with the advice of *his* friends. But if no means can effect *his* cure, let *him* possess *his* soul in peace and composure, and in every interval of reason address *his* prayer to thee; that, when *his* earthly tabernacle shall be dissolved, *he* may rejoice in *his* former inability to pursue the pleasures of the world, and be presented unto thee pure and undefiled, through Jesus Christ our Lord. *Amen.*

*A Prayer for Natural Fools or Madmen.*

(From Mr. Kettlewell.)

O Almighty and most merciful Father, pity, we entreat thee, this thy unhappy creature, who knows not *his* own wants, nor how to ask for thy mercies. Compassionate, O Lord, *his* infirmities, and supply *his* necessities. Let thy wisdom prevent those evils which *he* cannot foresee, or wants understanding to remove; but especially keep *him* from doing any thing that may be hurtful either to *himself or others.*

Let *his* mind, on all occasions, be quiet and peaceable; and, as far as *his* faculties extend, exercised in piety and devout meditations. O hear our cry when we call upon thee: hear us for *him* who is not able to pray for *himself*; grant *him* thy fatherly care at present, and thy peace at the last; through the mediation of thy Son, our Saviour Jesus Christ. *Amen.*

PROPER PSALMS  
FOR A SICK PERSON AT SEA.

I.

SAVE me, O God, for the waters are come in, even unto my soul.

2. I am come into deep waters, so that the floods run over me. Psalm lxix. 1, 2.

3. The floods are risen, O Lord, the floods have lift up their voice; the floods lift up their waves.

4. The waves of the sea are mighty, and rage horribly: but yet the Lord, who dwelleth in heaven, is mightier. Psalm xciii. 4, 5.

5. He rnaketh the storm to cease, so that the waves thereof are still.

6. Wherefore unto thee, O Lord, do I cry in my trouble: deliver me out of my distress. Psalm cvii. 28.

7. Thou shalt show us wonderful things in thy righteousness, O God of our salvation: thou that art the hope of all the ends of the earth, and of them that remain in the broad sea. Psalm lxv. 5.

8. Through thee have I been holden up ever since I was born; thou art he that took me out of my mother's womb; my praise shall always be of thee. Psalm lxxi. 5, 6.

9. I will cry unto thee, Thou art my father, my God, and the rock of my salvation.  
Psalm lxxxix. 26.

10. Withdraw not thou thy mercy from me, O Lord; let thy loving-kindness and truth always preserve me.

11. For innumerable troubles are come about me: my sins have taken such hold upon me, that I am not able to look up; yea, they are more in number than the hairs of my head, and my heart hath failed me.

12. O Lord, let it be thy pleasure to deliver me: make haste, O Lord, to help me.  
Psalm xl. 11—13.

## II.

1. Out of the deep have I called unto thee, O Lord; Lord, hear my voice.

2. O let thine ears consider well the voice of my complaint. Psalm cxxx. 1, 2.

3. For I am helpless and poor, and my heart is wounded within me. Psalm cix. 21.

4. My heart is disquieted within me, and the fear of death is fallen upon me.

5. Tearfulness and trembling are come upon me, and a horrible dread hath overwhelmed me. Psalm lv. 4, 5.

6. I go hence like the shadow that departeth, and am driven away like a grasshopper. Psalm cix. 22.

7. O God, thou knowest my foolishness, and my sins are not hidden from thee.  
Psalm lxix. 5.

8. Thou hast laid me in the lowest pit; in a place of darkness, and in the deep.

9. Thine indignation lieth hard upon me, and thou hast vexed me with all thy storms. Psalm lxxxviii. 5,6.

10. Thou breakest me with a tempest, and my roarings are poured out like waters.  
Job ix. 17; iii. 24.

11. O reject me not utterly, and be not exceeding wroth against thy servant. Lament, v. 22.
12. For my soul is full of trouble, and my life draweth nigh unto hell. Psalm lxxxviii. 2.
13. I am brought into so great trouble and misery that I go mourning all the day long.
14. For my loins are filled with a sore disease, and there is no whole part in my body. Psalm xxxviii. 6, 7«
15. My wounds stink and are corrupt, through my foolishness. Psalm xxxviii. 5.
16. Behold, O Lord, I am in distress; my bowels are troubled, my heart is turned within me, for I have grievously transgressed. Lament, i. 20.
17. O remember not the sins and offences of my youth; but according to thy mercy think thou upon me, O Lord, for thy goodness. Psalm xxv. 6.
18. Cast me not away in the time of age; forsake me not when my strength faileth me. Psalm lxxi. 8.
19. Take thy plague away from me: I am even consumed by the means of thy heavy hand.
20. When thou with rebukes dost chasten man for sin, thou makest his beauty to consume away, like as it were a moth fretting a garment: every man therefore is but vanity.
21. Hear my prayer, O Lord, and with thine ears consider my calling; hold not thy peace at my tears.
22. For I am a stranger with thee, and a sojourner, as all my fathers were.
23. O spare me a little, that I may recover my strength, before I go hence, and be no more seen. Psalm xxxix. 11—15.

*A Prayer for a Sick Seaman.*

O most great and glorious Lord, the "salvation of

all that dwell on the earth, and of them that remain in the broad sea;" under whose powerful protection we are alike secure in every place, and without whose providence over us we can no where be in safety; look down, we beseech thee, upon us, thy unworthy servants, who are called to "behold thy wonders in the deep," and to perform our several duties in the great waters.

"Thou art our refuge and strength, a very present help in trouble;" and therefore we fly unto thee for succour in all our necessities. Extend thy accustomed goodness to our distressed brother, whom thou hast been pleased to visit with the rod of affliction.

"The waves of death encompass him about, and the sorrows of hell take hold upon him."

O leave him not to himself, nor let him be given over "to a spirit of slumber" and darkness; but "open his eyes, that he may see the wondrous things of thy law," and the necessity of a speedy and sincere repentance; so that, from the sickness of his body, he may derive health and salvation to his soul, which is the great end of all thy righteous judgments, and of all our afflictions.

Let him seriously consider and reflect within himself, from this visitation, "what a dreadful thing it is to fall into the hands of the living God;" and let him hence learn, if it shall please thee to raise him up again, to preserve a more awful sense of thy divine majesty upon his spirit, "and to live more soberly, righteously, and piously in this present world."

We know, O Lord, that "many are the enemies of peace," and that "the whole world lieth in wickedness:" but let him not "follow a multitude to do evil," nor "give his consent to the enticement of sinners;" but being perfectly "redeemed from all vain conversation,

and renewed in the spirit of his mind," let him "walk before thee with a perfect heart," and spend the residue of his days in thy faith and fear.

Or if thou hast determined otherwise concerning him, be pleased to give him sufficient grace, and strength, and time, to "make his calling and election sure, before he go hence and be no more seen:" revive his drooping spirits, fortify his heart, and as he decays in the outer, strengthen him in the inner man, by setting before him the hopes of a blessed immortality "as an anchor of the soul, both sure and steadfast." *Amen.*

*A Prayer for a Sick Soldier or Seaman.*

O most mighty Lord, the fountain of health and life, strength and courage, the aid and support of all that fly unto thee for succour, with whom is no respect of persons, but every one that feareth thee (whether he be rich or poor, learned or unlearned) is accepted by thee; we beseech thee mercifully to look down upon our brother, who is now fallen under the rod of thy displeasure.

We know, O Lord, that all thy judgments are principally intended for our good in the end, by the reformation of our lives and manners; and therefore we most humbly beseech thee to let thy present judgment have that good effect upon our brother, that he may lead the rest of his life as a faithful soldier of Jesus Christ, and not continue to harden his heart against all the powerful and repeated instances of thy mercies and judgments towards him.

If thou hast designed this sickness shall terminate in his death, O be pleased to fit and prepare him for it; or if otherwise in mercy thou hast determined to spare him, O let hi.ii not return to any of his former

sinful courses, but let him always keep in mind the promise which he made to thee in baptism, of renouncing the world, the flesh, and the devil; and which, we hope, he now again heartily renews in this his day of visitation.

We know, O Lord, that many temptations will unavoidably assault him in the state of life wherein he is engaged, and therefore we most humbly beseech thee to give him such a portion of thy blessed Spirit, as may enable him to fight with as much resolution and courage against his spiritual enemies as the nature of his post obliges him to do, upon just occasions, against his temporal; ever remembering, that the greatest of conquests is that which is made upon ourselves; and that no victory is so truly honourable as that which is obtained over our vicious inclinations.

Wherefore give him grace, we beseech thee, O Lord, "to abhor that which is evil, and to cleave to that which is good." Let him religiously avoid all blasphemy and profaneness, all drunkenness, riot, and lasciviousness; and let him carefully follow the rule our Saviour hath set him, "of doing violence to no man, accusing no man falsely, and being content with his own wages;" so that, having "put on the whole armour of God, he may be able to stand against the wiles of the devil;" and whenever thou shalt be pleased to put an end to his warfare, (either now or hereafter,) he may cheerfully resign his soul into thy hands, in these comfortable words of the apostle—"I have fought a good fight, I have finished my course, I have kept the faith; henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous Judge, shall give unto those that love and fear him, and put their trust in his mercy." *Amen.*

*A Prayer to be used by a Person afflicted with a  
Distemper of long Continuance.  
(By Dr. Stonehouse.)*

O Lord God Almighty, I am wonderfully made, and all my powers of body and mind were produced and are supported by thee. "Thou killest and makest alive: thou woundest, and makest whole."

I own and reverence thine hand in my present affliction. I acknowledge that thou art righteous in all that befalls me: for I have sinned; and thou chastenest me less than my iniquities deserve. In punishment thou shovest mercy, continuest to me many comforts, prolongest my opportunities of reflection and amendment, and givest hope of that pardon which I so much want, and at this time earnestly entreat.

I desire, in this poor condition of my health, to search and try my ways, and turn unto thee, O Lord, by deep humility, sincere repentance, and faith in the great Redeemer: and may the fruit of this and every affliction be to take away sin, and make my heart better.

O God, if it be thy merciful will, direct me to and prosper some means for the removal of my disorder, that I may yet be capable of glorifying thee in my station, and, by further endeavours for thy service upon earth, be fitter for immortality.

Support me, gracious Lord, that my soul may not be quite cast down, and too much disquieted within me. Assist me to cherish penitent, believing, serious thoughts and affections. Grant me such resignation to thy will, such patience and meekness towards men, as my Divine Master requireth, and as he himself manifested while he was a sufferer on earth. Forgive

all the harshness and sinfulness of my temper, and keep it from increasing upon me. May I learn, from what I now feel, to pity all who are sick, in pain, or otherwise afflicted, and do all in my power to assist and relieve them.

If by this affliction thou intendest to bring me down to the grave, prepare me, by thy grace, for my removal hence, and entrance on the unseen eternal state; and may all the sufferings of the present life work out for me a far more exceeding and eternal weight of glory.

I am thankful for any degree of ease and comfort which I have this day enjoyed. Grant me, this night, such refreshing rest that I may be better able to discharge the duties and bear the burden of another day, if thou art pleased to indulge me with it. If my eyes are kept waking, may my meditations be comfortable and useful to me.

Pity my weakness, merciful and heavenly Father, and hear my imperfect petitions, through our Lord Jesus Christ, who was once a man of sorrow, and is still touched with the feeling of our infirmities; to whom, as our merciful High Priest and powerful Intercessor, be glory for evermore. *Amen.*

*A Prayer to be used on the Death of a Friend.*

(By Mr. Merrick.)

O Almighty God, who dost not willingly grieve the children of men, but in thy visitations rememberest mercy, teach me by thy grace to bear the loss of that dear person whom thou hast taken from me with patience and resignation, and to make a right use of the affliction which thy fatherly hand hath laid upon me. Thou hast given, and thou hast taken away: blessed be thy holy name! Make me thankful, O Lord, for the comforts

and blessings which I still enjoy; and sanctify to my soul all the sufferings which in the course of this mortal life thou shalt appoint for me. Let the death of friends and relations help to keep me always mindful of my own mortality. And grant, that by thy grace I may here apply my heart to wisdom, and may hereafter by thy mercy be received into that everlasting kingdom, where all tears shall be wiped from all faces, and sorrow and sighing shall flee away. Hear me, O merciful Father, for the sake of thy Son Jesus Christ. *Amen.*

*A Prayer to be used by a Person troubled in Mind.*

Almighty God, who beholdest with compassion and mercy the weaknesses and frailties of us thy sinful creatures; look down on me, I beseech thee, and deliver me, if it be thy blessed will, from the distress of mind under which I labour. Strengthen my judgment, and inform my understanding, that I may rightly know my duty; and grant that I may act on all occasions, and in every circumstance of life, in the manner most acceptable to thee. Pardon my secret sins and infirmities, and preserve me from all wilful neglects and offences. If thou seest it consistent with thy glory, and with the everlasting welfare of my soul, fill me with that fervency of affection towards thee, and with that measure of spiritual comfort and assurance, which may preserve my mind in a frame of cheerfulness and composure. But if trouble and bitterness of mind be more expedient for me, continue to me both this and all other afflictions which thou seest most conducive to my future happiness, and grant that I may bear them with patience and resignation. Let thine Holy Spirit direct and support me under every trial, and enable me so to walk in thy faith and fear, (hat I may at last be received into thy

heavenly kingdom, through the merits of thy Son Jesus Christ, our blessed Lord and Saviour. *Amen.*

*A Prayer to be used by an Old Person.*

O gracious Lord, my Maker and my Preserver, I give thee thanks for the long continuance which thou hast granted me in this world, in order that I may be the better prepared for another. Enable me by thy grace to make a right use of the time afforded me, and give me a true and deep repentance of the sins which I have committed. Support me by thy help under the infirmities of age; keep me from covetousness, and fret-fulness, and from all unreasonable fears and cares. Give me that degree of ease and health which thou seest most convenient for me; wean my affections and desires from the things of this life, and keep me continually prepared for death; through Jesus Christ. *Amen.*

*A Prayer for a Person condemned to die.*

(From Dr. Inet.)

O most just and holy Lord God, who bringest to light the hidden things of darkness, and by thy just and wise providence dost bring sin to shame and punishment; disappointing the hopes of wicked men; visiting their sins upon them in this present life, that thou mayest deter others from the evil of their ways, and save their souls in the day of judgment; O Lord, in mercy look down upon this thy servant, who now is before thee to confess thy justice in making *him* a sad example to others. *He* with sorrow and shame confesseth it would be just with thee, should death eternal be the wages of *his* sins, and everlasting sorrow the recompense of *his* iniquity. *He* has, we confess, O Lord, despised thy mercy, and abused thy goodness, and has therefore no

reason to expect any other than to be made an everlasting sacrifice to thy justice. When thou hast, by the ministry of thy word, and the interposition of thy providence, called *him* to repentance, he has slighted thine admonitions. O, how just therefore would it be now in thee to disregard *his* cry in this day of trouble, when distress and anguish are come upon *him!* *He* confesses that *he* hath hardened *his* heart, notwithstanding all thy importunities to *him* to repent and live; that he has still gone on from one wickedness to another, eagerly repeating the works of darkness, and even hating to be reformed; that *he* has notoriously broken *his* baptismal vows, and given encouragement to others to blaspheme our holy faith; and that on these accounts *he* has nothing to expect but that thou shouldst deal with *him* according to *his* sins, and reward *him* according to the multitude of AM offences. But thou, O God, hast been pleased to declare, that with thee is mercy and plenteous redemption; that thou desirest not the death of a sinner, but rather that he should repent and live. Thou hast so loved the world, that thou gavest thy only begotten Son, that whosoever believeth in him should not perish, but have everlasting life. O, let not *him*, whom we are now commanding to thy mercy, for ever perish and be lost. Have compassion upon a miserable sinner, who owns *he* deserves eternally to die; and let *him* find mercy in *his* distress. Pardon, we earnestly entreat thee, *his* wilful and *his* heedless follies, *his* errors, and *his* crying and notorious sins; particularly that for which *he* is now to die. O Lord, thou God of mercy, who art abundant in goodness, have pity on the work of thine own hands. Bury *his* sins in *his* grave, and, however they may rise up in this world to disgrace *him*, let them never rise up in the next to condemn *him*:

and whatever *he* suffers here, let *him* hereafter be in the number of those whose unrighteousness is forgiven, and whose sin is covered. However men, in the execution of justice, and to deter others from being guilty of the like wickedness, may kill *his* body; let neither *his* body nor *his* soul be destroyed in hell, but be delivered from eternal condemnation, for the sake of Jesus Christ, who died to save sinners. *Amen.*

*A Prayer of Preparation for Death.*

O Almighty God, Maker and Judge of all men, have mercy upon me, thy weak and sinful creature; and if by thy most wise and righteous appointment the hour of death be approaching towards me, enable me to meet it with a mind fully prepared for it, and to pass through this great and awful trial in the manner most profitable for me. O let me not leave any thing undone which may help to make my departure safe and happy, or to qualify me for the highest degree of thy favour that I am capable of attaining. Pardon the sins which I have committed against thee by thought, word, and deed, and all my neglects of duty. Pardon the sins which I have committed against my neighbour; and if others have wronged or offended me, incline my heart freely and fully to forgive them. Cleanse my soul from all its corruptions, and transform it into the likeness of thy Son Jesus Christ; that I may behold thy face in glory, and be made partaker of thy heavenly kingdom. And, O merciful Father, give me that supply of spiritual comfort which thou seest needful for me in my present condition: and grant that, when my change comes, I may die with a quiet conscience, with a well-grounded assurance of thy favour, and a joyful hope of a blessed resurrection; through our Lord and Saviour Jesus Christ. *Amen.*

THE MINISTRATION  
OF  
PUBLIC BAPTISM OF INFANTS.  
TO BE USED IN CHURCHES.

The people are to be admonished, that it is most convenient that baptism should not be administered but upon Sundays and other holydays, when the most number of persons come together; as well for that the congregation there present may testify the receiving of them that be newly baptized into the number of Christ's church; as also because, in the baptism of infants, every man present be put in remembrance of his own profession made to God in his baptism. For which cause also it is expedient that baptism be ministered in the vulgar tongue. Nevertheless, (if necessity so require,) children may be baptized on any other day.

And note, That there shall be for every male child to be baptized, two godfathers and one godmother; and for every female, one godfather and two godmothers.

When there are children to be baptized, the parents shall give knowledge thereof overnight, or in the morning before the beginning of morning prayer, to the Curate. And then the godfathers and godmothers, and the people with the children, must be ready at the font, either immediately after the last lesson at morning prayer, or else immediately after the last lesson at evening prayer, as the Curate by his discretion shall appoint. And the Priest coming to the font, (which is then to be filled with pure water,) and standing there, shall say,

HATH this child been already baptized, or no?

If they answer *No*, then shall the Priest proceed as follows:

Dearly beloved, forasmuch as all men are conceived and born in sin, and that our Saviour Christ saith, none

can enter into the kingdom of God, except he be regenerate and born anew of water and of the Holy Ghost; I beseech you to call upon God the Father, through our Lord Jesus Christ, that of his bounteous mercy he will grant *tin's child* that thing which by nature *he* cannot have, that *he* may be baptized with water and the Holy Ghost, and received into Christ's holy church, and be made *a lively member* of the same.

Then shall the Priest say,

Let us pray.

Almighty and everlasting God, who of thy great mercy didst save Noah and his family in the ark from perishing by water, and also didst safely lead the children of Israel thy people through the Red Sea, figuring thereby thy holy baptism; and, by the baptism of thy well beloved Son Jesus Christ in the river Jordan, didst sanctify water to the mystical washing away of sin; we beseech thee, for thine infinite mercies, that thou wilt mercifully look upon *this child*; wash *him* and sanctify *him* with the Holy Ghost, that *he*, being delivered from thy wrath, may be received into the ark of Christ's church; and being steadfast in faith, joyful through hope, and rooted in charity, may so pass the waves of this troublesome world, that finally he may come to the land of everlasting life, there to reign with thee world without end, through Jesus Christ our Lord. *A men.*

Almighty and immortal God, the aid of all that need, the helper of all that flee to thee for succour, the life of them that believe, and the resurrection of the dead; we call upon thee for *this infant*, that *he*, coming to thy holy baptism, may receive remission of *his* sins by

spiritual regeneration. Receive *him*, O Lord, as thou hast promised by thy well beloved Son, saying, Ask, and ye shall have; seek, and ye shall find; knock, and it shall be opened unto you. So give now unto us that ask; let us that seek, find;" open the gate unto us that knock; that *this infant* may enjoy the everlasting benediction of thy heavenly washing, and may come to the eternal kingdom which thou hast promised by Christ our Lord. *Amen.*

Then shall the Priest stand up, and shall say,

Hear the words of the Gospel written by St. Mark, in the tenth chapter, at the thirteenth verse: "They brought young children to Christ that he should touch them; and his disciples rebuked those that brought them. But when Jesus saw it, he was much displeased, and said unto them, Suffer the little children to come unto me, and forbid them not; for of such is the kingdom of God. Verily I say unto you, Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein. And he took them up in his arms, put his hands upon them, and blessed them."

After the Gospel is read, the Minister shall make this brief exhortation upon the words of the Gospel.

Beloved, ye hear in this Gospel the words of our Saviour Christ, that he commanded the children to be brought unto him; how he blamed those that would have kept them from him; how he exhorted all men to follow their innocence. Ye perceive how by his outward gesture and deed he declared his good will towards them; for he embraced them in his arms, he laid his hands upon them, and blessed them. Doubt ye not, therefore, but earnestly believe that he will likewise favourably receive

*this* present *infant*; that he will embrace *him* with the arras of his mercy; that he will give unto *him* the blessing of eternal life, and make *him partaker* of his everlasting kingdom. Wherefore we being thus persuaded of the good will of our heavenly Father towards *this infant*, declared by his Son Jesus Christ, and nothing doubting but that he favourably alloweth this charitable work of ours in bringing *this infant* to his holy baptism, let us faithfully and devoutly give thanks unto him, and say—

Almighty and everlasting God, heavenly Father, we give thee humble thanks that thou hast vouchsafed to call us to the knowledge of thy grace and faith in thee: increase this knowledge, and confirm this faith in us evermore. Give thy Holy Spirit to *this infant*, that *he* may be born again and be made *an heir* of everlasting salvation; through our Lord Jesus Christ, who liveth and reigneth with thee and the Holy Spirit, now and for ever. Amen.

Then shall the Priest speak unto the godfathers and godmothers in this wise:

Dearly beloved, ye have brought *this child* here to be baptized; ye have prayed that our Lord Jesus Christ would vouchsafe to receive *him*, to release *him* of *his* sins, to sanctify *him* with the Holy Ghost, to give *him* the kingdom of heaven, and everlasting life. You have heard also, that our Lord Jesus Christ hath promised also in his gospel to grant all these things that ye have prayed for; which promise he for his part will most surely keep and perform. Wherefore after this promise made by Christ, *this infant* must also faithfully, for *his* part, promise by you that are *his*

sureties, (until *he* come of age to take it upon *himself*,) that *he* will renounce the devil and all his works, and constantly believe God's holy word, and obediently keep his commandments.

I demand therefore,

Dost thou, in the name of this child, renounce the devil and all his works, the vain pomp and glory of the world, with all covetous desires of the same, and the carnal desires of the flesh, so that thou wilt not follow nor be led by them?

*Answ.* I renounce them all.

Minister.

Dost thou believe in God, the Father Almighty, Maker of heaven and earth?

And in Jesus Christ his only begotten Son, our Lord? And that he was conceived by the Holy Ghost; born of the Virgin Mary; that he suffered under Pontius Pilate, was crucified, dead, and buried; that he went down into hell, and also did rise again the third day; that he ascended into heaven, and sitteth at the right hand of God the Father Almighty; and from thence shall come again, at the end of the world, to judge the quick and the dead?

And dost thou believe in the Holy Ghost, the holy Catholic church; the communion of saints; the remission of sins; the resurrection of the flesh; and ever-lasting life after death?

*Answ.* All this I steadfastly believe.

Minister.

Wilt thou then be baptized in this faith? *Answ.* This is my desire.

Minister.

Wilt thou then obediently keep God's holy will and commandments, and walk in the same all the days of thy life?

*Answ.* I will.

Then the Priest shall say,

O merciful God, grant that the old Adam in *this child* may be so buried that the new man may be raised up in *him*. *Amen*.

Grant that all carnal affections may die in *him*, and that all things belonging to the spirit may live and grow in *him*. *Amen*.

Grant that *he* may have power and strength to have victory, and to triumph against the devil, the world, and the flesh. *Amen*.

Grant that whosoever is here dedicated to thee by our office and ministry, may also be endued with heavenly virtues, and everlasting rewarded, through thy mercy, O blessed Lord God, who dost live and govern all things, world without end. *Amen*.

Almighty and everlasting God, whose most dearly beloved Son Jesus Christ, for the forgiveness of our sins, did shed out of his most precious side both water and blood, and gave commandment to his disciples that they should go and teach all nations, and baptize them in the name of the Father, and of the Son, and of the Holy Ghost; regard, we beseech thee, the supplications of thy congregation; sanctify this water to the mystical washing away of sin; and grant that *this child*, now to be baptized therein, may receive the fulness of thy grace, and ever remain in the number of thy faithful and elect children; through Jesus Christ our Lord. *Amen*.

Then the Priest shall take the Child into his hands, and shall say to the godfathers and godmothers,

Name this child.

And then naming it after them, (if they shall certify him that the child may well endure it,) he shall dip it in the water discreetly and warily, saying,

N. I baptize thee in the name of the Father, and of the Son, and of the Holy Ghost.  
*Amen.*

But if they certify that the Child is weak, it shall suffice to pour water upon it, saying the aforesaid words,

N. I baptize thee in the name of the Father, and of the Son, and of the Holy Ghost.  
*Amen.*

Then shall the Priest say,

We receive *tin's child* into the congregation of Christ's flock,\* and do sign *him* with the sign of the cross, in token that hereafter *he* shall not be ashamed to confess the faith of Christ crucified, and manfully to fight under his banner against sin, the world, and the devil, and to continue Christ's faithful soldier and servant unto *his* life's end. *Amen.*

Then shall the Priest say,

Seeing now, dearly beloved brethren, that *this child is* regenerate and grafted into the body of Christ's church, let us give thanks unto Almighty God for these benefits, and with one accord make our prayers unto him, that *this child* may lead the rest of *his* life according to this beginning.

Then shall be said, all kneeling, Our Father, which art in heaven: hallowed be thy

\* Here the Priest shall make a cross upon the Child's forehead.

name. Thy kingdom come. Thy will be done in earth as it is in heaven. Give us this day our daily bread. And forgive us our trespasses, as we forgive them that trespass against us. And lead us not into temptation, but deliver us from evil. *Amen.*

Then shall the Priest say,

We yield thee hearty thanks, most merciful Father, that it hath pleased thee to regenerate *this infant* with thy Holy Spirit, to receive *him* for thine own *child* by adoption, and to incorporate *him* into thy holy church. And we humbly beseech thee to grant, that *he*, being dead unto sin, and living unto righteousness, and being buried with Christ in his death, may crucify the old man, and utterly abolish the whole body of sin: and that as *he is* made *partaker* of the death of thy Son, *he* may also be *partaker* of his resurrection; so that finally, with the residue of thy holy church, he may be *an inheritor* of thine everlasting kingdom, through Christ our Lord. *Amen.*

Then, all standing up, the Priest shall say to the godfathers and godmothers this exhortation following:

Forasmuch as *this child hath* promised by you *his* sureties to renounce the devil and all his works, to believe in God, and to serve Him; ye must remember that it is your parts and duties to see that *this infant* be taught, as soon as *he* shall be able to learn, what a solemn vow, promise, and profession *he hath* here made by you. And that *he* may know these things the better, ye shall call upon *him* to hear sermons; and chiefly ye shall provide that *he* may learn the Creed, the Lord's Prayer, and the Ten Commandments, in the vulgar tongue, and all other things which a Christian

ought to know and believe to his soul's health; and that *this child* may be virtuously brought up to lead a godly and Christian life; remembering always that baptism doth represent unto us our profession; which is, to follow the example of our Saviour Christ, and to be made like unto him; that as he died and rose again for us; so should we, who are baptized, die from sin, and rise again unto righteousness, continually mortifying all our evil and corrupt affections, and daily proceeding in all virtue and godliness of living.

Then shall he add, and say,

Ye are to take care that *this child* be brought to the bishop, to be confirmed by him, so soon as *he* can say the Creed, the Lord's Prayer, and the Ten Commandments, in the vulgar tongue, and be further instructed in the Church Catechism set forth for that purpose.

It is certain by God's word, that children which are baptized, dying before they commit actual sin, are undoubtedly saved.

To take away all scruple concerning the use of the sign of the cross in baptism; the true explication thereof, and the just reasons for the retaining of it, may be seen in the XXXth Canon, first published in the year MDCIV.

THE MINISTRATION or  
PRIVATE BAPTISM OF CHILDREN  
IN HOUSES.

THE Curate of the parish shall often admonish the people, that they defer not the baptism of their children longer than the first or second Sunday next after their birth, or other holy day falling between, unless upon a great and reasonable cause, to be approved by the Curate.

And also they shall warn them that, without like great cause and necessity, they procure not their children to be baptized at

home in their own houses. But when need shall compel them so to do, then Baptism shall be administered on this fashion:

First; let the Minister of the parish, (or, in his absence, any other lawful Minister that can be procured,) with them that are present, call upon God, and say the Lord's Prayer, and so many of the collects appointed to be said before in the form of Public Baptism as the time and present exigence will suffer. And then, the Child being named by some one that is present, the Minister shall pour water upon it, saying these words:

N. I baptize thee in the name of the Father, and of the Son, and of the Holy Ghost.  
*Amen.*

Then, all kneeling down, the Minister shall give thanks unto  
God, saying,

We yield thee hearty thanks, most merciful Father, that it hath pleased thee to regenerate this infant with thy Holy Spirit, to receive *him* for thine own child by adoption, and to incorporate *him* into thy holy church. And we humbly beseech thee to grant, that as *he* is now made partaker of the death of thy Son, so *he* may be also of his resurrection; and that finally, with the residue of thy saints, *he* may inherit thine everlasting kingdom, through the same, thy Son Jesus Christ our Lord. *Amen.*

And let them not doubt but that the Child, so baptized, is lawfully and sufficiently baptized, and ought not to be baptized again. Yet, nevertheless, if the Child, which is after this sort baptized, do afterwards live, it is expedient that it be brought into the church, to the intent that, if the Minister of the same parish did himself baptize that Child, the congregation may be certified by the true form of baptism by him privately before used.

THE  
**W O R K S**  
OF  
WILLIAM PALEY, D.D.

IN FIVE VOLUMES.

WITH NOTES AND ILLUSTRATIONS

BY JAMES PAXTON,

MEMBER OF THE ROYAL COLLEGE OF SURGEONS, LONDON.

VOL IV.

OXFORD, PRINTED BY J. VINCENT,  
FOR THOMAS TEGG AND SON, LONDON.  
GRIFFIN AND CO. GLASGOW.  
TEGG AND CO. DUBLIN.  
AND J. & S. A. TEGG, SYDNEY & HOBART TOWN.

1838.

TO THE  
HONOURABLE AND RIGHT REVEREND  
SHUTE BARRINGTON, LL.D.

LORD BISHOP OF DURHAM.

MY LORD,

To your suggestion the world is indebted for the existence of Dr. Paley's valuable work on Natural Theology. The universal and permanent esteem in which it has been held in this country, and its favourable reception in France, even after the desolating influence of the Revolution, have abundantly approved your Lordship's selection both of the subject and of the person to whom you intrusted it.

In looking round, then, for a patron for these ILLUSTRATIONS, it was natural to have recourse to him who was the original suggester of the work which it is their object to explain. Nor was I disappointed in my wish; your Lordship not only condescending to approve of the design, but to encourage me in its prosecution by your very liberal support. For this distinguished honour you will believe me deeply

sensible; and if I may indulge the hope that my humble efforts will increase the utility of so eminent a writer, I shall consider it the highest gratification.

I am,  
MY LORD,  
With great veneration,  
Your Lordship's most obliged  
And obedient Servant,  
JAMES PAXTON.

*Oxford,*  
*January 1, 1826.*

## PREFACE.

THE works of Dr. Paley have acquired that popularity which renders it scarcely necessary to observe, that his NATURAL THEOLOGY was written to establish the truth of the agency and wisdom of the Deity from the admirable contrivances and mechanism displayed in natural objects, inferring from thence that the knowledge and power requisite for the formation of created nature must be infinite.

The principal physical arguments made use of, relate to organs destined to mechanical functions, as the bones of man —the muscles—the structure of animals, or comparative anatomy—prospective and compensatory contrivances—insects and plants: with most of these objects the anatomist only can be conversant; but all admit of graphic representation, and such has been attempted.

The designs of the following plates are original, obtained from the most authentic sources, and submitted to the critical examination of the most competent judges. It is hoped that the illustrations will be found the more interesting from their being simple and unincumbered by parts irrelevant to the subject of the author. These are accompanied by notes, which are intended to supply defective or correct erroneous statements, and to explain the plates.

The undertaking originated in the difficulty of understanding the various descriptions introduced by Paley, not however

from his want of clearness, for the subjects in general are plainly and correctly described; but it is evident that visible representations strike the mind more forcibly than mere descriptions. It is therefore presumed that the subsequent illustrations will be an acquisition, by bringing vividly to the imagination, objects of which only an imperfect idea could otherwise be formed; and that they will consequently render the work more intelligible to the general reader.

## PREFACE TO THE SECOND EDITION.

IT cannot be necessary to insist on the superior character and merits of the NATURAL THEOLOGY of Dr. Paley. The high estimation in which the original work has been held, from the first publication to the present time, supersedes any encomium. The ILLUSTRATIONS and NOTES consequently met with a reception proportionably favourable; its success indeed exceeded every expectation the editor had entertained; and it becomes a matter of surprise, that so popular an author had not before received the aid of plates to exhibit animal mechanism, and vegetable formation, with notes to bring the physical statements down to the present advanced stage of natural knowledge; for it was well known, that, with the utmost attention, the fancy could not follow the author in his descriptions of structure and functions, especially when complicated contrivance, either in animal or vegetable nature, were to be unfolded. To comprehend the subject thoroughly also required a somewhat deeper acquaintance with the several sciences of anatomy, entomology, and botany, than most persons can be supposed to possess. The editor therefore trusts, that the illustrations and notes, particularly in their improved state, will be found to meet the difficulty and supply the deficiency.

In presenting the second edition to the public, the editor believes that the notes have not been enlarged without giving increasing value and interest to the text. The references

have been corrected, a number of new figures introduced, and two plates added, containing such objects which have been pointed out as being required to render the book more complete.

Several corrections and additions have been made from suggestions in the Edinburgh Review, etc. In the Entomological department, the editor begs to acknowledge his obligations to A. Ingpen, Esq.; and for several of the Botanical notes he is indebted to Mr. Baxter, of the Botanical Gardens of the University of Oxford.

*Oxford,*  
*June 1, 1828*

# CONTENTS.

## CHAPTER I.

*State of the Argument.*

Stone.	Description of the parts.
Watch.	Eight statements of the case

## CHAPTER II.

*State of the Argument continued.*

## CHAPTER III.

*Application of the Argument.*

Eye and telescope compared.	Socket—Eye-brow—Eye-lid—Lachrymal apparatus.
Light—Distance.	Nictitating membrane in birds — its muscles.
Mechanism of the iris.	Expedients.
Straight muscles,	Why means used.
Bony rim of the eyes of birds.	Human ear.
Marsupium.	Ear of elephant.
Eyes of fish.	
— of the eel.	
Minuteness of picture on the retina.	

## CHAPTER IV.

*Of the Succession of Plants and Animals.*

No account hereby of contrivance.	Viviparous?
Plants.	Rational animals.
Oviparous animals.	Instance in a gardener and flowers.

## CHAPTER V.

*Application of the Argument continued.*

Repetition from Chapter I.	Remains of possible forms.
Imperfection.	Use arising out of the parts.
Superfluous parts.	A principle of order.
Atheistic argument.	Of our ignorance.

**CHAPTER VI**  
*The argument Cumulative.*

**CHAPTER VII**  
*The Mechanical and Immechanical Parts and Functions of Animals and Vegetables*

Imperfection of knowledge no proof of want of contrivance	Chemistry.
Muscular action	Electricity.
Trochlear muscle.	Secretion.
	Kidney

**CHAPTER VIII.**  
*Mechanical Arrangement in the Human Frame.*

Of Bones.	Knee.
Neck.	Ligaments
Fore-arm.	Ankle.
Spine.	Shoulder.
— of the serpent.	Passage of blood-vessels.
Chest	Gristle.
Knee-pan.	Synovia.
Shoulder-blade.	Movable cartilages.
Joints.	How well the joints wear
Ball and socket.	Immovable joints.
Gynglymus or hinge-joint	

**CHAPTER IX.**  
*Of the Muscles.*

Suitableness to the joints.	Sphincters.
Sartorius muscle.	Combination—Delicacy.
Oblique muscles of the head.	Mechanical disadvantages
Antagonist muscles in the arm.	Single muscles.
Not obstructing one another.	Lower jaw.
Action wanted where their substance would be inconvenient.	Perforation of tendons, Bondage at the ankles.
Variety of figure.	Hypothesis from appetency repelled.
How many must be right for health.	Kent's enumeration of muscles.
Particular muscles.	Why mechanism not more striking.
Celerity of motion.	Description inferior to inspection.
Tongue—Mouth—Nose.	Quotation from Steno.
Music—Writing.	

**CHAPTER X.**  
*Of the Vessels of Animal Bodies.*

1. Circulation of the blood.	As referable to the lungs.
Disposition of the blood-vessels—	Valves of the heart.
Arteries—Veins.	Vital motions involuntary.
The heart as receiving returning	Pericardium. the blood.

2. Alimentary system.	Entrance of near the neck.
Passage of the food through the stomach to the intestines.	Gallbladder.
_____ of the chyle through the lacteals and thoracic duct to the blood.	Oblique insertion of the biliary duct into the intestines.
Length of intestines	4. Parotid gland and duct,
Peristaltic motion,	5. Larynx.
Tenuity of the lacteals.	Trachea—Gullet—Epiglottis.
Valves of the thoracic duct.	Rings of the trachea.
	Sensibility—Musical instrument.
	Lifting the arm to the head.

## CHAPTER XI.

*Of the Annual Structure regarded as a Mass*

1. Correspondence of tides.	Guts.
Not belonging to the separate limbs.	Mesentery.
Nor to the internal contents.	3. Beauty.
Nor to the feeding vessels.	In animated nature.
2. Package	In flowers.
Heart.	Whether any natural sense of beauty
Lungs.	4. Concealment.
Liver.	5. standing.
Bladder.	6. Interrupted analogies.
Kidneys.	Periosteum covering all bones except
Pancreas	the teeth.
Spleen.	Skin terminating at the nails.
Omentum.	Solid case for the brain.
Septa of the brain.	

## CHAPTER XII.

*Comparative Anatomy.*

1. Covering of animals.	Length of intestines.
Of man—of birds.	5. Bones of animals.
Structure of feathers.	_____ of birds.
Black down.	6. Lungs of animals.
2. Mouths of animals.	_____ of birds.
Bills of birds.	7. Birds oviparous.
Serrated bills.	8. Instruments of motion.
Affinity of mouths.	Wings of birds.
3. Gullets of animals.	Fins of fish.
4. Intestines of animals.	Web feet of water-foul.
Valvulae comments.	9. Senses of animals.

## CHAPTER XIII.

*Peculiar Organizations*

Paw-wax of quadrupeds.	Pelvis.
Oil of birds.	Middle claw of heron
Air-bladder of fish.	Stomach of camel.
Fang of viper.	Tongue of woodpecker.
Bag of opossum.	Babyrouessa.

## CHAPTER XIV.

*Prospective Contrivances.*

Teeth.	Eye of the foetus.
Temporary and permanent.	Lungs of the foetus—Foramen ovale.
Milk.	Ductus arteriosus, etc.

## CHAPTER XV.

*Relations, illustrated in a Watch.*

Alimentary system.	Teats and mouth.
Kidneys, ureters, and bladder.	Particular relations.
Eyes, hands, feet.	Swan.
Sexes.	Mole.

## CHAPTER XVI.

*Compensation.*

Elephant's proboscis.	Snail—Muscle—Cockle—Lobster.
Hook in the bat's wing.	Sloth—Sheep.
Crane's neck.	More general compensations.
Parrot's bill.	Want of fore-teeth—Rumination.
Spider's web.	In birds, want of teeth supplied by a gizzard.
Multiplying eyes of insects.	Reptiles.
Eye of the chameleon.	
Intestines of the alopecias.	

## CHAPTER XVII.

*The Relation of Animated Bodies to Inanimate feature.*

Wings of birds—Fins of fish—Air and water.	Eye to light.
Ear to the air.	Size of animals to external things.
Organs of speech—Voice and respiration to air.	Of the inhabitants of the earth and sea to their elements,
	Sleep to night.

## CHAPTER. XVIII.

*Instincts.*

Incubation of eggs.	Solution from sensations considered.
Deposition of eggs of insects.	

## CHAPTER XIX.

*Of Insects.*

Elytra of the scarabaeus.	Sting of the bee.
Borer of flies.	Proboscis.

Metamorphosis of insects.	Glow-worm.
Care of eggs.	Motion of the larva of the dragon-fly.
Observations limited to particular species.	Gossamer spider.
Thread of silkworm and spider.	Shell animals.
Wax and honey of bee.	Snail shells.
Sting.	Univalve shell-fish.
Forceps of the panorpidae tribe.	Bivalve.
Brushes of flies.	Lobster shell.
	Variety of insects.

CHAPTER XX.  
*Of Plants.*

Preservation, perfection, and dispersing of seed.	Grasses.
Trees.	Vallisneria.
Germination.	Cuscuta Europaea.
Tendrils.	Mistletoe.
Particular species.	Colchicum autumnale.
	Dionaea muscipula.

CHAPTER XXI.  
*The Elements.*

Consolidation of uses.	Insipidity.
1. Air.	Circulation.
Reflecting light.	3. Fire.
Evaporating fluids.	Dissolvent power.
Restoratives of purity.	4. Light.
2. Water.	Velocity.
Purity.	Tenuity.

CHAPTER XXII.  
*Astronomy.*

Fixing the source of light and heat in the centre.	Of admissible laws, the present the best.
Permanent axis of rotation.	United attraction of a sphere, the same as of the constituent particles.
Spheroidicity of the earth.	The apsides fixed.
Of centripetal forces.	Figures of the planetary orbits.
Attraction indifferent to laws.	Buffon's hypothesis.
Admissible laws within narrow limits.	

CHAPTER XXIII.  
*Of the Personality of the Deity.*

Not the object of our senses.	Second causes.
Contrivance proves personality.	Of generation as a principle.
Misapplication of laws.	Atheistic suppositions.
Mechanism.	Buffon's organic nodules.

Appetencies	Analogy strained.
Analogy by which they are supported.	Solutions contradicted.
Camel's bunch.	By ligaments—Valves.
Crane's thigh.	By senses of animals
Pelican's pouch.	By the parts without motion.
	By plants.

## CHAPTER XXIV.

*Of the Natural Attributes of the Deity.*

Omnipotence.	Self-existence.
Omnipresence.	Necessary existence.
Omniscience.	Spirituality.
Eternity.	

## CHAPTER XXV.

*The Unity of the Duty*

From the laws of attraction, and the presence of light among the heavenly bodies.	Resemblance of animals
From the laws of nature upon our globe.	Fish.
	Insects.

## CHAPTER XXVI.

*The Goodness of the Deity*

From the parts and faculties of animals.	Physical evils of finiteness
The actual happiness of young animals.	_____ bodily pain.
_____ winged insects	_____ mortal diseases.
_____ aphides.	_____ death.
_____ fish.	Civil evils of population.
1. Of old age	_____ distinctions.
Of different animal habits.	_____ wealth.
Prepollency of happiness	_____ idleness.
Causes of not observing it	Objections from chance answered.
Quotation	Must be chance in the midst of design
Apparent exceptions.	Ignorance of observance.
Venomous animals.	Advantages of chance.
Animals of prey	Disease.
2. Taste.	Seasons.
Adaptation of senses.	Station.
Property, origin of.	Acquirability.
Physical evils of imperfection	Sensible interposition.
	Probation.

## CHAPTER XXVII.

*Conclusion*

Natural religion prepares the way for revelation.

## INDEX TO THE PLATES.

TO THE  
HONOURABLE AND RIGHT REVEREND  
SHUTE BARRINGTON, LL. D.  
LORD BISHOP OF DURHAM.

MY LORD,

THE following Work was undertaken at your Lordship's recommendation, and, amongst other motives, for the purpose of making the most acceptable return that I could for a great and important benefit conferred upon me.

It may be unnecessary, yet not perhaps quite impertinent, to state to your Lordship, and to the reader, the several inducements that have led me once more to the press. The favour of my first and ever-honoured Patron had put me in possession of so liberal a provision in the Church, as abundantly to satisfy my wants, and much to exceed my pretensions. Your Lordship's munificence, in conjunction with that of some other excellent Prelates, who regarded my services with the partiality with which your Lordship was pleased to consider them, hath since placed me in ecclesiastical situations, more than adequate to every object of reasonable ambition. In the mean time, a weak, and, of late, a painful state of health, deprived me of the power of discharging the duties of my station in a manner at all suitable,

either to my sense of those duties, or to my most anxious wishes concerning them. My inability for the public functions of my profession, amongst other consequences, left me much at leisure. That leisure was not to be lost. It was only in my study that I could repair my deficiencies in the Church; it was only through the press that I could speak. These circumstances entitled your Lordship in particular to call upon me for the only species of exertion of which I was capable, and disposed me without hesitation to obey the call in the best manner that I could. In the choice of a subject I had no place left for doubt: in saying which, I do not so much refer, either to the supreme importance of the subject, or to any scepticism concerning it with which the present times are charged, as I do to its connexion with the subjects treated of in my former publications. The following discussion alone was wanted to make up my works into a system: in which works, such as they are, the public have now before them, the Evidences of Natural Religion, the Evidences of Revealed Religion, and an account of the duties that result from both. It is of small importance that they have been written in an order the very reverse of that in which they ought to be read. I commend, therefore, the present volume to your Lordship's protection, not only as, in all probability, my last labour, but as the completion of a regular and comprehensive design.

Hitherto, my Lord, I have been speaking of myself, and not of my Patron. Your Lordship wants not the testimony of a Dedication; nor any testimony from me: I consult, therefore, the impulse of my own mind alone when I declare, that in no respect has my intercourse with your Lordship been more gratifying to me, than in the opportunities which it has afforded me of observing your earnest, active, and

unwearied solicitude for the advancement of substantial Christianity; a solicitude, nevertheless, accompanied with that candour of mind, which suffers no subordinate differences of opinion, when there is a coincidence in the main intention and object, to produce any alienation of esteem, or diminution of favour. It is fortunate for a country, and honourable to its government, when qualities and dispositions like these are placed in high and influencing stations. Such is the sincere judgment which I have formed of your Lordship's character, and of its public value: my personal obligations I can never forget. Under a due sense of both these considerations, I beg leave to subscribe myself, with great respect and gratitude,

MY LORD,

Your Lordship's faithful

And most devoted Servant,

WILLIAM PALEY.

*Bishop-Wearmouth,*

*July, 1802,*

## NATURAL THEOLOGY.

### CHAPTER I.

#### STATE OF THE ARGUMENT.

IN crossing a heath, suppose I pitched my foot against a *stone*, and were asked how the stone came to be there: I might possibly answer, that, for any thing I knew to the contrary, it had lain there for ever; nor would it perhaps be very easy to show the absurdity of this answer.\* But suppose I had found a *watch* upon the ground, and it should be inquired how the watch happened to be in that place; I should hardly think of the, answer which I had before given—that, for any thing I knew, the watch might have always been there. Yet why should riot this answer serve for the watch as well as for the stone? Why is it not as admissible in the second case as in the first? For this reason, and for no other, viz. that, when we come to inspect the watch, we perceive (what we could not discover in the stone) that its several parts are framed and put together for a

\* Since the above was written, the modern science, geology, has considerably advanced our knowledge of the changes which the earth undergone, and scarcely any one would now for an instant believe that the stone was formed where it lay. On examination, we should see that its asperities had been worn off by being rolled from a distance in water , and on surveying the surrounding heights, probably we should find that it corresponded with the structure, or that it had been washed by to; from a remoter region. Thus the situation of a. pebble may afford evidence, of the slate of the globe which we inhabit, in past ages.

See also notes in Lord Brougham and Sir C. Bell's Nat. Theol.

purpose, e. g. that they are so formed and adjusted as to produce motion, and that motion so regulated as to point out the hour of the day; that if the different parts had been differently shaped from what they are, of a different size from what they are, or placed after any other manner, or in any other order than that in which they are placed, either no motion at all would have been carried on in the machine, or none which would have answered the use that is now served by it. To reckon up a few of the plainest of these parts, and of their offices, all tending to one result:—We see a cylindrical box containing a coiled elastic spring, which, by its endeavour to relax itself, turns round the box.\* We next observe a flexible chain (artificially wrought for the sake of flexure) communicating the action of the spring from the box to the fusee. † We then find a series of wheels, ‡ the teeth of which catch in, and apply to, each other, conducting the motion from the fusee to the balance,§ and from the balance to the pointer:|| and

at the same time, by the size and shape of those wheels, so regulating that motion, as to terminate in causing an index, by an equable and measured progression, to pass over a given space in a given time. We take notice that the wheels are made of brass in order to keep them from rust; the springs of steel, no other metal being so elastic; that over the face of the watch there is placed a glass, a material employed in no other part of the work, but in the room of which, if there had been any other than a transparent substance, the hour could not be seen without opening the case. This mechanism being observed, (it requires indeed an examination of the instrument, and perhaps some previous knowledge of the subject to perceive and understand it; but being once, as we have said, observed and understood,) the inference, we think, is inevitable, that the watch must have had a maker: that there must have existed, at some time, and at some place or other, an artificer or artificers who formed it for the purpose which we find it actually to answer; who comprehended its construction, and designed its use.

1. Nor would it, I apprehend, weaken the conclusion, that we had never seen a watch made; that we had never known an artist capable of making one; that we were altogether incapable of executing such a piece of workmanship ourselves, or of understanding in what manner it was performed; all this being no more than what is true of some exquisite remains of ancient art, of some lost arts, and, to the generality of mankind, of the more curious productions of modern manufacture. Does

much slower than the cannon pinion, and mark the hour by the hand on the dial.

The above is a description of the several wheels. alluded to by Paley. Their relative filiation, and combined movement, may be seen by the simple inspection of a watch.

one man in a million know how oval frames are turned? Ignorance of this kind exalts our opinion of the unseen and unknown artist's skill, if he be unseen and unknown, but raises no doubt in our minds of the existence and agency of such an artist, at some former time, and in some place or other. Nor can I perceive that it varies at all the inference, whether the question arise concerning a human agent, or concerning an agent of a different species, or an agent possessing, in some respects, a different nature.

II. Neither, secondly, would it invalidate our conclusion, that the watch sometimes went wrong, or that it seldom went exactly right. The purpose of the machinery, the design, and the designer, might be evident, and in the case supposed would be evident, in whatever way we accounted for the irregularity of the movement, or whether we could account for it or not. It is not necessary that a machine be perfect, in order to show with what design it was made: still less necessary, where the only question is, whether it were made with any design at all.

III. Nor, thirdly, would it bring any uncertainty into the argument, if there were a few parts of the watch, concerning which we could not discover, or had not yet discovered, in what manner they conduced to the general effect; or even some parts, concerning which we could not ascertain, whether they conduced to that effect in any manner whatever. For, as to the first branch of the case; if by the loss, or disorder, or decay of the parts in question, the movement of the watch were found in fact to be stopped, or disturbed, or retarded, no doubt would remain in our minds, as to the utility or intention of these parts, although we should be unable to investigate the manner according

to which, or the connexion by which, the ultimate effect depended upon their action or assistance; and the more complex, is the machine, the more likely is this obscurity to arise. Then, as to the second thing supposed, namely, that there were parts which might be spared, without prejudice to the movement of the watch, and that we had proved this by experiment—these superfluous parts, even if we were completely assured that they were such, would not vacate the reasoning which we had instituted concerning other parts. The indication of contrivance remained, with respect to them, nearly as it was before.

IV. Nor, fourthly, would any man in his senses think the existence of the watch, with its various machinery, accounted for, by being told that it was one out of possible combinations of material forms; that whatever he had found in the place where he found the watch, must have contained some internal configuration or other; and that this configuration might be the structure now exhibited, viz. of the works of a watch, as well as a different structure.

V. Nor, fifthly, would it yield his inquiry more satisfaction, to be answered, that there existed in things a principle of order, which had disposed the parts of the watch into their present form and situation. He never knew a watch made by the principle of order; nor can he even form to himself an idea of what is meant by a principle of order, distinct from the intelligence of the watchmaker.

VI. Sixthly, he would be surprised to hear that the mechanism of the watch was no proof of contrivance, only a motive to induce the mind to think so.

VII. And not less surprised to be informed, that the watch in his hand was nothing more than the result of

the laws of *metallic* nature. It is a perversion of language to assign any law as the efficient, operative cause of any thing. A law presupposes an agent; for it is only the mode, according to which an agent proceeds: it implies a power; for it is the order, according to which that power acts. Without this agent, without this power, which are both distinct from itself, the *law* does nothing, is nothing. The expression, "the law of metallic nature," may sound strange and harsh to a philosophic ear; but it seems quite as justifiable as some others which are more familiar to him, such as "the law of vegetable nature," "the law of animal nature," or indeed as "the law of nature" in general, when assigned as the cause of phenomena, in exclusion of agency and power; or when it is substituted into the place of these.

VIII. Neither, lastly, would our observer be driven out of his conclusion, or from his confidence in its truth, by being told that he knew nothing at all about the matter. He knows enough for his argument: he knows the utility of the end: he knows the subserviency and adaptation of the means to the end. These points being known, his ignorance of other points, his doubts concerning other points, affect not the certainty of his reasoning. The consciousness of knowing little need not beget a distrust of that which he does know.

## CHAPTER II. STATE OF THE ARGUMENT CONTINUED.

SUPPOSE, in the next place, that the person who found the watch should, after some time, discover that, in addition to all the properties which he had hitherto

observed in it, it possessed the unexpected property of producing, in the course of its movement, another watch like itself, (the thing is conceivable); that it contained within it a mechanism, a system of parts, a mould for instance, or a complex adjustment of laths, files, and other tools, evidently and separately calculated for this purpose; let us inquire, what effect ought such a discovery to have upon his former conclusion.

I. The first effect would be to increase his admiration of the contrivance, and his conviction of the consummate skill of the contriver. Whether he regarded the object of the contrivance, the distinct apparatus, the intricate, yet in many parts intelligible mechanism, by which it was carried on, he would perceive, in this new observation, nothing but an additional reason for doing what he had already done—for referring the construction of the watch to design, and to supreme art. If that construction *without* this property, or, which is the same thing, before this property had been noticed, proved intention and art to have been employed about it; still more strong would the proof appear, when he came to the knowledge of this farther property, the crown and perfection of all the rest.

II. He would reflect, that though the watch before him were, *in some sense*, the maker of the watch which was fabricated in the course of its movements, yet it was in a very different sense from that in which a carpenter, for instance, is the maker of a chair; the author of its contrivance, the cause of the relation of its parts to their use. With respect to these, the first watch was no cause at all to the second: in no such sense as this was it the author of the constitution and order, either of the parts which the new watch contained, or of the parts by the aid and instrumentality of which it was produced.

We might possibly say, but with groat latitude of expression, that a stream of water ground corn: but no latitude of expression would allow us to say, no stretch of conjecture could lead us to think, that the stream of water built the mill, though it were too ancient for us to know who the builder was. What the stream of water does in the affair, is neither more nor less than this; by the application of an unintelligent impulse to a mechanism previously arranged, arranged independently of it, and arranged by intelligence, an effect is produced, viz. the corn is ground. But the effect results from the arrangement. The force of the stream cannot be said to be the cause or author of the effect, still less of the arrangement. Understanding and plan in the formation of the mill were not the less necessary, for any share which the water has in grinding the corn; yet is this share the same as that which the watch would have contributed to the production of the new watch, upon the supposition assumed in the last section. Therefore,

III. Though it be now no longer probable, that the individual watch, which our observer had found, was made immediately by the hand of an artificer, yet doth not this alteration in anywise affect the inference, that an artificer had been originally employed and concerned in the production. The argument from design remains as it was. Marks of design and contrivance are no more accounted for now than they were before. In the same thing, we may ask for the cause of different properties. We may ask for the cause of the colour of a body, of its hardness, of its heat; and these causes may be all different. We are now asking for the cause of that subserviency to a use, that relation to an end, which we' have remarked in the watch before us. No answer is given to this question, by telling us that a preceding

watch produced it. There cannot be design without a designer; contrivance, without a contriver; order, without choice; arrangement, without any thing capable of arranging; subserviency and relation to a purpose, without that which could intend a purpose; means suitable to an end, and executing their office in accomplishing that end, without the end ever having been contemplated, or the means accommodated to it. Arrangement,, disposition of parts, subserviency of means to an end, relation of instruments to a use, imply the presence of intelligence and mind. No one, therefore, can rationally believe, that the insensible, inanimate watch, from which the watch before us issued, was the proper cause of the mechanism we so much admire in it;— could be truly said to have constructed the instrument, disposed its parts, assigned their office, determined their order, action, and mutual dependency, combined their several motions into one result, and that also a result connected with the utilities of other beings. All these properties, therefore, are as much unaccounted for as they were before.

IV. Nor is any thing gained by running the difficulty farther back, i. e. by supposing the watch before us to have been produced from another watch, that from a former, and so on indefinitely. Our going back ever so far brings us no nearer to the least degree of satisfaction upon the subject. Contrivance is still unaccounted for. We still want a contriver. A designing mind is neither supplied by this supposition, nor dispensed with. If the difficulty were diminished the farther we went back, by going back indefinitely we might exhaust it. And this is the only case to which this sort of reasoning applies. Where there is a tendency, or, as we increase the number of terms, a continual approach towards a limit,

*there*, by supposing the number of terms to be what is called infinite, we may conceive the limit to be attained: but where there is no such tendency, or approach, nothing is effected by lengthening the series. There is no difference, as to the point in question, (whatever there may be as to many points,) between one series and another; between a series which is finite, and a series which is infinite. A chain composed of an infinite number of links can no more support itself, than a chain composed of a finite number of links. And of this we are assured, (though we never *can* have tried the experiment,) because, by increasing the number of links, from ten for instance to a hundred, from a hundred to a thousand, &c. we make not the smallest approach, we observe not the smallest tendency, towards self-support. There is no difference in this respect (yet there may be a great difference in several respects) between a chain of a greater or less length, between one chain and another, between one that is finite and one that is infinite. This very much resembles the case before us. The machine which we are inspecting demonstrates, by its construction, contrivance and design. Contrivance must have had a contriver; design, a designer; whether the machine immediately proceeded from another machine or not. That circumstance alters not the case. That other machine may, in like manner, have proceeded from a former machine: nor does that alter the case; contrivance must have had a contriver. That former one from one preceding it: no alteration still; a contriver is still necessary. No tendency is perceived, no approach towards a diminution of this necessity. It is the same with any and every succession of these machines; a succession of ten, of a hundred, of a thousand; with one series as with another; a series

which is finite, as with a series which is infinite. In whatever other respects they may differ, in this they do not. In all, equally, contrivance and design are unaccounted for.

The question is not simply, How came the first watch into existence? which question, it may be pretended, is done away by supposing the series of watches thus produced from one another to have been infinite, and Consequently to have had no such *first*, for which it was necessary to provide a cause. This, perhaps, would have been nearly the state of the question, if nothing had been before us but an unorganized, unmechanized substance, without mark or indication of contrivance. It might be difficult to show that such substance could not have existed from eternity, either in succession, (if it were possible, which I think it is not, for unorganized bodies to spring from one another,) or by individual perpetuity. But that is riot the question now. To suppose it to be so, is to suppose that it made no difference whether he had found a watch or a stone. As it is, the metaphysics of that question have no place; for, in the watch which we are examining, are seen contrivance, design; an end, a purpose; means for the end, adaptation to the purpose. And the question which irresistibly presses upon our thoughts, is, Whence this contrivance and design? The thing required is the intending mind, the adapting hand, the intelligence by which that hand was directed. This question, this demand, is not shaken off, by increasing a number or succession of substances, destitute of these properties; nor the more, by increasing that number to infinity. If it be said, that, upon the supposition of one watch being produced from another in the course of that other's movements, and by means of the mechanism

within it, we have a cause for the watch in my hand, viz. the watch from which it proceeded: I deny, that for the design, the contrivance, the suitableness of means to an end, the adaptation of instruments to a use, (all which we discover in the watch,) we have any cause whatever. It is in vain, therefore, to assign a series of such causes, or to allege that a series may be carried back to infinity; for I do not admit that we have yet any cause at all of the phenomena, still less any series of causes either finite or infinite. Here is contrivance, but no contriver; proofs of design, but no designer.

V. Our observer would farther also reflect, that the maker of the watch before him was, in truth and reality, the maker of every watch produced from it: there being no difference (except that the latter manifests a more exquisite skill) between the making of another watch with his own hands, by the mediation of files, lathes, chisels, etc. and the disposing, fixing, and inserting of these instruments, or of others equivalent to them, in the body of the watch already made, in such a manner as to form a new watch in the course of the movements which he had given to the old one. It is only working by one set of tools instead of another.

The conclusion which the *first* examination of the watch, of its works, construction, and movement, suggested, was, that it must have had, for the cause and author of that construction, an artificer, who understood its mechanism, and designed its use. This conclusion is invincible. A *second* examination presents us with a new discovery. The watch is found, in the course of its movement, to produce another watch, similar to itself; and not only so, but we perceive in it a system or organization, separately calculated for that purpose. What effect would this discovery have, or ought it to

have, upon our former inference? What, as hath already been said, but to increase, beyond measure, our admiration of the skill which had been employed in the formation of such a machine! Or shall it, instead of this, all at once turn us round to an opposite conclusion, viz. that no art or skill whatever has been concerned in the business, although all other evidences of art and skill remain as they were, and this last and supreme piece of art be' now added to the rest? Can this be maintained without absurdity? Yet this is atheism.

### CHAPTER III.

#### APPLICATION OF THE ARGUMENT.

THIS is atheism: for every indication of contrivance, every manifestation of design, which existed in the watch, exists in the works of nature; with the difference, on the side of nature, of being greater and more, and that in a degree which exceeds all computation. I mean, that the contrivances of nature surpass the contrivances of art, in the complexity, subtlety, and curiosity of the mechanism; and still more, if possible, do they go beyond them in number and variety; yet, in a multitude of cases, are not less evidently mechanical, not less evidently contrivances, not less evidently accommodated to their end, or suited to their office, than are the most perfect productions of human ingenuity.

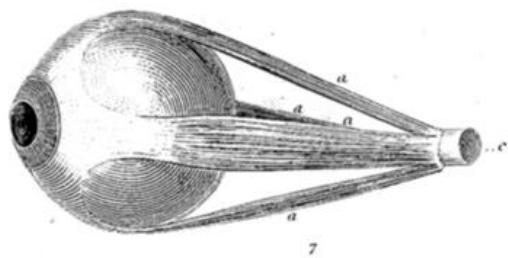

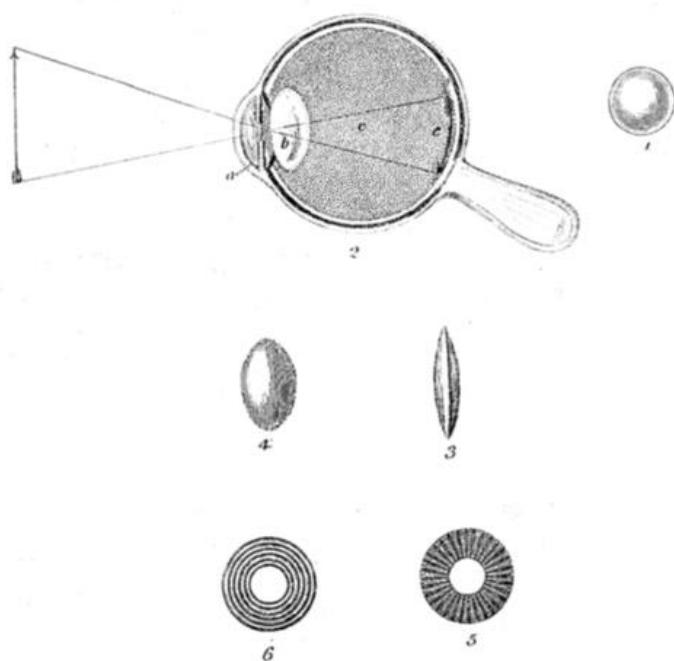

I know no better method of introducing so large a subject, than that of comparing a single thing with a single thing: an eye, for example, with a telescope. As far as the examination of the instrument goes, there is precisely the same proof that the eye was made for

vision, as there is that the telescope was made for assisting it. They are made upon the same principles; both being adjusted to the laws by which the transmission and refraction of rays of light are regulated. I speak not of the origin of the laws themselves; but such laws being fixed, the construction, in both cases, is adapted to them. For instance; these laws require, in order to produce the same effect, that the rays of light, in passing from water into the eye, should be refracted by a more convex surface than when it passes out of air into the eye. Accordingly we find that the eye of a fish,\* in that part of it called the crystalline lens, is much rounder than the eye of terrestrial animals. What plainer manifestation of design can there be than this difference? What could a mathematical instrument-maker have done more, to show his knowledge of his principle, his application of that knowledge, his suiting of his means to his end; I will not say to display the compass or excellence of his skill and art, for in these all comparison is indecorous, but to testify counsel, choice, consideration, purpose?

To some it may appear a difference sufficient to destroy all similitude between the eye and the telescope, that the one is a perceiving organ, the other an unperceiving instrument. The fact is, that they are both instruments. And, as to the mechanism, at least as to mechanism being employed, and even as to the kind of it, this circumstance varies not the analogy at all. For observe what the constitution of the eye is. It is necessary, in order to produce distinct vision, that an image or picture of the object

\* Tab. II. 1. The *crystalline lens of a fish*; it is proportionably larger than in other animals, and perfectly spherical, so that it has a greater power of concentrating the rays of light passing through the water.

ТАВ. III.

be formed at the bottom of the eye.\* Whence this necessity arises, or how the picture is connected with the sensation, or contributes to it, it may be difficult, nay, we will confess, if you please, impossible for us to search out. But the present question is not concerned in the inquiry. It may be true, that, in this and in other instances, we trace mechanical contrivance a certain way; and that then we come to something which is not mechanical, or which is inscrutable. But this affects not the certainty of our investigation, as far as we have gone. The difference between an animal and an automatic statue consists in this—that, in the animal, we trace the mechanism to a certain point, and then we are stopped; either the mechanism becoming too subtile for our discernment, or something else beside the known laws of mechanism taking place: whereas, in the automaton, for the comparatively few motions of which it is capable, we trace the mechanism throughout. But, up to the limit, the reasoning is as clear and certain in the one case as in the other. In the example before us, it is a matter of certainty, because it is a matter which experience and observation demonstrate, that the formation of an image at the bottom of the eye is necessary to perfect vision. The image itself can be

\* Fig. 2. A section of the human eye. It is formed of various *coats*, or membranes, containing pellucid humours of different degrees of density, and calculated for collecting the rays of light into a focus upon the nerve situated at the bottom of the eye-ball.

The external membrane, called *sclerotic*, is strong and firm, and is the support of the spherical figure of the eye; it is deficient in the centre, but that part is supplied by the *cornea*, which is transparent, and projects like the segment of a small globe from one of larger size. The interior of the sclerotic is lined by the *choroid*, which is covered by a dark mucous secretion, termed *pigmentum nigrum*, intended to absorb the superfluous rays of light. The *choroid* is represented in the plate by the black line. The third and inner membrane, which is, marked by the white line, is the *retina*, the expanded optic nerve.

shown. Whatever affects the distinctness of the image, affects the distinctness of the vision. The formation then of such an image being necessary (no matter how) to the sense of sight, and to the exercise of that sense, the apparatus by which it is formed is constructed and put together, not only with infinitely more art, but upon the self-same principles of art, as in the telescope or the camera-obscura. The perception arising from the image may be laid out of the question; for the production of the image, these are instruments of the same kind. The end is the same; the means are the same. The purpose in both is alike; the contrivance for the accomplishing that purpose is in both alike. The lens of the telescope,\* and the lens of the eye, † bear a near resemblance to one another, in their figure, their position, and in their power over the rays of light, viz. in bringing each pencil to a point at the right distance from the lens; viz. in the eye, at the exact place where the membrane is spread to receive it. How is it possible, under circumstances of such close affinity, and under the operation of equal evidence, to exclude contrivance from the one, yet to acknowledge the proof of contrivance having been employed, as the plainest and clearest of all propositions, in the other?

The resemblance between the two cases is still more accurate, and obtains in more points than we have yet

\* See Fig. 3.

† Fig. 4. The crystalline *lens*, or, as it has been called, the crystalline *humour*, of the eye. The comparison with the lens of the telescope is not perfectly exact, for the crystalline lens is a substance composed of concentric layers, of unequal density, the hardness of which increases from the surface to the centre; and hence possesses a more refractive power than any artificial lens. Mr. Ramsden supposes that this texture tends to correct the aberration occasioned by the spherical form of the cornea, and the focus of each oblique pencil of rays falls accurately on the concave surface of the retina.

represented, or than we are, on the first view of the subject, aware of. In dioptric telescopes there is an imperfection of this nature. Pencils of light, in passing through glass lenses, are separated into different colours, thereby tinging the object, especially the edges of it, as if it were viewed through a prism. To correct this inconvenience had been long a desideratum in the art. At last it came into the mind of a sagacious optician, to inquire how this matter was managed in the eye; in which there was the same difficulty to contend with as in the telescope. His observation taught him, that, in the eye, the evil was cured by combining lenses composed of different substances, i. e. of substances which possessed different refracting powers. Our artist borrowed thence his hint; and produced a correction of the defect by imitating, in glasses made from different materials, the effects of the different humours\* through which the rays of light pass before they reach the bottom of the eye. Could this be in the eye without purpose, which suggested to the optician the only effectual means of attaining that purpose?

But farther; there are other points, not so much perhaps of strict resemblance between the two, as of

\* Within the coats of the eye which have been mentioned, are the *humours*. Fig. 2. *a*, the *aqueous* humour, which is a thin fluid like water; *b*, the *crystalline lens*, of a dense texture; *c*, the *vitreous* humour, a very delicate gelatinous substance named from its resemblance to melted glass. Thus the crystalline is more dense than the vitreous, and the vitreous more dense than the aqueous humour; they are all perfectly transparent, and together make a compound lens, which refracts the rays of light issuing from *an* object, *d*, and delineates its figure, *e*, in the focus upon the retina, inverted. The Ashmolean Society has published a paper by Professor Powell, in which he has, in the most able and satisfactory manner, proved the achromatism of the eye "to be a direct result from the simplest considerations, relative to the dispersion of the media, and the investigation of a focus formed in a dense medium." See also Reports of the British Association, 1833 and 1834, by the same author.

superiority of the eye over the telescope; yet of a superiority which, being founded in the laws that regulate both, may furnish topics of fair and just comparison. Two things were wanted to the eye, which were not wanted (at least in the same degree) to the telescope: and these were the adaptation of the organ, first, to different degrees of light; and, secondly, to the vast diversity of distance at which objects are viewed by the naked eye, viz. from a few inches to as many miles. These difficulties present not themselves to the maker of the telescope. He wants all the light he can get; and he never directs his instrument to objects near at hand. In the eye, both these cases were to be provided for; and for the purpose of providing for them, a subtle and appropriate mechanism is introduced.

I. In order to exclude excess of light, when it is excessive, and to render objects visible under obscurer degrees of it, when no more can be had, the hole or aperture in the eye, through which the light enters, is so formed, as to contract or dilate itself for the purpose of admitting a greater or less number of rays at the same time. The chamber of the eye is a camera-obscura,\* which, when the light is too small, can enlarge its opening; when too strong, can again contract it; and that without any other assistance than that of its own exquisite machinery. It is farther also, in the human subject, to be observed, that this hole in the eye, which we call the pupil, under all its different dimensions, retains its exact circular shape. †

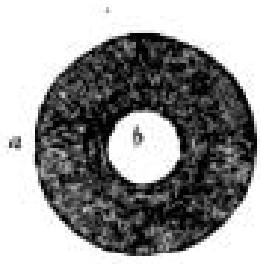

\* As the camera-obscura, by means of a lens refracting the rays, exhibits a picture of the scene before it on the opposite wall, so the rays of light flowing from all the points of an object through the *pupil* of the eye, by the refraction of the lens and humours of the eye, form an exact representation at the bottom of the eye on the retina.

† The pupil of the eye is the aperture formed by the inner margin of

This is a structure extremely artificial. Let an artist only try to execute the same; he will find that his threads and strings must be disposed with great consideration and contrivance, to make a circle which shall continually change

its diameter, yet preserve its form. This is done in the eye by an application of fibres, i. e. of strings, similar, in their position and action, to what an artist would and must employ, if he had the same piece of workmanship to perform.\*

II. The second difficulty which has been stated, was the suiting of the same organ to the perception of objects that lie near at hand, within a few inches, we will suppose, of the eye, and of objects which are placed at a considerable distance from it, that, for example, of as many furlongs; (I speak in both cases of the distance at which distinct vision can be exercised.) Now this, according to the principles of optics, that is, according to the laws by which the transmission of light is regulated, (and these laws are fixed,) could not be done without the organ itself undergoing an alteration, and receiving an adjustment, that might correspond with the exigency of the case, that is to say, with the different inclination, to one another under which the rays of

the *iris*. See Fig. 5, 6; which show plans of the arrangement of the fibres of the *iris*, according to Majendie, in two layers.

\* Some eminent anatomists have doubted the muscularity of the *iris*, and have given very different explanations of its motions, attributing the contraction and dilatation either to the varied impulse of the blood in its vessels, or to its own *vita propria*. The enlightened physiologist Magendie affirms, that the latest researches upon the anatomy of the *iris* proves its muscular structure. The above figure is taken from a beautiful plate in Dr. Monro's Elements of Anatomy, vol. ii; in which, a, the external fibres appear radiated, and pass into b, a fasciculus of circular fibres running round the inner margin.

light reached it. Rays issuing from points placed at a small distance from the eye, and which consequently must enter the eye in a spreading or diverging order, cannot, by the same optical instrument in the same state, be brought to a point, i. e, be made to form an image, in the same place with rays proceeding from objects situated at a much greater distance, and which rays arrive at the eye in directions nearly (and physically speaking) parallel. It requires a rounder lens to do it. The point of concourse behind the lens must fall critically upon the retina, or the vision is confused;\* yet, other things remaining the same, this point, by the immutable properties of light, is carried farther back when the rays proceed from a near object than when they are sent from one that is remote. A person who was using an optical instrument would manage this matter by changing, as the occasion required, his lens or his telescope; or by adjusting the distance of his glasses with his hand or his screw: but how is this to be managed in the eye? What the alteration was, or in what part of the eye it took place, or by what means it was effected, (for if the known laws which govern the refraction of light be maintained, some alteration in the state of the organ there must be,) had long formed a subject of inquiry and conjecture. The change, though sufficient for the purpose, is so minute as to elude ordinary observation. Some very late discoveries, deduced from a laborious and most accurate inspection of the structure and operation of the organ, seem at length

\* The focus of the refracted rays must fall exactly on the retina, so that the point of vision may be neither produced beyond it, nor shortened so as not to reach it. The latter defect exists in short-sighted persons, from too great convexity of the cornea or lens. The former is the defect of long-sighted persons, in whom there is an opposite conformation of those parts.

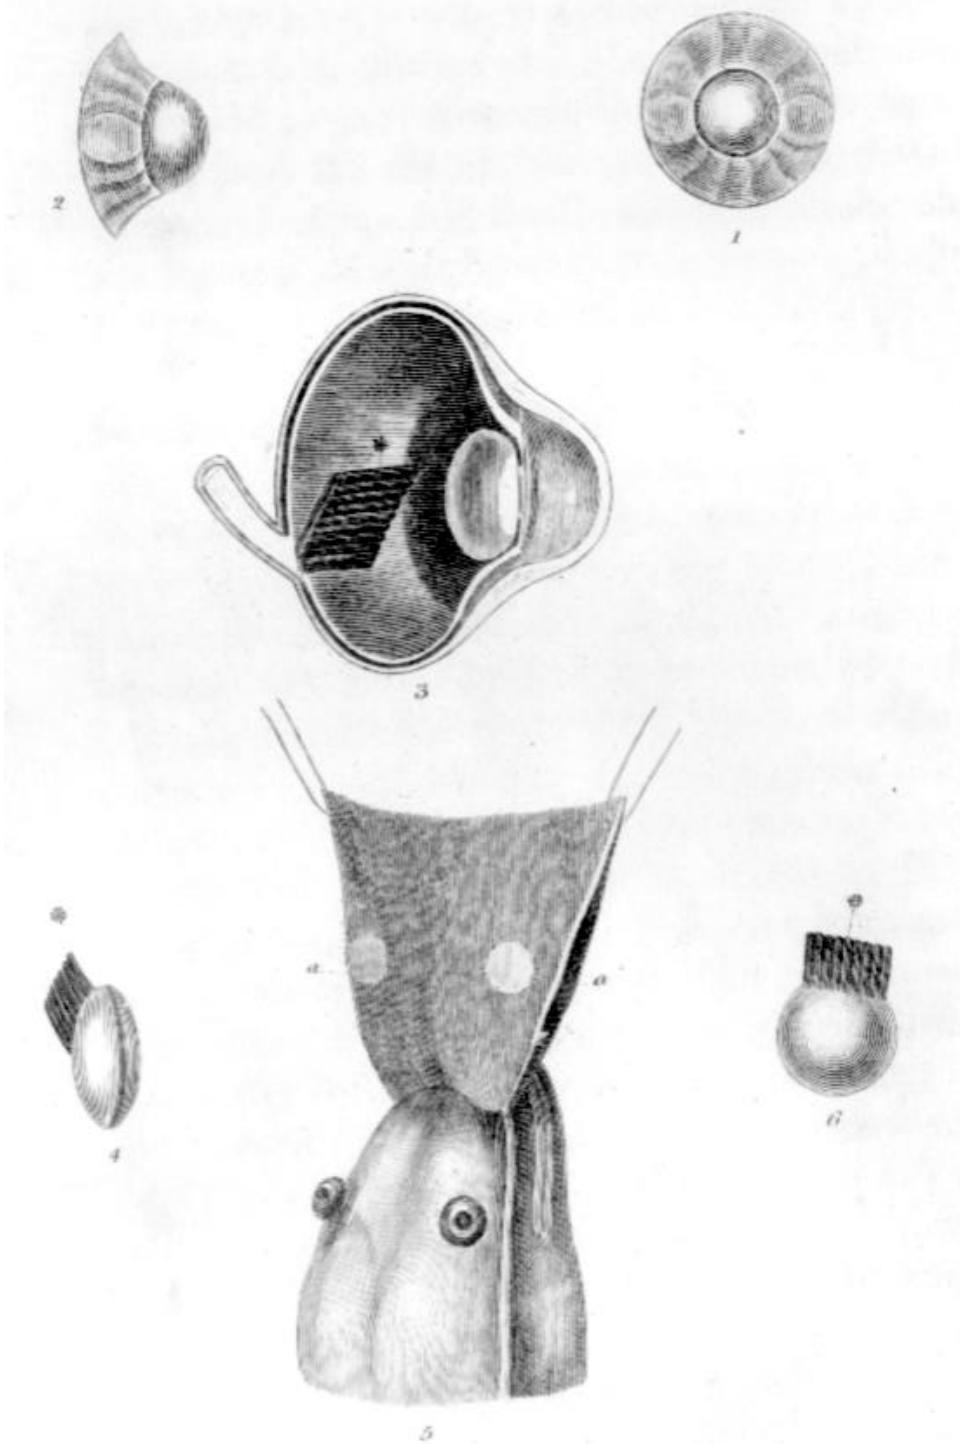

to have ascertained the mechanical alteration which the parts of the eye undergo. It is found, that by the action of certain muscles,\* called the straight muscles, and which action is the most advantageous that could be imagined for the purpose—it is found, I say, that whenever the eye is directed to a near object, three changes are produced in it at the same time, all severally contributing to the adjustment required. The cornea, or outermost coat of the eye, is rendered more round and prominent; the crystalline lens underneath is pushed forward; and the axis of vision, as the depth of the eye is called, is elongated. These changes in the eye vary its power over the rays of light in such a manner and degree as to produce exactly the effect which is wanted, viz. the formation of an image *upon the retina*, whether the rays come to the eye in a state of divergency, which is the case when the object is near to the eye, or come parallel to one another, which is the case when the object is placed at a distance. Can any thing be more decisive of contrivance than this is? The most secret laws of optics must have been known to the author of a structure endowed with such a capacity of change. It is as though an optician, when he had a nearer object to view, should *rectify* his instrument by

\* Fig. 7. There are four *straight* muscles, *a, a, a, a*, belonging to the globe of the eye. These muscles resemble each other, each arising from the bottom of the orbit, where they surround *c*, the optic nerve; they are strong and fleshy, and are inserted by broad thin tendons at the fore part of the globe of the eye, into the tunica sclerotica. This opinion of the adjustment of the eye to the distance of objects, though ingenious, is not entertained by the best physiologists. The eye is not a mere lens; it is a "camera-obscura," as the author has before stated, and like it receives the image of every object accurately at every distance. The more obvious use of the straight muscles, and the action which is assigned to them, is merely to turn the eye in different directions: hence they are severally named—*levator oculi*, *depressor oculi*, *adductor oculi*. and *abductor oculi*.

putting in another glass, at the same time drawing out also his tube to a different length.

Observe a new-born child first lifting up its eyelids. What does the opening of the curtain discover? The anterior part of two pellucid globes, which, when they come to be examined, are found to be constructed upon strict optical principles; the self-same principles upon which we ourselves construct optical instruments. We find them perfect for the purpose of forming an image by refraction; composed of parts executing different offices; one part having fulfilled its office upon the pencil of light, delivering it over to the action of another part; that to a third, and so onward: the progressive action depending for its success upon the nicest and minutest adjustment of the parts concerned; yet these parts so in fact adjusted as to produce, not by a simple action or effect, but by a combination of actions and effects, the result which is ultimately wanted. And forasmuch as this organ would have to operate under different circumstances, with strong degrees of light and with weak degrees, upon near objects and upon remote ones, and these differences demanded, according to the laws by which the transmission of light is regulated, a corresponding diversity of structure; that the aperture, for example, through which the light passes, should be larger or less; the lenses rounder or flatter, or that their distance from the tablet, upon which the picture is delineated, should be shortened or lengthened; this, I say, being the case and the difficulty to which the eye was to be adapted, we find its several parts capable of being occasionally changed, and a most artificial apparatus provided to produce that change. This is far beyond the common regulator of a watch, which requires the touch of a foreign hand to set

ТАБ. III.

it; but it is not altogether unlike Harrison's contrivance for making a watch regulate itself, by inserting within it a machinery, which, by the artful use of the different expansion of metals, preserves the equability of the motion under all the various temperatures of heat and cold in which the instrument may happen to be placed. The ingenuity of this last contrivance has been justly praised. Shall, therefore, a structure which differs from it chiefly by surpassing it, be accounted no contrivance at all? or, if it be a contrivance, that it is without a contriver?

But this, though much, is not the whole: by different species of animals the faculty we are describing is possessed, in degrees suited to the different range of vision which their mode of life, and of procuring their food, requires. *Birds*, for instance, in general, procure their food by means of their beak; and, the distance between the eye and the point of the beak being small, it becomes necessary that they should have the power of seeing very near objects distinctly. On the other hand, from being often elevated much above the ground, living in the air, and moving through it with great velocity, they require for their safety, as well as for assisting them in descrying their prey, a power of seeing at a great distance; a power of which, in birds of rapine, surprising examples are given. The fact accordingly is, that two peculiarities are found in the eyes of birds, both tending to *facilitate* the change upon which the adjustment of the eye to different distances depends. The one is a bony, yet, in most species, a flexible rim or hoop,\* surrounding the broadest part of the eye;

\* Tab. III. Fig. 1, 2. *The flexible rim, or hoop*, consists of bony plates which in all birds occupy the front of the sclerotic; lying close together and overlapping each other. These bony plates in general form a slightly convex ring, Fig. 1, but in the *accipitres* they form a concave ring, as in

which, confining the action of the muscles\* to that part, increases the effect of their lateral pressure upon the orb, by which pressure its axis is elongated for the purpose of looking at very near objects. The other is an additional muscle, called the marsupium, † to draw, on occasion, the crystalline lens *back*, and to fit the same eye for the viewing of very distant objects. By these means, the eyes of birds can pass from one extreme to another of their scale of adjustment, with more ease and readiness than the eyes of other animals.

The eyes of *fishes* also, compared with those of terrestrial animals, exhibit certain distinctions of struc-

Fig. 2, the bony rim of a hawk. It is a principle in optics, that the rays of light, passing through a lens, will be refracted to a point or focus beyond the lens, and this focus will be less distant in proportion as the lens approaches to a sphere in shape. This principle is very naturally applied to the explanation of the use of this apparatus. These scales partly lying over each other, so as to allow of motion, will, on the contraction of the straight muscles inserted into and covering them, move over each other, and diminish the circle of the sclerotica; and thus the cornea, which is immediately within the circle made by these scales, must be pressed forwards and rendered more convex, from the focus of the eye becoming altered, by its axis being elongated. This consequent convexity of the cornea renders small objects near the animal very distinct. Without this structure, a bird would be continually liable to dash itself against trees when flying in a thick forest, and would be unable to see the minute objects on which it sometimes feeds.

\* These muscles resemble the straight muscles of the human eye, and the eyes of all animals possess similar moving powers.

† The *marsupium* arises from the back of the eye; proceeding apparently through a slit in the retina, it passes obliquely into the vitreous humour, and terminates in that part, as in the eagle. Fig. 3, a section of the eye of the *falco chrysaetos* In some species it readier; the lens, and is attached to it, as in Fig. 4, 6. In the plate the marsupium is marked with an \*. We have now seen the form, but it is very much questioned whether it has the office here assigned to it: no muscular fibres are apparent, and its oblique situation seems unfavourable to the conjecture of its having muscular power. The marsupium has a structure resembling the choroid coat, is covered by the same black pigment, and answers the same purpose; that of absorbing the rays of light when too strong, and intercepting some of the rays in their course to the retina.

ture, adapted to their state and clement. We have already observed upon the figure of the crystalline compensating by its roundness the density of the medium through which their light passes. To which we have to add, that the eyes of fish, in their natural and indolent state, appear to be adjusted to near objects, in this respect differing from the human eye, as well as those of quadrupeds and birds. The ordinary shape of the fish's eye being in a much higher degree convex than that of land animals, a corresponding difference attends its muscular conformation, viz. that it is throughout calculated *for flattening* the eye.

The *iris* also in the eyes of fish does not admit of contraction. This is a great difference, of which the probable reason is, that the diminished light in water is never too strong for the retina.

In the *eel*, which has to work its head through sand and gravel, the roughest and harshest substances, there is placed before the eye, and at some distance from it, a transparent, horny, convex case or covering, which, without obstructing the sight, defends the organ.\* To such an animal, could any thing be more wanted, or more useful?

Thus, in comparing the eyes of different kinds of animals, we see, in their resemblances and distinctions, one general plan laid down, and that plan varied with the varying exigencies to which it is to be applied.

There is one property however common, I believe, to all eyes, at least to all which have been examined, namely, that the optic nerve enters the bottom of the

\* Fig. 5. The skin of the head of an *eel* is represented turned back; and as the *transparent horny covering* of the eye, *a, a*, is a cuticular covering, it is separated with it. Other fish have a similar, insensible, dense, and thick *adnata*, which is designed to protect the eye; and it seems especially necessary, as fish have no eyelids.

eye, not in the centre or middle, but a little on one side: not in the point where the axis of the eye meets the retina, but between that point and the nose. The difference which this makes is, that no part of an object is unperceived by both eyes at the same time.

In considering vision as achieved by the means of an image formed at the bottom of the eye, we can never reflect without wonder upon the smallness, yet correctness of the picture, the subtlety of the touch, the fineness of the lines. A landscape of five or six square leagues is brought into a space of half an inch diameter; yet the multitude of objects which it contains, are all preserved; are all discriminated in their magnitudes, positions, figures, colours. The prospect from Hampstead-hill is compressed into the compass of a sixpence, yet circumstantially represented. A stage-coach, travelling at an ordinary speed for half an hour, passes, in the eye, only over one-twelfth of an inch, yet is this change of place in the image distinctly perceived throughout its whole progress; for it is only by means of that perception that the motion of the coach itself is made sensible to the eye. If any thing can abate our admiration of the smallness of the visual tablet compared with the extent of vision, it is a reflection, which the view of nature leads us every hour to make, viz, that, in the hands of the Creator, great and little are nothing.\*

Sturmius held, that the examination of the eye was a euro for atheism. Besides that conformity to optical principles which its internal constitution displays, and

\* The magnitude of the image formed on the retina is proportional to the angle which the two extremities of the object viewed subtend with the centre of the eye. Hence, the more remote the object, the smaller the image.

which alone amounts to a manifestation of intelligence having been exerted in the structure; besides this, which forms, no doubt, the leading character of the organ, there is to be seen, in every thing belonging to it and about it, an extraordinary degree of care, an anxiety for its preservation, due, if we may so speak, to its value and its tenderness. It is lodged in a strong, deep, bony socket, composed by the junction of seven different bones,\* hollowed out at their orbitary processes. In some few species, as that of the coatimondi, the orbit is not bony throughout; but whenever this is the case, the upper, which is the deficient part, is supplied by a cartilaginous ligament; a substitution which shows the same care. Within this socket it is imbedded in fat, of all animal substances the best adapted both to its repose and motion. It is sheltered by the eyebrows; an arch of hair, which, like a thatched penthouse, prevents the sweat and moisture of the forehead from running down into it.

But it is still better protected by its *lid*. Of the superficial parts of the animal frame, I know none which, in its office and structure, is more deserving of attention than the eyelid. It defends the eye; it wipes it; it closes it in sleep. † Are there, in any work of art whatever, purposes more evident than those which this organ fulfils? Or an apparatus for executing those purposes more intelligible, more appropriate, or

\* The frontal, maxillary, malar, lachrymal, ethmoid, palatine, and sphenoid bones.

† The muscles which accomplish these actions are seen in Tab. XIV. Fig. 1, 2. The eyelids also moderate the force of a too brilliant light, and exclude, by a partial closure, that excess of it which would offend the eye. The eyelashes have a similar office, that of regulating the quantity of light: and it is believed, that they protect the eye from the small particles of dust that float in the air.

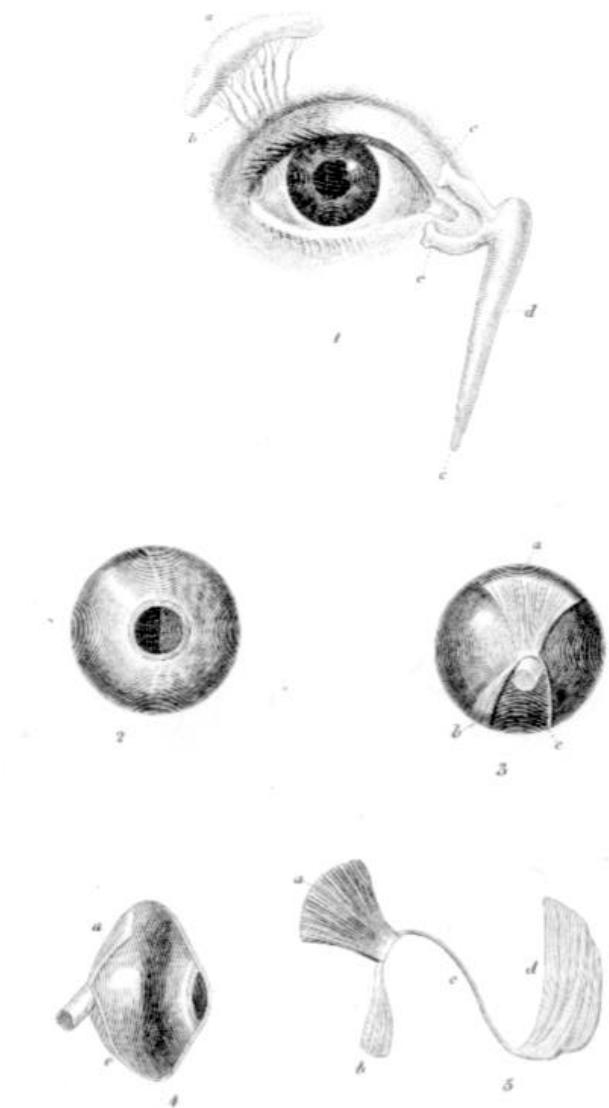

more mechanical? If it be overlooked by the observer of nature, it can only be because it is obvious and familiar. This is a tendency to be guarded against. We pass by the plainest instances, whilst we are exploring those which are rare and curious; by which conduct of the understanding, we sometimes neglect the strongest observations, being taken up with others, which, though more recondite and scientific, are, as solid arguments, entitled to much less consideration.

In order to keep the eye moist and clean, (which qualities are necessary to its brightness and its use,) a wash is constantly supplied by a secretion for the purpose; and the superfluous brine is conveyed to the nose through a perforation in the bone as large as a goose-quill.\* When once the fluid has entered the nose, it spreads itself upon the inside of the nostril, and is evaporated by the current of warm air, which, in the course of respiration, is continually passing over it. Can any pipe or outlet, for carrying off the waste liquor from a dye-house or a distillery, be more mechanical than this is? It is easily perceived, that the eye must want moisture: but could the want of the eye generate the gland which produces the tear, or bore the hole by which it is discharged—a hole through a bone?

It is observable, that this provision is not found in fish—the element in which they live supplying a constant lotion to the eye.

\* Tab. IV. Fig. 1, a, is the organ which supplies this fluid, called the *lachrymal gland*; it is situated at the outer and upper part of the orbit of the eye. This is the gland which secretes or separates the tears from the blood. There are five or six ducts or tubes, b, which convey this fluid to the globe of the eye, for the purpose of keeping it moist, and for facilitating its movements; the motion of the eyelid diffuses the tears, and c, c, the *puncta lachrymalia*, take up the superfluous moisture, which passes through d, the *lachrymal sac and duct*, into the nostril at e.

TAB. IV

It were, however, injustice to dismiss the eye as a piece of mechanism, without noticing that most exquisite of all contrivances, the *nictitating membrane*,\* which is found in the eyes of birds and of many quadrupeds. Its use is to sweep the eye, which it does in an instant; to spread over it the lachrymal humour; to defend it also from sudden injuries; yet not totally, when drawn upon the pupil, to shut out the light. The commodiousness with which it lies folded up in the inner corner of the eye, ready for use and action, and the quickness with which it executes its purpose, are properties known and obvious to every observer; but what is equally admirable, though not quite so obvious, is the combination of two kinds of substance, muscular and elastic, and of two different kinds of action, by which the motion of this membrane is performed. It is not, as in ordinary cases, by the action of two antagonist muscles, one pulling forward and the other backward, that a reciprocal change is effected; but it is thus: the membrane itself is an elastic substance, capable of being drawn out by force like a piece of elastic gum, and by its own elasticity returning, when the force is removed, to its former position. Such being its nature, in order to fit it up for its office, it is connected by a tendon or thread with a muscle in the back part of the eye: † this

\* Fig. 2. The *nictitating membrane*, or third eyelid, is a thin semi-transparent fold of the conjunctive, which, in a state of rest, lies in the inner corner of the eye, with its loose edge nearly vertical, but can be drawn out so as to cover the whole front of the globe. In this figure it is represented in the act of being drawn over the eye. By means of this membrane, according to Cuvier, the eagle is enabled to look at the sun.

† Fig. 3. These two very singular muscles are attached to the back of the sclerotica; one of them, which from its shape is called *quadratus*, *a*, has its origin from the upper and back part of the sclerotica; its fibers descend towards the optic nerve, and terminate in a curved margin will a cylindrical canal in it. The other muscle, *b*, which is called *pyramidalis*,

tendon or thread, though strong, is so fine as not to obstruct the sight, even when it passes across it; and the muscle itself, being placed in the *back* part of the eye, derives from its situation the advantage, not only of being secure, but of being out of the way; which it would hardly have been iii any position that could be assigned to it in the anterior part of the orb, where its function lies. When the muscle behind the eye contracts, the membrane, by paeans of the communicating thread, is instantly drawn over the fore-part of it. When the muscular contraction (which is a positive, and, most probably, a voluntary effort.) ceases to be exerted, the elasticity alone of the membrane brings it back again to its position. Does not this, if any thing can do it, bespeak an artist, master of his work, acquainted with his materials? "Of a thousand other things," say the French academicians, "we perceive not the contrivance, because we understand them only by the effects, of which we know not the causes: but; we here treat of a machine, all the parts whereof are visible; and which need only be looked upon to discover the reasons of its motion and action."

In the configuration of the muscle, which, though placed behind the eye, draws; the nictitating membrane over the eye, there is, what the authors just now quoted deservedly call a marvelous mechanism. I suppose this structure to be found in other animals; but, in the memoirs from which this account is taken, it is anatomically demonstrated only in the cassowary. The

arises from the lower and back part of the sclerotica. It has a long tendinous chord, *c*, which passes through the canal of the quadratus, *a*, as a pulley, and, having arrived at the lower and exterior part of the eyeball, is inserted into the loose edge of the nictitating membrane. This description refers also to Fig. 4, a profile of the eye, and Fig. 5, the membrane and its muscles detached from the eye.

muscle is *passed through a loop formed by another muscle*; and is there inflected, as if it were round a pulley. This is a peculiarity; and observe the advantage of it. A single muscle with a straight tendon, which is the common muscular form, would have been sufficient, if it had had power to draw far enough. But the contraction, necessary to draw the membrane over the whole eye, required a longer muscle than could lie straight at the bottom of the eye. Therefore, in order to have a greater length in a less compass, the cord of the main muscle makes an angle. This, so far, answers the end; but, still farther, it makes an angle, not round a fixed pivot, but round a loop formed by another muscle; which second muscle, whenever it contracts, of course twitches the first muscle at the point of inflection, and thereby assists the action designed by both.

---

One question may possibly have dwelt in the reader's mind during the perusal of these observations, namely, Why should not the Deity have given to the animal the faculty of vision *at once*? Why this circuitous perception; the ministry of so many means; an element provided for the purpose; reflected from opaque substances, refracted through transparent ones; and both according to precise laws; then, a complex organ, an intricate and artificial apparatus, in order, by the operation of this element, and in conformity with the restrictions of these laws, to produce an image upon a membrane communicating with the brain? Wherefore all this? Why make the difficulty in order to surmount it? If to perceive objects by some other mode than that of touch, or objects which lay out of the reach of that sense, were the thing proposed; could not a simple volition of the Creator have

communicated the capacity? Why resort to contrivance, where power is omnipotent? Contrivance, by its very definition and nature, is the refuge of imperfection. To have recourse to expedients implies difficulty, impediment, restraint, defect of power. This question belongs to the other senses, as well as to sight; to the general functions of animal life, as nutrition, secretion, respiration; to the economy of vegetables; and indeed to almost all the operations of nature. The question, therefore, is of very wide extent; and amongst other answers which may be given to it, besides reasons of which probably we are ignorant, one answer is this: it is only by the display of contrivance, that the existence, the agency, the wisdom of the Deity, *could* be testified to his rational creatures. This is the scale by which we ascend to all the knowledge of our Creator which we possess, so far as it depends upon the phenomena, or the works of nature. Take away this, and you take away from us every subject of observation, and ground of reasoning; I mean, as our rational faculties are formed at present. Whatever is done, God could have done without the intervention of instruments or means; but it is in the construction of instruments, in the choice and adaptation of means, that a creative intelligence is seen. It is this which constitutes the order and beauty of the universe. God, therefore, has been pleased to prescribe limits to his own power, and to work his ends within those limits. The general laws of matter have perhaps the nature of these limits; its inertia, its reaction; the laws which govern the communication of motion, the refraction and reflection of light, the constitution of fluids non-elastic and elastic, the transmission of sound through the latter; the laws of magnetism, of electricity; and probably others, yet undiscovered.

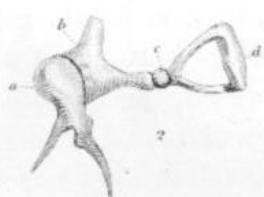

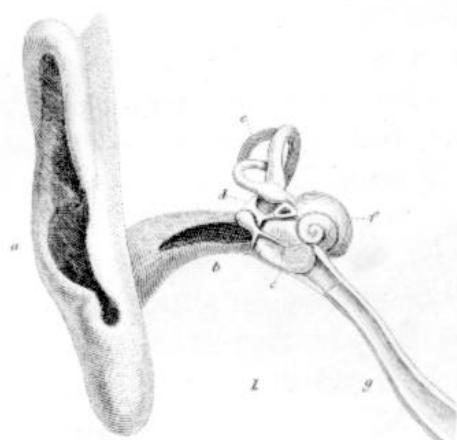

These are general laws; and when a particular purpose is to be effected, it is not by making a new law, nor by the suspension of the old ones, nor by making them wind, and bend, and yield to the occasion, (for nature with great steadiness adheres to and supports them); but it is, as we have seen in the eye, by the interposition of an apparatus, corresponding with these laws, and suited to the exigency which results from them, that the purpose is at length attained. As we have said, therefore, God prescribes limits to his power, that he may let in the exercise, and thereby exhibit demonstrations of his wisdom. For then, i. e. such laws and limitations being laid down, it is as though one Being should have fixed certain rules; and, if we may so speak, provided certain materials; and, afterwards, have committed to another Being, out of these materials, and in subordination to these rules, the task of drawing forth a creation: a supposition which evidently leaves room, and induces indeed a necessity for contrivance. Nay, there may be many such agents, and many ranks of these. We do not advance this as a doctrine either of philosophy or of religion; but we say that the subject may safely be represented under this view; because the Deity, acting himself by general laws, will have the same consequences upon our reasoning, as if he had prescribed these laws to another. It has been said, that the problem of creation was, "attraction and matter being given, to make a world out of them:" and, as above explained, this statement perhaps does not convey a false idea.

We have made choice of the eye as an instance upon which to rest the argument of this chapter. Some single example was to be proposed; and the eye offered itself under the advantage of admitting of a strict comparison with optical instruments. The ear, it is probable, is

no less artificially and mechanically adapted to its office than the eye. But we know less about it: we do not so well understand the action, the use, or the mutual dependency of its internal parts. Its general form, however, both external and internal, is sufficient to show that it is an instrument adapted to the reception of *sound*; that is to say, already knowing that sound consists in pulses of the air, we perceive, in the structure of the ear, a suitableness to receive impressions from this species of action, and to propagate these impressions to the brain. For of what does this structure consist? An external ear, (the concha,\*) calculated, like an ear-trumpet, to catch and collect the pulses of which we have spoken; in large quadrupeds, turning to the sound, and possessing a configuration, as well as motion, evidently fitted for the office: of a tube which leads into the head, lying at the root of this outward ear, the folds and sinuses thereof tending and conducting the air towards it: of a thin membrane, like the pelt of a drum, stretched across this passage upon a bony rim: of a chain of moveable, and infinitely curious bones, forming a communication, and the only communication that can be observed, between the membrane last mentioned and the interior channels and recesses of the skull: of cavities, similar in shape and form to wind instruments of music, being spiral or portions of circles: of the eustachian tube, like the hole in a drum, to let the air pass freely into and out of the barrel of the ear, as the covering membrane vibrates, or as the

\* Tab. V. Fig. 1. The organ of hearing, *a*, the *external ear*; *b*, the *meatus auditorius externus*, or outward passage of the ear; leading to *c*, the *membrana tympani*, or drum; *d*, the *ossicula auditus*, or little bones of the ear; *e*, the *semicircular canals*; *f*, the *cochlea*; *g*, a section of the *eustachian tube*, which extend from the cavity of the tympanum to the back of the mouth or fauces.

TAB.V

Published by J. Vincent Dorset.

temperature may be altered: the whole labyrinth\* hewn out of a rock; † that is, wrought into the substance of the hardest bone of the body. This assemblage of connected parts constitutes together an apparatus, plainly enough relative to the transmission of sound, or of the impulses received from sound, and only to be lamented in not being better understood.

The communication within, formed by the small bones of the ear,‡ is, to look upon, more like what we are accustomed to call machinery, than any thing I am acquainted with in animal bodies. It seems evidently designed to continue towards the sensorium, the tremulous motions which are excited in the membrane of the tympanum, or what is better known by the name of the "drum of the ear." The compages of bones consists of four, which are so disposed, and so hinge upon one another, as that if the membrane, the drum of the ear, vibrate, all the four are put in motion together; and, by the result of their action, work the base of that which is the last in the series, upon an aperture § which it closes, and upon which it plays, and which aperture opens into the tortuous canals that lead to the brain. || This last bone of the four is called the

\* Fig. 3. *The labyrinth*, so named from the intricacy of the cavities contained within it. It consists of the *vestibule*, *semicircular canals*, and *cochlea*, so named from its resemblance to the windings of a snail shell, and is best explained by the plate. Fig. 1 and 3.

† Hence called the *petrous* part of the temporal bone.

‡ Fig. 2. The bones of the ear magnified, *a*, the *malleus*, or hammer, connected by a process to the tympanum: the round head is lodged in the body of *b*, the *incus* or anvil, and the incus is united to *c*, the *os orbiculare*, or round bone, and this to *d*, the *stapes*, or the stirrup. These bones are named from their shape, and the names assist in conveying an idea of their form. They are united by ligaments, and form an uninterrupted chain to transmit the vibrations of the atmosphere.

§ The *fenestra ovalis*.

|| The description of the organ of hearing is so accurate as scarcely to

*stapes*. The office of the drum of the ear is to spread out an extended surface, capable of receiving the impressions of sound, and of being put by them into a state of vibration. The office of the stapes is to repeat these vibrations. It is a repeating frigate, stationed more within the line. From which account of its action may be understood, how the sensation of sound will be excited by any thing which communicates a vibratory motion to the stapes, though not, as in all ordinary cases, through the intervention of the membrana tympani. This is done by solid bodies applied to the bones of the skull, as by a metal bar holden at one end between the teeth, and touching at the other end a tremulous body. It likewise appears to be done, in a considerable degree, by the air itself, even when this membrane, the drum of the ear, is greatly damaged. Either in the natural or preternatural state of the organ, the use of the chain of bones is to propagate the impulse in a direction towards the brain, and to propagate it with the advantage of a lever; which advantage consists in increasing the force and strength of the vibration, and at the same time diminishing the space through which it oscillates: both of which changes may augment or facilitate the still deeper action of the auditory nerves.

The benefit of the eustachian tube to the organ may be made out upon known pneumatic principles. Behind the drum of the ear is a second cavity, or barrel, called the tympanum. The eustachian tube is a slender pipe, but sufficient for the passage of air, leading from

require farther explanation, only observing, that sounds striking against the membrana tympani, are propagated by the intervention of the four little bones, to the *water* contained within the cavities of the labyrinth; and by means of this water the impression is conveyed to the extremities of the *auditory nerve*, and finally to the brain. See Scarpa de Aure Humana; also, Saunders on the Ear.

this cavity into the back part of the mouth. Now, it would not have done to have had a vacuum in this cavity; for, in that case, the pressure of the atmosphere from without would have burst the membrane which covered it. Nor would it have done to have filled the cavity with lymph, or any other secretion; which would necessarily have obstructed both the vibration of the membrane and the play of the small bones. Nor, lastly, would it have done to have occupied the space with confined air, because the expansion of that air by heat, or its contraction by cold, would have distended or relaxed the covering membrane, in a degree inconsistent with the purpose which it was assigned to execute. The only remaining expedient, and that for which the eustachian tube serves, is to open to this cavity a communication with the external air. In one word, it exactly answers the purpose of the hole in a drum.

The membrana tympani itself, likewise, deserves all the examination which can be made of it. It is not found in the ears of fish;\* which furnishes an additional proof of what indeed is indicated by every thing about it, that it is appropriated to the action of air, or of an elastic medium. It bears an obvious resemblance to the pelt or head of a drum, from which it takes its name. It resembles also a drum-head in this principal property, that its use depends upon its tension.

\* In fish, the organ of hearing is simple, consisting of a cavity distended with fluid, and containing a bone, or concrete substances; and there are semicircular canals, similar in shape and situation to those found in the mammalia: the auditory nerve being distributed in a beautiful network upon the bony concretions, and within the canals. Not only is the impression of sound transmitted through the bones of the head by the water, but is conveyed by the same medium to the bottom of the ear; hence it is evident, that fish require no external ear, tympanum, or eustachian tube.

*Tension* is the state essential to it. Now we know that, in a drum, the pelt is carried over a hoop, and braced, as occasion requires, by the means of strings attached to its circumference. In the membrane of the ear, the same purpose is provided for, more simply, but not less mechanically, nor less successfully, by a different expedient, viz. by the end of a bone (the handle of the malleus) pressing upon its centre. It is only in very large animals that the texture of this membrane can be discerned. In the Philosophical Transactions for the year 1800, (vol. i.) Sir Everard Home has given some curious observations upon the ear, and the drum of the ear of an *elephant*.\* He discovered in it what he calls a radiated muscle, that is, straight muscular fibres, passing along the membrane from the circumference to the centre; from the bony rim which surrounds it towards the handle of the malleus to which the central part is attached. This muscle he supposes to be designed to bring the membrane into unison with different sounds: but then he also discovered, that this muscle itself cannot act, unless the membrane be drawn to a stretch, and kept in a due state of tightness, by what may be called a foreign force, viz. the action of the muscles of the malleus. Supposing his explanation of the use of the parts to be just, our author is well founded in the reflection which he makes upon it: "that this mode of adapting the ear to different sounds, is one of the most beautiful applications of muscles in the body; *the mechanism is so simple, and the variety of effects so great.*" †

In another volume of the Transactions above referred

\* Fig. 4. The tympanum of the elephant, of its natural size, shewing its radiated fibres, supposed to be muscular.

† As the ear of man and fish has been described, it may not be improper

to, and of the same year, two most curious cases are related, of persons who retained the sense of hearing, not in a perfect, but in a very considerable degree, notwithstanding the almost total loss of the membrane we have been describing. In one of these cases, the use here assigned to that membrane, of modifying the impressions of sound by change of tension, was attempted to be supplied by straining the muscles of the outward ear. "The external ear," we are told, "had acquired a distinct motion upward and backward, which was observable whenever the patient listened to any thing which he did not distinctly hear: when he was addressed in a whisper, the ear was seen immediately to move; when the tone of voice was louder, it then remained altogether motionless."

It appears probable, from both these cases, that a

in this place to state, that the other classes of animals are no less admirably provided with an ear, adapted to their peculiar habits and economy.

In amphibious animals, the organ of hearing has an intermediate structure; in some species of this class, the ear resembling fish, in others it resembles the formation of terrestrial animals.

There is an important addition to this organ in birds: viz. a cochlea and proper tympanum.

In quadrupeds we find a more complicated organization: to collect the vibrations of sound, they have an external ear, and all those parts, though of a different figure, which belong to the human ear.

The capacity for enjoyment of music is mental, but all the curious varieties of sound, which are the source of this enjoyment, are communicated by the mechanical provisions of the ear. We are astonished at the varieties of sensation: the ear is capable of perceiving four or five hundred variations of tone in sound. "Hence we may conceive a prodigious variety in the same tone, arising from irregularities of it occasioned by constitution, figure, situation or manner of striking the sonorous body; from the constitution of the elastic medium, or its being disturbed by other lions; and from the constitution of the ear itself, upon which the impression is made. A flute, a violin, a hautboy, a French horn, may all sound the same tone, and be easily distinguishable. Nay, if twenty human voices sound the same note, and with equal strength, there will be some difference." Reid's Enquiry, page 98.

collateral, if not principal, use of the membrane, is to cover and protect the barrel of the ear which lies behind it. Both the patients suffered from cold: one, "a great increase of deafness from catching cold;" the other, "very considerable pain from exposure to a stream of cold air." Bad effects therefore followed from this cavity being left open to the external air; yet, had the Author of nature shut it up by any other cover than what was capable, by its texture, of receiving vibrations from sound, and, by its connexion with the interior parts, of transmitting those vibrations to the brain, the use of the organ, so far as we can judge, must have been entirely obstructed.

#### CHAPTER IV.

#### OF THE SUCCESSION OF PLANTS AND ANIMALS.

THE *generation* of the animal no more accounts for the contrivance of the eye or ear, than, upon the supposition stated in a preceding chapter, the production of a watch, by the motion and mechanism of a former watch, would account for the skill and intention evidenced in the watch so produced; than it would account for the disposition of the wheels, the catching of their teeth, the relation of the several parts of the works to one another, and to their common end; for the suitableness of their forms and places to their offices, for their connexion, their operation, and the useful result of that operation. I do insist most strenuously upon the correctness of this comparison; that it holds as to every mode of specific propagation; and that whatever was true of the watch, under the hypothesis above mentioned, is true of plants and animals.

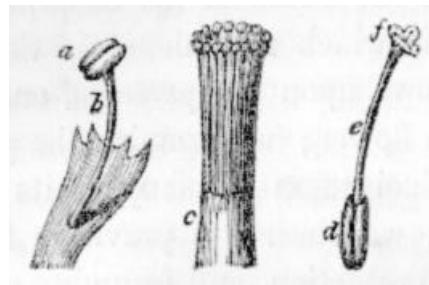

I. To begin with the fructification of plants. Can it be doubted but that the seed contains a particular organization? Whether a latent plantule with the means of temporary nutrition, or whatever else it be, it encloses an organization suited to the germination of a new plant. Has the plant which produced the seed any thing more to do with that organization, than the watch would have had to do with the structure of the watch which was produced in the course of its mechanical movement? I mean, Has it any thing at all to do with the *contrivance*? The maker and contriver of one watch, when he inserted within it a mechanism suited to the production of another watch, was, in truth, the maker and contriver of that other watch. All the properties of the new watch were to be referred to his agency: the design manifested in it, to his intention: the art, to him as the artist: the collocation of each part, to his placing: the action, effect, and use, to his counsel, intelligence, and workmanship. In producing it by the intervention of a former watch, he was only working by one set of tools instead of another. So it is with the plant, and the seed produced by it. Can any distinction be assigned between the two cases; between the producing watch and the producing plant; both passive, unconscious substances; both, by the organization which was given to them, producing their like, without understanding or design; both, that is, instruments?

II. From plants we may proceed to oviparous animals: from seeds to eggs. Now, I say, that the bird has the same concern in the formation of the egg which she lays, as the plant has in that of the seed which it drops; and no other, nor greater. The internal constitution of the egg is as much a secret to the hen, as if the hen were inanimate. Her will cannot alter it, or change a

single feather of the chick. She can neither foresee nor determine of which sex her brood shall be, or how many of either: yet the thing produced shall be, from the first, very different in its make, according to the sex which it bears. So far, therefore, from adapting the means, she is not beforehand apprized of the effect. If there be concealed within that smooth shell a provision and a preparation for the production and nourishment of a new animal, they are not of her providing or preparing: if there be contrivance, it is none of hers. Although, therefore, there be the difference of life and perceptivity between the animal and the plant, it is a difference which enters not into the account. It is a foreign circumstance. It is a difference of properties not employed. The animal function and the vegetable function are alike destitute of any design which can operate upon the form of the thing produced. The plant has no design in producing the seed, no comprehension of the nature or use of what it produces: the bird with respect to its egg, is not above the plant with respect to its seed. Neither the one nor the other bears that sort of relation to what proceeds from them, which a joiner does to the chair which he makes. Now a cause, which bears *this* relation to the effect, is what we want, in order to account for the suitableness of means to an end, the fitness and fitting of one thing to another; and this cause the parent plant or animal does not supply.

It is farther observable concerning the propagation of plants and animals, that the apparatus employed exhibits no resemblance to the thing produced; in this respect holding an analogy with instruments and tools of art. The filaments, antherae, and stigmata of flowers bear no more resemblance to the young plant, or even to

the seed which is formed by their intervention, than a chisel or a plane does to a table or chair. What then are the filaments, antherae,\* and stigmata of plants, † but instruments strictly so called?

III. We may advance from animals which bring forth eggs, to animals which bring forth their young alive—and of this latter class, from the lowest to the highest; from irrational to rational life, from brutes to the human species—without perceiving, as we proceed, any alteration whatever in the terms of the comparison. The rational animal does not produce its offspring with more certainty or success than the irrational animal; a man than a quadruped, a quadruped than a bird; nor (for we may follow the gradation through its whole scale) a bird than a plant; nor a plant than a watch, a piece of dead mechanism, would do, upon the supposition which has already so often been repeated. Rationality therefore has nothing to do in the business. If an account must be given of the contrivance which we observe; if

\* The stamens of plants are here referred to; they are generally composed of two parts—a, the *anther*, or cells containing a fine powder termed the pollen; and b, the *filament* or stalk on which it is placed; the latter part however is sometimes wanting, and then the anther is sessile. Sometimes the filaments are united and form a tube, as in c, and the stamens then are termed monadelphous.

† *Stigmata*, a part of the pistil, which consists of d, an ovary or germen containing the young seed, and e, a style or stalk to support f, the stigma.

it be demanded, whence arose either the contrivance by which the young animal is produced, or the contrivance manifested in the young animal itself, it is not from the reason of the parent that any such account can be drawn. He is the cause of his offspring, in the same sense as that in which a gardener is the cause of the tulip which grows upon his parterre, and in no other. We admire the flower; we examine the plant; we perceive the conduciveness of many of its parts to their end and office: we observe a provision for its nourishment, growth, protection, and fecundity; but we never think of the gardener in all this. We attribute nothing of this to his agency; yet it may still be true, that without the gardener we should not have had the tulip: just so it is with the succession of animals even of the highest order. For the contrivance discovered in the structure of the thing produced, we want a contriver. The parent is not that contriver. His consciousness decides that question. He is in total ignorance why that which is produced took its present form rather than any other. It is for him only to be astonished by the effect. We can no more look therefore to the intelligence of the parent animal for what we are in search of, a cause of relation, and of subserviency of parts to their use, which relation and subserviency we see in the procreated body, than we can refer the internal conformation of an acorn to the intelligence of the oak from which it dropped, or the structure of the watch to the intelligence of the watch which produced it; there being no difference, as far as argument is concerned, between an intelligence which is not exerted, and an intelligence which does not exist.

## CHAPTER V.

## APPLICATION OF THE ARGUMENT CONTINUED.

EVERY observation which was made in our first chapter concerning the watch, may be repeated with strict propriety concerning the eye; concerning animals; concerning plants; concerning, indeed, all the organized parts of the works of nature. As,

I. When we are inquiring simply after the *existence* of an intelligent Creator, imperfection, inaccuracy, liability to disorder, occasional irregularities, may subsist in a considerable degree, without inducing any doubt into the question: just as a watch may frequently go wrong, seldom perhaps exactly right, may be faulty in some parts, defective in some, without the smallest ground of suspicion from thence arising that it was not a watch; not made; or not made for the purpose ascribed to it. When faults are pointed out, and when a question is started concerning the skill of the artist, or dexterity with which the work is executed, then indeed, in order to defend these qualities from accusation, we must be able, either to expose some intractableness and imperfection in the materials, or point out some invincible difficulty in the execution, into which imperfection and difficulty the matter of complaint may be resolved; or, if we cannot do this, we must adduce such specimens of consummate art and contrivance, proceeding from the same hand, as may convince the inquirer of the existence, in the case before him, of impediments like those which we have mentioned, although, what from the nature of the case is very likely to happen, they be unknown and unperceived by him. This we must do in

order to vindicate the artist's skill, or, at least, the perfection of it; as we must also judge of his intention, and of the provision employed in fulfilling that intention, not from an instance in which they fail, but from the great plurality of instances in which they succeed. But, after all, these are different questions from the question of the artist's existence; or, which is the same, whether the thing before us be the work of art or not: and the questions ought always to be kept separate in the mind. So likewise it is in the works of nature. Irregularities and imperfections are of little or no weight in the consideration, when that consideration relates simply to the existence of a Creator. When the argument respects his attributes, they are of weight; but are then to be taken in conjunction (the attention is not to rest upon them, but they are to be taken in conjunction) with the unexceptionable evidences which we possess, of skill, power, and benevolence, displayed in other instances; which evidences may, in strength, number, and variety, be such, and may so overpower apparent blemishes, as to induce us, upon the most reasonable ground, to believe, that these last ought to be referred to some cause, though we be ignorant of it, other than defect of knowledge or of benevolence in the author.

II. There may be also parts of plants and animals, as there were supposed to be of the watch, of which, in some instances, the operation, in others, the use, is unknown. These form different cases; for the operation may be unknown, yet the use be certain. Thus it is with the lungs of animals. It does not, I think, appear, that we are acquainted with the action of the air upon the blood, or in what manner that action is communicated by the lungs;\* yet we find that a very short suspension

\* More recent discoveries prove that the lungs are the seat of two very

of their office destroys the life of the animal. In this case, therefore, we may be said to know the use, nay we experience the necessity, of the organ, though we be ignorant of its operation. Nearly the same thing may be observed of what is called the lymphatic system.\* We suffer grievous inconveniences from its disorder, without being informed of the office which it sustains in the economy of our bodies. There may possibly also be some few examples of the second class, in which not only the operation is unknown, but in which experiments may seem to prove that the part is not necessary; or may leave a doubt, how far it is even useful to the plant or animal in which it is found. This is said to be the case with the spleen; which has been extracted from dogs, without any sensible injury to their vital function. Instances of the former kind, namely, in which we cannot explain the operation, may be numerous; for they will be so in proportion to our ignorance. They will be more or fewer to different persons, and in different stages of science. Every improvement of knowledge diminishes their number. There is hardly, perhaps, a year passes that does not, in the works of nature, bring

different series of phenomena. The phenomena of the first series, which are entirely mechanical, are relative to the rise and fall of the ribs and diaphragm, and to the dilatation and contraction of the air-vessels, and to the entrance and exit of the air as effected by these movements. The phenomena of the second series are purely chemical, and may be referred to that, alteration which the blood undergoes in its passage through the lungs during respiration; by means of which process, the oxygen of the atmosphere being united to the carbon of the venous blood, the compound is carried off during the act. of respiration in the form of carbonic acid gas. These two series of phenomena have a mutual dependence on each other: without the mechanical, the chemical change could not be made: without the chemical change the blood would cease to excite the brain, in consequence of which that organ would no longer operate on the moving powers, and every function of animal life would be annihilated.

See Tab. XIX. and note on the lacteals.

some operation, or some mode of operation, to light, which was before undiscovered, probably unsuspected. Instances of the second kind, namely, where the part appears to be totally useless, I believe to be extremely rare; compared with the number of those of which the use is evident, they are beneath any assignable proportion; and, perhaps, have never been submitted to a trial and examination sufficiently accurate, long enough continued, or often enough repeated. No accounts which I have seen are satisfactory. The mutilated animal may live and grow fat, (as was the case of the dog deprived of its spleen,) yet may be defective in some other of its functions; which, whether they can all, or in what degree of vigour and perfection, be performed, or how long preserved, without the extirpated organ, does not seem to be ascertained by experiment.\* But to this case, even were it fully made out, may be applied the consideration which we suggested concerning the watch, viz. that these superfluous parts do not

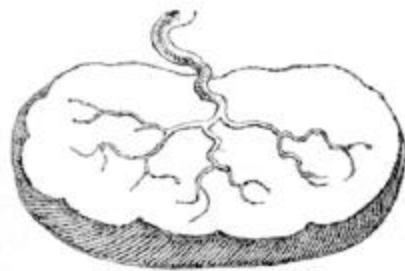

\* The *spleen* is that spongy mass of flesh which is known in animals by the name of milt: it lies at the right end of the stomach. Paley may allude to the experiments of Professor Coleman, of the Veterinary college, who, to ascertain the use, deprived dogs of the spleen, and the only consequences observed were, that the animals became dull, indolent, and fat, and their lives appeared shortened; merely a knowledge of these effects from the removal of the spleen, are insufficient for anyone to infer that the spleen is "totally useless."

Magendie made the following experiment:—The abdomen of a dog was opened, and the dimensions of the spleen being taken, a pint of blood was injected into the veins; the spleen was seen gradually to enlarge to near one half above its former dimensions.

On making the opposite experiment, after having measured the magnitude of the spleen, the animal was bled to fainting, and the spleen was observed sensibly to diminish in bulk as the blood flowed. These experiments are calculated to throw some light on the functions of this singular organ. According to this we may conclude, "that the spleen is a true reservoir with elastic walls which constantly press upon the blood it contains," when required by the wants of the vascular system of the animal.

negative the reasoning which we instituted concerning those parts which are useful, and of which we know the use; the indication of contrivance, with respect to them, remains as it was before.

*Section of the Spleen.*

III. One atheistic way of replying to our observations upon the works of nature, and to the proofs of a Deity which we think that we perceive in them, is to tell us, that all which we see must necessarily have had some form, and that it might as well be its present form as any other. Let us now apply this answer to the eye, as we did before to the watch. Something or other must have occupied that place in the animal's head; must have filled up, we will say, that socket: we will say also, that it must have been of that sort of substance which we call animal substance, as flesh, bone, membrane, cartilage, etc. But that it should have been an *eye*, knowing as we do what an eye comprehends— viz. that it should have consisted, first, of a series of transparent lenses, ("very different, by-the-bye, even in their substance, from the opaque materials of which the rest of the body is, in general at least, composed; and with which the whole of its surface, this single portion of it excepted, is covered): secondly, of a black cloth

or canvass (the only membrane of the body which is black\*) spread out behind these lenses, so as to receive the image formed by pencils of light transmitted through them; and placed at the precise geometrical distance at which, and at which alone, a distinct image could be formed, namely, at the concourse of the refracted rays: thirdly, of a large nerve communicating between this membrane and the brain; without which, the action of light upon the membrane, however modified by the organ, would be lost to the purposes of sensation:— that this fortunate conformation of parts should have been the lot, not of one individual out of many thousand individuals, like the great prize in a lottery, or like some singularity in nature, but the happy chance of a whole species: nor of one species out of many thousand species, with which we are acquainted, but of by far the greatest number of all that exist; and that under varieties not casual or capricious, but bearing marks of being suited to their respective exigencies:—that all this should have taken place, merely because something must have occupied those points in every animal's forehead;—or, that all this should be thought to be accounted for, by the short answer, "that whatever was there, must have had some form or other," is too absurd

\* This description can apply only to the *choroid* coat: this membrane is of use to vision, principally by the dark matter with which it is impregnated, and which absorbs the light immediately after it has traversed the retina. When the light is within certain limits of intensity, the *retina* receives the impression, is the seat of vision, and is of such a form as to receive the most perfect image on every point of its surface, that the state of each refracted ray will admit; and the varying density of the crystalline lens renders that state more capable of delineating such a picture, than any other imaginable contrivance could have done.

In Albino men and animals, viz. those in which the iris and choroid are red instead of black, vision is extremely imperfect: during the day they can scarcely see sufficiently to go about; a fact which confirms the opinion we have given of the use of this black membrane.

to be made more so by any augmentation. We are not contented with this answer; we find no satisfaction in it, by way of accounting for appearances of organization far short of those of the eye, such as we observe in fossil shells, petrified bones, or other substances which bear the vestiges of animal or vegetable recrements, but which, either in respect of utility, or of the situation in which they are discovered, may seem accidental enough. It is no way of accounting even for these things, to say, that the stone, for instance, which is shown to us, (supposing the question to be concerning a petrification,) must have contained some internal conformation or other. Nor does it mend the answer to add, with respect to the singularity of the conformation, that, after the event, it is no longer to be computed what the chances were against it. This is always to be computed when the question is, whether a useful or imitative conformation be the produce of chance, or not: I desire no greater certainty in reasoning, than that by which chance is excluded from the present disposition of the natural world. Universal experience is against it. What does chance ever do for us? In the human body, for instance, chance, i. e. the operation of causes without design, may produce a wen, a wart, a mole, a pimple, but never an eye. Amongst inanimate substances, a clod, a pebble, a liquid drop might be; but never was a watch, a telescope, an organized body of any kind, answering a valuable purpose by a complicated mechanism, the effect of chance. In no assignable instance hath such a thing existed without intention somewhere.\*

\* These observations, are justly thought by Lord Brougham to be unphilosophical. "Chance, being merely an abridged form of expressing our ignorance of the cause or preceding event to which any given event may

IV. There is another answer, which has the same effect as the resolving of things into chance; which answer would persuade us to believe, that the eye, the animal to which it belongs, every other animal, every plant, indeed every organized body which we see, are only so many out of the possible varieties and combinations of being, which the lapse of infinite ages has brought into existence; that the present world is the relic of that variety; millions of other bodily forms and other species having perished, being by the defect of their constitution incapable of preservation, or of continuance by generation. Now there is no foundation whatever for this conjecture in any thing which we observe in the works of nature; no such experiments are going on at present; no such energy operates, as that which is here supposed, and which should be constantly pushing into existence new varieties of beings. Nor are there any appearances to support an opinion, that every possible combination of vegetable or animal structure has formerly been tried. Multitudes of conformations, both of vegetables and animals, may be conceived capable of existence and succession, which yet do not exist. Perhaps almost as many forms of

be traced; and nothing can be more inaccurate, or indeed more productive of serious errors in this branch of science, than to speak of chance as a substantive thing or power. To take the most obvious instance: we say, in common parlance, that the dice being shaken together, it is a matter of chance what faces they will turn up; but if we could accurately observe their position in the box before the shaking and the curve in which the motion was made, the direction of the force applied, and the number of turns of the box, the manner of stopping the motion and the line in which the dice were thrown out, the faces turned up would be a matter of certain production, after a sufficient number of experiments had been made to correct the theory. It is only because we take no heed of all these things that we are ignorant what will be the event; and the darkness in which we are respecting die circumstances which regulate it, is called by the name of chance."

plants might have been found in the fields, as figures of plants can be delineated upon paper. A countless variety of animals might have existed, which do not exist. Upon the supposition here stated, we should see unicorns and mermaids, sylphs and centaurs, the fancies of painters, and the fables of poets, realized by examples. Or, if it be alleged that these may transgress the limits of possible life and propagation, we might, at least, have nations of human beings without nails upon their fingers, with more or fewer fingers and toes than ten; some with one eye, others with one ear, with one nostril, or without the sense of smelling at all. All these, and a thousand other imaginable varieties, might live and propagate. We may modify any one species many different ways, all consistent with life, and with the actions necessary to preservation, although affording different degrees of convenience and enjoyment to the animal. And if we carry these modifications through the different species which are known to subsist, their number would be incalculable. No reason can be given why, if these deperdits ever existed, they have now disappeared. Yet, if all possible existences have been tried, they must have formed part of the catalogue.

But, moreover, the division of organized substances into animals and vegetables, and the distribution and sub-distribution of each into genera and species, which distribution is not an arbitrary act of the mind, but founded in the order which prevails in external nature, appear to me to contradict the supposition of the present world being the remains of an indefinite variety of existences; of a variety which rejects all plan. The hypothesis teaches, that every possible variety of being hath, at one time or other, found its way into existence, (by what cause or in what manner

is not said,) and that those which were badly formed, perished; but how or why those which survived should be cast, as we see that plants and animals are cast, into regular classes, the hypothesis does not explain; or rather, the hypothesis is inconsistent with this phenomenon.

The hypothesis, indeed, is hardly deserving of the consideration which we have given to it. What should we think of a man who, because we had never ourselves seen watches, telescopes, stocking-mills, steam-engines, etc. made, knew not how they were made, nor could prove by testimony when they were made, or by whom, —would have us believe that these machines, instead of deriving their curious structures from the thought and design of their inventors and contrivers, in truth derive them from no other origin than this, viz. that a mass of metals and other materials having run when melted into all possible figures, and combined themselves in all possible forms and shapes and proportions, these things which we see, are what were left from the accident, as best worth preserving; and, as such, are become the remaining stock of a magazine, which, at one time or other, has, by this means, contained every mechanism, useful and useless, convenient and inconvenient, into which such like materials could be thrown? I cannot distinguish the hypothesis as applied to the works of nature, from this solution, which no one would accept, as applied to a collection of machines.

V. To the marks of contrivance discoverable in animal bodies, and to the argument deduced from them, in proof of design, and of a designing Creator, this turn is sometimes attempted to be given, namely, that the parts were not intended for the use, but that the use arose out of the parts. This distinction is intelli-

gible. A cabinet-maker rubs his mahogany with fish-skin; yet it would be too much to assert that the skin of the dog-fish was made rough and granulated on purpose for the polishing of wood, and the use of cabinetmakers. Therefore the distinction is intelligible. But I think that there is very little place for it in the works of nature. When roundly and generally affirmed of them, as it hath sometimes been, it amounts to such another stretch of assertion, as it would be to say, that all the implements of the cabinet-maker's work-shop, as well as the fish-skin, were substances accidentally configurated, which he had picked up, and converted to his use; that his adzes, saws, planes, and gimblets were not made, as we suppose, to hew, cut, smooth, shape out, or bore wood with; but that, these things being made, no matter with what design, or whether with any, the cabinet-maker perceived that they were applicable to his purpose, and turned them to account.

But, again. So far as this solution is attempted to be applied to those parts of animals, the action of which does not depend upon the will of the animal, it is fraught with still more evident absurdity. Is it possible to believe that the eye was formed without any regard to vision; that it was the animal itself which found out, that, though formed with no such intention, it would serve to see with; and that the use of the eye, as an organ of sight, resulted from this discovery, and the animal's application of it? The same question may be asked of the ear; the same of all the senses. None of the senses fundamentally depend upon the election of the animal; consequently, neither upon his sagacity, nor his experience. It is the impression which objects make upon them, that constitutes their use. Under that impression he is passive. He may bring objects

to the sense, or within its reach; he may select these objects: but over the impression itself he has no power, or very little; and that properly is the sense.

Secondly, there are many parts of animal bodies which seem to depend upon the will of the animal in a greater degree than the senses do, and yet, with respect to which, this solution is equally unsatisfactory. If we apply the solution to the human body, for instance, it forms itself into questions, upon which no reasonable mind can doubt; such as, whether the teeth were made expressly for the mastication of food, the feet for walking, the hands for holding? or whether, these things being as they are, being in fact in the animal's possession, his own ingenuity taught him that they convertible to these purposes, though no such purposes were contemplated in their formation?

All that there is of the appearance of reason in this way of considering the subject is, that in some cases the organization seems to determine the habits of the animal, and its choice to a particular mode of life; which, in a certain sense, may be called "the use arising out of the part." Now to all the instances, in which there is any place for this suggestion, it may be replied, that the organization determines the animal to habits beneficial and salutary to itself; and that this effect would not, be seen so regularly to follow, if the several organizations did not bear a concerted and contrived relation to the substance by which the animal was surrounded. They would, otherwise, be capacities without objects; powers without employment. The web-foot determines, you say, the duck to swim; but what would that avail, if there were no water to swim in? The strong hooked bill, and sharp talons, of one species of bird, determine it to prey upon animals; the soft

straight bill and weak claws of another species, determine it to pick up Feeds: but neither determination could take effect in providing for the sustenance of the birds, if animal bodies and vegetable seeds did not lie within their reach. The peculiar conformation of the bill and tongue and claws of the woodpecker,\* determines that bird to search for his food amongst the insects lodged behind the bark or in the wood of decayed trees: but what would this profit him, if there were no trees, no decayed trees, no insects lodged under their bark, or in their trunk? The proboscis with which the bee is furnished, determines him to seek for honey: but what would that signify, if flowers supplied none? Faculties thrown down upon animals at random, and without reference to the objects amidst which they are placed, would not produce to them the services and benefits which we see: and if there be that reference, then there is intention.

Lastly; the solution fails entirely when applied to plants. The parts of plants answer their uses, without any concurrence from the will or choice of the plant.

VI. Others have chosen to refer every thing to a *principle of order* in nature. A principle of order is the word: but what is meant by a principle of order, as different from an intelligent Creator, has not been explained either by definition or example; and, without such explanation, it should seem to be a mere substitution of words for reasons, names for causes. Order itself is only the adaptation of means to an end: a

\* The bill of the woodpecker is thick, strong, and sharp: tongue long, its tip horny and barbed: tail composed of ten stiff feathers bending downwards, which in climbing assist in its support: the claws are strong and hooked, and, as in all climbing birds, have two placed forwards and two backwards, by which they take a firm hold of the bark of trees See Tab. XXVII. Fig. 1,2,3.

principle of order therefore can only signify the mind and intention which so adapts them. Or, were it capable of being explained in any other sense, is there any experience, any analogy to sustain it? Was a watch ever produced by a principle of order? and why might not a watch be so produced, as well as an eye?

Furthermore, a principle of order, acting blindly and without choice, is negatived by the observation, that order is not universal; which it would be, if it issued from a constant and necessary principle: nor indiscriminate, which it would be, if it issued from an unintelligent principle. Where order is wanted, there we find it; where order is not wanted, i. e. where, if it prevailed, it would be useless, there we do not find it. In the structure of the eye, (for we adhere to our example,) in the figure and position of its several parts, the most exact order is maintained. In the forms of rocks and mountains, in the lines which bound the coasts of continents and islands, in the shape of bays and promontories, no order whatever is perceived, because it would have been superfluous. No useful purpose would have arisen from moulding rocks and mountains into regular solids, bounding the channel of the ocean by geometrical curves; or from the map of the world resembling a table of diagrams in Euclid's Elements, or Simpson's Conic Sections.

VI. Lastly; the confidence which we place in our observations upon the works of nature, in the marks which we discover of contrivance, choice, and design, and in our reasoning upon the proofs afforded us, ought not to be shaken, as it is sometimes attempted to be done, by bringing forward to our view our own ignorance, or rather the general imperfection of our knowledge of nature. Nor, in many cases, ought this consideration

to affect us, even when it respects some parts of the subject immediately under our notice. True fortitude of understanding consists in not suffering what we know to be disturbed by what we do not know. If we perceive a useful end, and means adapted to that end, we perceive enough for our conclusion. If these things be clear, no matter what is obscure. The argument is finished. For instance; if the utility of vision to the animal which enjoys it, and the adaptation of the *eye* to this office, be evident and certain, (and I can mention nothing which is more so,) ought it to prejudice the inference which we draw from these premisses, that we cannot explain the use of the spleen? Nay, more; if there be parts of the eye, viz. the cornea, the crystalline, the retina, in their substance, figure, and position, manifestly suited to the formation of an image by the refraction of rays of light, at least, as manifestly as the glasses and tubes of a dioptric telescope are suited to that purpose; it concerns not the proof which these afford of design, and of a designer, that there may perhaps be other parts, certain muscles, for instance, or nerves in the same eye, of the agency or effect of which we can give no account; any more than we should be inclined to doubt, or ought to doubt, about the construction of a telescope, viz. for what purpose it was constructed, or whether it were constructed at all, because there belonged to it certain screws and pins, the use or action of which we did not comprehend. I take it to be a general way of infusing doubts and

Tuples into the mind, to recur to its own ignorance, its own imbecility: to tell us that upon these subjects we know little; that little imperfectly; or, rather, that we know nothing properly about the matter. These suggestions so fall in with our consciousness, as sometimes

to produce a general distrust of our faculties and our conclusions. But this is an unfounded jealousy. The uncertainty of one thing does not necessarily affect the certainty of another thing. Our ignorance of many points need not suspend our assurance of a few. Before we yield, in any particular instance, to the scepticism which this sort of insinuation would induce, we ought accurately to ascertain whether our ignorance or doubt concern those precise points upon which our conclusion rests. Other points are nothing. Our ignorance of other points may be of no consequence to these, though they be points, in various respects, of great importance. A just reasoner removes from his consideration, not only what he knows, but what he does not know, touching matters not strictly connected with his argument, i. e. not forming the very steps of his deduction: beyond these, his knowledge and his ignorance are alike relative.

## CHAPTER VI.

### THE ARGUMENT CUMULATIVE.

WERE there no example in the world of contrivance, except that of the eye, it would be alone sufficient to support the conclusion which we draw from it, as to the necessity of an intelligent Creator. It could never be got rid of; because it could not be accounted for by any other supposition, which did not contradict all the principles we possess of knowledge: the principles, according to which things do, as often as they can be brought to the test of experience, turn out to be true or false. Its coats and humours, constructed as the lenses of a telescope are constructed, for the refraction

of rays of light to a point, which forms the proper office of the organ: the provision in its muscles for turning its pupil to the object, similar to that which is given to the telescope by screws, and upon which power of direction in the eye, the exercise of its office as an optical instrument depends; the farther provision for its defence, for its constant lubricity and moisture, which we see in its socket and its lids, in its gland for the secretion of the matter of tears, its outlet or communication with the nose for carrying off the liquid after the eye is washed with it;—these provisions compose altogether an apparatus, a system of parts, a preparation of means, so manifest in their design, so exquisite in their contrivance, so successful in their issue, so precious, and so infinitely beneficial in their use, as, in my opinion, to bear down all doubt that can be raised upon the subject. And what I wish, under the title of the present chapter, to observe is, that if other parts of nature were inaccessible to our inquiries, or even if other parts of nature presented nothing to our examination but disorder and confusion, the validity of this example would remain the same. If there were but one watch in the world, it would not be less certain that it had a maker. If we had never in our lives seen any but one single kind of hydraulic machine, yet, if of that one kind we understood the mechanism and use, we should be as perfectly assured that it proceeded from the hand, and thought, and skill of a workman, as if we visited a museum of the arts, and saw collected there twenty different kinds of machines for drawing water, or a thousand different kinds for other purposes. Of this point, each machine is a proof, independently of all the rest. So it is with the evidences of a Divine agency. The proof is not a conclusion which lies at

the end of a chain of reasoning, of which chain each instance of contrivance is only a link, and of which, if one link fail, the whole falls; but it is an argument separately supplied by every separate example. An error in stating an example affects only that example. The argument is cumulative, in the fullest sense of that term. The eye proves it without the ear; the ear without the eye. The proof in each example is complete; for when the design of the part, and the conduciveness of its structure to that design is shown, the mind may set itself at rest; no future consideration can detract any thing from the force of the example.

## CHAPTER VII.

### OF THE MECHANICAL AND IMMECHANICAL PARTS AND FUNCTIONS OF ANIMALS AND VEGETABLES.

IT is not that *every* part of an animal or vegetable has not proceeded from a contriving mind; or that every part is not constructed with a view to its proper end and purpose, according to the laws belonging to, and governing the substance or the action made use of in that part; or that each part is not so constructed as to effectuate its purpose whilst it operates according to these laws; but it is because these laws themselves are not in all cases equally understood; or, what amounts to nearly the same thing, are not equally exemplified in more simple processes, and more simple machines; that we lay down the distinction, here proposed, between the mechanical parts and other parts of animals and vegetables.

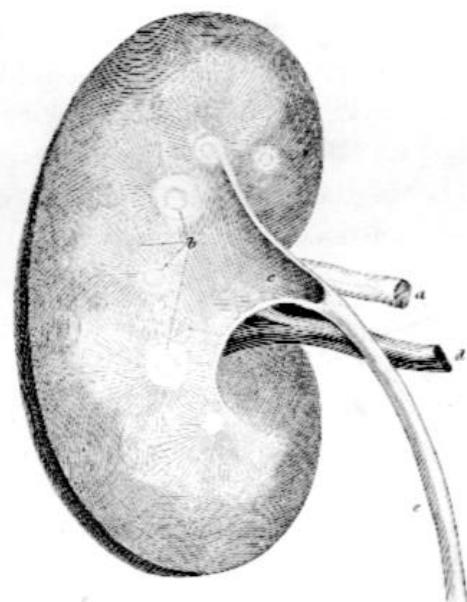

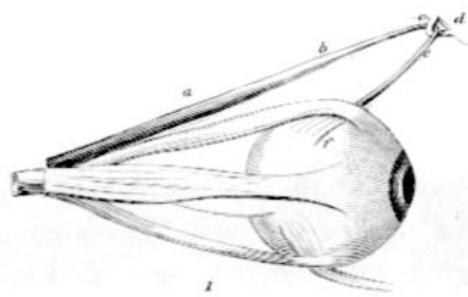

For instance: the principle of muscular motion, viz.

upon what cause the swelling of the belly of the muscle, and consequent contraction of its tendons, either by an act of the will, or by involuntary irritation, depends, is wholly unknown to us. The substance employed, whether it be fluid, gaseous, elastic, electrical, or none of these, or nothing resembling these, is also unknown to us: of course, the laws belonging to that substance, and which regulate its action, are unknown to us. We see nothing similar to this contraction in any machine which we can make, or any process which we can execute. So far (it is confessed) we are in ignorance, but no farther. This power and principle, from whatever cause it proceeds, being assumed, the collocation of the fibres to receive the principle, the disposition of the muscles for the use and application of the power, is mechanical; and is as intelligible as the adjustment of the wires and strings by which a puppet is moved. We see, therefore, as far as respects the subject before us, what is not mechanical in the animal frame, and what is. The nervous influence, (for we are often obliged to give names to things which we know little about)—I say the nervous influence, by which the belly, or middle of the muscle, is swelled, is not mechanical. The utility of the effect we perceive; the means, or the preparation of means, by which it is produced, we do not. But obscurity as to the origin of muscular motion brings no doubtfulness into our observations upon the sequel of the process: which observations relate, first, to the constitution of the muscle; in consequence of which constitution, the swelling of the belly or middle part is necessarily and mechanically followed by a contraction of the tendons: secondly, to the number and variety of the muscles and the corresponding number and variety of useful powers which they supply to the animal; which

is astonishingly great: thirdly, to the judicious, (if we may be permitted to use that term in speaking of the Author, or of the works of nature,) to the wise and well-contrived disposition of each muscle for its specific purpose; for moving the joint this way, and that way, and the other way; for pulling and drawing the part to which it is attached in a determinate and particular direction; which is a mechanical operation, exemplified in a multitude of instances. To mention only one: The tendon of the trochlear muscle of the eye,\* to the end that it may draw in the line required, is passed through a cartilaginous ring, at which it is reverted, exactly in the same manner as a rope in a ship is carried over a block or round a stay, in order to make it pull in the direction which is wanted. All this, as we have said, is mechanical; and is as accessible to inspection, as capable of being ascertained, as the mechanism of the automaton in the Strand. Suppose the automaton to be put in motion by a magnet, (which is probable,) it will supply us with a comparison very apt for our present purpose. Of the magnetic effluvium we know perhaps as little as we do of the nervous fluid. But, magnetic attraction being assumed, (it signifies nothing from what cause it proceeds,) we can trace, or there can be pointed out to us, with perfect clearness and certainty, the mechanism, viz. the steel bars, the wheels, the joints, the wires, by which the motion so much admired is

\* Tab. VI. Fig. 1. The *trochlear*, or *superior oblique* muscle, arises with the straight muscles from the bottom of the orbit. Its muscular portion, *a*, is extended over the upper part of the eye-ball, and gradually assumes the form of a smooth round tendon, *b*, which passes through the pulley, *c*, which is fixed to the inner edge of the orbit, *d*, then returning backwards and downwards, *e*, is inserted into the sclerotic membrane, *f*. The use of this muscle is to bring the eye forwards, and to turn the pupil downwards and outwards.

TAB.VI

communicated to the fingers of the image: and to make any obscurity, or difficulty, or controversy in the doctrine of magnetism, an objection to our knowledge or our certainty concerning the contrivance, or the marks of contrivance displayed in the automaton, would be exactly the same thing, as it is to make our ignorance (which we acknowledge) of the cause of nervous agency, or even of the substance and structure of the nerves themselves, a ground of question or suspicion as to the reasoning which we institute concerning the mechanical part of our frame. That an animal is a machine, is a proposition neither correctly true nor wholly false. The distinction which we have been discussing will serve to show how far the comparison, which this expression implies, holds; and wherein it fails. And whether the distinction be thought of importance or not, it is certainly of importance to remember, that there is neither truth nor justice in endeavouring to bring a cloud over our understandings, or a distrust into our reasonings upon this subject, by suggesting that we know nothing of voluntary motion, of irritability, of the principle of life, of sensation, of animal heat, upon all which the animal functions depend; for our ignorance of these parts of the animal frame concerns not at all our knowledge of the mechanical parts of the same frame. I contend, therefore, that there is mechanism in animals; that this mechanism is as properly such, as it is in machines made by art; that this mechanism is intelligible and certain; that it is not the less so, because it often begins or terminates with something which is not mechanical; that whenever it is intelligible and certain, it demonstrates intention and contrivance, as well in the works of nature as in those of art; and that it is the best demonstration which either can afford.

But whilst I contend for these propositions, I do not exclude myself from asserting, that there may be, and that there are, other cases, in which, although we cannot exhibit mechanism, or prove indeed that mechanism is employed, we want not sufficient evidence to conduct us to the same conclusion.

There is what may be called the *chemical* part of our frame; of which, by reason of the imperfection of our chemistry, we can attain to no distinct knowledge; I mean, not to a knowledge, either in degree or kind, similar to that which we possess of the mechanical part of our frame. It does not, therefore, afford the same species of argument as that which mechanism affords; and yet it may afford an argument in a high degree satisfactory. The *gastric juice*,\* or the liquor which digests the food in the stomachs of animals, is of this class. Of all menstrua, it is the most active, the most universal. In the human stomach, for instance, consider what a variety of strange substances, and how widely different from one another, it, in a few hours, reduces to an uniform pulp, milk, or mucilage. It seizes upon every thing, it dissolves the texture of almost every thing that comes in its way. The flesh of perhaps all animals; the seeds and fruits of the greatest number of plants; the roots, and stalks, and leaves of many, hard and tough as they are, yield to its powerful pervasion. The change wrought by it is different from any chemical solution which we can produce, or with which we are acquainted, in this respect, as well as many others, that, in our chemistry, particular menstrua act only upon particular substances. Consider, moreover, that this fluid, stronger in its operation than a caustic

\* The *gastric juice* is a fluid produced by the minute glands in the stomach called follicles.

alkali or mineral acid, than red precipitate, or aquafortis itself, is nevertheless as mild, and bland, and inoffensive to the touch or taste, as saliva or gum-water, which it much resembles. Consider, I say, these several properties of the digestive organ, and of the juice with which it is supplied, or rather with which it is made to supply itself, and you will confess it to be entitled to a name, which it has sometimes received, that of "the chemical wonder of animal nature."\*

Still we are ignorant of the composition of this fluid, and of the mode of its action; by which is meant, that we are not capable, as we are in the mechanical part of our frame, of collating it with the operations of art. And this I call the imperfection of our chemistry; for should the time ever arrive, which is not perhaps to be despained of, when we can compound ingredients, so as to form a solvent which will act in the manner in which the gastric juice acts, we may be able to ascertain the chemical principles upon which its efficacy depends, as well as from what part, and by what concoction, in the human body, these principles are generated and derived.

In the mean time, ought that, which is in truth the defect of our chemistry, to hinder us from acquiescing in the inference, which a production of nature, by its place, its properties, its action, its surprising efficacy, its invaluable use, authorizes us to draw in respect of a creative design?

Another most subtile and curious function of animal

\* This description of the gastric juice is perfectly correct; the object of digestion is the formation of *chyle*, a matter destined for repairing the continual waste of the animal machine. Independent of this general object, this function likewise contributes to nutrition, and even to life in general in various ways. See notes on the functions of the stomach, chap

bodies is *secretion*.\* This function is semi-chemical and semi-mechanical; exceedingly important and diversified in its effects, but obscure in its process and in its apparatus. The importance of the secretory organs is but too well attested by the diseases which an excessive, a deficient, or a vitiated secretion is almost sure of producing. A single secretion being wrong, is enough to make life miserable, or sometimes to destroy it. Nor is the variety less than the importance. From one and the same blood (I speak of the human body) about twenty different fluids are separated; in their sensible properties, in taste, smell, colour, and consistency, the most unlike one another that is possible; thick, thin, salt, bitter, sweet: and if from our own we pass to other species of animals, we find amongst their secretions, not only the most various, but the most opposite properties; the most nutritious aliment, the deadliest poison; the sweetest perfumes, † the most foetid odours. † Of these the greater part, as the gastric juice, the saliva, the bile, the slippery mucilage which lubricates the joints, the tears which moisten the eye,

\* The term *secretion* expresses that function by which a gland, or other organ, separates from the blood? fluid hurtful or useless to it, or destined for some farther purpose in the varied functions of the animal economy. The *urine*, *bile*, *saliva*, and the *milk* of animals in general, and the *venom* of poisonous serpents in particular, are instances of different *secretions*.

† The costly and powerful perfume, *musk*, is obtained from an animal inhabiting the most elevated regions of Asia, particularly of the Atlayan Alps, and the mountains which divide Thibet from China. It is a gentle and timid animal of the deer tribe: on the abdomen of the male there is an oval bag, about three inches long and two broad, having a small orifice, beset with short hair, which is empty in the young animal, but in the adult is filled with a *secreted matter* known by the name of musk.

‡ Foetid odours, from animal bodies, are exhalations rather than secretions; there is certainly an analogy, but there are distinctions, which are noticed in a subsequent note.

the wax which defends the ear, are, after they are secreted, made use of in the animal economy; are evidently subservient, and are actually contributing to the utilities of the animal itself. Other fluids seem to be separated only to be rejected. That this also is necessary, (though why it was originally necessary we cannot tell,) is shown by the consequence of the separation being long suspended; which consequence is disease and death. Akin to secretion, if not the same thing, is assimilation, by which one and the same blood is converted into bone, muscular flesh, nerves, membranes, tendons; things as different as the wood and iron, canvass and cordage, of which a ship with its furniture is composed. We have no operation of art wherewith exactly to compare all this, for no other reason perhaps than that all operations of art are exceeded by it. No chemical election, no chemical analysis or resolution of a substance into its constituent parts, no mechanical sifting or division, that we are acquainted with, in perfection or variety come up to animal secretion. Nevertheless, the apparatus and process are obscure; not to say absolutely concealed from our inquiries. In a few, and only a few instances, we can discern a little of the constitution of a gland. In the kidneys of large animals, we can trace the emulgent artery dividing itself into an infinite number of branches; their extremities every where communicating with little round bodies, in the substance of which bodies the secret of the machinery seems to reside, for there the change is made. We can discern pipes laid from these round bodies towards the pelvis, which is a basin within the solid of the kidney. We can discern these pipes joining and collecting together into larger pipes; and, when so collected, ending in innumerable papillae, through which the secreted fluid is

continually oozing into its receptacle.\* This is all we know of the mechanism of a gland, even in the case in which it seems most capable of being investigated. Yet to pronounce that we know nothing of animal secretion, or nothing satisfactorily, and with that concise remark to dismiss the article from our argument, would be to dispose of the subject very hastily and very irrationally. For the purpose which we want, that of evincing intention, we know a great deal. And what we know is this. We see the blood carried by a pipe, conduit, or duct, *to* the gland. We see an organized apparatus, be its construction or action what it will, which we call that gland. We see the blood, or part of the blood, after it has passed through and undergone the action of the gland, coming from it by an emulgent vein, i. e. by another pipe or conduit. And we see also at the same time a new and specific fluid issuing from the same gland by its excretory duct, i. e. by a third pipe or conduit; which new fluid is in some cases discharged out of the body, in more cases retained within it, and there executing some important and intelligent office. † Now supposing, or admitting,

\* The kidneys lie in the abdomen, on each side of the vertebrae of the loins. Like other glands they are lobulated, but in the kidney each lobe is composed of converging transparent tubes, terminating in larger ducts at the points of the papillae or "little round bodies" here mentioned. The natural office of the kidneys is to draw off fluids having saline and other substances in solution, the retention of which would be injurious to the animal system. Fig. 2. A section of the human kidney; *a*, the *emulgent artery* which conveys the blood to *b*, the *papillae*, where the peculiar fluid is secreted; from whence it passes by tubes into *c*, the *pelvis*; *e*, the *ureter*, or tube, which conducts the secretion to its receptacle; *d*, the *emulgent vein* for returning the blood after it has been submitted to the action of the gland.

† Secreted fluids are always destined to be expelled from the body; those matters derived from the blood, to be employed in the animal functions, as e. g. the synovial fluid, and mucous, are not termed secretions, but exhalations.

that we know nothing of the proper internal constitution of a gland, or of the mode of its acting upon the blood; then our situation is precisely like that of an unmechanical looker-on, who stands by a stocking-loom, a corn-mill, a carding-machine, or a threshing-machine, at work, the fabric and mechanism of which, as well as all that passes within, is hidden from his sight by the outside case; or, if seen, would be too complicated for his uninformed, uninstructed understanding to comprehend. And what is that situation? This spectator, ignorant as he is, sees at one end a material enter the machine, as unground grain the mill, raw cotton the carding-machine, sheaves of unthreshed corn the threshing-machine; and, when he casts his eye to the other end of the apparatus, he sees the material issuing from it in a new state; and, what is more, in a state manifestly adapted to future uses: the grain is meal fit for the making of bread, the wool in rovings ready for spinning into threads, the sheaf in corn dressed for the mill. Is it necessary that this man, in order to be convinced that design, that intention, that contrivance has been employed about the machine, should be allowed to pull it to pieces; should be enabled to examine the parts separately; explore their action upon one another, or their operation, whether simultaneous or successive, upon the material which is presented to them? He may long to do this to gratify his curiosity; he may desire to do it to improve his theoretic knowledge; or he may have a more substantial reason for requesting it, if he happen, instead of a common visitor, to be a millwright by profession, or a person sometimes called in to repair such-like machines when out of order; but for the purpose of ascertaining the existence of counsel and design in the formation of the machine, he wants no

such intromission or privity. What he sees is sufficient. The effect upon the material, the change produced in it, the utility of that change for future applications, abundantly testify, be the concealed part of the machine or of its construction what it will, the hand and agency of a contriver.

If any confirmation were wanting to the evidence which the animal secretions afford of design, it may be derived, as has been already hinted, from their variety, and from their appropriation to their place and use. They all come from the same blood; they are all drawn off by glands: yet the produce is very different, and the difference exactly adapted to the work which is to be done, or the end to be answered. No account can be given of this, without resorting to appointment. Why, for instance, is the saliva, which is diffused over the seat of taste, insipid, whilst so many others of the secretions, the urine, the tears, and the sweat, are salt? Why does the gland within the ear separate a viscid substance, which defends that passage;\* the gland in the outer angle of the eye, a thin brine which washes the ball? Why is the synovia of the joints mucilaginous; the bile bitter, stimulating, and soapy? Why does the juice, which flows into the stomach, contain powers which make that organ the great laboratory, as it is by its situation the recipient, of the materials of future nutrition? These are all fair questions: and no answer can be given to them, but what calls in intelligence and intention. †

\* Within the tube of the ear there is a set of small glands called the *glandulae cerumenosae*. These glands secrete the wax of the ear, and this secretion, with the hairs which stand across the passage, guards the internal parts of the ear from insects.

† *Exhalation* is another function continually going on in the animal system similar to *secretion*, both separate fluids from the blood. Their

My object in the present chapter has been to teach three things: first, that it is a mistake to suppose that, in reasoning from the appearances of nature, the imperfection of our knowledge proportion ably affects the certainty of our conclusion; for in many cases it does not affect it at all: secondly, that the different parts of the animal frame may be classed and distributed, according to the degree of exactness with which we can compare them with works of art: thirdly, that the *mechanical* parts of our frame, or those in which this comparison is most complete, although constituting, probably, the coarsest portions of nature's workmanship, are the most proper to be alleged as proofs and specimens of design.

## CHAPTER VIII. OF MECHANICAL ARRANGEMENT IN THE HUMAN FRAME.

WE proceed, therefore, to propose certain examples taken out of this class: making choice of such as, amongst those which have come to our knowledge, appear to be the most striking, and the best understood; but obliged, perhaps, to postpone both these recommendations to a third; that of the example being capable of explanation without plates, or figures, or technical language.

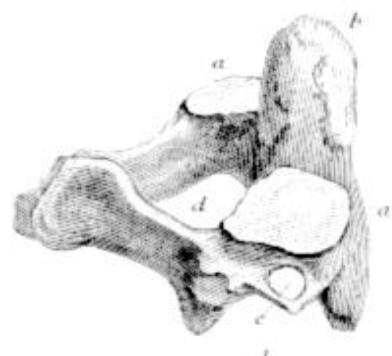

distinctions are as follow:—Exhalation takes place on the surface of the body as in perspiration, or from membranous or cellular tissues, as the vapour from the lungs, the separation of fat, etc. In secretion there is an intermediate organ to separate the fluid, as the liver for secreting the bile, the salivary glands the saliva, etc. From accurate experiments instituted by Lavoisier and Sequin it has been ascertained, that the mean quantity of exhalation from the surface of the human body and from the lungs in twenty-four hours amounts to somewhat more than four pounds. *Annales de Chemie*, tom. xc. p. 14.

## OF THE BONES.

I. I challenge any man to produce, in the joints and pivots of the most complicated or the most flexible machine that was ever contrived, a construction more artificial, or more evidently artificial, than that which is seen in the vertebrae of the *human neck*.\*—Two things were to be done. The head was to have the power of bending forward and backward, as in the act of nodding, stooping, looking upward or downward; and, at the same time, of turning itself round upon the body to a certain extent, the quadrant we will say, or rather, perhaps, a hundred and twenty degrees of a circle. For these two purposes, two distinct contrivances are employed: first, the head rests immediately upon the uppermost of the vertebra, and is united to it by a *hinge-joint*; upon which joint the head plays freely forward and backward, as far either way as is necessary, or as the ligaments allow; which was the first thing required.—But then the rotatory motion is unprovided for. Therefore, secondly, to make the head capable of this, a farther mechanism is introduced; not between the head and the uppermost bone of the neck, where the hinge is, but between that bone, and the bone next underneath it. † It is a mechanism resembling a *tenon and mortice*. This second or uppermost bone but one, has what anatomists call a process, viz. a projection,

\* Tab. VII. Fig. 1. A representation of the head and the neck; the latter is composed of seven bones, called *vertebra*.

† Fig. 2, exhibits the first and second vertebrae, with their mode of connexion. The uppermost vertebra, termed the *atlas*, from its supporting the globe of the head, has an oval *concave* surface on either side, *a, a*, for the reception of two corresponding *convex* surfaces placed on the lower part of the head, in such a manner as only to admit of the action of bending and raising the head.

somewhat similar, in size and shape, to a tooth; which tooth, entering a corresponding hole or socket in the bone above it, forms a pivot or axle, upon which that upper bone, together with the head which it supports, turns freely in a circle; and as far in the circle as the attached muscles permit the head to turn. Thus are both motions perfect, without interfering with each other. When we nod the head, we use the hinge-joint, which lies between the head and the first bone of the neck. When we turn the head round, we use the tenon and mortice, which runs between the first bone of the neck and the second. We see the same contrivance, and the same principle, employed in the frame or mounting of a telescope. It is occasionally requisite, that the object-end of the instrument be moved up and down, as well as horizontally, or equatorially. For the vertical motion, there is a hinge, upon which the telescope plays; for the horizontal or equatorial motion, an axis upon which the telescope and the hinge turn round together. And this is exactly the mechanism which is applied to the motion of the head: nor will any one here doubt of the existence of counsel and design, except it be by that debility of mind which can trust to its own reasonings in nothing.

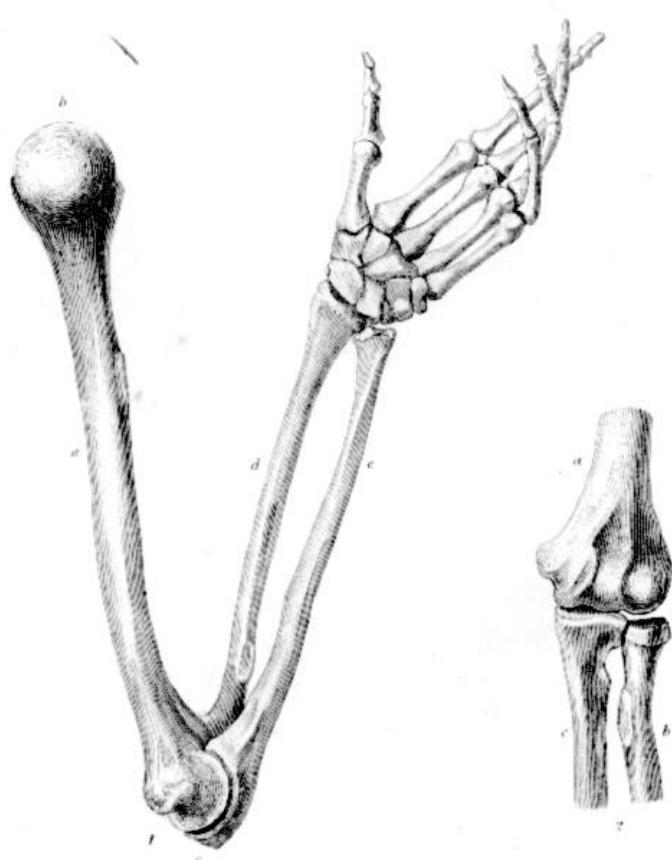

We may add, that it was, on another account also, expedient, that the motion of the head backward and forward should be performed upon the upper surface of the first vertebra: for, if the first vertebra itself had bent forward, it would have brought the spinal marrow, at the very beginning of its course, upon the point of the tooth.\*

\* Fig. 4. The second vertebra, called *dentata*, has two plane surfaces, *a*, *a*, adapted to the planes, *a*, *a*, Fig. 3, of the atlas: and this manner of articulation provides for the turning of the head laterally in almost every

II. Another mechanical contrivance, not unlike the last in its object, but different and original in its means, is seen in what anatomists call the *fore-arm*; that is, in the arm from the elbow to the wrist. Here, for the perfect use of the limb, two motions are wanted; a motion of the elbow backward and forward, which is called a reciprocal motion; and a rotatory motion, by which the palm of the hand, as occasion requires, may be turned upward. How is this managed? The forearm, it is well known, consists of two bones, lying along-side each other, but touching only towards the ends. One, and only one of these bones, is joined to the humerus, or upper part of the arm, at the elbow; the other alone, to the hand at the wrist. The first, by means, at the elbow, of a hinge-joint, (which allows only of motion in the same plane,) swings backward and forward, carrying along with it the other bone, and the whole fore-arm. In the mean time, as often as there is occasion to turn the palm upward, that other bone, to which the hand is attached, rolls upon the first, by the help of a groove or hollow near each end of one bone, to which is fitted a corresponding prominence in the other. If both bones had been joined to the cubit, or upper arm, at the elbow, or both to the hand at the wrist, the thing could not have been done. The first

direction. Fig. 2 and 4, *b, b*, show the *tooth-like process* which affords a firm pivot for the production of the lateral motion thus described. This process is received into a corresponding *indentation* of the atlas, Fig. 3, *b*, and a strong ligament passes behind it, serving as an effectual security against dislocation, and consequent compression of the spinal marrow. Fig. 4, *d*, marks the situation of the spinal marrow, which passes through the ring of each vertebra. The letter *c* indicates a perforation in the lateral process; and, as there is a corresponding perforation in each lateral, or as it is termed *transverse* process of the seven *cervical* vertebrae, a continuous passage is thus formed for the protection of two important blood-vessels destined to supply the brain.

TAB. VIII

was to be at liberty at one end, and the second at the other; by which means the two actions may be performed together. The great bone, which carries the fore-arm, may be swinging upon its hinge at the elbow, at the very time that the lesser bone, which carries the hand, may be turning round it in the grooves.\* The management also of these grooves, or rather of the tubercles and grooves, is very observable. The two bones are called the *radius* and the *ulna*. Above, i. e. towards the elbow, a tubercle of the radius plays into a socket of the ulna; whilst below, i. e. towards the wrist, the radius finds the socket, and the ulna the tubercle. † A single bone in the fore-arm, with a ball and socket joint at the elbow, which admits of motion in all directions, might, in some degree, have answered the purpose of both moving the arm and turning the hand. But how much better it is accomplished by the present mechanism, any person may convince himself, who puts the ease and quickness with which he can shake his hand at the wrist circularly, (moving likewise, if he pleases, his arm at the elbow at the same time,) in competition with the comparatively slow and laborious motion with which his arm can be made to turn round at the shoulder, by the aid of a ball and socket joint.

### III. The *spine*, or back-bone, is a chain of joints of

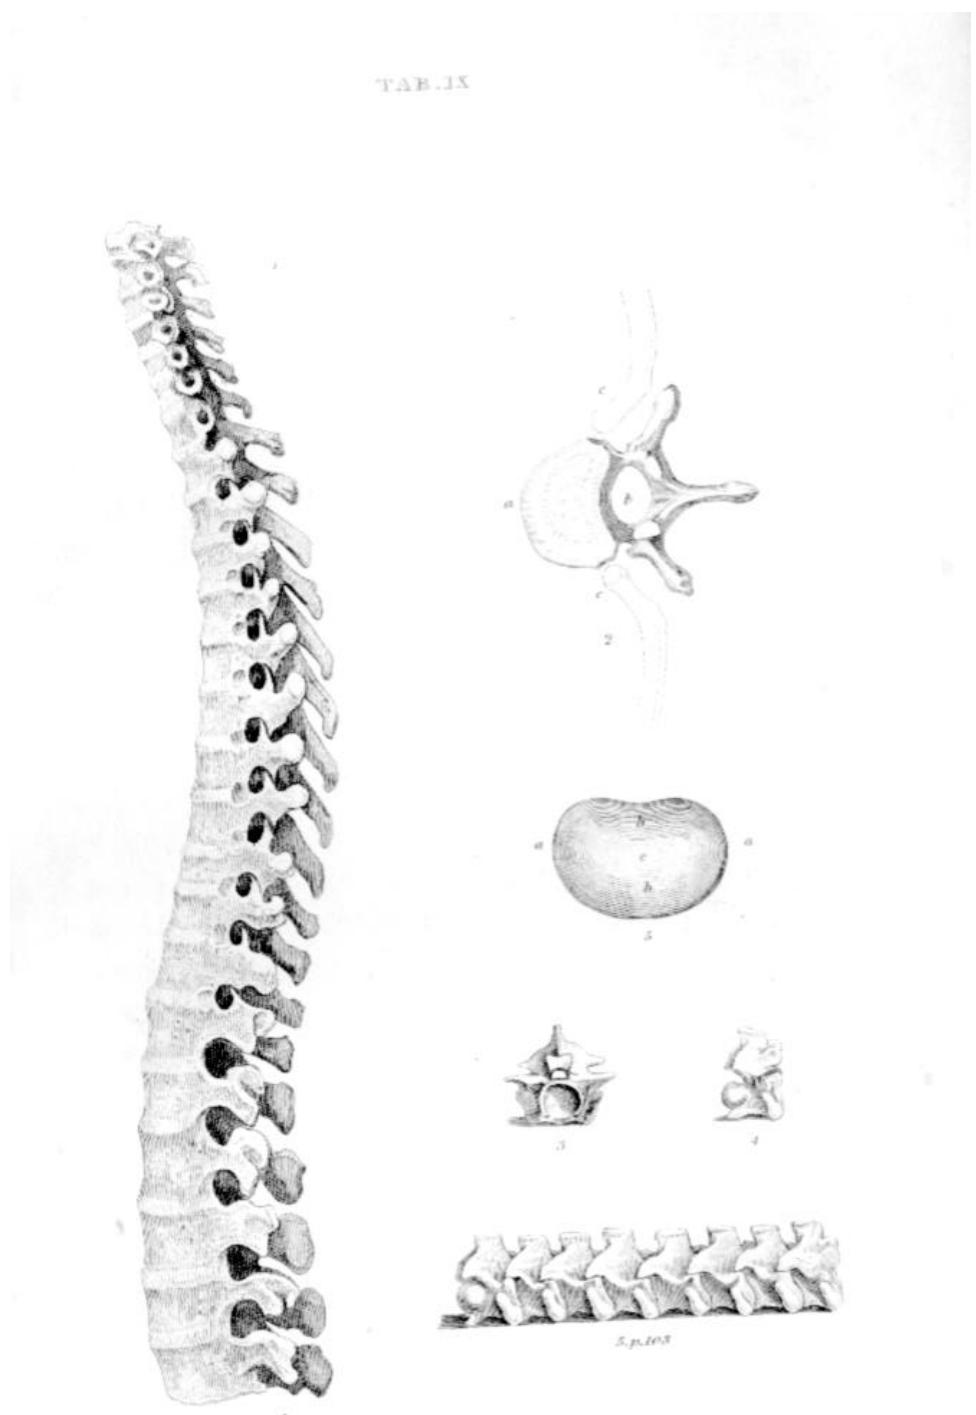

\* Tab. VIII. Fig. 1. *a*, the *humerus*; the head, *b*, is a portion of a sphere, and exhibits an example of the *ball and socket*, or universal joint; *c*, the *hinge-joint*, instanced in the elbow; *d*, the *radius*; *e*, the *ulna*. The radius belongs more peculiarly to the wrist, being the bone which supports the hand, and which turns with it in all its revolving motions. The ulna principally belongs to the elbow joint, for by it we perform all the actions of bending or extending the arm.

† Fig. 2, shows the connexion of tin radius, *b*, with the ulna, *c*, at the elbow; *a*, the humerus. The mode of articulation at the wrist is seen, Fig. 1.

very wonderful construction.\* Various, difficult, and almost inconsistent offices were to be executed by the same instrument. It was to be firm, yet flexible, (now I know no chain made by art, which is both these; for by firmness I mean, not only strength, but stability): *firm*, to support the erect position of the body; *flexible*, to allow of the bending of the trunk in all degrees of curvature. It was farther also (which is another, and quite a distinct purpose from the rest) to become a pipe or conduit for the safe conveyance from the brain, of the most important fluid of the animal frame, that, namely, upon which all voluntary motion depends, the spinal marrow; a substance not only of the first necessity to action, if not to life, but of a nature so delicate and tender, so susceptible and so impatient of injury, as that any unusual pressure upon it, or any considerable obstruction of its course, is followed by paralysis or death. Now the spine was not only to furnish the main trunk for the passage of the medullary substance from the brain, but to give out, in the course of its progress, small pipes therefrom, which, being afterwards indefinitely subdivided, might, under the name of nerves, distribute this exquisite supply to every part of the body. The same spine was also to serve another use not less wanted than the preceding, viz. to afford a fulcrum, stay, or basis, (or, more properly speaking, a series of these,) for the insertion of the muscles which are spread over the trunk of the body; in which trunk there are not, as in the limbs, cylindrical bones, to which

\* Tab. IX. Fig. 1. The *human spine*, so named from the series of sharp processes projecting from the posterior part of the vertebrae. The spine consists of *seven* vertebrae of the neck, distinguished by the perforations in their transverse processes; of *twelve* belonging to the back, and marked by depressions for the heads of the ribs; and, lastly, of *five* belonging to the loins, which are larger than the other vertebrae.

ТАБЛХ

they can be fastened: and, likewise, which is a similar use, to furnish a support for the ends of the ribs to rest upon.

Bespeak of a workman a piece of mechanism, which shall comprise all these purposes, and let him set about to contrive it; let him try his skill upon it; let him feel the difficulty of accomplishing the task, before he be told how the same thing is effected in the animal frame. Nothing will enable him to judge so well of the wisdom which has been employed; nothing will dispose him to think of it so truly.

First, for the firmness, yet flexibility, of the spine; it is composed of a great number of bones (in the human subject, of twenty-four) joined to one another, and compacted by broad bases. The breadth of the bases upon which the parts severally rest, and the closeness of the junction, give to the chain its firmness and stability; the number of parts, and consequent frequency of joints, its flexibility. Which flexibility, we may also observe, varies in different parts of the chain; is least in the back, where strength, more than flexure, is wanted; greater in the loins, which it was necessary should be more supple than the back; and greatest of all in the neck, for the free motion of the head. Then, secondly, in order to afford a passage for the descent of the medullary substance, each of these bones is bored through the middle in such a manner, as that, when put together, the hole in one bone falls into a line, and corresponds with the holes in the two bones contiguous to it. By which means the perforated pieces, when joined, form an entire, close, uninterrupted channel; at least, whilst the spine is upright, and at rest. But, as a settled posture is inconsistent with its use, a great difficulty still remained, which was to prevent the vertebrae shifting upon one another, so

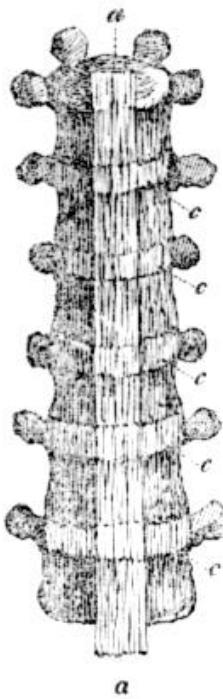

as to break the line of the canal as often as the body moves or twists; or the joints gaping externally, whenever the body is bent forward, and the spine thereupon made to take the form of a bow. These dangers, which are mechanical, are mechanically provided against. The vertebra?, by means of their processes and projections, and of the articulations which some of these form with one another at their extremities, are so locked in and confined, as to maintain, in what are called the bodies, or broad surfaces of the bones, the relative position nearly unaltered; and to throw the change and the pressure, produced by flexion, almost entirely upon the intervening cartilages,\* the springiness and yielding nature of whose substance admits of all the motion which is necessary to be performed upon them, without any chasm being produced by a separation of the parts. I say, of all the motion which is necessary; for although we bend our backs to every degree almost of inclination, the motion of each vertebra is very small: such is

\* These intervening cartilages, more properly called *intervertebral fibro-cartilages*, are intimately adherent, by their superior and inferior surfaces, to the corresponding surfaces of the vertebrae.

Dr. Monro, senior, discovered their mechanism, and it is well deserving our notice. The hinge, and the ball and socket joint, are familiar to the mechanic; but the singular contrivance here mentioned by Paley, is a species of universal joint, less understood, and which art never imitated. This moveable union is a mixture of cartilage and ligament, partaking of the property of both. On the outside (Fig. 5, *a, a.*) is a firm elastic rim of concentric fibres; within these, *b, b.* are smaller circles, gradually softer in their texture as they approach *c*, the centre, where it is altogether of a semi-liquid or mucous form. Thus each vertebra resting on a fluid fulcrum, or pivot, the motion to any side is easy, and quickly performed, the compressibility of this substance gradually increasing from the liquid centre to the fibro-cartilaginous circumference. Hence all the motions of the back bone, or bones, are performed on a fluid centre, surrounded by a perfectly elastic medium; which remarkable union of flat surfaces admits the requisite motion, and prevents the delicate texture of the spinal marrow and brain from sustaining injury by shocks in violent exercise.

the advantage we receive from the chain being composed of so many links, the spine of so many bones. Had it consisted of three or four bones only, in bending the body, the spinal marrow must have been bruised at every angle. The reader need not be told, that these intervening cartilages are gristles; and he may see them in perfection in a loin of veal. Their form also favours the same intention. They are thicker before than behind; so that, when we stoop forward, the compressible substance of the cartilage, yielding in its thicker and anterior part to the force which squeezes it, brings the surfaces of the adjoining vertebra? nearer to the being parallel with one another than they were before, instead of increasing the inclination of their planes, which must have occasioned a fissure or opening between them. Thirdly, for the medullary canal giving out in its course, and in a convenient order, a supply of nerves to different parts of the body, notches are made in the upper and lower edge of every vertebra, two on each edge, equi-distant on each side from the middle line of the back. When the vertebrae are put together, these notches, exactly fitting, form small holes, through which the nerves, at each articulation, issue out in pairs, in order to send their branches to every part of the body, and with an equal bounty to both sides of the body. The fourth purpose assigned to the same instrument is the insertion of the bases of the muscles, and the support of the ends of the ribs; and for this fourth purpose, especially the former part of it, a figure, specifically suited to the design, and unnecessary for the other purposes, is given to the constituent bones.\*

\* Fig. 2. A separated *dorsal vertebra*: *a*, the body of the vertebra; *b*, the ring through which the spinal marrow passes; *c, c*, the articulating surfaces to which the ribs are united.

Whilst they are plain, and round, and smooth, towards the front, where any roughness or projection might have wounded the adjacent viscera, they run out, behind and on each side, into long processes, to which processes the muscles necessary to the motions of the trunk are fixed; and fixed with such art, that, whilst the vertebrae supply a basis for the muscles, the muscles help to keep these bones in their position, or by their tendons to tie them together.\*

That most important, however, and general property, viz. the strength of the compages, and the security against luxation, was to be still more specially consulted: for where so many joints were concerned, and where, in every one, derangement would have been fatal, it became a subject of studious precaution. For this purpose, the vertebrae are articulated, that is, the moveable joints between them are formed by means of those projections of their substance, which we have mentioned under the name of processes; and these so lock in with, and overwrap one another, as to secure the body of the vertebra, not only from accidentally slipping, but even from being pushed out of its place by any violence short of that which would break the bone. I have often remarked and admired this structure in the chine of a hare. In this, as in many instances, a plain observer of the animal economy may spare himself the disgust of being present at human dissections, and yet learn enough for his information and satisfac-

\* The figure shows *c, c, c, c, c*, the intervertebral fibro cartilages, and *a, a*, the anterior ligament of the spine.

tion, by even examining the bones of the animals which come upon his table. Let him take, for example, into his hands, a piece of the clean-picked bone of a hare's back; consisting, we will suppose, of three vertebrae. He will find the middle bone of the three so implicated, by means of its projections or processes, with the bone on each side of it, that no pressure which he can use will force it out of its place between them. It will give way neither forward, nor backward, nor on either side. In whichever direction he pushes, he perceives, in the form, or junction, or overlapping of the bones, an impediment opposed to his attempt; a check and guard against dislocation. In one part of the spine, he will find a still farther fortifying expedient, in the mode according to which the ribs are annexed to the spine. Each rib rests upon two vertebrae.\* That is the thing to be remarked, and any one may remark it in carving a neck of mutton. The manner of it is this: the end of the rib is divided by a middle ridge into two surfaces; which surfaces are joined to the bodies of two contiguous vertebrae, the ridge applying itself to the intervening cartilage. Now this is the very contrivance which is employed in the famous iron bridge at my door at Bishop-Wearmouth; and for the same purpose of stability; viz. the cheeks of the bars, which pass between the arches, ride across the joints, by which the pieces composing each arch are united. Each cross-bar rests upon two of these pieces at their place of junction; and by that position resists, at least in one direction, any tendency in either piece to slip out of its place. Thus perfectly, by one means or the other, is the danger of slipping laterally, or of being drawn aside out of the

\* There is an exception to this arrangement in the first, tenth, eleventh, and twelfth ribs, which have a single articular surface to a single vertebra.

*line* of the back, provided against; and to withstand the bones being pulled asunder longitudinally, or in the direction of that line, a strong membrane runs from one end of the chain to the other, sufficient to resist any force which is ever likely to act in the direction of the back, or parallel to it, and consequently to secure the whole combination in their places. The general result is, that not only the motions of the human body necessary for the ordinary offices of life are performed with safety, but that it is an accident hardly ever heard of, that even the gesticulations of a harlequin distort his spine.\*

Upon the whole, and as a guide to those who may be inclined to carry the consideration of this subject farther, there are three views under which the spine ought to be regarded, and in all which it cannot fail to excite our admiration. These views relate to its ar-

\* The human spine possesses great strength combined with great flexibility. Its pyramidal form obviously contributes to the former. "The arrangement of the solid matter of which it is composed, is such as to contribute to the same effect; for that solid matter, instead of being collected into one solid mass, is diffused in such a manner as to resemble the structure of a sponge; and it is well known, with reference to the strength of artificial columns, that the same quantity of matter being given for each, those columns which are hollow are stronger than those which are solid."

"The flexibility of the spine is secured to the utmost requisite extent by the number of articulations or joints which it possesses, as well as by the elasticity of the substance constituting those joints: and the projecting parts or processes of the several vertebrae, which serve for the insertion of the muscles and tendons which are to move the whole, are differently disposed in the neck, the back, and the loins, so as to be accommodated to the degree and kind of motion in each; thus the vertebrae of the neck admit of a lateral motion to a greater extent than those of the back, and the vertebra; of the back admit of flexion and extension to a greater degree than those of the neck; while the vertebra of the loins, being intended for support rather than flexibility, have their processes so distributed, as to contribute principally to the former of those effects."

See Kidd's Introductory Lecture to a Course of Comparative Anatomy illustrative of Paley's Natural Theology, page 7, etc.

ticulations, its ligaments, and its perforation; and to the corresponding advantages which the body derives from it, for action, for strength, and for that which is essential to every part, a secure communication with the brain.

The structure of the spine is not in general different in different animals. In the serpent tribe, however, it is considerably varied; but with a strict reference to the convenience of the animal. For, whereas in quadrupeds the number of vertebrae is from thirty to forty, in the serpent it is nearly one hundred and fifty: whereas in men and quadrupeds the surfaces of the bones are flat, and these flat surfaces laid one against the other, and bound tight by sinews; in the serpent the bones play one within another like a ball and socket, so that they have a free motion upon one another in every direction: that is to say, in men and quadrupeds, firmness is more consulted; in serpents, pliancy.\* Yet even pliancy is not obtained at the expense of safety. The back-bone of a serpent, for coherence and flexibility, is one of the most curious pieces of animal mechanism with which we are acquainted.! The chain of a watch, (I mean the

\* Fig. G. Tab. IX. A part of the spine of a very large serpent, drawn from a specimen belonging to the School of Anatomy, Christ Church, Oxford. Fig. 3, shows the socket-joint. Fig. 4, the rounded head, which is placed at the posterior extremity of the body of the vertebra, and at the anterior, the deep depression (Fig. 3,) corresponds to it. The shape of the processes, which constitute the arches of the bodies of the vertebrae, is such as to permit free lateral motion.

In fish, which have more elastic but less flexible bodies, the structure of the spine differs. The end of each vertebra is a cup containing a viscid fluid, which keeps the bones from approaching nearer to each other than the limit of the elasticity of the lateral ligaments; the fluid is incompressible, therefore forms a ball round which the bony cups move; the ball having no cohesion, the centre of motion is always adapted to the change which the joint undergoes without producing friction.

† There are fifteen surfaces of articulation to each vertebra.

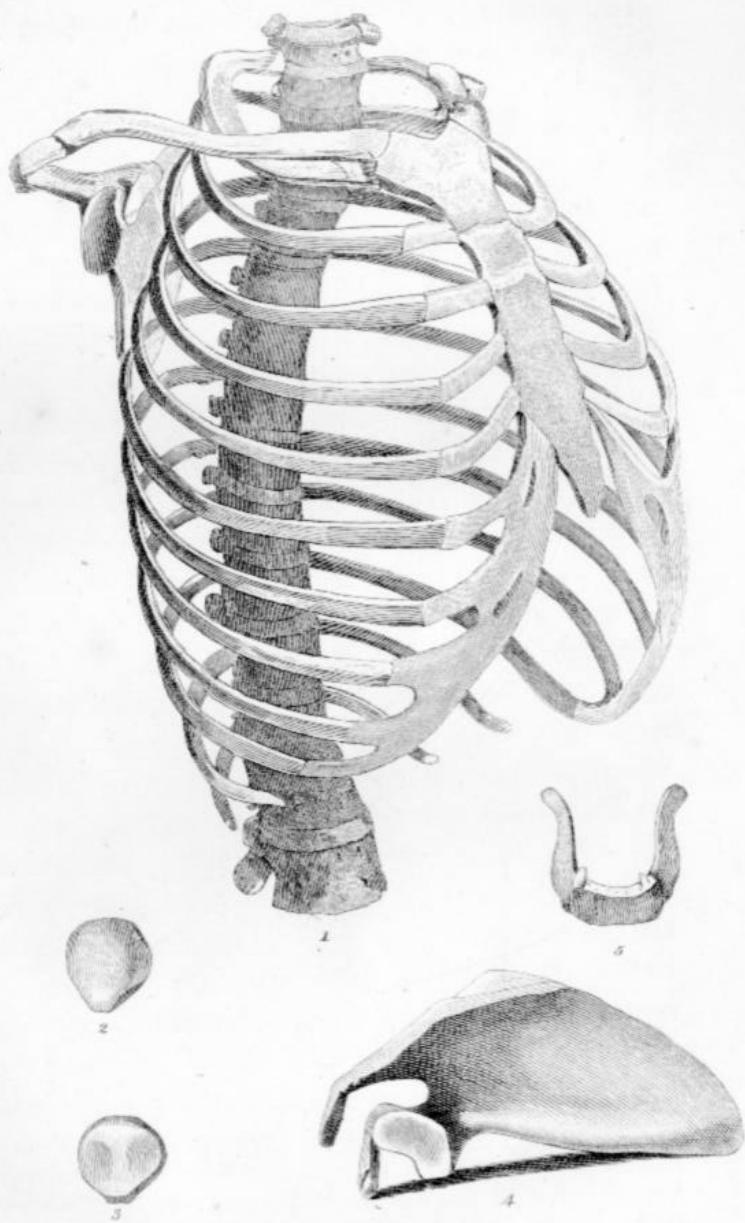

chain which passes between the spring-barrel and the fusee,) which aims at the same properties, is but a bungling piece of workmanship in comparison with that of which we speak.

IV. The reciprocal enlargement and contraction of the *chest*, to allow for the play of the lungs, depends upon a simple yet beautiful mechanical contrivance, referable to the structure of the bones which enclose it. The ribs are articulated to the back-bone, and to its side projections, *obliquely*: that is, in their natural position they bend or slope from the place of articulation downwards. But the basis upon which they rest at this end being fixed, the consequence of the obliquity, or the inclination downwards, is, that when they come to move, whatever pulls the ribs upwards, necessarily, at the same time, draws them out; and that, whilst the ribs are brought to a right angle with the spine behind, the sternum, or part of the chest to which they are attached in front, is thrust forward. The simple action, therefore, of the elevating muscles does the business; whereas, if the ribs had been articulated with the bodies of the vertebrae at right angles, the cavity of the thorax could never have been farther enlarged by a change of their position.\* If each rib had been a rigid bone, articulated at both ends to fixed bases, the whole chest had been immovable. †

\* The figure exhibits the obliquity of the articulation of the ribs, and the direction of *a*, the external, and *b*, the internal muscles of the ribs.

† Tab. X. Fig. 1. The *spine*, *ribs*, and *sternum*, constitute the framework of the *chest* or *thorax*. Referring, however, to the plate, or to nature, we observe that the ribs are not continued throughout from the spine to the sternum, but intervening *cartilages* complete the form of the chest,, by connecting the end of the first ten ribs to the breast bone. This is a further provision, relative to the mechanical function of the lungs, deserving our attention. The muscles of respiration enlarge the capacity

TAB. X.

*Published by J. Vincent Oxford.*

*J. & J. Collier 224 Strand.*

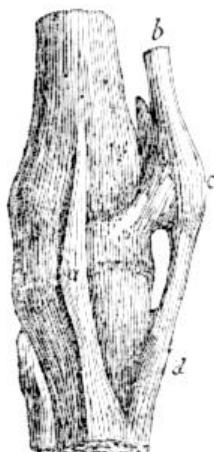

Keill has observed, that the breast-bone, in an easy inspiration, is thrust out one-tenth of an inch: and he calculates that this, added to what is gained to the space within the chest by the flattening or descent of the diaphragm, leaves room for forty-two cubic inches of air to enter at every drawing-in of the breath. When there is a necessity for a deeper and more laborious inspiration, the enlargement of the capacity of the chest may be so increased by effort, as that the lungs may be distended with seventy or a hundred such cubic inches. The thorax, says Schelhammer, forms a kind of bellows, such as never have been, nor probably will be made by any artificer.\*

of the chest by elevating the ribs; and, during the momentary interval of muscular action, the cartilages, from their great *elasticity*, restore the ribs to their former position.

\* Dr. Thompson considers the ordinary quantity of air contained in

V. The *patella*,\* or knee-pan, is a curious little bone; in its form and office, unlike any other bone of the body. It is circular; the size of a crown piece; pretty thick; a little convex on both sides, and covered with a smooth cartilage. It lies upon the front of the knee: and the powerful tendons, by which the leg is brought forward, pass into it, (or rather it makes a part of their continuation,) from their origin in the thigh to their insertion in the tibia. † It protects both the tendon and the joint from any injury which either might suffer by the rubbing of one against the other, or by the pressure of unequal surfaces.

It also gives to the tendons a very considerable

the lungs is 280 cubic inches, and that there enters into, or goes out, at each inspiration or expiration forty inches. Thus, supposing twenty inspirations in a minute, the quantity of air which would enter and pass out in this time would be 800 inches; which makes 48,000 in the hour, and in twenty-four hours 1,152,000 cubic inches.

\* Fig. 2. Represents the true shape of the *patella*, the *anterior surface convex*. Fig. 3, the *posterior surface*, which has two *concave* depressions adapted to the condyles of the thigh bone. The projection of the patella, as a lever, or pulley, removes the acting force from the centre of motion, by which means the muscles have a greater advantage in extending the leg. That this bone is "unlike any other in the body," is a mistake; such bones are numerous, though less obvious, for they do not exceed the size of a pea: these are called *sesamoid bones*, and are formed in the flexor tendons of the thumb, and sometimes in the fingers. They are frequently found under the tendons of some of the muscles. Two of these sort of bones are constantly found under the articulation of the great toe with the foot: some also are discovered, though not so constantly, under the corresponding joints of the other toes. The sesamoid bones, like the patella, remove their tendons from the centre of motion, facilitate their glidings over the bone, and protect their articulations.

† In this figure, *b*, *c*, *d* show the ligaments of the patella.

mechanical advantage, by altering the line of their direction, and by advancing it farther out from the centre of motion; and this upon the principles of the resolution of force, upon which principles all machinery is founded. These are its uses. But what is most observable in it is, that it appears to be supplemental, as it were, to the frame; added, as it should almost seem, afterward; not quite necessary, but very convenient. It is separate from the other bones; that is, it is not connected with any other bones by the common mode of union. It is soft, or hardly formed, in infancy; and produced by an ossification, of the inception or progress of which no account can be given from the structure or exercise of the part.

VI. The *shoulder-blade*\* is, in some material respects, a very singular bone; appearing to be made so expressly for its own purpose, and so independently of every other reason. In such quadrupeds as have no collar-bones, which are by far the greater number, the shoulder-blade has no bony communication with the trunk, either by a joint, or process, or in any other way. It does not grow to, or out of, any other bone of the trunk. It does not apply to any other bone of the trunk; (I know not whether this be true of any second bone in the body, except perhaps the *os hyoides*: †) in strictness, it forms no part of the skeleton. It is bedded in the flesh; attached only to the muscles. It

\* Fig. 4. This bone (*the scapula*) is joined to the collar-bone by ligaments and to the thorax by powerful muscles which are capable of sustaining immense weights, and whose action gives the various directions to the arm, and enables it freely to revolve at the shoulder-joint.

† The *os hyoides* is a small bone situated at the root of the tongue, Fig. 5. It serves as a lever or point for attaching the muscles of the tongue, larynx, and those of deglutition. The figure is introduced, as it will be again referred to.

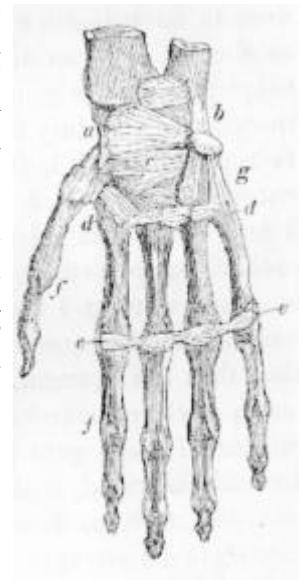

is no other than a foundation bone for the arm, laid in separate, as it were, and distinct from the general ossification. The lower limbs connect themselves at the hip with bones which form part of the skeleton; but this connexion, in the upper limbs, being wanting, a basis, whereupon the arm might be articulated, was to be supplied by a detached ossification for the purpose.

#### OF THE JOINTS.

I. The above are a few examples of bones made remarkable by their configuration: but to almost all the bones belong *joints*; and in these, still more clearly than in the form or shape of the bones themselves, are seen both contrivance and contriving wisdom. Every joint is a curiosity, and is also strictly mechanical. There is the hinge-joint, and the mortice-and-tenon joint; each as manifestly such, and as accurately defined, as any which can be produced out of a cabinetmaker's shop; and one or the other prevails, as either is adapted to the motion which is wanted: e. g. a mortice-and-tenon, or ball-and-socket joint, is not required at the knee, the leg standing in need only of a motion backward and forward in the same plane, for which a hinge-joint is sufficient; a mortice-and-tenon or ball-and-socket joint is wanted at the hip, that not only the progressive step may be provided for, but the interval between the limbs may be enlarged or contracted at pleasure. Now, observe, what would have been the inconveniency, i. e. both the superfluity and the defect of articulation, if the case had been inverted; if the ball-and-socket joint had been at the knee, and the hinge-joint at the hip. The thighs must have been kept constantly together, and the legs had been loose and straddling. There would have been no use, that

we know of, in being able to turn the calves of the legs before; and there would have been great confinement by restraining the motion of the thighs to one plane. The disadvantage would not have been less, if the joints at the hip and the knee had been both of the same sort; both balls and sockets, or both hinges: yet why, independently of utility, and of a Creator who consulted that utility, should the same bone (the thighbone) be rounded at one end and channelled at the other?

The *hinge-joint* is not formed by a bolt passing through the two parts of the hinge, and thus keeping them in their places, but by a different expedient. A strong, tough, parchment-like membrane, rising from the receiving bones, and inserted all round the received bones a little below their heads, encloses the joint on every side. This membrane ties, confines, and holds the ends of the bones together; keeping the corresponding parts of the joint, i. e. the relative convexities and concavities, in close application to each other.\*

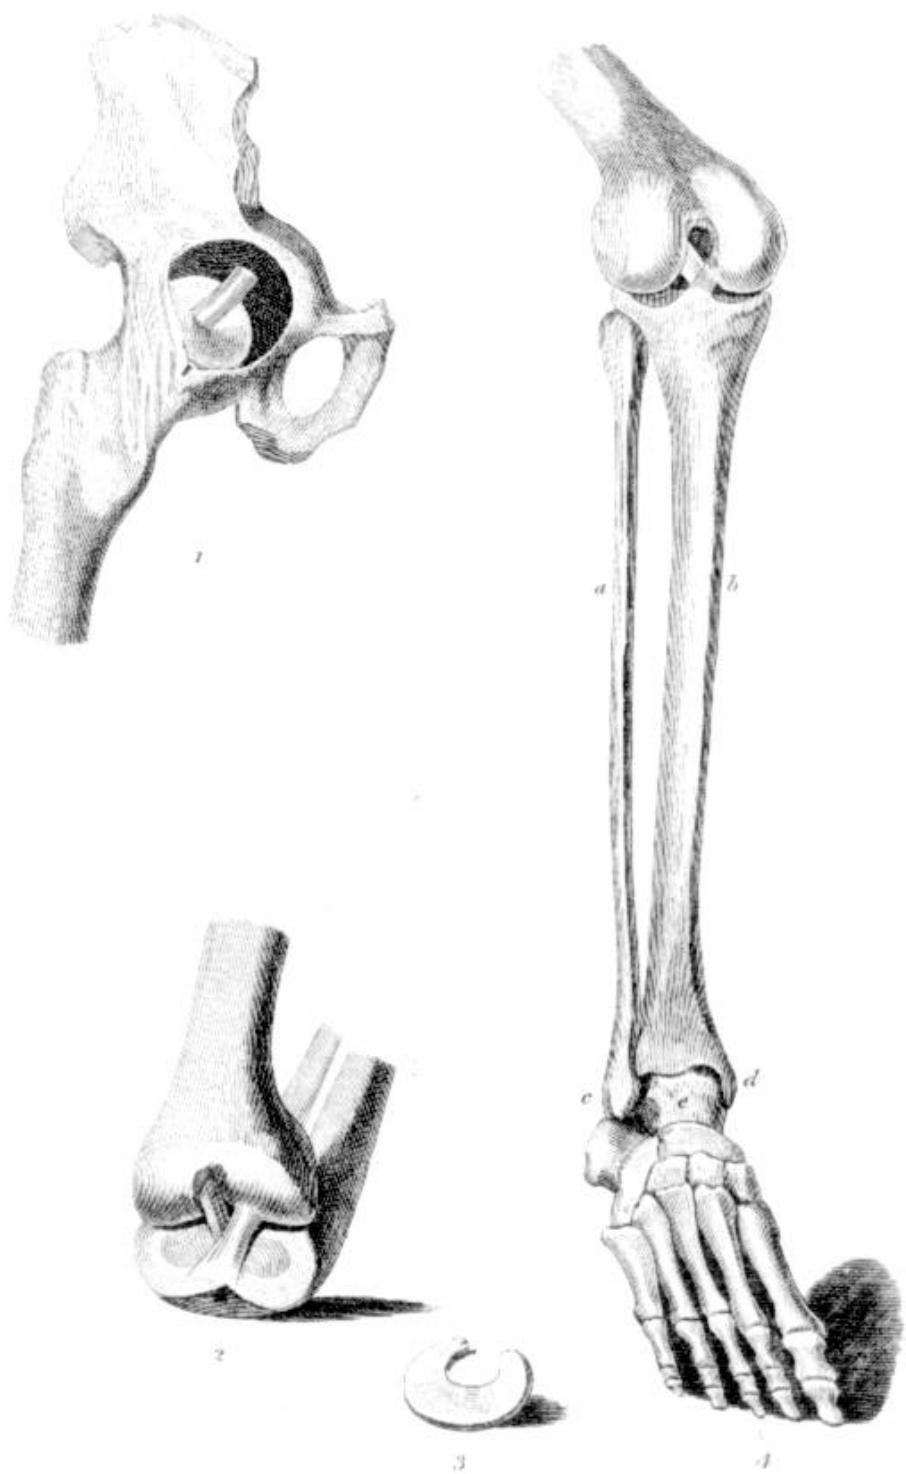

\* This figure exhibits the ligaments of the hand: *a, b, c*, ligaments of the wrist; *d, e*, transverse; ligament of the hand; *f, f*, lateral ligaments of the fingers.

This membrane is the *capsular*, or *bursal ligament*, common to every moveable joint. It certainly connects the bones together, but does not possess much strength; its chief use is to produce and preserve the synovia in the part where it is required. The security and strength of the hinge-

For the *ball-and-socket joint*, beside the membrane already described, there is in one important joint, as an additional security, a short, strong, yet flexible ligament, inserted by one end into the head of the ball, by the other into the bottom of the cup; which ligament keeps the two parts of the joint so firmly in their place, that none of the motions which the limb naturally performs, none of the jerks and twists to which it is ordinarily liable, nothing less indeed than the utmost and the most unnatural violence, can pull them asunder. It is hardly imaginable, how great a force is necessary, even to stretch, still more to break this ligament; yet so flexible is it, as to oppose no impediment to the suppleness of the joint. By its situation, also, it is inaccessible to injury from sharp edges. As it cannot be ruptured, (such is its strength,) so it cannot be cut, except by an accident which would sever the limb. If I had been permitted to frame a proof of contrivance, such as might satisfy the most distrustful inquirer, I know not whether I could have chosen an example of mechanism more unequivocal, or more free from objection, than this ligament. Nothing can be more mechanical; nothing, however subservient to the safety, less capable of being generated by the action of the joint. I would particularly solicit the reader's attention to this provision, as it is found in the head of the *thighbone*.\* to its strength, its structure, and its use. It

joint depends on certain ligaments called lateral ligaments, and the tendons of those muscles which pass over it. In the particular instance of the knee, from its being the largest joint in the body, there is, as we shall presently find, an additional contrivance to prevent dislocation.

\* Tab. XI. Fig. 1. The capsular ligament is here opened in order to show the ligament of the hip, named the *round ligament*. It allows considerable latitude of motion, at the same time that it is the great safeguard against dislocation. This ligament is also common to all quadrupeds, even in the more largo and unwieldy, as the Hippopotamus and Rhinoceros.

*Published by J. Vincent Oxford.*

*1830.*

is an instance upon which I lay my hand. One single fact, weighed by a mind in earnest, leaves oftentimes the deepest impression. For the purpose of addressing different understandings and different apprehensions— for the purpose of sentiment, for the purpose of exciting admiration of the Creator's works, we diversify our views, we multiply our examples; but for the purpose of strict argument, one clear instance is sufficient; and not only sufficient, but capable perhaps of generating a firmer assurance than what can arise from a divided attention. The *ginglymus*, or hinge-joint, does not, it is manifest, admit of a ligament of the same kind with that of the ball-and-socket joint, but it is always fortified by the species of ligament of which it does admit. The strong, firm, investing membrane, above described, accompanies it in every part: and in particular joints, this membrane, which is properly a ligament, is considerably stronger on the sides than either before or behind,\* in order that the convexities may play true in their concavities, and not be subject to slip sideways, which is the chief danger; for the muscular tendons generally restrain the parts from going farther than they ought to go in the plane of their motion. In the *knee*, which is a joint of this form, and of great importance, there are superadded to the common provisions for the stability of the joint, two strong ligaments which cross each other; and cross each other in such a manner, as to secure the joint from being displaced in any assignable direction. † "I think," says Cheselden,

ceros—it is wanting in the Elephant only, whose limbs, ill qualified for active movements, do not seem to require this security to the joint.

\* The sides of hinge-joints are always strengthened by *lateral ligaments*, distinct from the capsular, the use of which is correctly stated.

† Fig. 2 and 4, the *crucial* or *internal ligaments* of the knee-joint, arise from each side of the depression between the condyles of the thigh-

"that the knee cannot be completely dislocated without breaking the *cross ligaments*." We can hardly help comparing this with the binding up of a fracture, where the fillet is almost always strapped across, for the sake of giving firmness and strength to the bandage.

Another no less important joint, and that also of the ginglymus sort, is the *ankle*; yet though important, (in order, perhaps, to preserve the symmetry and lightness of the limb,) *small*, and on that account more likely to injury. Now this joint is strengthened, i. e. is defended from dislocation, by two remarkable processes or prolongations of the bones of the leg: which processes form the protuberances that we call the inner and outer ankle. It is part of each bone going down lower than the other part, and thereby overlapping the joint: so that, if the joint be in danger of slipping outward, it is curbed by the inner projection, i. e. that of the tibia; if inward, by the outer projection, i. e. that of the fibula. Between both, it is locked in its position. I know no account that can be given of this structure, except its utility. Why should the tibia terminate, at its lower extremity, with a double end, and the fibula the same—but to barricade the joints on both sides by a continuation of part of the thickest of the bone over it?\* The

bone; the anterior is fixed into the centre, the posterior into the back of the articulation of the tibia. This structure properly limits the motions of the joint, and gives the firmness requisite for violent exertions. Viewing the form of the bones, we should consider it one of the weakest and most superficial, but the strength of its ligaments and the tendons passing over it renders it the most secure, and the least liable to dislocation of any joint in the whole body.

\* Fig. 4: *a*, the *fibula*; *b*, the *tibia*, the lower extremities of which, *c*, *d*, form the outer and inner ankle, and receive *e*, the great articulating bone of the foot, called the astragalus, between them. When the foot sustains the weight of the body the joint is firm; but when raised, it easily rolls on the end of these bones, so that the toe is directed to the place on which we intend to step.

joint at the *shoulder*, compared with the joint at the *hip*, though both ball-and-socket joints, discovers a difference in their form and proportions, well suited to the different offices which the limbs have to execute. The cup or socket at the shoulder is much shallower and flatter than it is at the hip, and is also in part formed of cartilage set round the rim of the cup. The socket, into which the head of the thigh-bone is inserted, is deeper, and made of more solid materials.\* This agrees with the duties assigned to each part. The arm is an instrument of motion, principally, if not solely. Accordingly, the shallowness of the socket at the shoulder, and the yieldingness of the cartilaginous substance with which its edge is set round, and which in fact composes a considerable part of its concavity, are excellently adapted for the allowance of a free motion and a wide range; both which the arm wants. Whereas, the lower limb, forming a part of the column of the body; having to support the body, as well as to be the means of its locomotion; firmness was to be consulted, as well as action. With a capacity for motion, in all directions indeed, as at the shoulder, but not in any direction to the same extent as in the arm, was to be united stability, or resistance to dislocation. Hence the deeper excavation of the socket; and the presence of a less proportion of cartilage upon the edge.

The suppleness and pliability of the joints we every moment experience; and the *firmness* of animal articulation, the property we have hitherto been considering,

\* The socket for the head of the thigh-bone is indeed deeper than that at the shoulder, but the "materials" which form the concavities are the same; both are solid bone covered by cartilages, and both have a rim of a strong fibro-cartilaginous texture, not only for the purpose of rendering the socket deeper, but for preventing fractures of the rim in robust exercises, to which, were it bony, it would be very liable.

may be judged of from this single observation—that, at any given moment of time, there are millions of animal joints in complete repair and use, for one that is dislocated; and this, notwithstanding the contortions and wrenches to which the limbs of animals are continually subject.

II. *The joints*, or rather the ends of the bones which form them, display also, in their configuration, another use. The nerves, blood-vessels, and tendons, which are necessary to the life, or for the motion of the limbs, must, it is evident, in their way from the trunk of the body to the place of their destination, travel over the moveable joints; and it is no less evident, that, in this part of their course, they will have, from sudden motions, and from abrupt changes of curvature, to encounter the danger of compression, attrition, or laceration. To guard fibres so tender against consequences so injurious, their path is in those parts protected with peculiar care; and that by a provision in the figure of the bones themselves. The nerves which supply the *fore-arm*, especially the inferior cubital nerves, are at the elbow conducted, by a kind of covered way, between the condyles, or rather under the inner extubercence of the bone which composes the upper part of the arm.\* At the *knee*, the extremity of the thigh-bone is divided by a sinus or cleft into two heads or protuberances: and these heads on the back part stand out beyond the cylinder of the bone. Through the hollow, which lies between the hind-parts of these two heads, that is to say, under the ham, between the hamstrings, and within the concave recess of the bone formed by the extuberances

\* In many animals, the nerves of the fore-leg, which correspond with these nerves, for their protection are actually conducted through a hole in the bone.

on each side; in a word, long a defile, between rocks, pass the great vessels and nerves which go to the leg. Who led these vessels by a road so defended and secured? In the joint at the *shoulder*, in the edge of the cup which receives the head of the bone, is a *notch*,\* which is joined or covered at the top with a ligament. Through this hole, thus guarded, the blood-vessels steal to their destination in the arm, instead of mounting over the edge of the concavity.

III. In all joints, the ends of the bones, which work against each other, are tipped with *gristle*. In the ball-and-socket joint, the cup is lined, and the ball capped with it. The smooth surface, the elastic and unfriable nature of cartilage, render it of all substances the most proper for the place and purpose. I should, therefore, have pointed this out amongst the foremost of the provisions which have been made in the joints for the facilitating of their action, had it not been alleged, that cartilage in truth is only nascent or imperfect bone; and that the bone in these places is kept soft and imperfect, in consequence of a more complete and rigid ossification being prevented from taking place by the continual motion and rubbing of the surfaces; which being so, what we represent as a designed advantage, is an unavoidable effect. I am far from being convinced that this is a true account of the fact; or that, if it were so, it answers the argument. To me, the surmounting of the ends of the bones with gristle, looks more like a plating with a different metal, than like the same metal, kept in a different state by the action to which it is

\* This is called the *semilunar notch*; it is not "in the edge of the cup," but on the superior border of the bone, and near the cavity; see *a*, Tab. X. Fig. 4. A ligament extends from one point of the notch to the other, forming a foramen, which is traversed by the superior scapular nerves and blood-vessels.

exposed.\* At all events, we have a great particular benefit, though arising from a general constitution: but this last not being quite what my argument requires, lest I should seem by applying the instance to overrate its value, I have thought it fair to state the question which attends it.

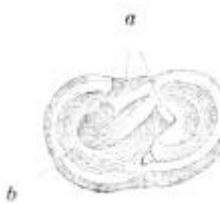

IV. In some joints, very particularly in the knees, there are loose cartilages or gristles between the bones, and within the joint, so that the ends of the bones, instead of working upon one another, work upon the intermediate cartilages. † Cheselden has observed that the contrivance of a loose ring is practised by mechanics, where the friction of the joints of any of their machines is great; as between the parts of crook-hinges of large gates, or under the head of the male screw of large vices. The cartilages of which we speak, have very much of the form of these rings. The comparison moreover shows the reason why we find them in the

\* *Cartilage* is of a white or pearly colour, elastic and softer than bone, from having a smaller quantity of earth in its composition. It possesses neither nerves nor blood-vessels, at least in a sound adult state none can be demonstrated; and having no sensibility, it is a material eminently fitted for the compression and friction it is perpetually undergoing. Where the motion is confined, the cartilage firmly unites bones, as, for instance, the ribs to the breast-bone.

† Fig. 3, one of the *interarticular* cartilages of the knee, from their shape called *semilunar*; it is also represented *in situ*, Fig. 2. The outer edge of each cartilage is thick, the inner concave edge thin; the sockets for the condyles of the thigh-bone are thus rendered deeper, and the cartilages are so fixed as to allow a little play on the tibia. Another use which has been assigned to them is that of cushions, which, giving way to pressure, again recover their form, and protect the articular surfaces to which they correspond.

A moving cartilage is not common, but is peculiar to those joints whose motions are very frequent, or which move under a great weight. It is a contrivance found at the jaw, the inner head of the collar-bone, and the articulation of the wrist, as well as at the knee. The obvious use is to lessen friction and facilitate motion.

knees rather than in other joints. It is an expedient, we have seen, which a mechanic resorts to, only when some strong and heavy work is to be done. So here the thigh-bone has to achieve its motion at the knee, with the whole weight of the body pressing upon it, and often, as in rising from our seat, with the whole weight of the body to lift. It should seem also, from Cheselden's account, that the slipping and sliding of the loose cartilages, though it be probably a small and obscure change, humoured the motion of

the end of the thigh-bone, under the particular configuration which was necessary to be given to it for the commodious action of the tendons; (and which configuration requires what he calls a variable socket, that is, a concavity, the lines of which assume a different curvature in different inclinations of the bones.\*)

V. We have now done with the configuration: but there is also in the joints, and that common to them all, another exquisite provision, manifestly adapted to their use, and concerning which there can, I think, be no dispute, namely, the regular supply of a *muoilage*, more emollient and slippery than oil itself, which is constantly softening and lubricating the parts that rub upon each other, and thereby diminishing the effect of attrition in the highest possible degree. † For the continual secretion of this important liniment, and for the feeding of the cavities of the joint with it, glands are fixed near each

\* In the above figure, *a*, the crucial ligaments are separated from the thigh-bone; *b*, *c*, the interarticular cartilages.

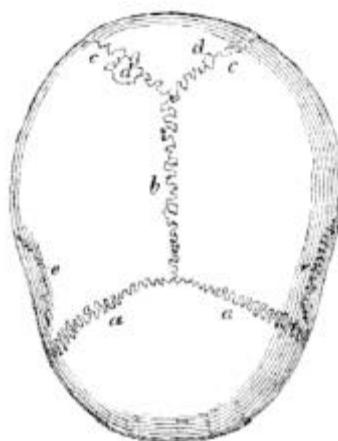

† This mucilage is termed *synovia*; vulgarly called joint oil, but it has no property of oil. It is very viscid, and at the same time smooth and slippery to the touch; and therefore better adapted than any oil to lubricate the interior of the joints and prevent ill effects from friction.

joint; the excretory ducts of which glands dripping with their balsamic contents, hang loose like fringes within the cavity of the joints. A late improvement in what are called friction-wheels, which consist of a mechanism so ordered, as to be regularly dropping oil into a box, which encloses the axis, the nave, and certain balls upon which the nave revolves, may be said, in some sort, to represent the contrivance in the animal joint; with this superiority, however, on the part of the joint, viz. that here, the oil is not only dropped, but *made*.\* In considering the joints, there is nothing, perhaps, which ought to move our gratitude more than the reflection, *how well they wear*. A limb shall swing upon its hinge, or play in its socket, many hundred times in an hour, for sixty years together, without diminution of its agility: which is a long time for any thing to last; for any thing so much worked and exercised as the joints are. This durability I should attribute, in part, to the provision which is made for the preventing of wear and tear, first, by the polish of the cartilaginous surfaces; secondly, by the healing lubrication of the mucilage; and, in part, to that astonishing property of animal constitutions, assimilation; by which, in every portion of the body, let it consist of what it will, substance is restored, and waste repaired.!

\* From this interesting description, a very correct idea may be formed of the apparatus termed *bursae mucosae*. These are *masses of fat* found in the greater number of joints, covered with a continuation of the inner layer of the capsular ligament, and projecting in such a manner as to receive gentle pressure from the motions of the joint; and in proportion to the frequency of the motion, the fluid which the bursa; secrete is supplied in a greater or less quantity. From the edges of these bodies there are *fimbriae* which convey the synovia into the cavity of the joint. This contrivance is found not only in joints, but between other parts exposed to friction, as between *tendons* and *bones*, where they play on each other.

† There is waste in the animal system but not wear; for as the

Movable joints, I think, compose the curiosity of bones; but their union, even where no motion is intended or wanted, carries marks of mechanism and of mechanical wisdom. The teeth, especially the front teeth, are one bone fixed in another, like a peg driven into a board. The sutures of the skull are like the edges of two saws clapped together, in such a manner as that the teeth of one enter the intervals of the other.\* We have

structure of the part is originally perfected by the action of the vessels, "the function or operation of the part is made the stimulus to those vessels. The cuticle of the hands wears away like a glove; but the pressure stimulates the living surface to force successive layers of skin under that which is wearing."

\* *a, a*, the coronal; *b*, the sagittal; *c, c*, the lambdoidal; *d, d*, irregular sutures; and *e*, the squamous sutures.

Most of the bones of the skull are composed of two plates or *tablets*, with an intermediate spongy vascular substance; the outer tablet is *fibrous*, having the edges curiously indented and united by a *dove-tailed* suture; the inner from its brittleness is called *vitreous*, and therefore merely joined together in a straight line; this mode of union is not accidental—not the result of chance, but design. The author of the treatise on "Animal Mechanics" gives the following admirable illustration of the structure:—

"Suppose a carpenter employed upon his own material—he would join a box with regular indentations by dove-tailing, because he knows that the material on which he works, from its softness and toughness, admits of such adjustment of its edges. The processes of bone shoot into the opposite cavities with an exact resemblance to the fox-tail wedge of the carpenter.

"But if a workman in glass or marble were to join these materials, he would smooth the edges and unite them by cement; for if he could succeed

sometimes one bone lapping over another, and planed down at the edges; sometimes also the thin lamella of one bone received into a narrow furrow of another. In all which varieties, we seem to discover the same design, viz. firmness of juncture, without clumsiness in the seam.

## CHAPTER IX. OF THE MUSCLES.

MUSCLES, with their tendons, are the instruments by which animal motion is performed. It will be our business to point out instances in which, and properties with respect to which, the disposition of these muscles is as strictly mechanical, as that of the wires and strings of a puppet.\*

I. We may observe, what I believe is universal, an exact relation between the joint and the muscles which move it. Whatever motion the joint, by its mechanical construction, is capable of performing, that motion, the annexed muscles, by their position, are capable of producing. For example; if there be, as at the knee and

in indenting the line of union, he knows that his material would chip off on the slightest vibration.

"Now apply this principle to the skull; the outer table, which resembles wood, is indented and dove-tailed; the inner glassy table has its edges simply laid in contact."

\* Muscles are the *fleshy* parts of the body which surround the bones, having a fibrous texture; a muscle being composed of a number of *muscular fasciculi*, which are composed of fibres still smaller; these result from fibres of a less volume, until by successive division we arrive at very small fibres no longer divisible. These muscular fibres are longer or shorter according to the muscles to which they belong; and every fibre is fixed by its two extremities to *tendon* or *aponeurosis*, which are the "wires and strings" which conduct the muscular power when they contract.

TABLE XI

Published by *A. Vincent O'Gorman*

elbow, a hinge-joint, capable of motion only in the same plane, the leaders, as they are called, i. e. the muscular tendons, are placed in directions parallel to the bone, so as, by the contraction or relaxation of the muscles to which they belong, to produce that motion and no other., If these joints were capable of a freer motion, there are no muscles to produce it. Whereas at the shoulder and the hip, where the ball-and-socket joint allows by its construction of a rotatory or sweeping motion, tendons are placed in such a position, and pull in such a direction, as to produce the motion of which the joint admits. For instance, the sartorius or tailor's muscle, rising from the spine,\* running diagonally across the thigh, and taking hold of the inside of the main bone of the lag, a little below the knee, enables us, by its contraction, to throw one leg and thigh over the other; giving effect, at the same time, to the ball-and-socket joint at the hip, and the hinge-joint at the knee. † There is, as we have seen, a specific mechanism in the bones, for the rotatory motions of the head and hands: there is, also, in the oblique direction of the muscles belonging to them, a specific provision for the putting of this mechanism of the bones into action. And mark the consent of uses. The oblique muscles would have been inefficient without that particular articulation; that particular articulation would have been lost, without the oblique muscles. It may be proper, however, to observe, with respect to the *head*, although I think it does not vary the case, that its oblique motions and inclinations are often motions in a *diagonal*, produced by

\* This should read, "The front upper spine of the hip bone."

† Tab. XII. Fig. 1. *a, a*, the *sartorius*, is the longest muscle of the whole fabric: it is extended obliquely across the thigh from the fore part of the hip to the inner side of the tibia. Its office is to bend the knee and bring the leg inwards.

the joint action of muscles lying in straight directions. But whether the pull be single or combined, the articulation is always such, as to be capable of obeying the action of the muscles. The oblique muscles attached to the head are likewise so disposed, as to be capable of steadyng the globe, as well as of moving it.\* The head of a new-born infant is often obliged to be filleted up. After death, the head drops and rolls in every direction. So that it is by the equilibre of the muscles, by the aid of a considerable and equipollent muscular force in constant exertion, that the head maintains its erect posture. The muscles here supply what would otherwise be a great defect in the articulation; for the joint in the neck, although admirably adapted to the motion of the head, is insufficient for its support. It is not only by the means of a most curious structure of the bones that a man turns his head, but by virtue of an adjusted muscular power that he even holds it up.

As another example of what we are illustrating, viz. conformity of use between the bones and the muscles, it has been observed of the different vertebreas, that their processes are exactly proportioned to the quantity of motion which the other bones allow of, and which the respective muscles are capable of producing.

## II. A muscle acts only by contraction. † Its force

\* There are two pairs of oblique muscles; Fig. 2, a, a, the *obliquus capitis superior*, arising from the transverse process of the atlas, and inserted into the occipital bone; b, b, the *obliquus capitis inferior*, arising from the spinous process of the dentata, and inserted into the transverse process of the atlas. These muscles roll the head on one side and draw it backwards.

† The muscular fibres are parallel and straight, if the muscle be in a state of repose; but when the muscle contracts, immediately the fibres bend themselves into a zigzag direction, and present a number of angular and regularly opposed undulations. Muscular action is under the influence of the brain and nerves; if the brain of a man or animal is compressed, the

TAB. XIII.

*Published by J. Vincent Odeard*

is exerted in no other way. When the exertion ceases, it relaxes itself, that is, it returns by relaxation to its former state; but without energy. This is the nature of the muscular fibre: and being so, it is evident that the reciprocal *energetic* motion of the limbs, by which we mean motion *with force* in opposite directions, can only be produced by the instrumentality of opposite or antagonist muscles; of flexors and extensors answering to each other. For instance, the biceps and brachiaeus *internus*\* muscles, placed in the front part of the upper arm, by their contraction bend the elbow; and with such degree of force, as the case requires, or the strength admits of. The relaxation of these muscles, after the effort, would merely let the fore-arm drop down. For the *back stroke*, therefore, and that the arm may not only bend at the elbow, but also extend and straighten itself, with force, other muscles, the longus and brevis brachiaeus *externus* † and the anconaeus, ‡ placed on the hinder part of the arm, by their contractile twitch fetch back the fore-arm into a straight line with the cubit, with no less force than that with which it was bent out of it. The same thing obtains in all the limbs, and in every moveable part of the body. A ringer is not bent

faculty of contracting the muscle ceases; the nerves of a muscle being cut, it loses all power.

\* Tab. XIII. Fig. 1. *a*, the *biceps* (*biceps flexor cubiti*), arise by two portions from the scapula; they form a thick mass of flesh in the middle of the arm, which is finally inserted into the upper end of the radius; *b*, the *brachiaeus interims*, arises from the middle of the *os humeri*, and is inserted into the ulna. Both these muscles bend the fore-arm.

† *c*, the *longus et brevis brachiaeus externus*, better named as one muscle, *triceps extensor cubiti*. It is attached to the inferior edge of the scapula, and to the *os humeri*, by three distinct heads, which unite and invest the whole back part of the bone; which, becoming a strong tendon, is implanted into the elbow. It is a powerful extensor of the fore-arm.

‡ *d*, the *anconaeus*, a small triangular muscle, situated at the outer side of the elbow; it assists the last muscle.

and straightened, without the *contraction* of two muscles taking place.\* It is evident, therefore, that the animal functions require that particular disposition of the muscles which we describe by the name of antagonist muscles. And they are accordingly so disposed. Every muscle is provided with an adversary. They act, like two sawyers in a pit, by an opposite pull; and nothing surely can more strongly indicate design and attention to an end, than their being thus stationed, than this collocation. The nature of the muscular fibre being what it is, the purposes of the animal could be answered by no other. And not only the capacity for motion, but the aspect and symmetry of the body is preserved by the muscles being marshalled according to this order; e. g. the mouth is holden in the middle of the face, and its angles kept in a state of exact correspondency, by several muscles drawing against, and balancing each other. † In a hemiplegia, ‡ when the muscles on one side are weakened, the muscles on the other side draw the mouth awry.

III. Another property of the muscles, which could only be the result of care, is, their being almost universally so disposed, as not to obstruct or interfere with one another's action. I know but one instance in which this impediment is perceived. We cannot easily swallow whilst we gape. This, I understand, is owing to the muscles employed in the act of deglutition being so implicated with the muscles of the lower jaw, that, whilst these last are contracted, the former cannot act with freedom. The obstruction is, in this instance, attended with little inconveniency; but it shows what

\* Four muscles are concerned in producing every such movement of the finger, viz. in bending the finger the *flexor sublimis*, *flexor profundus*, and the *lumbricus* contract; in again bringing it into the straight position, the *extensor* muscle is called into action.

† See Tab. XIV. Fig. 3. ‡ A paralytic affection of one side of the body.

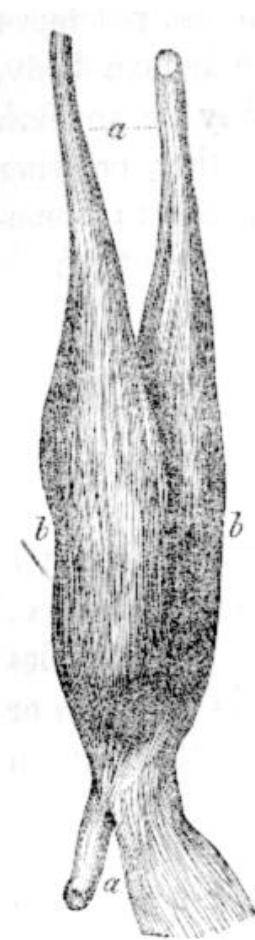

the effect is where it does exist; and what loss of faculty there would be if it were more frequent. Now when we reflect upon the number of muscles, not fewer than four hundred and forty-six in the human body, known and named,\* how contiguous they lie to each other, in layers, as it were, over one another, crossing one another, sometimes imbedded in one another; sometimes perforating one another; an arrangement, which leaves to each its liberty, and its full play, must necessarily require meditation and counsel.

IV. The following is oftentimes the case with the muscles. Their action is wanted, where their situation would be inconvenient. In which case, the body of the muscle is placed in some commodious position at a distance, and made to communicate with the point of action by slender strings or wires. If the muscles which move the fingers had been placed in the palm or back of the hand, they would have swelled that part to an awkward and clumsy thickness. The beauty, the proportions of the part, would have been destroyed. They are therefore disposed in the arm, and even up to the elbow; and act by long tendons, strapped down at the wrist, and passing under the ligaments to the fingers, and to the joints of the fingers, which they are severally to move. † In like manner, the muscles which move the toes, and many of the joints of the foot, how gracefully are they disposed in the calf of the leg, instead of forming an unwieldy tumefaction in the foot itself! The observation may be repeated of the muscle which draws the nictitating membrane over the eye. Its office is in the front of the eye; but its body is lodged

\* There are five hundred and twenty-seven muscles described by more modern anatomists.

† See Tab. XIII. Fig. 1 and 2. *e, e*, the *annular ligament* of the wrist, under which pass the tendons of the muscles of the fingers.

in the back part of the globe, where it lies safe, and where it encumbers nothing.

V. The great mechanical variety in the figure of the muscles may be thus stated. It appears to be a fixed law, that the contraction of a muscle shall be towards its centre. Therefore the subject for mechanism on each occasion is, so to modify the figure, and adjust the position of the muscle, as to produce the motion required, agreeably with this law. This can only be done by giving to different muscles a diversity of configuration, suited to their several offices, and to their situation, with respect to the work which they have to perform. On which account we find them under a multiplicity of forms and attitudes; sometimes with double, sometimes with treble tendons, sometimes with none; sometimes one tendon to several muscles, at other times one muscle to several tendons.\* The shape of the organ is susceptible of an incalculable variety, whilst the original property of the

\* The annexed cut represents the biceps muscle of the arm: *a, a*, the tendons; *b, b*, the muscular fibres. The convenience and beauty of the tendons seem only an ulterior object, their necessity and utility principally claim our attention. The force which a muscle possesses is as the number of the muscular fibres; but a limited number of fibres only can be fixed to any certain point of bone destined to be moved, therefore the contrivance is, to attach them to a cord, called a sinew or tendon, which can be conveniently conducted and fixed to the bone. If we are desirous of moving a heavy weight, we tie a strong cord to it, that a greater number of men may apply their strength. Thus a similar effect is produced—the muscular fibres are the moving powers, the tendon is the cord attached to the point to be moved.

muscle, the law and line of its contraction, remains the same, and is simple.\* Herein the muscular system may be said to bear a perfect resemblance to our works of art. An artist does not alter the native quality of his materials, or their laws of action. He takes these as he finds them. His skill and ingenuity are employed in turning them, such as they are, to his account, by giving to the parts of his machine a form and relation, in which these unalterable properties may operate to the production of the effects intended.

VI. The ejaculations can never too often be repeated: —How many things must go right for us to be an hour at ease! how many more for us to be vigorous and active! Yet vigour and activity are, in a vast plurality of instances, preserved in human bodies, notwithstanding that they depend upon so great a number of instruments of motion, and notwithstanding that the defect or disorder sometimes of a very small instrument, of a single pair, for instance, out of the four hundred and forty-six muscles which are employed, may be attended with grievous inconveniency. There is piety and good sense in the following observation, taken out of the *Religious Philosopher*: "With much compassion," says this writer, "as well as astonishment at the goodness of our loving Creator, have I considered the sad state of a certain gentleman, who, as to the rest, was in pretty good health, but only wanted the use of these *two little muscles* that serve to lift up the eyelids, and so had almost lost the use of his sight, being forced, as

\* A good idea of the varied forms of the muscular system may be obtained by consulting Cowper's *Myotomia Reformata*, wherein are accurate figures of each detached muscle. The splendid folio of Albinus contains fine engravings of the bones and muscles; but there is no book which we have more gratification in recommending than the admirable work of M. Jules Cloquet, the *Anatomiae de l'Homme*.

long as this defect lasted, to shove up his eyelids every moment with his own hands!"\* In general we may remark, in how small a degree those, who enjoy the perfect use of their organs, know the comprehensiveness of the blessing, the variety of their obligation. They perceive a result, but they think little of the multitude of concurrences and rectitudes which go to form it.

Besides these observations, which belong to the muscular organ as such, we may notice some advantages of structure, which are more conspicuous in muscles of a certain class or description than in others. Thus:

I. The variety, quickness, and precision, of which muscular motion is capable, are seen, I think, in no part so remarkably as in the *tongue*. It is worth any man's while to watch the agility of his tongue; the wonderful promptitude with which it executes changes of position, and the perfect exactness. Each syllable of articulated sound requires for its utterance a specific action of the tongue, and of the parts adjacent to it. The disposition and configuration of the mouth, appertaining to every letter and word, is not only peculiar, but, if nicely and accurately attended to, perceptible to the sight; insomuch, that curious persons have availed themselves of this circumstance to teach the deaf to speak, and to understand what is said by others. In the same person, and after his habit of speaking is formed, one, and only one, position of the parts will produce a given articulate sound correctly. How instantaneously are these positions assumed and dismissed! how numerous are the permutations, how

\* Tab.XIV. Fig. 1. A front view of this muscle, named *levator palpebrae superioris*; Fig. 2, a profile of the same in its natural position. This muscle arises within the orbit, and is inserted by a broad tendon into the upper eye-lid. Its name is expressive of the use.

various, yet how infallible! Arbitrary and antic variety is not the thing we admire; but variety obeying a rule, conduced to an effect, and commensurate with exigencies infinitely diversified. I believe also that the anatomy of the tongue corresponds with these observations upon its activity. The muscles of the tongue are so numerous, and so implicated with one another, that they cannot be traced by the nicest dissection;\* nevertheless, (which is a great perfection of the organ,) neither the number, nor the complexity, nor what might seem to be the entanglement of its fibres, in anywise impede its motion, or render the determination or success of its efforts uncertain.

---

I here entreat the reader's permission to step a little out of my way, to consider *the parts of the mouth*, in some of their other properties. It has been said, and that by an eminent physiologist, that, whenever nature attempts to work two or more purposes by one instrument, she does both or all imperfectly. Is this true of the tongue, regarded as an instrument of speech, and of taste; or regarded as an instrument of speech, of taste, and of deglutition? So much otherwise, that many persons, that is to say, nine hundred and ninety-nine persons out of a thousand, by the instrumentality of this one organ, talk, and taste, and swallow very well. In fact, the constant warmth and moisture of the tongue, the thinness of the skin, the papillae upon its surface, qualify this organ for its office of tasting, as much as its

\* For performing its varied movements, the tongue is provided with *four* regular pairs of muscles, besides sets of short muscular fibres called *fibrae longitudinales*, *transversae* and *perpendiculares*: these are the intricate fibres referred to; they cannot be separated, being so much involved in the adjacent muscles.

inextricable multiplicity of fibres do for the rapid movements which are necessary to speech. Animals which feed upon grass, have their tongues covered with a perforated skin, so as to admit the dissolved food to the papillae underneath, which, in the mean time, remain defended from the rough action of the unbruised spiculae.\* There are brought together within the cavity of the mouth more distinct uses, and parts executing more distinct offices, than I think can be found lying so near to one another, or within the same compass, in any other portion of the body: viz. teeth of different shape, first for cutting, secondly for grinding: † muscles, most

\* *Papilla* are small bodies situated on the surface and sides of the tongue; and they are furnished by the extreme filaments of the gustatory nerve, through which medium we acquire the sense of tasting.

In herbivorous animals the papillae are sharp and pointed; and directed backwards to assist in laying hold of the grass. In the cat kind there is a horny or prickly set covering the tongue, rendering it rough and enabling it to take firmer hold of the prey. Birds also have a similar contrivance. In fish the tongue is covered by a number of teeth, serving the same purpose.

† In the figure we have the section of the jaw: there are, *h*, four *incisores*, or cutting teeth; *i*, two *canine*, which may be ranked with the former, only more pointed; *k*, four small *molar*, and, *l*, six large molar or grinding teeth in each jaw. And as the teeth of animals indicate the food on which

artificially disposed for carrying on the compound motion of the lower jaw, half lateral and half vertical, by which the mill is worked: \* fountains of saliva, springing up in different parts of the cavity for the moistening of the food, whilst the mastication is going on: glands, † to feed the fountains; a muscular constriction of a very peculiar kind in the back part of the cavity, for the guiding of the prepared aliment into its passage towards the stomach, and in many cases for carrying it along that passage; for, although we may imagine this to be done simply by the weight of the food itself, it in truth is not so, even in the upright posture of the human neck; and most evidently is not the case with quadrupeds, with a horse for instance, in which, when pasturing, the food is thrust upward by muscular strength, instead of descending of its own accord. ‡

In the mean time, and within the same cavity, is going on another business, altogether different from what is here described—that of respiration and speech. In

they are destined to subsist, so from analogy we may infer that man is called to use either animal or vegetable aliments, or both, i. e. keeps a mean between graminivorous and carnivorous animals, in the structure and complication of his digestive apparatus, without deserving on that account to be called omnivorous: for it is known, that a great number of the substances upon which animals feed are of no use in the support of man.

\* Mastication requiring muscles of great power; there are two temporal, two masseter, and four pterygoid muscles; these have great strength, especially the first two pairs, which draw the jaw upwards; the latter move the jaw horizontally in the act of grinding our food.

† The principal of these are the *parotids*, see Tab. XX. There are others; the *submaxillary* under the jaw, and those under the tongue called the *sublingual*; food, or sometimes even hunger, causes an afflux of saliva from these glands into the mouth.

‡ There are three pairs of muscles of the *pharynx*, or upper part of this passage; their action is, when stimulated by food, to propel it into the (*Esophagus*, a strong fleshy canal, the muscular fibres of which contract in succession, and force the contents of the tube into the stomach.

addition therefore to all that has been mentioned, we have a passage opened, from this cavity to the lungs, for the admission of air, exclusively of every other substance; we have muscles, some in the larynx, and without number in the tongue, for the purpose of modulating that air in its passage, with a variety, a compass, and precision, of which no other musical instrument is capable. And, lastly, which in my opinion crowns the whole as a piece of machinery, we have a specific contrivance for dividing the pneumatic part from the mechanical, and for preventing one set of actions interfering with the other.\* Where various functions are united, the difficulty is to guard against the inconveniences of a too great complexity. In no apparatus put together by art, and for the purposes of art, do I know such multifarious uses so aptly combined, as in the natural organization of the human mouth; or where the structure, compared with the uses, is so simple. The mouth, with all these intentions to serve, is a single cavity; is one machine; with its parts neither crowded nor confused, and each unembarrassed by the rest; each at least at liberty in a degree sufficient for the end to be attained. If we cannot eat and sing at the same moment, we can eat one moment and sing the next; the respiration proceeding freely all the while.

There is one case however of this double office, and that of the *earliest* necessity, which the mouth alone could not perform; and that is, carrying on together the two actions of sucking and breathing. Another route therefore is opened for the air, namely, through the nose, which lets the breath pass backward and forward, whilst the lips, in the act of sucking, arc

\* See Tab. XXI.

necessarily shut close upon the body from which the nutriment is drawn. This is a circumstance which always appeared to me worthy of notice. The nose would have been necessary, although it had not been the organ of smelling. The making it the seat of a sense was superadding a new use to a part already wanted; was taking a wise advantage of an antecedent and a constitutional necessity.\*

---

But to return to that which is the proper subject of the present section—the celerity and precision of muscular motion. These qualities may be particularly observed in the execution of many pieces of instrumental *music*, in which the changes produced by the hand of the musician are exceedingly rapid; are exactly measured, even when most minute; and display, on the part of the muscles, an obedience of action, alike wonderful for its quickness and its correctness.

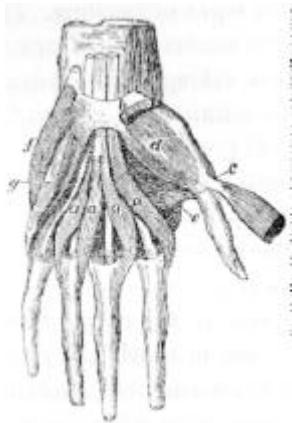

Or let a person only observe his own hand whilst he is *writing*; the number of muscles which are brought to bear upon the pen; how the joint and adjusted operation of several tendons is concerned in every stroke, yet that five hundred such strokes are drawn in a minute. Not a letter can be turned without more

\* The sense of smelling resides in the olfactory nerves, which are distributed in the cells and curious convoluted bones of the nose. In some classes of animals, as the *dog*, *hare*, *sheep*, etc., there are found astonishing scrolls of bony texture, giving a great extent of surface, on which are spread out fibrillae of nervous matter; thus bearing a ratio to the acuteness of the sense of smell.

Sir Charles Bell observes:—"It is with manifest design that this organ, which so particularly admonishes us of the effluvia diffused in the air we breathe, should have been placed in the entrance to the canal of the lungs; it is in some measure a safeguard to the lungs, as the sensibility of the tongue is a guard to the alimentary canal."

than one, or two, or three tendinous retractions, definite, both as to the choice of the tendon, and as to the space through which the retraction moves; yet how currently does the work proceed! And when we look at it, how faithful have the muscles been to their duty, how true to the order which endeavour or habit hath inculcated! For let it be remembered, that, whilst a man's hand-writing is the same, an exactitude of order is preserved, whether he write well or ill. These two instances, of music and writing, show not only the quickness and precision of muscular action, but the docility.\*

II. Regarding the particular configuration of muscles, *sphincter* or circular muscles appear to me admirable pieces of mechanism. † It is the muscular power most happily applied; the same quality of the muscular substance, but under a new modification. The circular disposition of the fibres is strictly mechanical; but, though the most mechanical, is not the only thing in sphincters which deserves our notice. The regulated

\* The above figure exhibits the principal muscles of the palm of the hand: *a, a, a, a, lumbricales*, small muscles indispensably necessary in the performance of the rapid movements of the fingers, as in playing musical instruments, etc. Hence Cowper gave them the name of *musculi fidicinales*: *c, d, e*, muscles of the thumb; *f, g*, muscles of the little finger.

† Tab. XIV. Fig. 3. exhibits examples of *sphincter* muscles; *a, a*, the *orbicularis palpebrarum* encircling the eye-lid; it closes the eye, and compresses it, with spasmodic force, when injured by particles of dust, etc. *b*, the *orbicularis oris*, surrounding the mouth; its chief use is to contract the lips.

degree of contractile force with which they are endowed, sufficient for retention, yet vincible when requisite, together with their ordinary state of actual contraction, by means of which their dependence upon the will is not constant, but occasional, gives to them a constitution, of which the conveniency is inestimable. This their semi-voluntary character, is exactly such as suits with the wants and functions of the animal.\*

III. We may also, upon the subject of muscles, observe, that many of our most important actions are achieved by the combined help of different muscles. Frequently, a diagonal motion is produced, by the retraction of tendons pulling in the direction of the sides of the parallelogram. This is the case, as hath been already noticed, with some of the oblique nutations of the head. Sometimes the number of co-operating muscles is very great. Dr. Nieuentyt, in the Leipsic Transactions, reckons up a hundred muscles that are employed every time we breathe; yet we take in, or let out, our breath, without reflecting what a work is thereby performed; what an apparatus is laid in, of instruments for the service, and how many such contribute their assistance to the effect! Breathing with ease, is a blessing of every moment; yet, of all others, it is that which we possess with the least consciousness.

\* Those muscles which are under the direct influence of the will are called *voluntary muscles*. Such are the muscles of loco-motion. But there are other muscles over which we have no control: these are *involuntary muscles*: the heart, arteries, and intestines are examples of this description; and it is remarkable that such muscles are not fatigued, though in continual action. The third or intermediate class of muscles, here termed *semi-voluntary*, are those whose action we can increase or suspend at pleasure, yet their regular actions are continued without our consciousness. The diaphragm and other muscles of breathing, and the muscles of winking, are of this class.

A man in an asthma is the only man who knows how to estimate it.

IV. Sir Everard Home has observed,\* that the most important and the most delicate actions are performed in the body by the smallest muscles; and he mentions, as his examples, the muscles which have been discovered in the iris of the eye, and the drum of the ear. The tenuity of these muscles is astonishing. They are microscopic hairs; must be magnified to be visible; yet are they real, effective muscles; † and not only such, but the grandest and most precious of our faculties, sight and hearing, depend upon their health and action.

V. The muscles act in the limbs with what is called a mechanical disadvantage. The muscle at the shoulder, ‡ by which the arm is raised, is fixed nearly in the same manner as the load is fixed upon a steelyard, within a few decimals, we will say, of an inch, from the centre upon which the steelyard turns. In this situation, we find that a very heavy draught is no more than sufficient to countervail the force of a small lead plummet, placed upon the long arm of the steelyard, at the distance of perhaps fifteen or twenty inches from the centre, and on the other side of it. And this is the disadvantage which is meant. And an absolute disadvantage, no doubt, it would be, if the object were to spare the force of muscular contraction. But observe how conducive is this constitution to animal conveniency. Mechanism has always in view one or other of these two purposes; either to move a great weight slowly, and through a small space, or to move a light weight rapidly, through

\* Philosophical Transactions, Part I. 1800. p. 8.

† This statement will not so much excite our astonishment when we reflect, that every movement of the smallest insect is the effect of a muscular apparatus, the fibres of which must be proportionably minute.

‡ The *deltoid muscle*, see Tab. XIII. Fig. 1. *f.*

a considerable sweep. For the former of these purposes, a different species of lever, and a different collocation of the muscles, might be better than the present; but for the second, the present structure is the true one. Now so it happens, that the second, and not the first, is that which the occasions of animal life principally call for. In what concerns the human body, it is of much more consequence to any man to be able to carry his hand to his head with due expedition, than it would be to have the power of raising from the ground a heavier load (of two or three more hundred weight, we will suppose,) than he can lift at present. This last is a faculty, which on some extraordinary occasions he may desire to possess; but the other is what he wants and uses every hour or minute. In like manner, a husbandman or a gardener will do more execution, by being able to carry his scythe, his rake, or his flail, with a sufficient despatch through a sufficient space, than if, with greater strength, his motions were proportionably more confined and slow. It is the same with a mechanic in the use of his tools. It is the same also with other animals in the use of their limbs. In general, the vivacity of their motions would be ill exchanged for greater force under a clumsier structure.

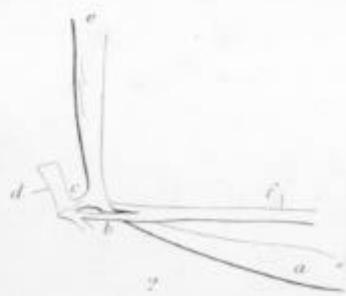

We have offered our observations upon the structure of muscles in general; we have also noticed certain species of muscles; but there are also *single* muscles, which bear marks of mechanical contrivance, appropriate as well as particular. Out of many instances of this kind, we select the following.

I. Of muscular actions, even of those which are well understood, some of the most curious are incapable of popular explanation; at least, without the aid of plates and figures. This is in a great measure the case, with

a very familiar, but, at the same time, a very complicated motion—that of the *lower jaw*; and with the muscular structure by which it is produced. One of the muscles concerned may, however, be described in such a manner, as to be, I think, sufficiently comprehended for our present purpose. The problem is to pull the lower jaw *down*. The obvious method should seem to be, to place a straight muscle, viz., to fix a string from the chin to the breast, the contraction of which would open the mouth, and produce the motion required at once. But it is evident that the form and liberty of the neck forbid a muscle being laid in such a position; and that, consistently with the preservation of this form, the motion which we want must be effectuated by some muscular mechanism disposed farther back in the jaw. The mechanism adopted is as follows: A certain muscle, called the *digastric*, rises on the side of the face, considerably *above* the insertion of the lower jaw, and comes down, being converted in its progress into a round tendon. Now, it is manifest that the tendon, whilst it pursues a direction *descending* towards the jaw, must, by its contraction, pull the jaw up, instead of down. What then was to be done? This, we find, is done: The descending tendon, when it is got low enough, is passed through a loop, or ring, or pulley, in the *os hyoides*, and then made to ascend; and, having thus changed its line of direction, is inserted into the inner part of the chin; by which device, viz. the turn at the loop, the action of the muscle (which in all muscles is contraction) that before would have pulled the jaw up, now as necessarily draws it down. "The mouth," says Heister, "is opened by means of this trochlea in a most wonderful and elegant manner."<sup>\*</sup>

\* Tab. XV. Fig. 1 and 2. The *digastric muscle* is attached at *a*, the

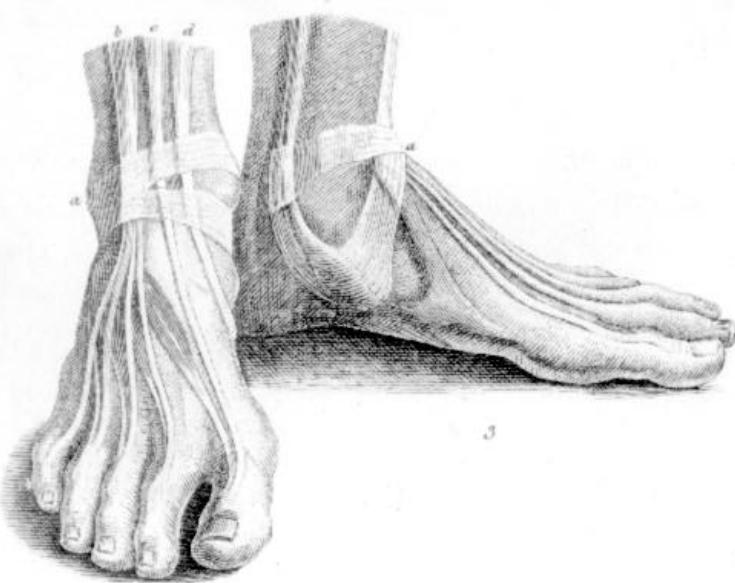

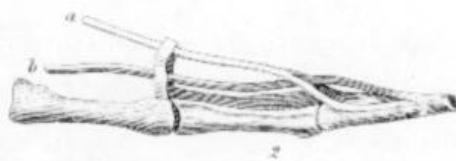

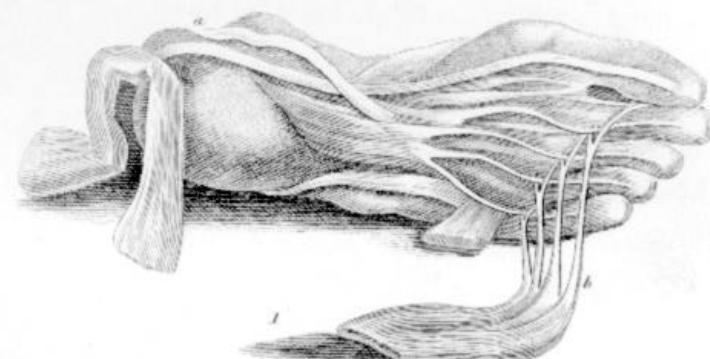

TAB. XV

London: C. D. Marshall.

Published by J. Vincent, Oxford.

TAB. XVI

II. What contrivance can be more mechanical than the following, viz. a slit in one tendon to let another tendon pass through it? This structure is found in the tendons which move the toes and fingers.\* The long tendon, as it is called, in the foot, which bends the first joint of the toe, passes *through* the short tendon which bends the second joint; which course allows to the sinew more liberty, and a more commodious action than it would otherwise have been capable of exerting. There is nothing, I believe, in a silk or cotton mill, in the belts, or straps, or ropes, by which motion is communicated from one part of the machine to another, that is more artificial, or more evidently so, than this *perforation*.

III. The next circumstance which I shall mention, under this head of muscular arrangement, is so decisive a mark of intention, that it always appeared to me to supersede, in some measure, the necessity of seeking for any other observation upon the subject; and that circumstance is, the tendons, which pass from the leg to the foot, being bound down by a ligament at the ankle. The foot is placed at a considerable angle with the leg. It is manifest, therefore, that flexible strings,

lower part of the temporal bone; it runs downwards and forwards, and forms a strong round tendon, *b*, which passes through a perforation in the stylo-hyoideus muscle, *f*; it is then fixed by a strong ligament, *c*, to the os hyoides, *d*; it again becomes fleshy, runs upwards, and is attached at *e*, the chin. This description differs from the above, and it will be found by reference to dissections or the plate, that the os hyoides furnishes a *stay* or *brace* instead of a pulley, and that the *loop* or *ring* is in the stylo-hyoideus muscle.

\* Tab. XVI. Fig. 1. *a*, the tendon of the *long flexor of the toes*, which divides about the middle of the foot into four portions, which pass through the slits in, *b*, the *short flexor tendons*. Fig. 2. explains a similar contrivance belonging to each finger: *a*, a tendon of the *flexor sublimis*; *b*, a tendon of the *flexor profundus*, passing through it.

passing along the interior of the angle, if left to themselves, would, when stretched, start from it. The obvious preventive is to tie them down. And this is done in fact. Across the instep, or rather just above it, the anatomist finds a strong ligament, *under* which the tendons pass to the foot.\* The effect of the ligament as a bandage, can be made evident to the senses; for if it be cut, the tendons start up. The simplicity, yet the clearness of this contrivance, its exact resemblance to established resources of art, place it amongst the most indubitable manifestations of design with which we are acquainted.

There is also a farther use to be made of the present example, and that is, as it precisely contradicts the opinion, that the parts of animals may have been all formed by what is called *appetency*, i. e. endeavour, perpetuated, and imperceptibly working its effect, through an incalculable series of generations. We have here no endeavour, but the reverse of it; a constant renitency and reluctance. The endeavour is all the other way. The pressure of the ligament constrains the tendons; the tendons re-act upon the pressure of the ligament. It is impossible that the ligament should ever have been generated by the exercise of the tendon, or in the course of that exercise, forasmuch as the force of the tendon perpendicularly resists the fibre which confines it, and is constantly endeavouring, not to form, but to rupture and displace, the threads of which the ligament is composed.

\* Tab. XVI. Fig. 3. *b*, *c*, tendons of the extensor muscles of the toes; *d*, the tendon of a flexor of the foot. These are bound down and retained *in situ* by, *a*, the *annular* or *transverse ligament* of the instep, which consists of two distinct cross bands, going from the outer ankle to the inner ankle and neighbouring bones.

Keill has reckoned up, in the human body, four hundred and forty-six muscles,\* disectible and describable; and hath assigned a use to every one of the number. This cannot be all imagination.

Bishop Wilkins hath observed from Galen, that there are, at least, ten several qualifications to be attended to in each particular muscle; viz. its proper figure; its just magnitude; its fulcrum; its point of action, supposing the figure to be fixed; its collocation, with respect to its two ends, the upper and the lower; the place; the position of the whole muscle; the introduction into it of nerves, arteries, veins. How are things, including so many adjustments, to be made; or, when made, how are they to be put together, without intelligence?

I have sometimes wondered, why we are not struck with mechanism in animal bodies, as readily and as strongly as we are struck with it, at first sight, in a watch or a mill. One reason of the difference may be, that animal bodies are, in a great measure, made up of soft, flabby substances, such as muscles and membranes; whereas we have been accustomed to trace mechanism in sharp lines, in the configuration of hard materials, in the moulding, chiseling, and filing into shapes, of such articles as metals or wood. There is something therefore of habit in the case; but it is sufficiently evident, that there can be no proper reason for any distinction of the sort. Mechanism may be displayed in one kind of substance as well as in the other.

Although the few instances we have selected, even as they stand in our description, are nothing short

\* In a former note it has been stated there are five hundred and twenty-seven muscles in the human frame, "dissectible and describable," independent of those which perform the internal vital motions.

perhaps of logical proofs of design, yet it must not be forgotten, that, in every part of anatomy, description is a poor substitute for inspection. It is well said by an able anatomist,\* and said in reference to the very part of the subject which we have been treating of:—"Imperfecta haec muscularum descriptio, non minus arida est legentibus, quam inspectantibus fuerit jucunda eorundem praeparatio. Elegantissima enim mechanices articia, creberrime in illis obvia, verbis nonnisi obscure exprimuntur: carnium autem ductu, tendinum colore, insertionum proportione, et trochlearium distributione, oculis exposita, omnem superant admirationem."†

## CHAPTER X.

### OF THE VESSELS OF ANIMAL BODIES.

THE circulation of the *bloody* through the bodies of men and quadrupeds, and the apparatus by which it is carried on, compose a system, and testify a contrivance, perhaps the best understood of any part of the animal frame. The lymphatic system, or the nervous system, may be more subtle and intricate; nay, it is possible

\* Steno, in *Blas. Anat. Animal*, p. 2. c. 4.

† For acquiring further knowledge of anatomy, we recommend the inspection of animals. It is a pursuit which would be neither attended with disgust or revolting to the finer feelings of our nature. And from the strong resemblance of quadrupeds to man, a very accurate notion may be obtained of our own structure. The bones, ligaments, muscles, tendons, membranes, vessels, etc. may be identified; they are formed of the same materials and of the same textures, and chiefly differ in their figure and proportions. For surgical anatomy, we are sensible that nothing but a patient and attentive examination of the human body will suffice; but for general anatomy, as it respects structure, we may observe the same display of animal mechanism in the dissection of quadrupeds.

that in their structure they may be even more artificial than the sanguiferous; but we do not know so much about them.

The utility of the circulation of the blood I assume as an acknowledged point. One grand purpose is plainly answered by it; the distributing to every part, every extremity, every nook and corner of the body, the nourishment which is received into it by one aperture. What enters at the mouth finds its way to the fingers' ends. A more difficult mechanical problem could hardly, I think, be proposed, than to discover a method of constantly repairing the waste, and of supplying an accession of substance to every part of a complicated machine, at the same time.

This system presents itself under two views: first, the disposition of the blood-vessels, i. e. the laying of the pipes; and, secondly, the construction of the engine at the centre, viz. the heart, for driving the blood through them.

I. The disposition of the blood-vessels, as far as regards the supply of the body, is like that of the water-pipes in a city, viz. large and main trunks branching off by smaller pipes (and these again by still narrower tubes) in every direction, and towards every part in which the fluid, which they convey, can be wanted. So far the water-pipes which serve a town may represent the vessels which carry the blood from the heart. But there is another thing necessary to the blood, which is not wanted for the water; and that is, the carrying of it back again to its source. For this office, a reversed system of vessels is prepared, which, uniting at their extremities with the extremities of the first system, collects the divided and subdivided streamlets, first, by capillary ramifications into larger branches;

secondly, by these branches into trunks; and thus returns the blood (almost exactly inverting the order in which it went out) to the fountain whence its motion proceeded. All which is evident mechanism.\*

The body, therefore, contains two systems of bloodvessels—arteries and veins. Between the constitution of the systems there are also two differences, suited to the functions which the systems have to execute. The blood, in going out, passing always from wider into narrower tubes; and, in coming back, from narrower into wider; it is evident, that the impulse and pressure upon the sides of the blood-vessel will be much greater in one case than the other. Accordingly, the arteries, which carry out the blood, are formed of much tougher and stronger coats † than the veins, which bring it back. That is one difference: the other is still more artificial, or, if I may so speak, indicates, still more clearly, the care and anxiety of the artificer. Forasmuch as in the arteries, by reason of the greater force with which the blood is urged along them, a wound or rupture would be more dangerous than in the veins, these vessels are defended from injury, not only by their texture, but by their situation; and by every advantage of situation which can be given to them. They are buried in sinuses, or they creep along grooves, made for them in the bones: for instance, the under-edge of the ribs is

\* From this description of the vessels it must not be inferred that the circulation is merely a mechanical effect, explicable by the principles of hydraulics: the *arteries* are living tubes, endowed with the power of muscular contraction, by which at each pulsation, the vital stream is propelled not only through the arteries themselves, but also through the veins again to the heart.

† The arteries are strong elastic pulsating canals, whose contractions assist in continuing the stream of blood from the heart. The veins do not pulsate, and have a more delicate structure.

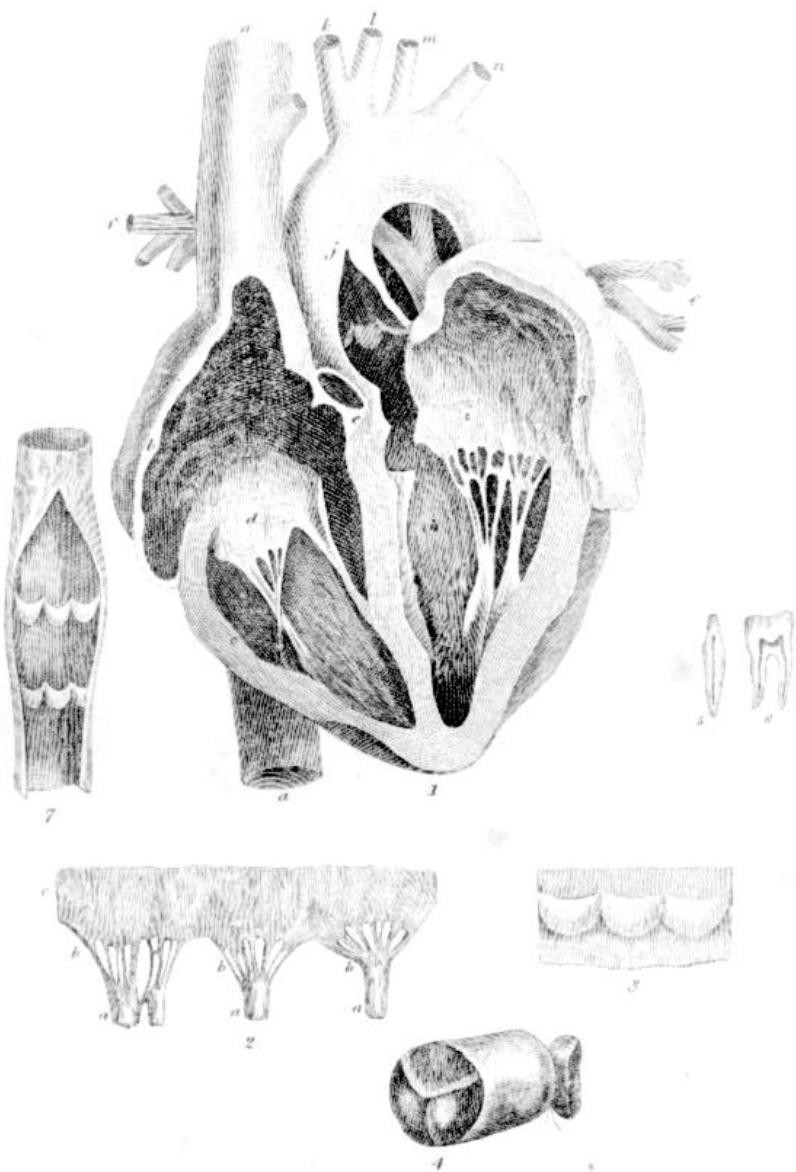

sloped and furrowed solely for the passage of these vessels. Sometimes they proceed in channels, protected by stout parapets on each side; which last description is remarkable in the bones of the fingers, these being hollowed out, on the under-side, like a scoop, and with such a concavity, that the finger may be cut across to the bone, without hurting the artery which runs along it. At other times, the arteries pass in canals wrought in the substance, and in the very middle of the substance of the bone: this takes place in the lower jaw; and is found where there would, otherwise, be danger of compression by sudden curvature. All this care is wonderful, yet not more than what the importance of the case required. To those who venture their lives in a ship, it has been often said, that there is only an inch-board between them and death; but in the body itself, especially in the arterial system, there is in many parts only a membrane, a skin, a thread. For which reason, this system lies deep under the integuments; whereas the veins, in which the mischief that ensues from injuring the coats is much less, lie in general above the arteries; come nearer to the surface; are more exposed. It may be farther observed concerning the two systems taken together, that though the arterial, with its trunk and branches and small twigs, may be imagined to issue or proceed—in other words, to *grow* from the heart—like a plant from its root, or the fibres of a leaf from its foot-stalk, (which, however, were it so, would be only to resolve one mechanism into another); yet the venal, the returning system, can never be formed in this manner. The arteries might go on shooting out from their extremities, i. e. lengthening and subdividing indefinitely; but an inverted system, continually uniting its streams, instead of dividing, and thus carrying back

what the other system carried out, could not be referred to the same process.

II. The next thing to be considered is the engine which works this machinery, viz. the *heart*. For our purpose it is unnecessary to ascertain the principle upon which the heart acts. Whether it be irritation excited by the contact of the blood, by the influx of the nervous fluid, or whatever else be the cause of its motion, it is something which is capable of producing, in a living muscular fibre, reciprocal contraction and relaxation. This is the power we have to work with; and the inquiry is, how this power is applied in the instance before us. There is provided, in the central part of the body, a hollow muscle, invested with spiral fibres, running in both directions, the layers intersecting one another; in some animals, however, appearing to be semicircular rather than spiral. By the contraction of these fibres, the sides of the muscular cavities are necessarily squeezed together, so as to force out from them any fluid which they may at that time contain: by the relaxation of the same fibres, the cavities are in their turn dilated, and, of course, prepared to admit every fluid which may be poured into them. Into these cavities are inserted the great trunks, both of the arteries which carry out the blood, and of the veins which bring it back.\* This is a general account of the apparatus; and the simplest

\* Tab. XVII. Fig. 1, a section of the human heart: *a, a*, the *superior* and *inferior vena cava*, the veins which convey the blood to the *right auricle*, *b*, and thence into the corresponding *ventricle*, *c*; from this ventricle the blood is impelled through the *pulmonary artery*, *e*, into the lungs; and returning by the pulmonary veins, *f, f*, it is received into the *left auricle*, *g*: it flows next into the *left ventricle*, *h*; which by its contraction distributes the blood through the general arterial system; *j*, the *aorta*, the great artery which transmits blood to the different parts of the body, from whence it is returned by veins to the *cavae*.

TAB. XVII.

idea of its action is, that, by each contraction, a portion of blood is forced by a syringe into the arteries; and, at each dilatation, an equal portion is received from the veins. This produces, at each pulse, a motion, and change in the mass of blood, to the amount of what the cavity contains, which, in a full-grown human heart, I understand, is about an ounce, or two table-spoons full. How quickly these changes succeed one another, and by this succession how sufficient they are to support a stream or circulation throughout the system, may be understood by the following computation, abridged from Keill's Anatomy, p. 177, edit. 3:—"Each ventricle will at least contain one ounce of blood. The heart contracts four thousand times in one hour; from which it follows, that there pass through the heart, every hour, four thousand ounces, or three hundred and fifty pounds of blood. Now the whole mass of blood is said to be about twenty-five pounds; so that a quantity of blood, equal to the whole mass of blood, passes through the heart fourteen times in one hour; which is about once every four minutes." Consider what an affair this is, when we come to very large animals. The aorta of the whale is larger in the bore than the main pipe of the water-works at London-bridge; and the water roaring in its passage through that pipe is inferior, in impetus and velocity, to the blood gushing from the whale's heart. Hear Dr. Hunter's account of the dissection of a whale:—"The aorta measured a foot diameter. Ten or fifteen gallons of blood are thrown out of the heart at a stroke with an immense velocity, through a tube of a foot diameter. The whole idea fills the mind with wonder."\*

\* Dr. Hunter's Account of the Dissection of a Whale, (Philosophical Transactions.)

The account which we have here stated, of the injection of blood into the arteries by the contraction, and of the corresponding reception of it from the veins by the dilatation, of the cavities of the heart, and of the circulation being thereby maintained through the blood-vessels of the body, is true, but imperfect. The heart performs this office, but it is in conjunction with another of equal curiosity and importance. It was necessary that the blood should be successively brought into contact, or contiguity, or proximity, with the *air*. I do not know that the chemical reason, upon which this necessity is founded, has been yet sufficiently explored. It seems to be made appear, that the atmosphere which we breathe is a mixture of two kinds of air; one pure and vital, the other, for the purposes of life, effete, foul, and noxious: \* that when we have drawn in our breath, the blood in the lungs imbibes from the air, thus brought into contiguity with it, a portion of its pure ingredient, and, at the same time, gives out the effete or corrupt air which it contained, and which is carried away, along with the halitus, every time we expire. At least, by comparing the air which is breathed from the lungs with the air which enters the lungs, it is found to have lost some of its pure part, and to have brought away with it an addition of its impure part. Whether these experiments satisfy the question, as to the need which the blood stands in of being visited by continual accesses of air, is not for us to inquire into, nor material to our argument: it is sufficient to know, that, in the constitu-

\* Atmospheric air consists of about twenty parts of oxygen gas, and eighty of azotic gas; it also contains a portion of other gases, vapour, etc. But it is the oxygen which supports combustion and respiration, being indispensably necessary for the life of animals and vegetables, hence called here "vital" air.

tion of most animals, such a necessity exists, and that the air, by some means or other, *must* be introduced into a near communication with the blood.\* The lungs of animals are constructed for this purpose. They consist of blood-vessels and air-vessels, lying close to each other; and wherever there is a branch of the trachea or windpipe, there is a branch accompanying it of the vein and artery, and the air-vessel is always in the middle between the blood-vessels. The internal surface of these vessels, upon which the application of the air to the blood depends, would, if collected and expanded, be, in a man, equal to a superficies of fifteen feet square. Now, in order to give the blood in its course the benefit of this organization, (and this is the part of the subject with which we are chiefly concerned,) the following operation takes place. As soon as the blood is received by the heart from the veins of the body, and *before* that is sent out again into its arteries, it is carried, by the force of the contraction of the heart, and by means of a separate and supplementary artery, to the lungs, and made to enter the vessels of the lungs; from which, after it has undergone the action, whatever it be, of that viscus, it is brought back by a large vein once more to the heart, in order, when thus concocted and prepared, to be thence distributed anew into the system. This assigns to the heart a double office. The pulmonary circulation is a system within a system; and one action of the heart is the origin of both. †

\* Respiration is supposed also to be the principal source of animal heat. The heat of the blood increasing nearly a degree in passing through the lungs.

† The double office of the heart is very correctly described; one side being appropriated to the *pulmonary*, the other to the general system. On the *right side*, the blood arrives dark and unfit for the purposes of the circulation; but when it has reached the *left side*, from having travel:

For this complicated function, four cavities become necessary; and four are accordingly provided: two, called ventricles, which *send out* the blood, viz. one into the lungs, in the first instance; the other into the mass, after it has returned from the lungs: two others also, called auricles, which *receive* the blood from the veins; viz. one, as it comes immediately from the body; the other, as the same blood comes a second time after its circulation through the lungs. So that there are two receiving cavities, and two forcing cavities. The structure of the heart has reference to the lungs; for without the lungs, one of each would have been sufficient. The translation of the blood in the heart itself is after this manner. The receiving cavities respectively communicate with the forcing cavities, and, by their contraction, unload the received blood into them. The forcing cavities, when it is their turn to contract, impel the same blood into the mouths of the arteries.

The account here given will not convey to a reader, ignorant of anatomy, any thing like an accurate notion of the form, action, or use of the parts, (nor can any short and popular account do this); but it is abundantly sufficient to testify contrivance; and although imperfect, being true as far as it goes, may be relied upon for the only purpose for which we offer it, the purpose of this conclusion.

\*' The wisdom of the Creator," saith Hamburgher, "is in nothing seen more gloriously than in the heart." And how well doth it execute its office! An anatomist, who understood the structure of the heart, might say

the lungs, in which it is exposed to the atmosphere, and has been purified, that is, the carbon of the blood has been thrown off, it then has acquired a florid colour, and is capable of supporting every function of life.

beforehand that it would play; but he would expect, I think, from the complexity of its mechanism, and the delicacy of many of its parts, that it should always be liable to derangement, or that it would soon work itself out. Yet shall this wonderful machine go, night and day, for eighty years together, at the rate of a hundred thousand strokes every twenty-four hours, having, at every stroke, a great resistance to overcome; and shall continue this action for this length of time, without disorder and without weariness!

But farther: from the account which has been given of the mechanism of the heart, it is evident that it must require the interposition of *valves*; that the success indeed of its action must depend upon these; for when any one of its cavities contracts, the necessary tendency of the force will be to drive the enclosed blood, not only into the mouth of the artery where it ought to go, but also back again into the mouth of the vein from which it flowed. In like manner, when by the relaxation of the fibres the same cavity is dilated, the blood would not only run into it from the vein, which was the course intended, but back from the artery, through which it ought to be moving forward. The way of preventing a reflux of the fluid, in both these cases, is to fix valves, which, like flood-gates, may open a way to the stream in one direction, and shut up the passage against it in another. The heart, constituted as it is, can no more work without valves than a pump can. When the piston descends in a pump, if it were not for the stoppage by the valve beneath, the motion would only thrust down the water which it had before drawn up. A similar consequence would frustrate the action of the heart. Valves, therefore, properly disposed, i. e. properly with respect to the course of the blood which

it is necessary to promote, are essential to the contrivance. *And valves so disposed, are accordingly provided.*\* A valve is placed in the communication between each auricle and its ventricle, lest, when the ventricle contracts, part of the blood should get back again into the auricle, instead of the whole entering, as it ought to do, the mouth of the artery. A valve is also fixed at the mouth of each of the great arteries which take the blood from the heart; † leaving the passage free, so long as the blood holds its proper course forward; closing it, whenever the blood, in consequence of the relaxation of the ventricle, would attempt to flow back. There is some variety in the construction of these valves, though all the valves of the body act nearly upon the same principle, and are destined to the same use. In general they consist of a thin membrane, lying close to the side of the vessel, and consequently allowing an open passage whilst the stream runs one way, but thrust out from the side by the fluid getting behind it, and opposing the passage of the blood, when it would flow the other way.<sup>4</sup> Where more than one membrane is employed, the different membranes only compose one valve. Their joint action fulfils the office

\* Tab. XVII. Fig. 1. *d*, the valves of the right; *i*, the valves of the left ventricle. Fig. 2. the valves of the right side (*tricuspid valves*), separated from the heart; *a, a, a*, the *carneae columnae*, or muscular fibres of the valves; *b, b, b*, the *chorda; tendineae*, or tendinous filaments which are attached to *c*, the valves.

† Fig. 3. exhibits the *artery* cut open, with the form of the *semilunar valves*. Fig. 4. a portion of the artery filled, shewing how effectually these valves prevent the retrograde motion of the blood in the aorta and pulmonary artery.

‡ The veins and absorbent vessels present in their cavities folds of a parabolic form, called *valves*, like the semi-lunar valve: the one edge adheres to the sides of the vein, the other is loose; the first is farthest from the heart, the other nearer. The number of valves is greatest where the blood flows contrary to the force of its own weight. See Fig. 7.

of a valve: for instance; over the entrance of the right auricle of the heart into the right ventricle, three of these skins or membranes are fixed, of a triangular figure, the bases of the triangles fastened to the flesh; the sides and summits loose; but, though loose, connected by threads\* of a determinate length, with certain small fleshy prominencies adjoining. † The effect of this construction is, that, when the ventricle contracts, the blood endeavouring to escape in all directions, and amongst other directions pressing upwards, gets *between* these membranes and the sides of the heart; and thereby forces them up into such a position, as that, together, they constitute, when raised, a hollow cone, (the strings, before spoken of, hindering them from proceeding or separating farther); which cone, entirely occupying the passage, prevents the return of the blood into the auricle. A shorter account of the matter may be this: so long as the blood proceeds in its proper course, the membranes which compose the valve are pressed close to the side of the vessel, and occasion no impediment to the circulation: when the blood would regurgitate, they are raised from the side of the vessel, and, meeting in the middle of its cavity, shut up the channel. Can any one doubt of contrivance here; or is it possible to shut our eyes against the proof of it?

This valve, also, is not more curious in its structure than it is important in its office. Upon the play of the valve, even upon the proportioned length of the strings or fibres which check the ascent of the membranes, depends, as it should seem, nothing less than the life itself of the animal. We may here likewise repeat, what we before observed concerning some of

\* The tendinous filaments, Fig, 2. *b, b, b.*

† The muscular fibres of the valve, *a, a, a.*

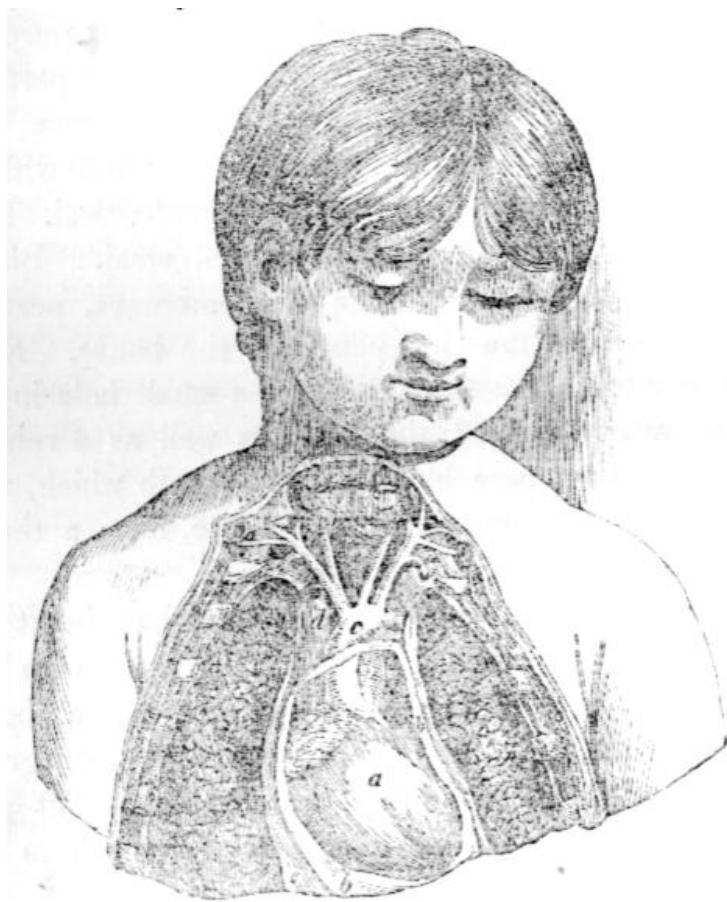

the ligaments of the body, that they could not be formed by any action of the parts themselves. There are cases in which, although good uses appear to arise from the shape or configuration of a part, yet that shape or configuration itself may seem to be produced by the action of the part, or by the action or pressure of adjoining parts. Thus the bend, and the internal smooth concavity of the ribs, may be attributed to the equal pressure of the soft viscera; the particular shape of some bones and joints, to the traction of the annexed muscles, or to the position of contiguous muscles. But valves could not be so formed. Action and pressure are all against them. The blood, in its proper course, has no tendency to produce such things; and, in its improper or reflected current, has a tendency to prevent their production. Whilst we see, therefore, the use and necessity of this machinery, we can look to no other account of its origin or formation than the intending; mind of a Creator. Nor can we without admiration reflect, that such thin membranes, such weak and tender instruments, as these valves are, should be able to hold out for seventy or eighty years.

Here also we cannot consider but with gratitude, how happy it is that our vital motions\* are *involuntary*. We should have enough to do, if we had to keep our hearts beating, and our stomachs at work. Did these

\* "Vital motions." Much has been written on this subject by physiologists, showing that, besides the heart and stomach, there are many other parts of the body which exhibit, either continually or at periods, the phenomenon of *vital action*—as, for instance, the liver, by virtue of a power which is peculiar to it, continually forms bile—the same thing takes place in the kidneys with regard to urine.—The same power, of the mechanism of which we are ignorant, carries on the process of secretion in glands and exhalation from surfaces—by it the arteries pulsate, the intestines press forward their contents. Vital or organic action, therefore, performs a very considerable part, both in the life of man and animals.

things depend, we will not say upon our effort, but upon our bidding, our care, or our attention, they would leave us leisure for nothing else. We must have been continually upon the watch, and continually in fear; nor would this constitution have allowed of sleep.

It might perhaps be expected, that an organ so precious, of such central and primary importance as the heart is, should be defended by *a case*. The fact is, that a membranous purse or bag, made of strong, tough materials, is provided for it; holding the heart within its cavity;\* sitting loosely and easily about it;

\* This cavity, *b*, *b*, *e*, which is opened, is the *pericardium*; it secretes, i. e. produces that fluid which lubricates the surface of, *a*, the heart, and diminishes the effects of friction; *c* the large artery; *d*, the large vein.

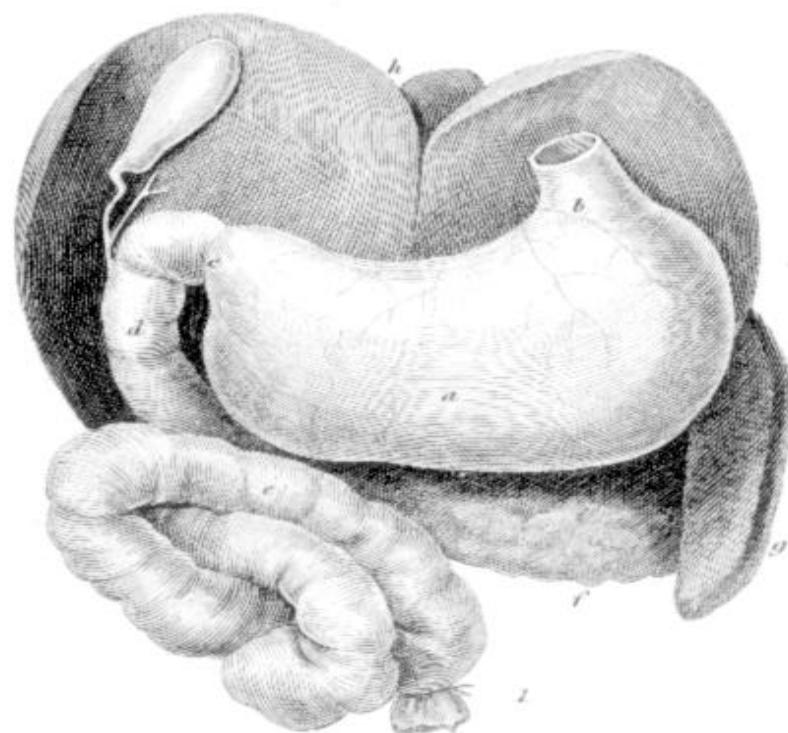

guarding its substance, without confining its motion; and containing likewise a spoonful or two of water, just sufficient to keep the surface of the heart in a state of suppleness and moisture. How should such a loose covering be generated by the action of the heart? Does not the enclosing of it in a sack, answering no other purpose but that enclosure, show the care that has been taken of its preservation?

One use of the circulation of the blood probably (amongst other uses) is, to distribute nourishment to the different parts of the body. How minute and multiplied the ramifications of the blood-vessels, for that purpose, are; and how thickly spread, over at least the superficies of the body, is proved by the single observation, that we cannot prick the point of a pin into the flesh without drawing blood, i. e. without finding a blood-vessel. Nor, internally, is their diffusion less universal. Bloodvessels run along the surface of membranes, pervade the substance of muscles, penetrate the bones. Even into every tooth, we trace, through a small hole in the root, an artery to feed the bone, as well as a vein to bring back the spare blood from it; both which, with the addition of an accompanying nerve, form a thread only a little thicker than a horse-hair.\*

Wherefore, when the nourishment taken in at the mouth has once reached, and mixed itself with the blood, every part of the body is in the way of being supplied with it. And this introduces another grand topic, namely, the manner in which the aliment gets into the *blood*; which is a subject distinct from the

\* Tab. XVI. Fig. 5 and 6. A section of a cutting and grinding tooth, showing the apertures at the root and the cavities for the vessels and nerves, which supply the bony part of the teeth, the enamel not being an organized substance.

preceding, and brings us to the consideration of another entire system of vessels.

III. For this necessary part of the animal economy, an apparatus is provided, in a great measure capable of being what anatomists call demonstrated, that is, shown in the dead body; and a line or course of conveyance, which we can pursue by our examinations.

First: The food descends by a wide passage into the intestines, undergoing two great preparations on its way; one, in the mouth by mastication and moisture—(can it be doubted with what design the teeth were placed in the road to the stomach, or that there was choice in fixing them in this situation?) the other, by digestion in the stomach itself. Of this last surprising dissolution I say nothing; because it is chemistry, and I am endeavouring to display mechanism. The figure and position of the stomach (I speak all along with a reference to the human organ) are calculated for detaining the food long enough for the action of its digestive juice. It has the shape of the pouch of a bagpipe; lies across the body; and the pylorus, or passage by which the food leaves it, is somewhat higher in the body than the cardia, or orifice by which it enters;\* so that it is by the contraction of the muscular coat of the stomach, that the contents, after having

\* Tab. XVIII. Fig. 1. *a*, the *stomach*; *b*, the *cardia*; *c*, the *pylorus*. It is a capacious receptacle of an extensible and contractile nature, destined to contain alimentary substances in order to their formation into chyle. The digestive organs therefore act upon the aliments, changing and decomposing them, and separate from them the gross and inert portion, which is thrown off; while the nutritive juice, the useful part called *chyle* is preserved and penetrates into the most remote recesses of the body, repairing the incessant loss occasioned by perspiration, urine, respiration, etc., amounting to several pounds in twenty-four hours. This would reduce our strength, and we should soon perish, were we not to repair the loss and our strength together by a new supply of nourishment and drink.

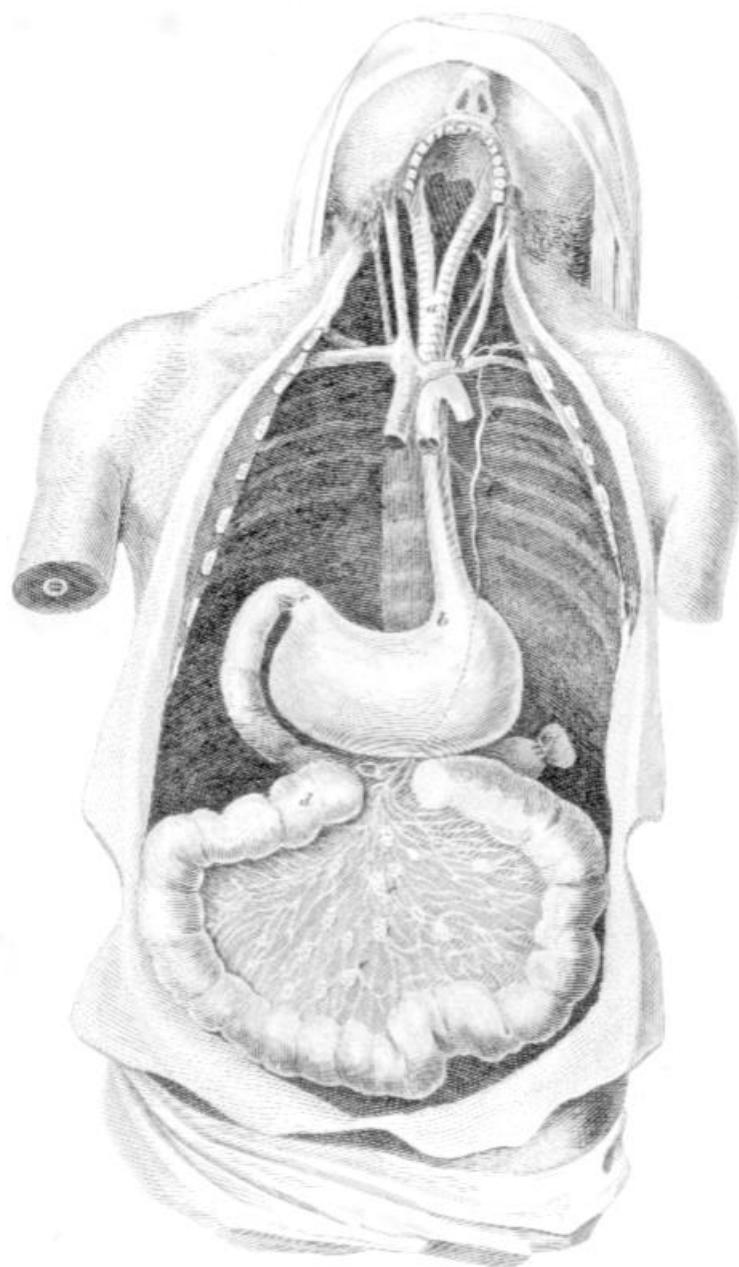

undergone the application of the gastric menstruum, are gradually pressed out. In dogs and cats, this action of the coats of the stomach has been displayed to the eye. It is a slow and gentle undulation, propagated from one orifice of the stomach to the other. For the same reason that I omitted, for the present, offering any observation upon the digestive fluid, I shall say nothing concerning the bile or the pancreatic juice,\* farther than to observe upon the mechanism, viz. that from the glands in which these secretions are elaborated, pipes are laid into the first of the intestines, through which pipes the product of each gland flows into that bowel, † and is there mixed with the aliment, as soon almost as it passes the stomach; adding also as a remark, how grievously the same bile offends the stomach itself, yet cherishes the vessel that lies next to it. ‡

Secondly: We have now the aliment in the intestines converted into pulp; and, though lately consisting of ten different viands, reduced to nearly a uniform substance, and to a state fitted for yielding its essence, which is called chyle, but which is milk, or more nearly resembling milk than any other liquor with which it can be compared. For the straining off this fluid from the digested aliment in the course of its long progress through the body, myriads of capillary tubes, i. e. pipes as small as hairs, open their orifices into the cavity of

\* The pancreas secretes a fluid resembling saliva, which, mixing with the contents of the intestines assists in dissolving the alimentary matter, and thus performs the office of a salivary gland.

† Fig. 2. *e*, the opening common to the *biliary and pancreatic ducts*.

‡ The *bile* is important in the animal economy. The primary uses of this fluid are, 1. To separate the chyle. 2. By its acrid quality to excite the peristaltic motion of the intestines. 3. To prevent the abundance of mucus and acidity in the intestinal canal: hence jaundice, constipation, and various other diseases, are common from deficient or inert bile.

*Taylor & Francis, Strand.*

*Published by J. Vincent, Oxford.*

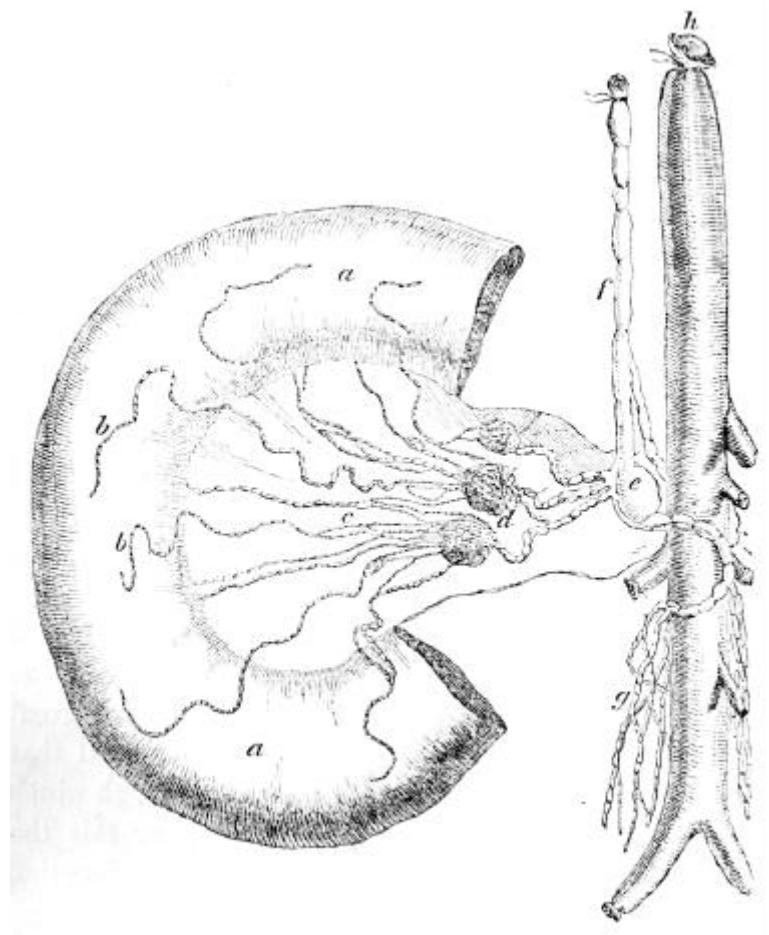

every part of the intestines. These tubes, which are so fine and slender as not to be visible unless when distended with chyle, soon unite into larger branches. The pipes, formed by this union, terminate in glands, from which other pipes of a still larger diameter arising, carry the chyle from all parts, into a common reservoir or *receptacle*. This receptacle is a bag of size enough to hold about a table-spoon full; and from this vessel a duct or main pipe proceeds, climbing up the back part of the chest, and afterwards creeping along the gullet till it reaches the neck. Here it meets the river: here it discharges itself into a large vein, which soon conveys the chyle, now flowing along with the old blood, to the heart. This whole route can be exhibited to the eye; nothing is left to be supplied by imagination or conjecture.\* Now, beside the subserviency of this structure, collectively considered, to a manifest and necessary purpose, we may remark two or three separate particulars in it, which show, not only the contrivance, but the perfection of it. We may remark, first, the length of the intestines, which, in the human subject, is six times that of the body. Simply for a passage, these voluminous bowels, this prolixity of gut, seems in no

\* Tab. XIX. represents the course of the food, from its entrance at the mouth to its assimilation with the blood; *a*, the *oesophagus*, extending from the *pharynx* to *b*, the *stomach*; where the alimentary matter, having undergone the digestive process, is converted into *chyme*, a soft homogeneous substance, and escapes at *c*, the *pylorus*, into *d*, *d*, the *intestines*. In this plate a large portion of the latter is spread out to show a part of the absorbent system called *lacteals*: these collect and imbibe the *chyle*, or milky juice from the *chyme*, and transmit it through *e*, *e*, the *mesenteric glands*, into one general receptacle, *f*, (*receptaculum chyli*,) from which *g*, the *thoracic duct*, ascends in a more or less tortuous direction to the lower vertebrae of the neck, and after forming an arch, it descends and enters *h*, the *left subclavian vein*, at the point where that vein is united with the *internal jugular*. The absorbents of the right side generally form a trunk, which enters the *right subclavian vein*.

wise necessary; but, in order to allow time and space for the successive extraction of the chyle from the digested aliment, namely, that the chyle which escapes the lacteals of one part of the guts may be taken up by those of some other part, the length of the canal is of evident use and conduciveness. Secondly, we must also remark their peristaltic motion; which is made of contractions, following one another like waves upon the surface of a fluid, and not unlike what we observe in the body of an earth-worm crawling along the ground; and which is effected by the joint action of longitudinal and of spiral, or rather perhaps of a great number of separate semicircular fibres.\* This curious action pushes forward the grosser part of the aliment, at the same time that the more subtle parts, which we call chyle, are, by a series of gentle compressions, squeezed into the narrow orifices of the lacteal vessels. Thirdly, it was necessary that these tubes, which we denominate lacteals, or their mouths at least, should be as narrow as possible, in order to deny admission into the blood to any particle which is of size enough to make a lodgement afterwards in the small arteries, and thereby to obstruct the circulation: and it was also necessary that this extreme tenuity should be compensated by multitude; for a large quantity of chyle (in ordinary constitutions, not less, it has been computed, than two or three quarts in a day) is, by some means or other, to be passed through them. Accordingly, we find the number of the lacteals exceeding all powers of computation; and their pipes so fine and slender, as not to be visible, unless filled, to the naked eye; † and their orifices, which open into the

\* These are *muscular fibres*; the longitudinal shorten the canal, the circular fibres contract it; and their conjoined action produces the *peristaltic motion*.

† By feeding an animal with milk, and killing it in two hours afterwards,

intestines, so small, as not to be discernible even by the best microscope. Fourthly, the main pipe, which carries the chyle from that reservoir to the blood, viz. the thoracic duct, being fixed in an almost upright position, and wanting the advantage of propulsion which the arteries possess, is furnished with a succession of

then immediately opening the abdomen, the lacteals *a, a, b, b, c*, may be distinctly observed, as represented in the cut. Or if a ligature is tied round the root of the mesentery, and the intestines and mesentery immersed into (its of wine, the chyle becomes white and opaque, and the vessels may be easily traced to *d*, lymphatic glands, to *e*, the receptacle, and to *f*, the principal trunk which conveys the chyle into the blood.

valves\* to check the ascending fluid, when once it has passed them, from falling back. These valves look upward, so as to leave the ascent free, but to prevent the return of the chyle, if, for want of sufficient force to push it on, its weight should at any time cause it to descend. Fifthly, the chyle enters the blood in an odd place, but perhaps the most commodious place possible, viz. at a large vein near the neck, so situated with respect to the circulation, as speedily to bring the mixture to the heart. And this seems to be a circumstance of great moment; for had the chyle entered the blood at an artery, or at a distant vein, the fluid, composed of the old and new materials, must have performed a considerable part of the circulation, before it received that churning in the lungs which is probably necessary for the intimate and perfect union of the old blood with the recent chyle. Who could have dreamt of a communication between the cavity of the intestines and the left great vein near the *neck*? Who could have suspected that this communication should be the medium through which all nourishment † is derived to the body? or this the place, where, by a side-inlet, the important junction is formed between the blood and the material which feeds it?

We postponed the consideration of *digestion*, lest it

\* The lacteals and absorbents have numerous *valves*, which are constantly disposed in pairs; these are of a semicircular form, connected by the semicircular edge to the inner surface of the vessels, and having the straight edge corresponding with the opposite valve loose in the cavity. The situation of the valves is indicated externally by a knotted appearance, which the absorbents in general assume. A contractile power is also assigned to them, by which these vessels urge forward their contents.

† "All nourishment." At present it is maintained by Magendie and other able physiologists, that the veins also have the power of absorbing; and that they absorb all fluids passing through the intestines except the chyle.

should interrupt us in tracing the course of the food to the blood; but, in treating of the alimentary system, so principal a part of the process cannot be omitted.

Of the gastric juice, the immediate agent by which that change which food undergoes in our stomachs is effected, we shall take our account from the numerous, careful, and varied experiments of the Abbe Spallanzani.

1. It is not a simple diluent, but a real solvent. A quarter of an ounce of beef had scarcely touched the stomach of a crow, when the solution began.

a. It has not the nature of saliva; it has not the nature of bile; but is distinct from both. By experiments out of the body it appears, that neither of these secretions acts upon alimentary substances, in the same manner as the gastric juice acts.

3. Digestion is not *putrefaction*: for the digesting fluid resists putrefaction most pertinaciously; nay, not only checks its farther progress, but restores putrid substances.

4. It is not a *fermentative* process: for the solution begins at the surface, and proceeds towards the centre, contrary to the order in which fermentation acts and spreads.

5. It is not the *digestion of heat*: for the cold maw of a cod or sturgeon will dissolve the shells of crabs or lobsters, harder than the sides of the stomach which contains them.\*

In a word, animal digestion carries about it the marks of being a power and a process completely *sui generis*;

\* Fish are of all animals the most voracious; their digestive powers are quick: whatever any of them are able to swallow possessed of life, or indeed dead animal substances, seems to be desirable food. They often meet each other in fierce opposition, when the fish with the largest swallow comes off with the victory. We have seen a pike, with one of its own species in its stomach half its own size.

distinct from every other; at least from every chemical process with which we are acquainted.\* And the most wonderful thing about it is its appropriation; its subserviency to the particular economy of each animal. The gastric juice of an owl, falcon, or kite, will not touch grain; no, not even to finish the macerated and half-digested pulse which is left in the crops of the sparrows that the bird devours. In poultry, the trituration of the gizzard and the gastric juice conspire in the work of digestion. The gastric juice will not dissolve the grain whilst it is whole. Entire grains of barley, enclosed in tubes or spherules, are not affected by it. But if the same grain be by any means broken or ground, the gastric juice immediately lays hold of it. Here then is wanted, and here we find, a combination of mechanism and chemistry. For the preparatory grinding, the gizzard lends its mill. And as all mill-work should be strong, its structure is so, beyond that of any other muscle belonging to the animal. The internal coat also, or lining of the gizzard, is, for the same purpose, hard and cartilaginous. But, forasmuch as this is not the sort of animal substance suited for the reception of glands or for secretion, the gastric juice, in this family, is not supplied, as in membranous stomachs, by the stomach itself, but by the gullet, in which the

\* The *gastric juice* is a secretion principally derived from the inner membrane of the stomach, and digestion, or the solution of the food, is effected by it: although it is never found pure, but mixed with saliva, the mucus of the mouth, pharynx, and oesophagus. In the various orders of animated beings it differs, being adapted to the food on which they are accustomed to subsist. The food, when properly masticated, is dissolved by the gastric fluid, and converted into *chyme*; so that most kinds of the ingesta lose their specific qualities; and the chemical changes to which they would otherwise be liable, as putridity, rancidity, and fermentation, are thus prevented, when the stomach is in a healthy state.

feeding-glands are placed, and from which it trickles down into the stomach.

In sheep, the gastric fluid has no effect in digesting plants, *unless they have been previously masticated*. It only produces a slight maceration; nearly such as common water would produce, in a degree of heat somewhat exceeding the medium temperature of the atmosphere. But provided that the plant has been reduced to pieces by chewing, the gastric juice then proceeds with it—first, by softening its substance; next, by destroying its natural consistency; and, lastly, by dissolving it so completely, as not even to spare the toughest and most stringy parts, such as the nerves of the leaves.

So far our accurate and indefatigable Abbe.—Dr. Stevens, of Edinburgh, in 1777, found, by experiments tried with perforated balls, that the gastric juice of the sheep and the ox speedily dissolved vegetables, but made no impression upon beef, mutton, and other animal bodies. Dr. Hunter discovered a property of this fluid, of a most curious kind; viz. that in the stomachs of animals which feed upon flesh, irresistibly as this fluid acts upon animal substances, it is only upon the *dead* substance that it operates at all. The *living* fibre suffers no injury from lying in contact with it. Worms and insects are found alive in the stomachs of such animals. The coats of the human stomach, in a healthy state, are insensible to its presence: yet in cases of sudden death, (wherein the gastric juice, not having been weakened by disease, retains its activity,) it has been known to eat a hole through the bowel which contains it.\* How nice is this discrimination of action, yet how necessary!

\* This opinion has been taken up on the authority of Mr. Hunter, and we

But to return to our hydraulics.

IV. The gall-bladder is a very remarkable contrivance. It is the reservoir of a canal. It does not form the channel itself, i. e. the direct communication between the liver and the intestine, which is by another passage, viz. the ductus hepaticus, continued under the name of the ductus communis; but it lies adjacent to this channel, joining it by a duct of its own, the ductus cysticus: by which structure it is enabled, as occasion may require, to add its contents to, and increase the flow of bile into the duodenum.\* And the position of the gall-bladder is such as to apply this structure to the best advantage. In its natural situation, it touches the exterior surface of the stomach, and consequently is compressed by the distension of that vessel: the effect of which compression is, to force out from the bag, and send into the duodenum, an extraordinary quantity of bile, to meet the extraordinary demand which the repletion of the stomach by food is about to occasion. Cheselden describes the gall-bladder as seated against the duodenum, and thereby liable to have its fluid are acquainted with several other cases on record of this sort of occurrence; but we receive them with much doubt. We have been in the habit of examining a great number of animals at different periods after death, and most of them carnivorous, whose gastric secretion *is* more active than that of the human stomach in dissolving animal matter; yet in these we never could find any erosion of the coats of the stomach, which must have been the case if it was possible for the gastric juice to have such effects. We consider the stomach, therefore, to be equally insensible to its presence in life or in death. See also Philosophical Transactions, vol. lxii. p. 447.

\* Tab. XVIII. Fig. 1. In this plate, *h*, the *liver*, is turned up, in order to show *i*, the *gall-bladder*, which is attached to its concave surface; *a*, the *stomach*; *d*, the *duodenum*, or first portion of intestine; *e*, the *intestines*; *f*, the *pancreas*; and *g*, the *spleen*. Fig. 2. explains the several ducts and their communication with the *duodenum*; *a*, the *gallbladder*; *b*, the *ductus cysticus*; *i* which, uniting with *c*, the *ductus hepaticus*, forms *d*, the *ductus communis*, terminating at *e*, the point where the bile is poured into the duodenum

pressed out, by the passage of the aliment through that cavity; which likewise will have the effect of causing it to be received into the intestine, at a right time, and in a due proportion.

There may be other purposes answered by this contrivance; and it is probable that there are. The contents of the gall-bladder are not exactly of the same kind as what passes from the liver through the direct passage. It is possible that the gall may be changed, and for some purposes meliorated, by keeping.\*

The entrance of the gall-duct into the duodenum furnishes another observation. Whenever either smaller tubes are inserted into larger tubes, or tubes into vessels and cavities, such receiving tubes, vessels, or cavities being subject to muscular constriction, we always find a contrivance to prevent *regurgitation*. In some cases valves are used; in other cases, amongst which is that now before us, a different expedient is resorted to, which may be thus described. The gall-duct enters the duodenum obliquely: after it has pierced the first coat, it runs near two fingers' breadth *between* the coats before it opens into the cavity of the intestine. † The same contrivance is used in another part, where there is exactly the same occasion for it, viz. in the insertion of the ureters in the bladder. These enter the bladder near its neck, running obliquely for the space of an inch between its coats. It is, in both cases, sufficiently

\* The bile is said to become more viscid, acrid, and bitter, from the thinner parts being absorbed during its retention in the gall-bladder.

The mode in which this duct perforates the intestines is shown in Tab. XVIII. Fig. 2. *d*, the *ductus communis* at the point of its entrance, which, after passing between the muscular and inner coat of the duodenum, opens into it at *e*. This oblique passage of the common duct through the coats of the duodenum, has the effect of a valve, preventing the reflux of bile, and even of air from the intestine.

evident, that this structure has a necessary mechanical tendency to resist regurgitation: for whatever force acts in such a direction as to urge the fluid back into the orifices of the tubes, must, at the same time, stretch the coats of the vessels, and thereby compress that part of the tube which is included between them.

V. Amongst the *vessels* of the human body, the pipe which conveys the saliva from the place where it is made, to the place where it is wanted, deserves to be reckoned amongst the most intelligible pieces of mechanism with which we are acquainted. The saliva, we all know, is used in the mouth; but much of it is produced on the outside of the cheek, by the parotid gland, which lies between the ear and the angle of the lower jaw. In order to carry the secretion to its destination, there is laid from the gland, on the outside, a pipe about the thickness of a wheat straw, and about three fingers' breadth in length; which, after riding over the masseter muscle, bores for itself a hole through the very middle of the cheek; enters by that hole, which is a complete perforation of the buccinator muscle, into the mouth; and there discharges its fluid very copiously.\*

VI. Another exquisite structure, differing indeed from the four preceding instances in that it does not relate to the conveyance of fluids, but still belonging, like these, to the class of pipes, or conduits of the body, is seen in

\* Tab. XX. Fig. 1. a dissection to exhibit the *parotid gland*. Fig. 2. explains the former; *a, a*, the integuments turned back; *b*, the *parotid gland*; *c*, its *pipe* or *duct* passing over the *masseter*, then perforating *d*, the *buccinator muscle*, and opening into the mouth opposite the second molar tooth. The flow of saliva into the mouth is incessant: and it is one of the most useful digestive fluids. It is favourable to the maceration and division of the food, it assists it in deglutition and transformation into chyme; it also renders more easy the motions of the tongue in speech and in singing.

the *larynx*. We all know that there go down the throat two pipes, one leading to the stomach, the other to the lungs; the one being the passage for the food, the other for the breath and voice: we know also that both these passages open into the bottom of the mouth; the gullet, necessarily, for the conveyance of food; and the wind-pipe, for speech and the modulation of sound, not much less so: therefore the difficulty was, the passages being so contiguous, to prevent the food, especially the liquids, which we swallow into the stomach, from entering the wind-pipe, i. e. the road to the lungs; the consequence of which error, when it does happen, is perceived by the convulsive throes that are instantly produced. This business, which is very nice, is managed in this manner. The gullet (the passage for food) opens into the mouth like the cone or upper part of a funnel, the capacity of which forms indeed the bottom of the mouth. Into the side of this funnel, at the part which lies the lowest, enters the windpipe, by a chink or slit,\* with a lid or flap, † like a

\* "Chink or slit," called the *glottis*. This is the opening of the larynx, formed by the *arytenoid* cartilages, shown in Tab. XXI. Fig. 1 and 2. *g*, *g*. These cartilages constitute the most important part of the larynx, being connected with ligaments called the vocal chords, upon the state of which the human voice more immediately depends. The edges of these cartilages vibrate in the production of the voice, on the same principle as that of the reed in a wind instrument of music. The arytenoid cartilages therefore might be called the human reed, the trachea the tube; and the sounds will be dull or sharp according as the cartilages are more or less pressed together, and their intensity more or less according to the force with which the air is expelled from the lungs.

We assert that there never have been employed in musical instruments any reeds whose moveable plates could vary every instant in thickness and elasticity, so as to produce such various tones and inflections, as those of the human voice.

† "Lid or flap," or *epiglottis*. Fig. 1 and 2. *b*, *b*, is another cartilage or valve for protecting the opening of the glottis. In Fig. 1. it is pressed

little tongue, accurately fitted to the orifice. The solids or liquids which we swallow, pass over this lid or flap, as they descend by the funnel into the gullet. Both the weight of the food, and the action of the muscles concerned in swallowing, contribute to keep the lid close down upon the aperture, whilst any thing is passing; whereas, by means of its natural cartilaginous spring, it raises itself a little, as soon as the food is passed, thereby allowing a free inlet and outlet for the respiration of air by the lungs. Such is its structure. And we may here remark the almost complete success of the expedient, viz. how seldom it fails of its purpose, compared with the number of instances in which it fulfils it. Reflect how frequently we swallow, how constantly we breathe. In a city feast, for example, what deglutition, what anhelation! yet does this little cartilage, the epiglottis, so effectually interpose its office, so securely guard the entrance of the wind-pipe, that whilst morsel after morsel, draught after draught, are coursing one another over it, an accident of a crumb or a drop slipping into this passage (which nevertheless must be opened for the breath every second of time) excites in the whole company, not only alarm by its danger, but surprise by its novelty. Not two guests are choked in a century.

There is no room for pretending that the action of the parts may have gradually formed the epiglottis: I do not mean in the same individual, but in a succession of generations. Not only the action of the parts has no such tendency, but the animal could not live, nor consequently the parts act, either without it, or with it in a half-formed state. The species was not to wait for

down with a probe to show its office when we are in the act of deglutition, at other times its elasticity keeps it raised, as we see in Fig. 2.

the gradual formation or expansion of a part which was, from the first, necessary to the life of the individual.

Not only is the larynx\* curious, but the whole windpipe possesses a structure adapted to its peculiar office. It is made up (as any one may perceive by putting his fingers to his throat) of stout cartilaginous ringlets, placed at small and equal distances from one another. Now this is not the case with any other of the numerous conduits of the body. The use of these cartilages is to keep the passage for the air *constantly* open; which they do mechanically. A pipe with soft membranous coats, liable to collapse and close when empty, would not have answered here; although this be the general vascular structure, and a structure which serves very well for those tubes which are kept in a state of perpetual distention by the fluid they enclose, or which afford a passage to solid and protruding substances.

Nevertheless, (which is another particularity well worthy of notice,) these rings are not complete, that is, are not cartilaginous and stiff all round; but their hinder part, which is contiguous to the gullet, is membranous and soft, easily yielding to the distentions of that organ occasioned by the descent of solid food. The same rings are also bevelled off at the upper and lower edges,

\* Fig. 2. exhibits the *larynx* and *trachea*: the larynx is formed of five cartilages, viz. *b*, the *epiglottis*; *g*, the two *arytenoid cartilages*; *e*, the *thyroid cartilage*, exceedingly strong, for the protection of the upper part of the air-tube; *h*, the *cricoid cartilage*; *d*, the *cartilaginous ringlets* of the *trachea* or *wind-pipe*, varying in number from sixteen to twenty, each funning nearly two-thirds of a circle, and completed by, *f*, a soft *membrane*, which, from its apposition to the oesophagus, accommodates itself to the substances passing into the stomach. The trachea finally divides into two branches called *bronchi*, which are subdivided into very minute brandies through the substance of the lungs. In birds, the trachea is composed of cartilages which form complete rings, and these overlap each other at their edges in such a manner, that the diameter of the tube is not affected by any bending or twisting of the neck.

the better to close upon one another when the trachea is compressed or shortened.

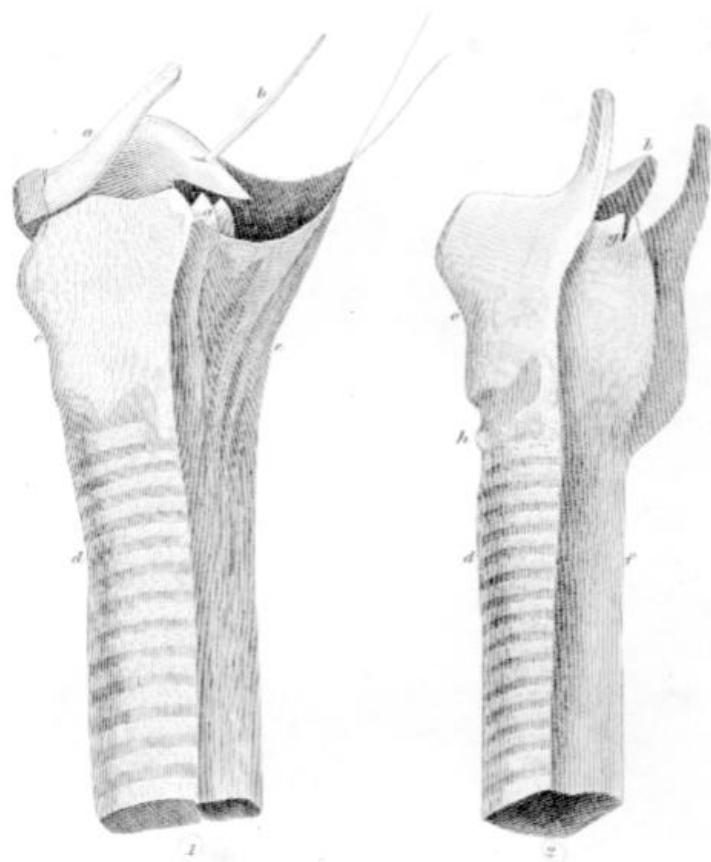

The constitution of the trachea may suggest likewise another reflection. The membrane which lines its inside is, perhaps, the most sensible, irritable membrane of the body. It rejects the touch of a crumb of bread, or a drop of water, with a spasm which convulses the whole frame; yet, left to itself, and its proper office, the intromission of air alone, nothing can be so quiet. It does not even make itself felt; a man does not know that he has a trachea. This capacity of perceiving with such acuteness, this impatience of offence, yet perfect rest and ease when let alone, are properties, one would have thought, not likely to reside in the same subject. It is to the junction, however, of these almost inconsistent qualities, in this, as well as in some other delicate parts of the body, that we owe our safety and our comfort;—our safety to their sensibility, our comfort to their repose.

The larynx, or rather the whole wind-pipe taken together, (for the larynx is only the upper part of the wind-pipe,) besides its other uses, is also a musical instrument, that is to say, it is *mechanism* expressly adapted to the modulation of sound; for it has been found upon trial, that, by relaxing or tightening the tendinous bands at the extremity of the wind-pipe, and blowing in at the other end, all the cries and notes might be produced of which the living animal was capable. It can be sounded, just as a pipe or flute is sounded.

Birds, says Bonnet, have, at the lower end of the wind-pipe,\* a conformation like the reed of a hautboy,

\* Tab. XXI. Fig. 3. This is called the *inferior larynx*, where the vocal organ is formed by a compression of the trachea, for it is here contracted into a narrow chink, and divided into two openings by a slender

for the modulation of their notes. A tuneful bird is a ventriloquist. The seat of the song is in the breast.

The use of the lungs *in* the system has been said to be obscure: one use however is plain, though, in some sense, external to the system, and that is, the formation, in conjunction with the larynx, of voice and speech.\* They are, to animal utterance, what the bellows are to the organ.

---

For the sake of method, we have considered animal bodies under three divisions—their bones, their muscles, and their vessels; and we have stated our observations upon these parts separately. But this is to diminish the strength of the argument. The wisdom of the Creator is seen, not in their separate but their collective action; in their mutual subserviency and dependence; in their contributing *together* to one effect and one use. It has been said, that a man cannot lift his hand to his head without finding enough to convince him of the existence of a God. And it is well said: for he has only to reflect, familiar as this action is, and simple as it seems to be, how many things are requisite for the performing of it; how many things which we understand, to say nothing of many more, probably, which we do not; viz. first, a long, hard, strong

bone, or tense membrane, which, in producing sounds, resembles the mechanism of a musical instrument. In the plate, this part of the larynx is a little turned up to show the *tendinous band* at this extremity stretched across it, which is furnished from the surrounding parts with muscles to modulate the tone.

\* Speech or pronunciation entirely depends on the air passing from the lungs, though at the same time it requires a particular disposition of the vocal tube: for one sort of pronunciation the tongue is the principal agent of formation; for another it is the teeth; others are formed by the lips; whilst, for the production of others, the air must pass the nasal cavities.

cylinder, in order to give to the arm its firmness and tension; but which being rigid, and in its substance inflexible, can only turn upon joints: secondly, therefore, joints for this purpose—one at the shoulder to raise the arm, another at the elbow to bend it; these joints continually fed with a soft mucilage to make the parts slip easily upon one another, and holden together by strong braces, to keep them in their position: then, thirdly, strings and wires, i. e. muscles and tendons, artificially inserted for the purpose of drawing the bones in the directions in which the joints allow them to move. Hitherto we seem to understand the mechanism pretty well; and, understanding this, we possess enough for our conclusion: nevertheless, we have hitherto only a machine standing still; a dead organization—an apparatus. To put the system in a state of activity, to set it at work, a farther provision is necessary, viz. a communication with the brain by means of nerves. We know the existence of this communication, because we can see the communicating threads, and can trace them to the brain: its necessity we also know, because if the thread be cut, if the communication be intercepted, the muscle becomes paralytic: but beyond this we know little; the organization being too minute and subtile for our inspection.\*

\* The functions of the brain and nervous system are at present involved in much mystery; we see only the surprising effects of their agency. That the mind may act on the body, and indeed superintend the whole fabric, it is necessary that this thinking immaterial agent should be provided with an immediate place of residence: that residence is the brain! And as we are destined to hold correspondence with the material beings that surround us, we must be supplied with organs fitted to receive the different kinds of impressions made upon them. For this purpose we are provided with the organs of sense: the eye is adapted to light; the ear to sound; the nose to smell; the mouth to taste; the skin to touch. But as the brain is the seat or source of sensation and volition, we must be furnished with a

To what has been enumerated, as officiating in the sin fie act of a man's raising his hand to his head, must be added likewise, all that is necessary, and all that contributes to the growth, nourishment, and sustentation of the limb, the repair of its waste, the preservation of its health: such as the circulation of the blood through every part of it; its lymphatics, exhalants, absorbents; its excretions and integuments. All these share in the result; join in the effect: and how all these, or any of them, come together without a designing, disposing intelligence, it is impossible to conceive.

## CHAPTER XI. OF THE ANIMAL STRUCTURE REGARDED AS A MASS.

CONTEMPLATING *an animal body* in its collective ca-

medium of communication between the brain and external senses. Hence we are supplied with nerves. An impression received on the most remote part of the body, is propagated by the nerves to the brain, where, cognizance being taken of it, sensation is produced; again, a command emanating from the brain is transmitted along the nervous chords to the parts requisite to be put into motion, when the influence is immediately acknowledged. That these properties reside in the brain and nerves is almost self-evident. By directing my will to the muscles which move my fingers I easily bend them, because there is a direct communication with the brain by means of the nerves: if these be divided I might will my fingers to move, but they would continue motionless. This proves that volition is connected with the brain. Again, if the nerves passing to the limb be divided, the most severe injury may be inflicted on it, yet no pain will be experienced, because the communication with the sensorium has been cut off. When, as in apoplexy, or an effusion of blood on the brain, it is compressed, loss of voluntary motion and sensation follows; notwithstanding the involuntary functions nay for a time proceed in consequence of the nerves of organic life possessing some inherent and apparently independent power. By means of our nerves we are warned of those bodies which are noxious to us. By means of our nerves we receive all our corporeal enjoyment, and even the powers of the mind are extensively influenced by their actions.

pacity, we cannot forget to notice, what a number of instruments are brought together, and often within how small a compass. It is a cluster of contrivances. In a canary-bird, for instance, and in the single ounce of matter which composes his body, (but which seems to be all employed,) we have instruments for eating, for digesting, for nourishment, for breathing, for generation, for running, for flying, for seeing, for hearing, for smelling; each appropriate—each entirely different from all the rest.

The human, or indeed the animal frame, considered as a mass or assemblage, exhibits in its composition three properties, which have long struck my mind as indubitable evidences, not only of design, but of a great deal of attention and accuracy in prosecuting the design. I. The first is, the exact correspondence of the two sides of the same animal; the right hand answering to the left, leg to leg, eye to eye, one side of the countenance to the other; and with a precision, to imitate which in any tolerable degree forms one of the difficulties of statuary, and requires, on the part of the artist, a constant attention to this property of his work, distinct from every other.

It is the most difficult thing that can be to get a wig made even: yet how seldom is the *face* awry! And what care is taken that it should not be so, the anatomy of its bones demonstrates. The upper part of the face is composed of thirteen bones, six on each side, answering each to each, and the thirteenth, without a fellow, in the middle: the lower part of the face is in like manner composed of six bones, three on each side respectively corresponding, and the lower jaw in the centre.\* In

\* The bones which compose the upper part of the face are as follows: viz. Two *ossa nasi*; two *ossa unguis*; two *ossa malarum*; two *ossa*

building an arch, could more be done in order to make the curve *true*, i. e. the parts equi-distant from the middle, alike in figure and position?

The exact resemblance of the *eyes*, considering how compounded this organ is in its structure, how various and how delicate are the shades of colour with which its iris is tinged; how differently, as to effect upon appearance, the eye may be mounted in its socket, and how differently in different heads eyes actually are set — is a property of animal bodies much to be admired. Of ten thousand eyes, I do not know that it would be possible to match one, except with its own fellow; or to distribute them into suitable pairs by any other selection than that which obtains.

This regularity of the animal structure is rendered more remarkable by the three following considerations: —First, the limbs, *separately* taken, have not this correlation of parts, but the contrary of it. A knife drawn down the chine, cuts the human body into two parts, externally equal and alike; you cannot draw a straight line which will divide a hand, a foot, the leg, the thigh, the cheek, the eye, the ear, into two parts equal and alike. Those parts which are placed upon the middle or partition line of the body, or which traverse that line, as the nose, the tongue, the lips, may be so divided, or, more properly speaking, are double organs; but other parts cannot. This shows that the correspondency which we have been describing, does not arise by any necessity in the nature of the subject: for, if necessary, it would be universal; whereas it is observed only in

*mzxillaria superiora*; two *ossa palati*; two *ossa spongiosa inferiora*; and the *vomer*. The lower part of the face consists of the *maxilla inferior*, or lower jaw only; it is evident therefore there must be some error in the preceding enumeration.

the system or assemblage: it is not true of the separate parts; that is to say, it is found where it conduces to beauty or utility; it is not found where it would subsist at the expense of both. The two wings of a bird always correspond; the two sides of a feather frequently do not. In centipedes, millepedes, and that whole tribe of insects, no two legs on the same side are alike; yet there is the most exact parity between the legs opposite to one another.\*

2. The next circumstance to be remarked is, that whilst the cavities of the body are so configurated, as *externally* to exhibit the most exact correspondency of the opposite sides, the contents of these cavities have no such correspondency. A line drawn down the middle of the breast divides the thorax into two sides exactly similar; yet these two sides enclose very different contents. The heart lies on the left side; a lobe of the lungs on the right; balancing each other neither in size nor shape. The same thing holds of the abdomen. The liver lies on the right side, † without any similar viscus opposed to it on the left. The spleen indeed is situated over against the liver; but agreeing with the liver neither in bulk nor form. There is no equipollency between these. The stomach is a vessel, both irregular in its shape, and oblique in its position. The foldings and doublings of the intestines do not present a parity

\* The celebrated Bichat observes, that the organs of *animal life* are *symmetrical*, "Two globes, similar in every respect, receive the impressions of light. Sounds and odours have also their double analogous organ. A single membrane is affected by savours, but the median line is manifest upon it." There are indications throughout the whole body, and numerous distinct points which demonstrate the symmetry of the animal life of man, and every class of animal existence.

† The principal lobe of the liver is on the right, but a smaller is extended into the left side. See Tab. XXII.

of sides. Yet that symmetry, which depends upon the correlation of the sides, is externally preserved throughout the whole trunk; and is the more remarkable in the lower parts of it, as the integuments are soft; and the shape, consequently, is not, as the thorax is by its ribs, reduced by natural stays. It is evident, therefore, that the external proportion does not arise from any equality in the shape or pressure of the internal contents.\* What is it indeed but a correction of inequalities? an adjustment, by mutual compensation, of anomalous forms into a regular congeries? the effect, in a word, of artful, and, if we might be permitted so to speak, of studied collocation?

3. Similar also to this, is the third observation; that an internal inequality in the feeding vessels is so managed, as to produce no inequality in parts which were intended to correspond. The right arm answers accurately to the left, both in size and shape; but the arterial branches, which supply the two arms, do not go off from their trunk, in a pair, in the same manner, at the same place, or at the same angle. Under which want of similitude, it is very difficult to conceive how the same quantity of blood should be pushed through each artery: yet the result is right; the two limbs, which are nourished by them, perceive no difference of supply, no effects of excess or deficiency.

Concerning the difference of manner, in which the subclavian and carotid arteries, upon the different sides of the body, separate themselves from the aorta, Cheselden seems to have thought, that the advantage which

\* The viscera of the thorax and abdomen, i. e. the viscera of *organic life*, are irregularly disposed. The *agents of volition* are double, but the instruments of *involuntary motion*, namely the interior life, are single, and at least are irregular in their form.

the left gain by going off at an angle much more acute than the right, is made up to the right by their going off together in one branch. It is very possible that this may be the compensating contrivance; and if it be so, how curious, how hydrostatical!\*

II. Another perfection of the animal mass is the *package*. † I know nothing which is so surprising. Examine the contents of the trunk of any large animal. Take notice how soft, how tender, how intricate they are; how constantly in action, how necessary to life! Reflect upon the danger of any injury to their substance, any derangement of their position, any obstruction to their office. Observe the heart pumping at the centre, at the rate of eighty strokes in a minute; one set of pipes carrying the stream away from it, another set bringing, in its course, the fluid back to it again; the lungs performing their elaborate office, viz. distending and contracting their many thousand vesicles, by a reciprocation which cannot cease for a minute; the stomach exercising its powerful chemistry; the bowels silently propelling the changed aliment; collecting from it, as it proceeds, and transmitting to the blood, an incessant supply of prepared and assimilated nourishment; that blood pursuing its course; the liver, the kidneys, the pancreas, the parotid, with many other known and

\* The arrangement of these vessels is seen in Tab. XVII. *k*, the *right subclavian*; *l*, the *right carotid* arteries, originating from one common trunk; *m*, the *left carotid*; *n*, the *left subclavian*.

† Tab. XXII. Fig. 1. In this plate the parieties of the chest and abdomen, with the omentum, are removed to show the viscera *in situ*: *a*, the *heart*; *b*, the *aorta*; *c*, the *descending vena cava*; *d, d*, the *lungs* divided by the mediastinum into two portions; three lobes belong to the right, and two to the left portion of the lungs; *e*, the *diaphragm*, or that muscle which separates the thorax from the abdomen; *f*, the *liver*; *g*, the *gallbladder*; *h*, the *stomach*; *i*, the *spleen*; *k, k*, the *large intestine*; *I, I*, the *small intestines*; *m*, the *bladder*.

*Ptilodexia hispanica* (Linné)

TAB. XXII.

distinguishable glands, drawing off from it, all the while, their proper secretions. These several operations, together with others more subtle but less capable of being investigated, are going on within us, at one and the same time. Think of this; and then observe how the body itself, the case which holds this machinery, is rolled, and jolted, and tossed about, the mechanism remaining unhurt, and with very little molestation even of its nicest motions. Observe a rope-dancer, a tumbler, or a monkey: the sudden inversions and contortions which the internal parts sustain by the postures into which their bodies are thrown; or rather observe the shocks which these parts, even in ordinary subjects, sometimes receive from falls and bruises, or by abrupt jerks and twists, without sensible, or with soon-recovered damage. Observe this, and then reflect how firmly every part must be secured, how carefully surrounded, how well tied down and packed together.

This property of animal bodies has never, I think, been considered under a distinct head, or so fully as it deserves. I may be allowed, therefore, in order to verify my observation concerning it, to set forth a short anatomical detail, though it oblige me to use more technical language than I should wish to introduce into a work of this kind.

1. The *heart* (such care is taken of the centre of life) is placed between the soft lobes of the lungs; is *tied* to the mediastinum\* and to the pericardium; which pericardium is not only itself an exceedingly strong membrane, but *adheres* firmly to the duplicature of the mediastinum, and, by its point, to the middle tendon of the diaphragm. The heart is also *sustained*

\* The mediastinum is a membrane which divides the chest into two parts.

in its place by the great blood-vessels which issue from it.

2. The *lungs* are *tied* to the sternum by the mediastinum, before; to the vertebrae by the pleura, behind. It seems indeed to be the very use of the mediastinum (which is a membrane that goes straight through the middle of the thorax, from the breast to the back) to keep the contents of the thorax in their places; in particular, to hinder one portion of the lungs from incommodeing another, or the parts of the lungs from pressing upon each other when we lie on one side.\*

3. The *liver* is fastened in the body by two ligaments: the first, which is large and strong, comes from the covering of the diaphragm, and penetrates the substance of the liver; the second is the umbilical vein, which, after birth, degenerates into a ligament. The first, which is the principal, fixes the liver in its situation, whilst the body holds an erect posture; the second prevents it from pressing upon the diaphragm when we lie down; and both together *sling* or suspend the liver when we lie upon our backs, so that it may not compress or obstruct the ascending vena cava, to which belongs the important office of returning the blood from the body to the heart.

4. The *bladder* is tied to the navel by the urachus, transformed into a ligament: thus, what was a passage for urine to the foetus, becomes, after birth, a support or stay to the bladder. The peritonaeum † also keeps the

\* A membrane, called the pleura, lines the chest and covers its contents: on each side it forms a distinct bag for the lungs, and the lungs of opposite sides being independent, breathing may be continued in one lung, though the other has been destroyed.

† The *peritonaeum* is a smooth shining membrane enveloping the liver, stomach, spleen, and intestines; the kidneys and bladder are partially covered by it. The lower surface of the diaphragm, and the parietes or

viscera from confounding themselves with, or pressing irregularly upon the bladder: for the kidneys and bladder are contained in a distinct duplicature of that membrane, being thereby partitioned off from the other contents of the abdomen.

5. The *kidneys* are lodged in a bed of fat.

6. The *pancreas*, or sweetbread, is strongly tied to the peritonaeum, which is the great wrapping sheet that encloses all the viscera contained in the lower belly.

7. The *spleen* also is confined to its place by an adhesion to the peritonaeum and diaphragm, and by a connexion with the omentum. It is possible, in my opinion, that the spleen may be merely a *stuffing*, a soft cushion to fill up a vacancy or hollow, which, unless occupied, would leave the package loose and unsteady: for, supposing that, it answers no other purpose than this, it must be vascular, and admit of a circulation through it, in order to be kept alive, or be a part of a living body.\*

8. The *omentum*, † epiploon, or cawl, is an apron tucked up, or doubling upon itself, at its lowest part. The upper edge is tied to the bottom of the stomach,

sides of the abdomen, receive their exterior covering from it. The inner surface habitually exhales a moisture which bedews the surface of the several organs, permits motion, and prevents adhesion. The mesentery, the broad ligament of the liver, and the omentum, are productions or folds of the same membrane.

\* The several viscera are correctly described, and sufficient is said for the purposes for which they are introduced. To the supposed use of the *spleen* only an objection must be taken: various hypotheses have been entertained as to its office, but none are perfectly conclusive; the most probable is, that it is a source of supply of blood for furnishing the gastric secretion, or that the blood undergoes some important change in it. See note, p. 48.

† The omentum is spread over the intestines, and is formed of a duplicature of the peritonaeum with more or less of fat interposed; indeed it receives the superfluous depositions of fat. Like other parts of the peritonaeum it is an exhaling organ for producing the fluid necessary for the due action and condition of the intestines.

to the spleen, as hath already been observed, and to part of the duodenum. The reflected edge also, after forming the doubling, comes up behind the front flap, and is tied to the colon\* and adjoining viscera.

9. The septa of the brain probably prevent one part of that organ from pressing with too great a weight upon another part. The processes of the dura mater divide the cavity of the skull, like so many inner partition walls, and thereby confine each hemisphere and lobe of the brain to the chamber which is assigned to it, without its being liable to rest upon, or incommod the neighbouring parts. The great art and caution of packing is to prevent one thing hurting another. This, in the head, the chest, and the abdomen, of an animal body, is, amongst other methods, provided for by membranous partitions and wrappings, which keep the parts separate.

The above may serve as a short account of the manner in which the principal viscera are sustained in their places. But of the provisions for this purpose, by far, in my opinion, the most curious, and where also such a provision was most wanted, is in the *guts*. It is pretty evident, that a long narrow tube (in man, about five times the length of the body) laid from side to side in folds upon one another, winding in oblique and circuitous directions, composed also of a soft and yielding substance, must, without some extraordinary precaution for its safety, be continually displaced by the various, sudden, and abrupt motions of the body which contains it. I should expect that, if not bruised or wounded by every fall, or leap, or twist, it would be entangled, or be involved with itself; or, at the least, slipped and shaken out of the order in which it is disposed, and

\* The upper portion of the large intestine.

which order is necessary to be preserved for the carrying on of the important functions which it has to execute in the animal economy. Let us see, therefore, how a danger so serious, and yet so natural to the length, narrowness, and tubular form of the part, is provided against. The expedient is admirable; and it is this: the intestinal canal, throughout its whole progress, is knit to the edge of a broad fat membrane called the *mesentery*.\* It forms the margin of this mesentery, being stitched and fastened to it like the edging of a ruffle: being four times as long as the mesentery itself, it is what a seamstress would call "puckered or gathered on" to it. This is the nature of the connexion of the gut with the mesentery; and being thus joined to, or rather made a part of the mesentery, it is folded and wrapped up together with it. Now the mesentery, having a considerable dimension in breadth, being in its substance, withal, both thick and suety, is capable of a close and safe folding, in comparison of what the intestinal tube would admit of, if it had remained loose. The mesentery, likewise, not only keeps the intestinal canal in its proper place and position, under all the turns and windings of its course, but sustains the numberless small vessels, the arteries, the veins, the lympheducts, and, above all, the lacteals, which lead from or to almost every point of its coats and cavity. This membrane, which appears to be the great support and security of the alimentary apparatus, is itself strongly tied to the first three vertebrae? of the loins.

\* Tab. XXII. Fig. 2. This membrane is formed by a reflection of the *peritonaeum* from each side of the vertebrae; it connects the intestines loosely to the spine, to allow them a certain degree of motion, yet retains them in their places, and furnishes their exterior covering. Between the laminae of *a*, the *mesentery*, are received the *glands*, *vessels*, and *nerves*; and its extent admits of a proper distribution of each.

III. A third general property of animal forms is *beauty*. I do not mean relative beauty, or that of one individual above another of the same species, or of one species compared with another species; but I mean, generally, the provision which is made in the body of almost every animal, to adapt its appearance to the perception of the animals with which it converses. In our own species, for example, only consider what the parts and materials are, of which the fairest body is composed; and no farther observation will be necessary to show, how well these things are wrapped up, so as to form a mass which shall be capable of symmetry in its proportion, and of beauty in its aspect; how the bones are covered, the bowels concealed, the roughnesses of the muscles smoothed and softened; and how over the whole is drawn an integument, which converts the disgusting materials of a dissecting-room into an object of attraction to the sight, or one upon which it rests, at least, with ease and satisfaction. Much of this effect is to be attributed to the intervention of the cellular or adipose membrane,\* which lies immediately under the

\* The *cellular membrane* is a system of considerable extent every where continuous, surrounding and penetrating the multitude of organic formations; it consists of whitish filaments interlaced and intermixed a thousand different ways, leaving between them certain interstices for the reception of *fat* or *serum*; it is a tissue of fibres which constitutes the bond that unites the various parts of the animal fabric, and the medium which separates them.

In this "cellular or adipose" tissue, the fat or adipose substance is deposited. Certainly its presence beneath the skin, by rounding the outline beautifies the form; but in the animal economy it has other and more important uses. First, by forming elastic cushions or layers, which render the pressure exerted on the skin less severe. Secondly, by receiving into its cells the surplus of nutritive matter, to be brought out and employed according to the exigence, in instances where food cannot be obtained, and in often supporting the system under wasting diseases, until, by medical treatment, or the powers of nature, the deranged functions are put in order. Thirdly, as all fat bodies are bad conductors of caloric,

skin; is a kind of lining to it; is moist, soft, slippery, and compressible; every where filling up the interstices of the muscles, and forming thereby the roundness and flowing line, as well as the evenness and polish of the whole surface.

All which seems to be a strong indication of design, and of a design studiously directed to this purpose. And it being once allowed, that such a purpose existed with respect to *any* of the productions of nature, we may refer, with a considerable degree of probability, other particulars to the same intention; such as the teints of flowers, the plumage of birds, the furs of beasts, the bright scales of fishes, the painted wings of butterflies and beetles, the rich colours and spotted lustre of many tribes of insects.

There are parts also of animals ornamental, and the properties by which they are so, not subservient, that we know of, to any other purpose. The *irides* of most animals are very beautiful, without conducing at all, by their beauty, to the perfection of vision; and nature could in no part have employed her pencil to so much advantage, because no part presents itself so conspicuously to the observer, or communicates so great an effect to the whole aspect.

In plants, especially in the flowers of plants, the principle of beauty holds a still more considerable place in their composition; is still more confessed than in animals. Why, for one instance out of a thousand, does the corolla of the tulip, when advanced to its size and maturity, change its colour? The purposes, so far as we can see, of vegetable nutrition, might have been carried on as well by its continuing green. Or,

so it contributes to the preservation of the heat of the body. Persons of a full habit in general suffer little in winter from cold.

if this could not be, consistently with the progress of vegetable life, why break into such a variety of colours? This is no proper effect of age, or of declension in the ascent of the sap: for that, like the autumnal teints, would have produced one colour on one leaf, with marks of fading and withering. It seems a lame account to call it, as it has been called, a disease of the plant. Is it not more probable, that this property, which is independent, as it should seem, of the wants and utilities of the plant, was calculated for beauty, intended for display?

A ground, I know, of objection, has been taken against the whole topic of argument, namely, that there is no such thing as beauty at all; in other words, that whatever is useful and familiar, comes of course to be thought beautiful; and that things appear to be so, only by their alliance with these qualities. Our idea of beauty is capable of being in so great a degree modified by habit, by fashion, by the experience of advantage or pleasure, and by associations arising out of that experience, that a question has been made, whether it be not altogether generated by these causes, or would have any proper existence without them. It seems, however, a carrying of the conclusion too far, to deny the existence of the principle, viz. a native capacity of perceiving beauty, on account of an influence, or of varieties proceeding from that influence, to which it is subject, seeing that principles the most acknowledged are liable to be affected in the same manner. I should rather argue thus:—The question respects objects of sight. Now every other sense hath its distinction of agreeable and disagreeable. Some tastes offend the palate, others gratify it. In brutes and insects, this distinction is stronger and more regular than in man.

Every horse, ox, sheep, swine, when at liberty to choose, and when in a natural state, that is, when not vitiated by habits forced upon it, eats and rejects the same plants. Many insects which feed upon particular plants, will rather die than change their appropriate leaf. All this looks like a determination in the sense itself to particular tastes. In like manner, smells affect the nose with sensations pleasurable or disgusting. Some sounds, or compositions of sound, delight the ear; others torture it. Habit can do much in all these cases, (and it is well for us that it can; for it is this power which reconciles us to many necessities); but has the distinction, in the mean time, of agreeable and disagreeable, no foundation in the sense itself? What is true of the other senses, is most probably true of the eye, (the analogy is irresistible,) viz. that there belongs to it an original constitution, fitted to receive pleasure from some impressions and pain from others.

I do not however know, that the argument which alleges beauty as a final cause, rests upon this concession. We possess a sense of beauty, however we come by it. It in fact exists. Things are not indifferent to this sense; all objects do not suit it; many, which we see, are agreeable to it; many others disagreeable. It is certainly not the effect of habit upon the particular object, because the most agreeable objects are often the most rare; many which are very common, continue to be offensive. If they be made supportable by habit, it is all which habit can do; they never become agreeable. If this sense, therefore, be acquired, it is a result; the produce of numerous and complicated actions of external objects upon the senses, and of the mind upon its sensations. With this *result*, there must be a certain congruity to enable any particular object to

please; and that congruity, we contend, is consulted in the *aspect* which is given to animal and vegetable bodies.

IV. The skin and covering of animals is that upon which their appearance chiefly depends; and it is that part which, perhaps, in all animals, is most decorated and most free from impurities. But were beauty, or agreeableness of aspect, entirely out of the question, there is another purpose answered by this integument, and by the collocation of the parts of the body beneath it, which is of still greater importance; and that purpose is *concealment*.\* Were it possible to view through the skin the mechanism of our bodies, the sight would frighten us out of our wits. "Durst we make a single movement," asks a lively French writer, "or stir a step from the place we were in, if we saw our blood circulating, the tendons pulling, the lungs blowing, the humours filtrating, and all the incomprehensible assemblage of fibres, tubes, pumps, valves, currents, pivots, which sustain an existence at once so frail, and so presumptuous?"

V. Of animal bodies, considered as masses, there is another property, more curious than it is generally thought to be; which is the faculty of *standing*: and it is more remarkable in two-legged animals than in quadrupeds, and, most of all, as being the tallest, and resting upon the smallest base, in man. † There is more,

\* The purpose of integuments is, we conceive, *protection* rather than *concealment*; it is an elastic medium resisting every violence better than any other medium. See also preceding note, p. 168.

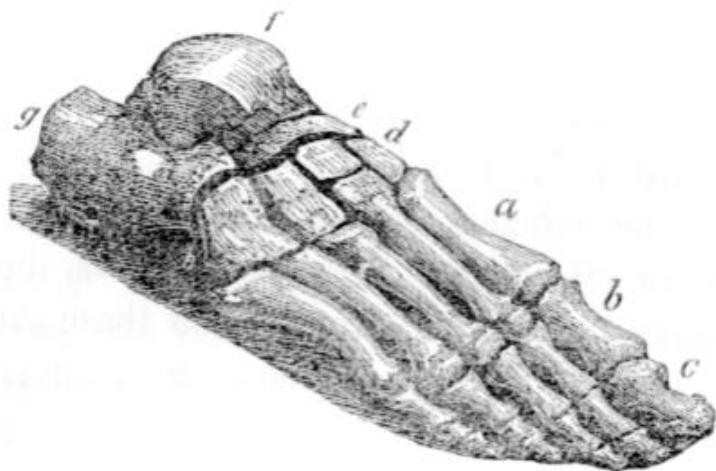

† Anatomy explains the mode in which the weight of the body is transmitted to the feet, and we have seen that the muscles which prevent the head from falling forward in standing, have their fixed point in the neck; that those which perform the same office with regard to the vertebral column, have theirs in the pelvis; that those which preserve the pelvis in equilibrium

I think, in the matter than we are aware of. The statue of a man, placed loosely upon its pedestal, would not be secure of standing half an hour. You are obliged to fix its feet to the block by bolts and solder; or the first shake, the first gust of wind, is sure to throw it down. Yet this statue shall express all the mechanical proportions of a living model. It is not, therefore, the mere figure, or merely placing the centre of gravity within the base, that is sufficient. Either the law of gravitation is suspended in favour of living substances, or something more is done for them, in order to enable them to uphold their posture. There is no reason whatever to doubt, but that their parts descend by gravitation in the same manner as those of dead matter.

The gift, therefore, appears to me to consist in a faculty of perpetually shifting the centre of gravity, by a set of obscure, indeed, but of quick-balancing actions, so as to keep the line of direction, which is a line drawn from that centre to the ground, within its prescribed limits. Of these actions it may be observed, first, that they in part constitute what we call strength. The dead body drops down. The mere adjustment, therefore, of weight and pressure, which may be the same the moment after death as the moment before, does not support the column. In cases also of extreme weakness, the patient cannot stand upright. Secondly, that these actions are only in a small degree voluntary. A man is seldom conscious of his voluntary powers in keeping himself upon his legs. A child learning to walk is the greatest posture-master in the world: but art, if it may be so

are attached to the thighs, or to the bones of the legs; that those which prevent the thighs from falling backward are inserted into the tibia; and, lastly, that those that preserve the tibia in their vertical position have their fixed point in the feet; these preserve us firm in a standing position.

called, sinks into habit; and he is soon able to poise himself in a great variety of attitudes, without being sensible either of caution or effort. But still there must be an aptitude of parts, upon which habit can thus attach; a previous capacity of motions which the animal is thus taught to exercise: and the facility with which this exercise is acquired, forms one object of our admiration. What parts are principally employed, or in what manner each contributes to its office, is, as hath already been confessed, difficult to explain. Perhaps the obscure motion of the bones of the feet may have their share in this effect. They are put in action by every slip or vacillation of the body, and seem to assist in restoring its balance. Certain it is, that this circumstance in the structure of the foot, viz. its being composed of many small bones, applied to and articulating with one another, by diversely shaped surfaces, instead of being made of one piece, like the last of a shoe, is very remarkable.\*

\* See Tab. XI. There is no part of the human frame which is more wonderfully constructed than the foot. It has the requisite strength to support the weight of the body, and often an additional burden: flexibility, that it may be adapted to the inequalities of the surface on which we tread; and elasticity, to assist in walking, running, and springing from the ground. This advantage we possess from the number of joints, the

I suppose, also, that it would be difficult to stand firmly upon stilts or wooden legs, though their base exactly imitated the figure and dimensions of the sole of the foot. The alternation of the joints—the knee-joint bending backward, the hip-joint forward; the flexibility, in every direction, of the spine, especially in the loins and neck, appear to be of great moment in preserving the equilibrium of the body. With respect to this last circumstance, it is observable, that the vertebra are so confined by ligaments, as to allow no more slipping upon their bases, than what is just sufficient to break the shock which any violent motion may occasion to the body. A certain degree also of tension of the sinews appears to be essential to an erect posture; for it is by the loss of this, that the dead or paralytic body drops down. The whole is a wonderful result of combined powers, and of very complicated operations. Indeed, that *standing* is not so simple a business as we imagine it to be, is evident from the strange gesticulations of a drunken man, who has lost the government of the centre of gravity.

We have said that this property is the most worthy of observation in the *human* body; but a *bird*, resting upon its perch, or hopping upon a spray, affords no mean specimen of the same faculty. A chicken runs off as soon as it is hatched from the egg; yet a chicken, considered geometrically, and with relation to its centre of gravity, its line of direction, and its equilibrium, is a

arch of the foot being composed of twenty-six bones: *a*, the metatarsus; *b, c*, the phalanges of the foot and toes; *d, e, f, g, h*, the bones of the tarsus or instep. These bones have a considerable play on each other; and as each articulating surface is covered with cartilage, the essential property of which is *elasticity*, the jarring is thus prevented which would result from a contact of the bones.

"The first question which naturally arises is, Why there should be so many bones? the answer is—In order that there may be so many joints: for the structure of a joint not only permits motion but bestows elasticity."

very irregular solid. Is this gift, therefore, or instruction? May it not be said to be with great attention, that nature hath balanced the body upon its pivots?

I observe also in the same *bird* a piece of useful mechanism of this kind. In the trussing of a fowl, upon bending the legs and thighs up towards the body, the cook finds that the claws close of their own accord. Now let it be remembered, that this is the position of the limbs, in which the bird rests upon its perch. And in this position it sleeps in safety; for the claws do their office in keeping hold of the support, not by any exertion of voluntary power, which sleep might suspend, but by the traction of the tendons in consequence of the attitude which the legs and thighs take by the bird sitting down, and to which the mere weight of the body gives the force that is necessary.

VI. Regarding the human body as a mass; regarding the general conformations which obtain in it; regarding also particular parts in respect to those conformations; we shall be led to observe what I call "interrupted analogies." The following are examples of what I mean by these terms; and I do not know how such critical deviations can, by any possible hypothesis, be accounted for without design.

1. All the bones of the body are covered with a *periosteum*,\* except the teeth; where it ceases, and an enamel of ivory, which saws and files will hardly touch, comes into its place. † No one can doubt of the use and

\* The *periosteum* consists of layers of condensed cellular tissue, which constitute a membrane surrounding all the bones, except in such parts as are covered with cartilage; it is connected to them by innumerable vessels which nourish the external plates.

† "Enamel" is a substance harder than iron; it is only found round the crown of the tooth, or those parts which we see exposed. It is thick on the upper surface, and gradually thinner as it draws near the root. This

propriety of this difference; of the "analogy" being thus "interrupted;" of the rule, which belongs to the conformation of the bones, stopping where it does stop: for had so exquisitely sensible a membrane as the periosteum invested the teeth, as it invests every other bone of the body, *their* action, necessary exposure, and irritation, would have subjected the animal to continual pain. General as it is, it was not the sort of integument which suited the teeth: what they stood in need of, was a strong, hard, insensible, defensive coat; and exactly such a covering is given to them, in the ivory enamel which adheres to their surface.

2. The scarf-skin, which clothes all the rest of the body, gives way, at the extremities of the toes and fingers, to *nails*. A man has only to look at his hand, to observe with what nicety and precision that covering, which extends over every other part, is here superseded by a different substance, and a different texture. Now, if either the rule had been necessary, or the deviation from it accidental, this effect would not be seen. When I speak of the rule being necessary, I mean the formation of the skin upon the surface being produced by a set of causes constituted without design, and acting, as all ignorant causes must act, by a general operation. Were this the case, no account could be given of the operation being suspended at the fingers' ends, or on the back part of the fingers, and not on the fore part. On the other hand, if the deviation were accidental, an error, an anomalous; were it any thing else than settled by intention, we should meet with nails upon other parts of the body. They would be scattered over the surface, like warts or pimples.

structure and disposition of it is a provision indispensable in order to give strength and to allow of attrition.

3. All the great cavities of the body are enclosed by membranes, except the *skull*. Why should not the brain be content with the same covering as that which serves for the other principal organs of the body? The heart, the lungs, the liver, the stomach, the bowels, have all soft integuments, and nothing else. The muscular coats are all soft and membranous. I can see a reason for this distinction in the final cause, but in no other. The importance of the brain to life, (which experience proves to be immediate,) and the extreme tenderness of its substance, make a solid case more necessary for it than for any other part: and such a case the hardness of the skull supplies. When the smallest portion of this natural casket is lost, how carefully, yet how imperfectly, is it replaced by a plate of metal! If an anatomist should say, that this bony protection is not confined to the brain, but is extended along the course of the spine; I answer, that he adds strength to the argument. If he remark, that the chest also is fortified by bones; I reply, that I should have alleged this instance myself, if the ribs had not appeared subservient to the purpose of motion as well as of defence. What distinguishes the skull from every other cavity is, that the bony covering completely surrounds its contents, and is calculated, not for motion, but solely for defence.\*

\* From the importance of the brain as being the material instrument of thought, and on account of its very delicate texture, it was necessary that it should be especially guarded from physical derangement, and defended against injuries from surrounding bodies; and we admit that the skull is the most effective security; particularly on account of its form. Sir Charles Bell terms it an *elliptical dome*, but strictly speaking it is a *spheroid*, so that all pressure or blows upon the head are distributed in all directions, from the point of the bone struck over the other parts, and consequently falls less injuriously on the brain. Nature has been further provident, for amongst the protecting parts we may also reckon the hair, the scalp, the muscles, and the pericranium. The hair too, being a bad

Those hollows, likewise, and inequalities, which we observe in the inside of the skull, and which exactly fit the folds of the brain, answer the important design of keeping the substance of the brain steady, and of guarding it against concussions.

## CHAPTER XII.

### COMPARATIVE ANATOMY.

WHENEVER we find a general plan pursued, yet with such variations in it as are, in each case, required by the particular exigency of the subject to which it is applied, we possess, in such a plan and such adaptation, the strongest evidence that can be afforded of intelligence and design; an evidence which most completely excludes every other hypothesis. If the general plan proceeded from any fixed necessity in the nature of things, how could it accommodate itself to the various wants and uses which it had to serve under different circumstances, and on different occasions? *Arkwright's* mill was invented for the spinning of cotton. We see it employed for the spinning of wool, flax, and hemp, with such modifications of the original principle, such variety in the same plan, as the texture of those different materials rendered necessary. Of the machine's being put together with design, if it were possible to doubt, whilst we saw it only under one mode, and in one form; when we came to observe it in its different applications, with such changes of structure, such additions and supplements, as the special and particular use in each case

conductor of caloric, is well suited to preserve an uniform temperature in the head.

demanded, we could not refuse any longer our assent to the proposition, "that intelligence, properly and strictly so called, (including under that name, foresight, consideration, reference to utility,) had been employed, as well in the primitive plan, as in the several changes and accommodations which it is made to undergo."

Very much of this reasoning is applicable to what has been called *Comparative Anatomy* \* In their general economy, in the outlines of the plan, in the construction as well as offices of their principal parts, there exists between all large terrestrial animals a close resemblance. In all, life is sustained and the body nourished by nearly the same apparatus. The heart, the lungs, the stomach, the liver, the kidneys, are much alike in all. The same fluid (for no distinction of blood has been observed) circulates through their vessels, and nearly in the same order. The same cause, therefore, whatever that cause was, has been concerned in the origin, has governed the production of these different animal forms.

When we pass on to smaller animals, or to the inhabitants of a different element, the resemblance becomes more distant and more obscure; but still the plan accompanies us.

And, what we can never enough commend, and which it is our business at present to exemplify, the plan is attended, through all its varieties and deflections, by subserviences to special occasions and utilities.

I. The *covering* of different animals (though whether I am correct in classing this under their anatomy, I do not know) is the first thing which presents itself to our observation; and is, in truth, both for its variety and

\* "Comparative Anatomy;" so called from comparing with Human Anatomy the points of similarity and dissimilarity observed in inferior animals.

its suitableness to their several natures, as much to be admired as any part of their structure. We have bristles, hair, wool, furs, feathers, quills, prickles, scales;\* yet in this diversity both of material and form, we cannot change one animal's coat for another, without evidently changing it for the worse: taking care however to remark, that these coverings are, in many cases, armour as well as clothing; intended for protection as well as warmth.

The *human* animal is the only one which is naked, and the only one which can clothe itself. This is one of the properties which renders him an animal of all climates, and of all seasons. He can adapt the warmth or lightness of his covering to the temperature of his habitation. Had he been born with a fleece upon his back, although he might have been comforted by its warmth in high latitudes, it would have oppressed him by its weight and heat as the species spread towards the equator.

What art, however, does for men, nature has, in many instances, done for those animals which are incapable of art. Their clothing, of its own accord, changes with their necessities. This is particularly the case with that large tribe of quadrupeds which are covered with *furs*. Every dealer in hare-skins and

\* "Hair" is found on all the mammalia, whales not excepted, differing however greatly in quantity according to the species, but always most abundant in those parts exposed, and on those animals which inhabit cold countries. It is found on birds along with feathers on different parts of the neck. It is absent in the reptiles, fishes, and molusca.

"Feathers" occur on birds only, and characterize the class—they are related to the hairs in the animal economy in regard to situation, composition, and purpose; they are renewed periodically, or if accidentally destroyed are readily reproduced.

"Quills, prickles, and scales" are chiefly formed for the defence of the animals which possess them. See Flemming's Philosophy of Zoology, vol. i. p. 80.

rabbit-skins knows how much the fur is thickened by the approach of winter. It seems to be a part of the same constitution and the same design, that wool, in hot countries, degenerates, as it is called, but in truth (most happily for the animal's ease) passes into hair; whilst, on the contrary, that hair, on the dogs of the polar regions, is turned into wool, or something very like it. To which may be referred, what naturalists have remarked, that bears, wolves, foxes, hares, which do not take the water, have the fur much thicker on the back than the belly: whereas on the beaver it is the thickest upon the belly; as are the feathers on water fowl. We know the final cause of all this; and we know no other.

The *covering of birds* cannot escape the most vulgar observation. Its lightness, its smoothness, its warmth; —the disposition of the feathers all inclined backward, the down about their stem, the overlapping of their tips, their different configuration in different parts, not to mention the variety of their colours, constitute a vestment for the body, so beautiful, and so appropriate to the life which the animal is to lead, as that, I think, we should have had no conception of any thing equally perfect, if we had never seen it, or can now imagine any thing more so. Let us suppose (what is possible only in supposition) a person who had never seen a bird, to be presented with a plucked pheasant, and bid to set his wits to work, how to contrive for it a covering which shall unite the qualities of warmth, levity, and least resistance to the air, and the highest degree of each; giving it also as much of beauty and ornament as he could afford. He is the person to behold the work of the Deity, in this part of his creation, with the sentiments which are due to it.

The commendation, which the general aspect of the feathered world seldom fails of exciting, will be increased by farther examination. It is one of those cases in which the philosopher has more to admire than the common observer. Every *feather* is a mechanical wonder. If we look at the quill, we find properties not easily brought together—strength and lightness. I know few

things more remarkable than the strength and lightness of the very pen with which I am writing. If we cast our eye to the upper part of the stem, we see a material, made for the purpose, used in no other class of animals, and in no other part of birds; tough, light, pliant, elastic. The pith, also, which feeds the feathers, is, amongst animal substances, *sui generis*; neither bone, flesh, membrane, nor tendon.\*

But the artificial part of a feather is the *beard*, or, as it is sometimes, I believe, called, the vane. By the beards are meant, what are fastened on each side of the stem, and what constitute the breadth of the feather; what we usually strip off from one side or both, when we make a pen. The separate pieces of laminae, of which the beard is composed, are called threads, sometimes filaments, or rays. Now the first thing which an attentive observer will remark is, how much stronger the beard of the feather shows itself to be, when pressed in a direction perpendicular to its plane, than when rubbed, either up or down, in the line of the stem; and he will soon discover the structure which occasions this difference, viz. that the laminae, whereof these beards are composed, are flat, and placed with

\* The quill part of a feather is composed of circular and longitudinal fibres. In making a pen, you must scrape off the coat of circular fibres, or the quill will split in a ragged, jagged manner, making what boys call *cut's teeth*. PALEY.

their flat sides towards each other; by which means, whilst they *easily* bend for the approaching of each other, as any one may perceive by drawing his finger ever so lightly upwards, they are much harder to bend out of their plane, which is the direction in which they have to encounter the impulse and pressure of the air, and in which their strength is wanted and put to the trial.

This is one particularity in the structure of a feather; a second is still more extraordinary. Whoever examines a feather, cannot help taking notice, that the threads or lamina?, of which we have been speaking, in their natural state *unite*; that their union is something more than the mere apposition of loose surfaces; that they are not parted asunder without some degree of force; that nevertheless there is no glutinous cohesion between them; that, therefore, by some mechanical means or other, they catch or clasp among themselves, thereby giving to the beard or vane its closeness and compactness of texture. Nor is this all: when two lamina?, which have been separated, by accident or force, are brought together again, they immediately *reclasp*: the connexion, whatever it was, is perfectly recovered, and the beard of the feather becomes as smooth and firm as if nothing had happened to it. Draw your finger down the feather, which is against the grain, and you break, probably, the junction of some of the contiguous threads; draw your finger up the feather, and you restore all things to their former state. This is no common contrivance: and now for the mechanism by which it is effected.\* The threads or laminae above mentioned

\* By the aid of the microscope it appears, that the laminse are not flat, as they appear to the unassisted eye, but are semi-tubular, having on their outward edge a series of bristles, termed in the text fibres, set in pairs opposite one another, which clasp with the bristles of the approximate

are *interlaced* with one another; and the interlacing is performed by means of a vast number of fibres, or teeth, which the laminae shoot forth *on each side*, and which hook and grapple together. A friend of mine counted fifty of these fibres in one-twentieth of an inch. These fibres are crooked; but curved after a different manner: for those which proceed from the thread on the side towards the extremity of the feather, are longer, more flexible, and bent downward; whereas those which proceed from the side towards the beginning, or quill-end of the feather, are shorter, firmer, and turn upwards. The process then which takes place is as follows: When two laminae are pressed together, so that these long fibres are forced far enough over the short ones, *their* crooked parts fall into the cavity made by the crooked parts of the others; just as the latch that is fastened to a door enters into the cavity of the catch fixed to the door-post, and there hooking itself, *fastens* the door; for it is properly in this manner, that one thread of a feather is fastened to the other.

This admirable structure of the feather, which it is easy to see with the microscope,\* succeeds perfectly for the use to which nature has designed it; which use was, not only that the laminae might be united, but that when one thread or lamina has been separated from another by some external violence, it might be reclasped with sufficient facility and expedition.

laminae, and cause that adhesiveness observable between the several laminae of the vane.

\* The appearance they then present is exhibited in Tab. XXIII. Fig. 2. which shows distinctly the form, direction, and relative positions of each set of fibrils, and the manner in which they lay hold of each other. Those marked *a, a*, are branched and tufted, and bend downwards; while those marked *b, b*, proceeding from the other side of the lamina, are shorter and firmer and do not divide into branches. See Annales des Sciences Naturelles, vol. ix. p. 113.

In the *ostrich*, this apparatus of crotchets and fibres, of hooks and teeth, is wanting; and we see the consequence of the want. The filaments hang loose and separate from one another, forming only a kind of down; which constitution of the feathers, however it may fit them for the flowing honours of a lady's head-dress, may be reckoned an imperfection in the bird, inasmuch as wings, composed of these feathers, although they may greatly assist it in running, do not serve for flight.

But under the present division of our subject, our business with feathers is, as they are the *covering* of the bird. And herein a singular circumstance occurs. In the small order of birds which winter with us, from a snipe downwards, let the external colour of the feathers be what it will, their Creator has universally given them a bed of *black* down next their bodies. Black, we know, is the warmest colour; and the purpose here is, to *keep in* the heat, arising from the heart and circulation of the blood. It is farther likewise remarkable, that this is not found in larger birds; for which there is also a reason:—small birds are much more exposed to the cold than large ones; forasmuch as they present, in proportion to their bulk, a much larger surface to the air. If a turkey were divided into a number of wrens, (supposing the shape of the turkey and the wren to be similar,) the surface of all the wrens would exceed the surface of the turkey, in the proportion of the length, breadth, (or, of any homologous line,) of a turkey to that of a wren; which would be, perhaps, a proportion of ten to one. It was necessary, therefore, that small birds should be more warmly clad than large ones: and this seems to be the expedient by which that exigency is provided for.

II. In comparing different animals, I know no part

of their structure which exhibits greater variety, or, in that variety, a nicer accommodation to their respective conveniency, than that which is seen in the different formations of their *mouths*. Whether the purpose be the reception of aliment merely, or the catching of prey, the picking up of seeds, the cropping of herbage, the extraction of juices, the suction of liquids, the breaking and grinding of food, the taste of that food, together with the respiration of air, and, in conjunction with it, the utterance of sound; these various offices are assigned to this one part, and, in different species, provided for, as they are wanted, by its different constitution. In the human species, forasmuch as there are hands to convey the food to the mouth, the mouth is flat, and by reason of its flatness, fitted only for *reception*; whereas the projecting jaws, the wide rictus, the pointed teeth of the dog and his affinities, enable them to apply their mouths to *snatch and seize* the objects of their pursuit. The full lips, the rough tongue, the corrugated cartilaginous palate, the broad cutting teeth of the ox, the deer, the horse, and the sheep, qualify this tribe for *browsing* upon their pasture; either gathering large mouthfuls at once, where the grass is long, which is the case with the ox in particular; or biting close, where it is short, which the horse and the sheep are able to do, in a degree that one could hardly expect. The retired under-jaw of a swine *works in the ground*, after the protruding snout, like a prong or ploughshare, has made its way to the roots upon which it feeds. A conformation so happy was not the gift of chance.

In *birds*, this organ assumes a new character; new both in substance and in form; but in both, wonderfully adapted to the wants and uses of a distinct mode of

existence. We have no longer the fleshy lips, the teeth of enamelled bone; but we have, in the place of these two parts, and to perform the office of both, a hard substance, (of the same nature with that which composes the nails, claws, and hoofs of quadrupeds,) cut out into proper shapes, and mechanically suited to the actions which are wanted. The sharp edge and tempered point of the *sparrow's* bill picks almost every kind of seed from its concealment in the plant; and not only so, but hulls the grain, breaks and shatters the coats of the seed, in order to get at the kernel. The hooked beak of the hawk tribe separates the flesh from the bones of the animals which it feeds upon, almost with the cleanliness and precision of a dissector's knife. The butcherbird transfixes its prey upon the spike of a thorn whilst it picks its bones. In some birds of this class, we have the *cross-bill*, i. e. both the upper and lower bill hooked, and their tips crossing. The *spoon-bill* enables the goose to graze, to collect its food from the bottom of pools, or to seek it amidst the soft or liquid substances with which it is mixed. The *long* tapering bill of the snipe and woodcock penetrates still deeper into moist earth, which is the bed in which the food of that species is lodged. This is exactly the instrument which the animal wanted. It did not want strength in its bill, which was inconsistent with the slender form of the animal's neck, as well as unnecessary for the kind of aliment upon which it subsists; but it wanted length to reach its object.

But the species of bill which belongs to birds that live by *suction*, deserves to be described in its relation to that office. They are what naturalists call serrated or dentated bills; the inside of them, towards the edge, being thickly set with parallel or concentric rows of

short, strong, sharp-pointed prickles. These, though they should be called teeth, are not for the purpose of mastication, like the teeth of quadrupeds; nor yet, as in fish, for the seizing and retaining of their prey; but for a quite different use. They form a filter. The *duck* by means of them discusses the mud; examining with great accuracy the puddle, the brake, every mixture which is likely to contain her food. The operation is thus carried on:—The liquid or semi-liquid substances, in which the animal has plunged her bill, she draws, by the action of her lungs, through the narrow interstices which lie between these teeth; catching, as the stream passes across her beak, whatever it may happen to bring along with it, that proves agreeable to her choice, and easily dismissing all the rest. Now, suppose the purpose to have been, out of a mass of confused heterogeneous substances, to separate for the use of the animal, or rather to enable the animal to separate for its own, those few particles which suited its taste and digestion; what more artificial, or more commodious instrument of selection, could have been given to it, than this natural filter?\* It has been observed, also, (what must enable the bird to choose and distinguish with greater acuteness, as well, probably, as what greatly increases its luxury,) that the bills of this species are furnished with large nerves—that they are covered with a skin—and that the nerves run down to the very extremity. In the curlew, woodcock, and snipe, there are *three pairs* of nerves, equal almost to the optic nerve in thickness,

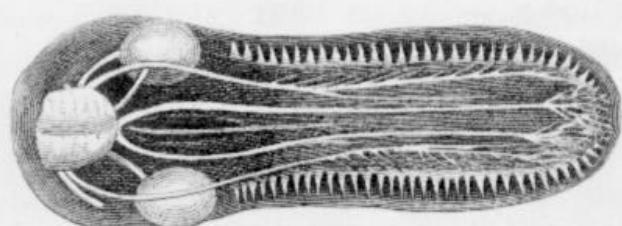

\* There is a remarkable contrivance of this kind in the genus *balaena*, or proper whale. Numerous parallel plates of the substance called whalebone, cover the palatine surface of the upper jaw, and descend vertically into the mouth; the lower edges are fringed by long fibres, which serve the animal, when taking in the water, to retain the molluscae, with which the water abounds, and which constitute its food.

which pass first along the roof of the mouth, and then along the upper chap down to the point of the bill, long as the bill is.\*

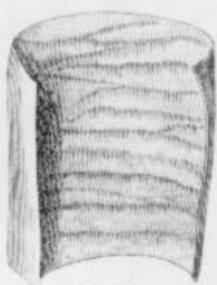

But to return to the train of our observations.—The similitude between the bills of birds and the mouths of quadrupeds, is exactly such as, for the sake of the argument, might be wished for. It is near enough to show the continuation of the same plan; it is remote enough to exclude the supposition of the difference being produced by action or use. A more prominent contour, or a wider gap, might be resolved into the effect of continued efforts, on the part of the species, to thrust out the mouth, or open it to the stretch. But by what course of action, or exercise, or endeavour, shall we get rid of the lips, the gums, the teeth; and acquire, in the place of them, pincers of horn? By what habit shall we so completely change, not only the shape of the part, but the substance of which it is composed? The truth is, if we had seen no other than the mouths of quadrupeds, we should have thought no other could have been formed: little could we have supposed, that all the purposes of a mouth, furnished with lips and armed with teeth, could be answered by an instrument which had none of these; could be supplied, and that with many additional advantages, by the hardness, and sharpness, and figure of the bills of birds. Every thing about the animal *mouth* is mechanical. The

\* Tab. XXIII, Fig. 1. the upper *mandible* of the duck, on which are distributed the first and second branches of the fifth pair of nerves; the former passing through the orbit to the extremity of the bill, and, together with the latter, supplying the whole palatine surface. This gustatory sensibility is the more necessary to those races of birds called palmipedes, such as penguins, the wild goose, ducks, etc. and the grallae, such as water-hens, curlews, woodcocks, etc. their sight being of no assistance to them in finding their prey in the mire.

Published by J. C. Green, Overland,

teeth of fish have their points turned backward, like the teeth of a wool or cotton card. The teeth of lobsters work one against another, like the sides of a pair of shears. In many insects, the mouth is converted into a pump or sucker, fitted at the end sometimes with a wimble, sometimes with a forceps; by which double provision, viz. of the tube and the penetrating form of the point, the insect first bores through the integuments of its prey, and then extracts the juices. And, what is most extraordinary of all, one sort of mouth, as the occasion requires, shall be changed into another sort. The caterpillar could not live without teeth; in several species, the butterfly formed from it could not use them. The old teeth therefore are cast off with the exuviae of the grub; a new and totally different apparatus assumes their place in the fly. Amid these novelties of form, we sometimes forget that it is, all the while, the animal's *mouth*; that, whether it be lips, or teeth, or bill, or beak, or shears, or pump, it is the same part diversified: and it is also remarkable, that, under all the varieties of configuration with which we are acquainted, and which are very great, the organs of taste and smelling are situated near each other.

III. To the mouth adjoins the gullet: in this part, also, comparative anatomy discovers a difference of structure, adapted to the different necessities of the animal. In brutes, because the posture of their neck conduces little to the passage of the aliment, the fibres of the gullet, which act in this business, run in two close spiral lines, crossing each other: in men, these fibres run only a little obliquely from the upper end of the oesophagus to the stomach, into which, by a gentle contraction, they easily transmit the descending morsels; that is to say, for the more laborious deglutition of

animals, which thrust their food *up* instead of *down*, and also through a longer passage, a proportionably more powerful apparatus of muscles is provided; more powerful, not merely by the strength of the fibres, which might be attributed to the greater exercise of their force, but in their collocation, which is a determinate circumstance, and must have been original.

IV. The gullet leads to the *intestines*; here, likewise, as before, comparing quadrupeds with man, under a general similitude we meet with appropriate differences. The *valvulae conniventes*, or, as they are by some called, the semilunar valves, found in the human intestine, are wanting in that of brutes. These are wrinkles or plaits of the innermost coat of the guts, the effect of which is, to retard the progress of the food through the alimentary canal. It is easy to understand how much more necessary such a provision may be to the body of an animal of an erect posture, and in which, consequently, the weight of the food is added to the action of the intestine, than in that of a quadruped, in which the course of the food, from its entrance to its exit, is nearly horizontal: but it is impossible to assign any cause, except the final cause, for this distinction actually taking place.\* So far as depends upon the action of the part, this structure was more to be expected in a quadruped than in a man. In truth, it must in both have been formed, not by action, but in

\* Fig. 2. The intestine cut open in order to show the *valvulae*. It may be questioned, whether these extremely soft rugae or folds of the villous coat of the intestine can in the least retard the passage of the food through its canal; nor does the erect attitude of man require them; for, since there are as many of the convolutions of the intestines ascending as there are descending, the weight of the food can have no influence in the action of the intestine: it is certain, however, that this arrangement of the internal coat affords *a more extensive surface for the lacteals and secreting vessels*; and this appears to be the real use of the *valvulae conniventes*.

direct opposition to action and to pressure; but the opposition which would arise from pressure, is greater in the upright trunk than in any other. That theory therefore is pointedly contradicted by the example before us. The structure is found where its generation, according to the method by which the theorist would have it generated, is the most difficult; but (*observe*) it is found where its effect is most useful.

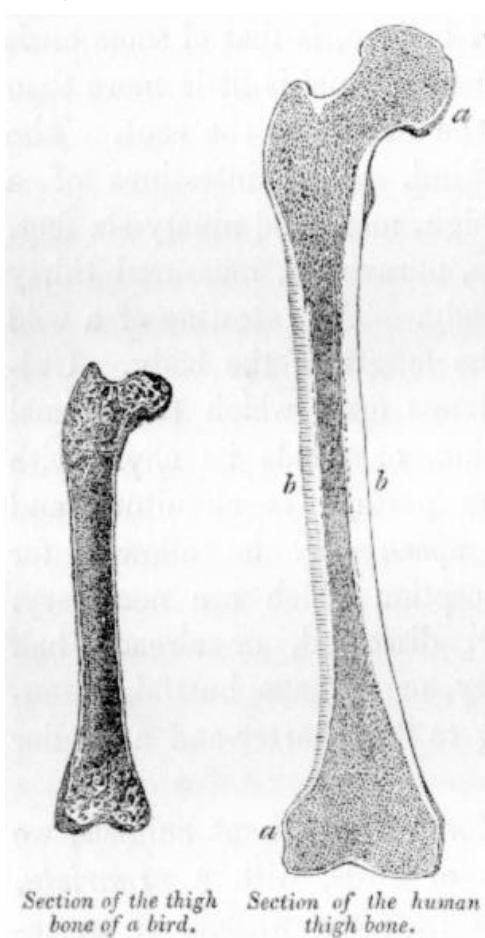

The different length of the intestines in carnivorous and herbivorous animals, has been noticed on a former occasion. The shortest, I believe, is that of some birds of prey, in which the intestinal canal is little more than a straight passage from the mouth to the vent. The longest is in the deer-kind. The intestines of a Canadian stag, four feet high, measured ninety-six feet. The intestine of a sheep, unravelled, measured thirty times the length of the body. The intestine of a wild cat is only three times the length of the body. Universally, where the substance upon which the animal feeds is of slow concoction, or yields its chyle with more difficulty, there the passage is circuitous and dilatory, that time and space may be allowed for the change and the absorption which are necessary. Where the food is soon dissolved, or already half assimilated, an unnecessary, or perhaps hurtful, detention is avoided, by giving to it a shorter and a readier route.\*

V. In comparing the *bones* of different animals, we are struck, in the bones of birds, with a *propriety*, which could only proceed from the wisdom of an in-

\* The whole length of the alimentary canal is greater in the mammalia than in other classes. It diminishes successively as we trace it in birds, reptiles, and fish, being shorter than the body in some of the latter animals, which is never the case in the three first classes.

telligent and designing Creator. In the bones of an animal which is to fly, the two qualities required are strength and lightness. Wherein, therefore, do the bones of birds (I speak of the cylindrical bones) differ in these respects from the bones of quadrupeds? In three properties: first, their cavities are much larger in proportion to the weight of the bone than in those of quadrupeds; secondly, these

cavities are empty; thirdly, the shell is of a firmer texture than the substance of other bones. It is easy to observe these particulars, even in picking the wing or leg of a chicken. Now, the weight being the same, the diameter, it is evident, will be greater in a hollow bone than in a solid one; and with the diameter, as every mathematician can prove, is increased, *caeteris paribus*, the strength of the cylinder, or its resistance to breaking. In a word, a bone of the *same weight* would not have been so strong in any other form; and to have made it heavier, would have incommodeed the animal's flight.\* Yet this form could not

*Section of the thigh bone of a bird.*    *Section of the human thigh bone.*

\* The bones of birds admit air into their cavities, not only in those species which fly, but also in those which swim, or run with rapidity; e. g. the ostrich, cassowary, the great hawk, etc.: hence there does not appear to be any reason for doubling, that one at least among the objects of this provision is to favour the motion of this class of animals in the air or water,

be acquired by use, or the bone become hollow and tubular by exercise. What appetency could excavate a bone?

VI. The *lungs* also of birds, as compared with the lungs of quadrupeds, contain in them a provision, distinguishingly calculated for this same purpose of levitation; namely, a communication (not found in other kinds of animals) between the air-vessels of the lungs and the cavities of the body; so that by the intromission of air from one to the other, (at the will, as it should seem, of the animal,) its body can be occasionally puffed out, and its tendency to descend in the air, or its specific gravity, made less. The bodies of birds are blown up from their lungs, (which no other animal bodies are,) and thus rendered buoyant.\*

VII. All birds are *oviparous*. This likewise carries on the work of gestation with as little increase as possible of the weight of the body. A gravid uterus would have been a troublesome burden to a bird in its flight. The advantage, in this respect, of an oviparous procreation is, that, whilst the whole brood are hatched together, the eggs are excluded singly, and at, considerable intervals. Ten, fifteen, or twenty young birds may be produced in one cletch or covey, yet the parent bird has never been encumbered by the load of more than one full-grown egg at one time.

by giving them a greater degree of buoyancy by the diminution of the relative weight resulting from the increase of surface.

The organs of respiration in birds are especially singular from their connexion with numerous air cells, extended generally over the whole body, but particularly in the abdomen; a great part of which is occupied by membranous cells which open by considerable apertures into the lungs; a considerable part also of the bones are destitute of marrow and become receptacles for air; the largest and most numerous bony cells being found in birds which have the highest and most rapid flight. The barrels of the quills, and even the softer parts, in some species, have cavities which are inflated.

VIII. A principal topic of comparison between animals, is in their *instruments of motion*. These come before us under three divisions; feet, wings, and fins. I desire any man to say, which of the three is best fitted for its use; or whether the same consummate art be not conspicuous in them all. The constitution of the elements, in which the motion is to be performed, is very different. The animal action must necessarily follow that constitution. The Creator, therefore, if we might so speak, had to prepare for different situations, for different difficulties; yet the purpose is accomplished not less successively in one case than in the other; and, as between *wings* and the corresponding limbs of quadrupeds, it is accomplished without deserting the general idea. The idea is modified, not deserted. Strip a wing of its feathers, and it bears no obscure resemblance to the fore-leg of a quadruped. The articulations at the shoulder and the cubitus are much alike; and, what is a closer circumstance, in both cases the upper part of the limb consists of a single bone, the lower part of two.

But, fitted up with its furniture of feathers and quills, it becomes a wonderful instrument, more artificial than its first appearance indicates, though that be very striking: at least, the use which the bird makes of its wings in flying is more complicated, and more curious, than is generally known. One thing is certain, that if the flapping of the wings in flight were no more than the reciprocal motion of the same surface in opposite directions, either upwards and downwards, or estimated in any oblique line, the bird would lose as much by one motion as she gained by another. The sky-lark could never ascend By such an action as this: for, though the stroke upon the air by the under side of her wing would carry her up, the

stroke from the upper side, when she raised her wing again, would bring her down. In order, therefore, to account for the advantage which the bird derives from her wing, it is necessary to suppose, that the surface of the wing, measured upon the same plane, is contracted whilst the wing is drawn up; and let oat to its full expansion, when it descends upon the air for the purpose of moving the body by the re-action of that element. Now, the form and structure of the wing, its external convexity, the disposition, and particularly the overlapping, of its larger feathers, the action of the muscles,\* and joints of the pinions, are all adapted to this alternate adjustment of its shape and dimensions. Such a twist, for instance, or semirotatory motion, is given to the great feathers of the wing, that they strike the air with their flat side, but rise from the stroke slantwise. The turning of the oar in rowing, whilst the rower advances his hand for a new stroke, is a similar operation to that of the feather, and takes its name from the resemblance. I believe that this faculty is not found in the great feathers of the tail. This is the place also for observing, that the pinions are so set upon the body as to bring down the wings, not vertically, but in a direction obliquely tending towards the tail: which motion, by virtue of the common resolution of forces, does two things at the same time; supports the body in the air, and carries it forward. The *steerage* of a bird in its flight is effected partly by the wings, but in a principal

\* There are three powerful muscles (the fleshy part of the breast) called pectoral muscles, which, with other smaller on the bones of the wing which are analogous to the arm, press with vigour on the air, the elasticity of which gives support. "And it is remarkable, that the general resemblance which the best form of windmill sails bears to the feathers of the wings of birds is striking, and one of those beautiful instances of truly mathematical principles on which the works of creation are constructed,"

degree by the tail. And herein we meet with a circumstance not a little remarkable. Birds with long legs have short tails, and in their flight place their legs close to their bodies, at the same time stretching them out backwards as far as they can. In this position the legs extend beyond the rump, and become the rudder; supplying that steerage which the tail could not.

From the *wings* of birds, the transition is easy to the *fins* of fish. They are both, to their respective tribes, the instruments of their motion; but, in the work which they have to do, there is a considerable difference, founded in this circumstance.

Fish, unlike birds, have very nearly the same specific gravity with the element in which they move. In the case of fish, therefore, there is little or no weight to bear up; what is wanted, is only an impulse sufficient to carry the body through a resisting medium, or to maintain the posture, or to support or restore the balance of the body, which is always the most unsteady where there is no weight to sink it. For these offices the fins are as large as necessary, though much smaller than wings, their action mechanical, their position, and the muscles by which they are moved, in the highest degree convenient. The following short account of some experiments upon fish, made for the purpose of ascertaining the use of their fins, will be the best conformation of what we assert. In most fish, besides the great fin, the tail, we find two pairs of fins upon the sides, two single fins upon the back, and one upon the belly, or rather between the belly and the tail. The *balancing* use of these organs is proved in this manner. Of the large-headed fish, if you cut off the pectoral fins, i. e. the pair which lies close behind the gills, the head falls prone to the bottom; if the right pectoral fin only

be cut off, the fish leans to that side; if the ventral fin on the same side be cut away, then it loses its equilibrium entirely; if the dorsal and ventral fins be cut off, the fish reels to the right and left. When the fish dies, that is, when the fins cease to play, the belly turns upwards. The use of the same parts for *motion* is seen in the following observation upon them when put in action. The pectoral, and particularly the ventral fins, serve to *raise and depress* the fish: when the fish desires to have a *retrograde* motion, a stroke forward with the pectoral fin effectually produces it; if the fish desire to *turn* either way, a single blow with the tail the opposite way sends it round at once; if the tail strike both ways, the motion produced by the double lash is *progressive*, and enables the fish to dart forwards with an astonishing velocity. The result is not only in some cases the most rapid, but in all cases the most gentle, pliant, easy animal motion with which we are acquainted. However, when the tail is cut off, the fish loses all motion, and gives itself up to where the water impels it. The rest of the fins, therefore, so far as respects motion, seems to be merely subsidiary<sup>4</sup> to this. In their mechanical use, the anal fin may be reckoned the keel; the ventral fins, out-riggers; the pectoral muscles, the oars:<sup>\*</sup> and if there be any similitude between these parts of a boat and a fish, observe, that it is not the resemblance of imitation, but the likeness which arises

\* The pectoral *fins* are the oars, the muscles are, in all cases, the prime movers in animal strength; and if we are allowed to carry on the comparison, the pectoral *muscles* of the fish are the *rowers*. In other words, the fins, which in fish supply the place of external extremities, may be considered as hands for swimming, provided with numerous delicate fingers, articulated, and connected together by a web. From the point to which they are attached they receive the name of dorsal, caudal, pectoral, ventral, and anal fins, the pectoral and ventral correspond to the anterior and posterior extremities.

from applying similar mechanical means to the same purpose.

We have seen that the *tail* in the fish is the great instrument of motion. Now, in cetaceous or warmblooded fish, which are obliged to rise every two or three minutes to the surface to take breath, the tail, unlike what is in other fish, is horizontal; its stroke consequently perpendicular to the horizon, which is the right direction for sending the fish to the top, or carrying it down to the bottom.

Regarding animals in their instruments of motion, we have only followed the comparison through the first great division of animals into beasts, birds, and fish. If it were our intention to pursue the consideration farther, I should take in that generic distinction amongst birds, the *webfoot* of water-fowl. It is an instance which may be pointed out to a child. The utility of the web to water-fowl, the inutility to land-fowl, are so obvious, that it seems impossible to notice the difference without acknowledging the design. I am at a loss to know, how those who deny the agency of an intelligent Creator dispose of this example. There is nothing in the action of swimming, as carried on by a bird upon the surface of the water, that should generate a membrane between the toes. As to that membrane, it is an exercise of constant resistance. The only supposition I can think of is, that all birds have been originally water-fowl, and web-footed; that sparrows, hawks, linnets, etc. which frequent the land, have, in process of time, and in the course of many generations, had this part worn away by treading upon hard ground. To such evasive assumptions must atheism always have recourse! and, after all, it confesses that the structure of the feet of birds, in their original form, was critically adapted to their ori-

ginal destination! The web-feet of amphibious quadrupeds, seals, otters, etc., fall under the same observation.

IX. The *Jive senses* are common to most large animals: nor have we much difference to remark in their constitution; or much, however, which is referable to mechanism.

The superior sagacity of animals which hunt their prey, and which, consequently, depend for their livelihood upon their *nose*, is well known in its use; but not at all known in the organization which produces it.\*

The external *ears* of beasts of prey, of lions, tigers, wolves, have their trumpet-part, or concavity, standing forwards, to seize the sounds which are before them, viz. the sounds of the animals which they pursue or watch. The ears of animals of flight are turned backward, to give notice of the approach of their enemy from behind, whence he may steal upon them unseen. This is a critical distinction, and is mechanical; but it may be suggested, and I think not without probability, that it is the effect of continual habit. †

The *eyes* of animals which follow their prey by night, as cats, owls, etc., possess a faculty not given to those of other species, namely, of closing the pupil *entirely*. The final cause of which seems to be this:—it was necessary for such animals to be able to descry objects with very small degrees of light. This capacity depended upon the superior sensibility of the retina; that

\* From observation we know that the olfactory nerves of such animals are exceedingly large and extended.

† There is a deficiency of the external ear in some instances, as in the cetacea, several seals, and the walrus, ornithorinchi, moles, and shrews; and we easily conceive that, from their habits, these animals scarcely need them. In other species the ear attains an extraordinary size, particularly in the long-eared bat.

is, upon its being affected by the most feeble impulses. But that tenderness of structure, which rendered the membrane thus exquisitely sensible, rendered it also liable to be offended by the access of stronger degrees of light. The contractile range, therefore, of the pupil is increased in these animals, so as to enable them to close the aperture entirely, which includes the power of diminishing it in every degree; whereby at all times such portions, and only such portions, of light are admitted, as may be received without injury to the sense.

There appears to be also in the figure, and in some properties of the pupil of the eye, an appropriate relation to the wants of different animals. In horses, oxen, goats, sheep, the pupil of the eye is elliptical; the transverse axis being horizontal; by which structure, although the eye be placed on the side of the head, the anterior elongation of the pupil catches the forward rays, or those which come from objects immediately in front of the animal's face.

## CHAPTER XIII.

### PECULIAR ORGANIZATIONS.

I BELIEVE that all the instances which I shall collect under this title might, consistently enough with technical language, have been placed under the head of *Comparative Anatomy*. But there appears to me an impropriety in the use which that term hath obtained; it being, in some sort, absurd to call that a case of comparative anatomy, in which there is nothing to "compare;" in which a conformation is found in one animal, which hath nothing properly answering to it in

another. Of this kind are the examples which I have to propose in the present chapter: and the reader will see that, though some of them be the strongest, perhaps, he will meet with under any division of our subject, they must necessarily be of an unconnected and miscellaneous nature. To dispose them, however, into some sort of order, we will notice, first, particularities of structure which belong to quadrupeds, birds, and fish, as such, or to many of the kinds included in these classes of animals; and then, such particularities as are confined to one or two species.

I. Along each side of the neck of large *quadrupeds* runs a stiff, robust ligament, which butchers call the pax-wax. No person can carve the upper end of a crop of beef without driving his knife against it. It is a tough, strong, tendinous substance, braced from the head to the middle of the back: its office is to assist in supporting the weight of the head. It is a mechanical provision, of which this is the undisputed use; and it is sufficient, and not more than sufficient, for the purpose which it has to execute. The head of an ox or a horse is a heavy weight, acting at the end of a long lever, (consequently with a great purchase,) and in a direction nearly perpendicular to the joints of the supporting neck. From such a force, so advantageously applied, the bones of the neck would be in constant danger of dislocation, if they were not fortified by this strong tape.\* No

\* We cannot view this proof of the Divine power, as manifest in the structure of the neck of animals, without admiration at the contrivance by which muscular power is compensated for, by this ligament (*ligamentum nuchae*). Muscular power must be relieved, it cannot always be kept in action; therefore in animals, particularly those which have long necks, as the camel, giraffe, etc., and in birds, as the ostrich, crane, swan, etc., we find a very powerful *ligamentum nuchae*, so that, by means of this strong elastic substance, the head is supported without muscular exertion.

such organ is found in the human subject,\* because, from the erect position of the head, (the pressure of it acting nearly in the direction of the spine,) the junction of the vertebra) appears to be sufficiently secure without it. This cautionary expedient, therefore, is limited to quadrupeds: the care of the Creator is seen where it is wanted.

II. The *oil* with which *birds* prune their feathers, and the organ which supplies it, is a specific provision for the winged creation. On each side of the rump of birds is observed a small nipple, yielding upon pressure a butter-like substance, which the bird extracts by pinching the pap with its bill. With this oil, or ointment, thus procured, the bird dresses its coat; and repeats the action as often as its own sensations teach it that it is in any part wanted, or as the excretion may be sufficient for the expense, † The gland, the pap, the nature and quality of the excreted substance, the manner of obtaining it from its lodgment in the body, the application of it when obtained, form, collectively, an evidence of intention which it is not easy to withstand. Nothing similar to it is found in unfeathered animals. What blind *conatus* of nature should produce it in birds? should not produce it in beasts?

III. The *air-bladder* also of a *fish* affords a plain and direct instance, not only of contrivance, but strictly of that species of contrivance which we denominate

\* There is a slight trace of it in man, but it is comparatively small.

† There are glands in the skin of birds for the secretion of oil, as being important for the support of the feathers. Beside these, each feather appears to be supplied with oily matter from the point of the skin where it is inserted. But the quantity of oil necessary for rendering them impenetrable to water is furnished by the oil-glands here mentioned, situated on the sacrum, which are particularly large in wading and aquatic birds, and they pour out their oil by two fissure-like openings.

mechanical. It is a philosophical apparatus in the body of an animal. The principle of the contrivance is clear; the application of the principle is also clear. The use of the organ to sustain, and, at will, also to elevate the body of the fish in the water, is proved by observing, what has been tried, that when the bladder is burst the fish grovels at the bottom: and also, that flounders, soles, skates, which are without the air-bladder, seldom rise in the water, and that with effort.\* The manner in which the purpose is attained, and the suitableness of the means to the end, are not difficult to be apprehended. The rising and sinking of a fish in water, so far as it is independent of the stroke of the fins and tail, can only be regulated by the specific gravity of the body. When the bladder contained in the body of the fish is contracted, which the fish probably possesses a muscular power of doing, the bulk of the fish is contracted along with it; whereby, since the absolute weight remains the same, the specific gravity, which is the sinking force, is increased, and the fish descends: on the contrary, when, in consequence of the relaxation of the muscles, the elasticity of the enclosed and now compressed air restores the dimensions of the bladder, the tendency downwards becomes proportionably less than it was before, or is turned into a contrary tendency. These are known properties of bodies immersed in a fluid. The enamelled figures, or little glass bubbles, in a jar of water, are made to rise and fall by the same

\* Tab. XXIII. Fig. 3. The *air-bladder* in the roach. This vessel differs in size and shape, in different species of fish; generally communicating, by one or more ducts, either with the oesophagus or stomach; by which means the fish receives or expels the air, thus sinking or rising without effort: but as some are destitute of this organ, it is considered as an accessory instrument of motion: such fish live almost uniformly at the bottom of the water.

artifice. A diving-machine might be made to ascend and descend upon the like principle; namely, by introducing into the inside of it an air-vessel, which by its contraction would diminish, and by its distention enlarge, the bulk of the machine itself, and thus render it specifically heavier, or specifically lighter, than the water which surrounds it. Suppose this to be done, and the artist to solicit a patent for his invention: the inspectors of the model, whatever they might think of the use or value of the contrivance, could by no possibility entertain a question in their minds, whether it were a contrivance or not. No reason has ever been assigned, no reason can be assigned, why the conclusion is not as certain in the fish as it is in the machine; why the argument is not as firm in one case as the other.

It would be very worthy of inquiry, if it were possible to discover, by what method an animal which lives constantly in water is able to supply a repository of air. The expedient, whatever it be, forms part, and perhaps the most curious part, of the provision. Nothing similar to the air-bladder is found in land-animals; and a life in the water has no natural tendency to produce a bag of air. Nothing can be farther from an acquired organization than this is.

These examples mark the attention of the Creator to the three great kingdoms of his animal creation, and to their constitution as such. The example which stands next in point of generality, belonging to a large tribe of animals, or rather to various species of that tribe, is the poisonous tooth of serpents.

I. The *fang of a viper*\* is a clear and curious ex-

\* Fig. 4, the head of a viper of the natural size. Fig. 5, the *fang* magnified, at the root of which is the gland which secretes the venom: a

ample of mechanical contrivance. It is a perforated tooth, loose at the root: in its quiet state, lying down flat upon the jaw, but furnished with a muscle, which, with a jerk, and by the pluck as it were of a string, suddenly erects it. Under the tooth, close to its root, and communicating with the perforation, lies a small bag containing the venom. When the fang is raised, the closing of the jaw presses its root against the bag underneath; and the force of this compression sends out the fluid with a considerable impetus through the tube in the middle of the tooth. What more unequivocal or effectual apparatus could be devised, for the double purpose of at once inflicting the wound and injecting the poison? Yet, though lodged in the mouth, it is so constituted, as, in its inoffensive and quiescent state, not to interfere with the animal's ordinary office of receiving its food. It has been observed also, that none of the harmless serpents, the black snake, the blind worm, etc., have these fangs, but teeth of an equal size; not moveable, as this is, but fixed into the jaw.

II. In being the property of several different species, the preceding example is resembled by that which I shall next mention, which is the *bag of the opossum*. This is a mechanical contrivance, most properly so called. The simplicity of the expedient renders the contrivance more obvious than many others, and by no means less certain. A false skin under the belly of the animal forms a pouch, into which the young litter are received at their birth; where they have an easy

hair is represented in the tube, through which the poison is ejected. "As those sharp tooth are very liable to accidents, others are ready to supply their places when wanted: for such purpose there is commonly provided two or three half-grown fangs, which are connected only by soft parts with the jaw, and are successively moved forwards into the socket to replace those that were lost." See Sir E. Home, Lectures, etc. vol. i. p. 333.

and constant access to the teats; in which they are transported by the dam from place to place; where they are at liberty to run in and out; and where they find a refuge from surprise and danger. It is their cradle, their asylum, and the machine for their conveyance.\* Can the use of this structure be doubted of? Nor is it a mere doubling of the skin; but it is a new organ, furnished with bones and muscles of its own. Two bones are placed before the os pubis, and joined to that bone as their base. † These support, and give a fixture to, the muscles which serve to open the bag. To these muscles there are antagonists, which serve in the same manner to shut it; and this office they perform so exactly, that, in the living animal, the opening can scarcely be discerned, except when the sides are forcibly drawn asunder. Is there any action in this part of the animal, any process arising from that action, by which these members could be formed? any account to be given of the formation, except design?

III. As a particularity, yet appertaining to more species than one, and also as strictly mechanical, we may notice a circumstance in the structure of the *claws* of certain birds. The middle claw of the heron and cormorant is toothed and notched like a saw. ‡ These birds

\* Tab. XXIV. Fig. 1. The American opossum; (*didelphis virginiana*). The body of the animal is of a greyish yellow colour, some hairs entirely black, with others entirely white; the tail furnished with scales; the hands, nose, and ears naked.

The female has the whole length of the belly cleft or slit, and appears like a person's waistcoat buttoned only at the top and bottom. This cavity the animal has the power of firmly closing. Within are thirteen teats, extremely small, one in the centre and the rest ranged round it. See Animal Kingdom, vol. iii. p. 29. Fig. 2, one of the young of the opossum.

are great fishers, and these notches assist them in holding their slippery prey. The use is evident; but the structure such as cannot at all be accounted for by the effort of the animal, or the exercise of the part. Some other fishing birds have these notches in their *bills*; and for the same purpose. The gannet, or Soland goose, has the edges of its bill irregularly jagged, that it may hold its prey the faster.\* Nor can the structure in this, more than in the former case, arise from the manner of employing the part. The smooth surfaces, and soft flesh of fish, were less likely to notch the bills of birds, than the hard bodies upon which many other species feed.

We now come to particularities strictly so called, as being limited to a single species of animal. Of these I shall take one from a quadruped and one from a bird.

I. The *stomach of the camel* is well known to retain large quantities of water, and to retain it unchanged for a considerable length of time. † This property qualifies

\* Fig. 2. The head of the *Soland goose*, (*pelicanus bassanus*.) drawn from a specimen in the Ashmolean Museum. This bird inhabits the coldest parts of this kingdom, more especially the Northern Isles of Scotland. The inhabitants of St. Kilda make it their principal article of food, and are said to consume annually near thirty thousand young birds, beside an amazing quantity of eggs.

† Tab. XXVI. exhibits the *cells in the stomach of the camel*, from a preparation in the museum of the Royal College of Surgeons, London. In the camel, dromedary, and lama, there are four stomachs, as in horned ruminants; but the structure, in some respects, differs from those of the latter. The camel tribe have in the first and second stomach numerous cells, several inches deep, formed by bands of muscular fibres crossing each other at right angles; these are constructed so as to retain the water, and completely exclude the food. In a camel dissected by Sir E. Home, the colls of the stomach were found to contain two gallons of water; but, in consequence of the muscular contraction which had taken place immediately after death, he was led to conclude this was a quantity much less than these cavities were capable of receiving in the living animal. See Lectures on Comparative Anatomy, by Sir E. Home, vol. i. p. 168. Mr. Brace states in his Travels that he procured four gallons of water from a

it for living in the desert. Let us see, therefore, what is the internal organization, upon which a faculty so rare, and so beneficial, depends. A number of distinct sacs or bags (in a dromedary thirty of these have been counted) are observed to lie between the membranes of the second stomach, and to open into the stomach near the top by small square apertures. Through these orifices, after the stomach is full, the annexed bags are filled from it: and the water so deposited is, in the first place, not liable to pass into the intestines; in the second place, is kept separate from the solid aliment; and, in the third place, is out of the reach of the digestive action of the stomach, or of mixture with the gastric juice. It appears probable, or rather certain, that the animal, by the conformation of its muscles, possesses the power of squeezing back this water from the adjacent bags into the stomach, whenever thirst excites it to put this power in action.\*

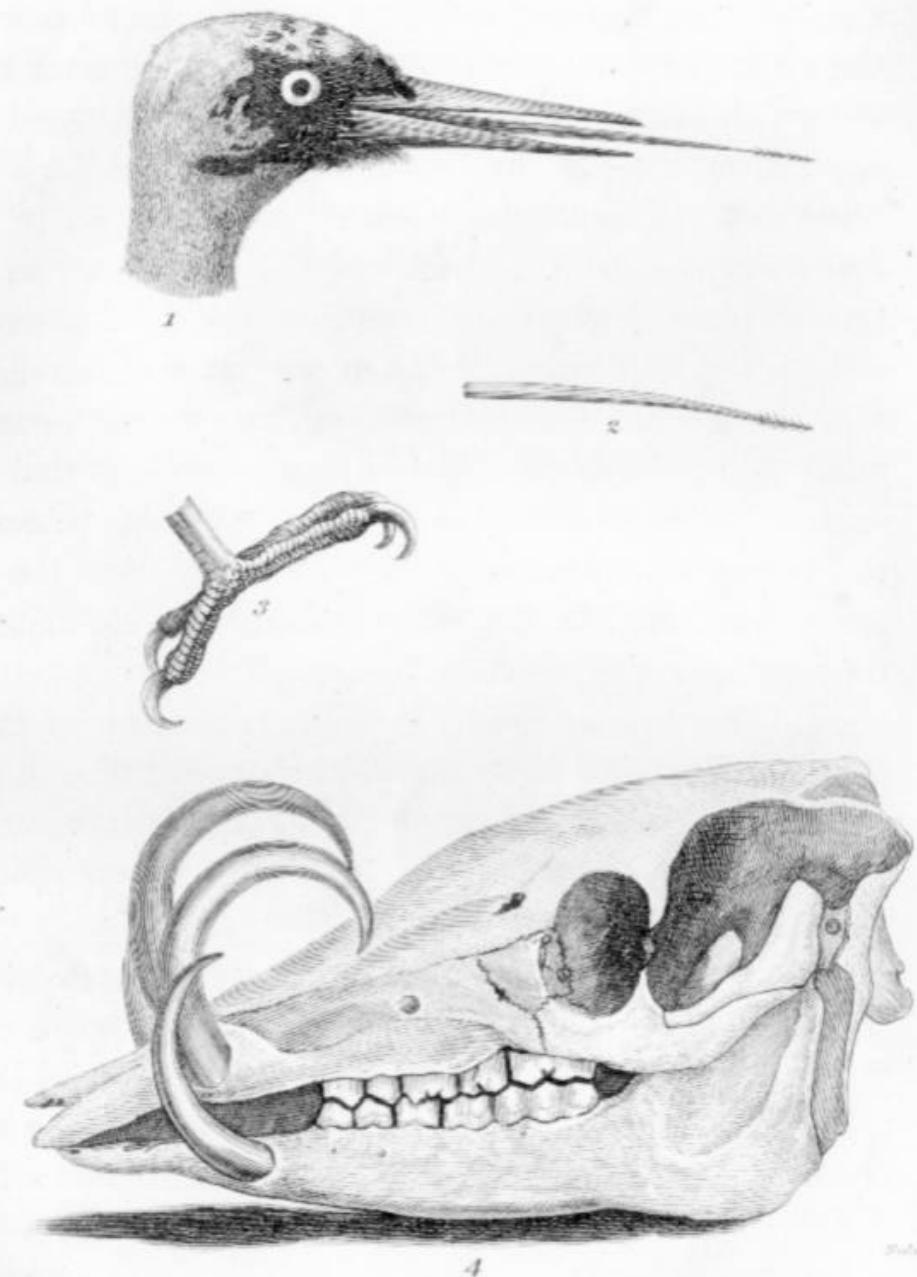

II. The *tongue of the woodpecker* is one of those singularities which nature presents us with when a singular purpose is to be answered. It is a particular instrument for a particular use: and what, except design, ever produces such? The woodpecker lives chiefly upon insects, lodged in the bodies of decayed or decaying trees. For the purpose of boring into the wood, it is furnished with a bill, straight, hard, angular, and sharp. † When, by means of this piercer, it has reached the cells of the insects, then comes the office of its tongue: which tongue is, first, of such a length that the bird can dart it out three or four inches from the bill—in this respect

camel, which, from necessity, he slaughtered in upper Egypt. Shaw's Abridgment of Bruce's Travels, edit. 3. p. 371.

\* The stomach of the lama has the same power.

† Tab. XXVII. Fig. 1. The *head of the woodpecker*, (*picus viridis*.)

TAB. XXVII

*Published by J. Vincent, Oxford.*

differing greatly from every other species of bird; in the second place, it is tipped with a stiff, sharp, bony thorn; and, in the third place, (which appears to me the most remarkable property of all,) this tip is dentated on both sides, like the beard of an arrow or the barb of a hook.\* The description of the part declares its uses. The bird, having exposed the retreats of the insects by the assistance of its bill, with a motion inconceivably quick, launches out at them this long tongue, transfixes them upon the barbed needle at the end of it, and thus draws its prey within its mouth. † If this be not mechanism, what is? Should it be said, that, by continual endeavours to shoot out the tongue to the stretch, the woodpecker species may by degrees have lengthened the organ itself beyond that of other birds, what account can be given of its form, of its tip? how, in particular, did it get its barb, its dentation? These barbs, in my opinion, wherever they occur, are decisive proofs of mechanical contrivance.

III. I shall add one more example, for the sake of its novelty. It is always an agreeable discovery, when, having remarked in an animal an extraordinary structure, we come at length to find out an unexpected use for it. The following narrative furnishes an instance of this kind. The babyrouessa, or Indian hog, a species of wild boar, found in the East Indies, has two *bent* teeth, more than half a yard long, growing upwards, and

\* Fig. 2. The *tongue*, the natural size.

† This is accomplished by a most curious piece of mechanism, thus: two curved cartilages, nearly as elastic as steel springs, pass from the bone which supports the tongue to the back of the neck and round the head: a muscle is attached to the inner curvature of each cartilage, and their combined action projects the tongue to a considerable distance. The elasticity of the cartilages retracts the tongue into the mouth. Dr. Roget, vol. 2. p. 132.

(which is the singularity) from the upper jaw. These instruments are not wanted for offence; that service being provided for by two tusks issuing from the upper jaw, and resembling those of the common boar; nor does the animal use them for defence. They might seem therefore to be both a superfluity and an encumbrance. But observe the event:—the animal sleeps standing; and, in order to support its head, hooks its upper tusks upon the branches of trees.\*

## CHAPTER XIV. PROSPECTIVE CONTRIVANCES.

I CAN hardly imagine to myself a more distinguishing mark, and consequently a more certain proof of design, than *preparation*, i. e. the providing of things beforehand which are not to be used until a considerable time afterwards: for this implies a contemplation of the future, which belongs only to intelligence.

Of these *prospective* contrivances, the bodies of animals furnish various examples.

### I. The human teeth afford an instance, not only of

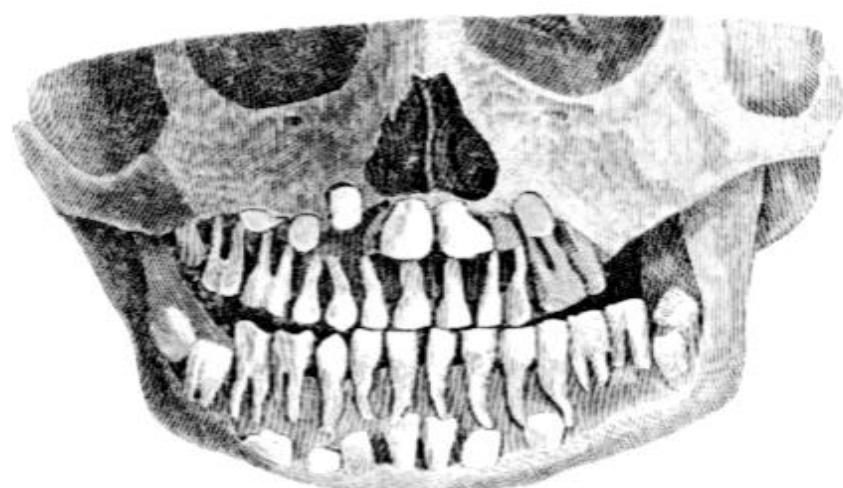

\* Tab. XXVII. Fig. 4. The *skull of the babyrouessa* from a specimen in the Anatomy School, Christ Church, Oxford. This animal is nearly the size of the common hog, and, instead of bristles, is covered with fine short and woolly hair, of a deep brown or black colour. It is also distinguished by the extraordinary position and form of the *upper tusks*, which are not situated on the edge of the jaw, as in other animals, but are placed externally, perforating the skin of the snout, and turning upwards towards the forehead.

The babyrouessa is found in large herds in many parts of Java, Amboina, and other Indian islands, and feeds on vegetables. Sir C. Bell observes that this notion of the animal hanging by its teeth is a mere fancy. He is of opinion that these tusks protect the eyes in rushing through the thick underwood.

ТАБ. XXVIII

1

Nice

2

prospective contrivance, but of the completion of the contrivance being designedly suspended. They are formed within the gums, and there they stop: the fact being, that their farther advance to maturity would not only be useless to the new-born animal, but extremely in its way; as it is evident that the act of *sucking*, by which it is for some time to be nourished, will be performed with more ease both to the nurse and to the infant, whilst the inside of the mouth and edges of the gums are smooth and soft, than if set with hard pointed bones. By the time they are wanted, the teeth are ready. They have been lodged within the gums for some months past, but detained as it were in their sockets, so long as their farther protrusion would interfere with the office to which the mouth is destined.\* Nature, namely, that intelligence which was employed in creation, looked beyond the first year of the infant's life; yet, whilst she was providing for functions which were after that term to become necessary, was careful not to incommod those which preceded them. What renders it more probable that this is the effect of design, is, that the teeth are imperfect, whilst all other parts of the mouth are perfect. The lips are perfect, the tongue is perfect; the jaws, the palate, the pharynx, the larynx, are all perfect: the teeth alone are not so. This is the fact with respect to the human mouth: the fact also is, that the parts above enumerated are called into use from the beginning; whereas the teeth would be only so many obstacles and annoyances, if they were there. When a contrary order is necessary, a contrary order

\*Tab. XXVIII. Fig. 1. The gums and outer plate of the bone are removed, showing the teeth of the infant as they exist at the time of its birth: they are without roots, and contained in a capsule within the jaws.

prevails. In the worm of the beetle, as hatched from the egg, the teeth are the first things which arrive at perfection. The insect begins to gnaw as soon as it escapes from the shell, though its other parts be only gradually advancing to their maturity.

What has been observed of the teeth, is true of the *horns* of animals, and for the same reason. The horn of a calf or lamb does not bud, or at least does not sprout to any considerable length, until the animal be capable of browsing upon its pasture; because such a substance upon the forehead of the young animal would very much incommod the teat of the dam in the office of giving suck.

But in the case of the *teeth*, of the human teeth at least, the prospective contrivance looks still farther. A succession of crops is provided, and provided from the beginning; a second tier being originally formed beneath the first, which do not come into use till several years afterwards. And this double or suppletory provision meets a difficulty in the mechanism of the mouth, which would have appeared almost insurmountable. The expansion of the jaw (the consequence of the proportionable growth of the animal, and of its skull) necessarily separates the teeth of the first set, however compactly disposed, to a distance from one another, which would be very inconvenient. In due time, therefore, i. e. when the jaw has attained a great part of its dimensions, a new set of teeth springs up, (loosening and pushing out the old ones before them,) more exactly fitted to the space which they are to occupy, and rising also in such close ranks, as to allow for any extension of line which the subsequent enlargement of the head may occasion.\*

\* Fig. 2. In this figure, also, the outer alveolar plate of the jaw has

II. It is not very easy to conceive a more evidently prospective contrivance than that which, in all viviparous animals, is found in the *milk* of the female parent. At the moment the young animal enters the world, there is its maintenance ready for it. The particulars to be remarked in this economy are neither few nor slight. We have, first, the nutritious quality of the fluid, unlike, in this respect, every other excretion of the body; and in which nature hitherto remains unimitated, neither cookery nor chemistry having been able to make milk out of grass: we have, secondly, the organ for its reception and retention: we have, thirdly, the excretory duct, annexed to that organ: and we have, lastly, the determination of the milk to the breast, at the particular juncture when it is about to be wanted. We have all these properties in the subject before us; and they are all indications of design. The last circumstance is the strongest of any. If I had been to guess beforehand, I should have conjectured, that at the time when there was an extraordinary demand for nourishment in one part of the system, there would be the least likelihood of a redundancy to supply another part. The advanced pregnancy of the female has no intelligible tendency to fill the breasts with milk. The lacteal system is a constant wonder; and it adds to other causes of our admiration, that the number of the teats or paps in each species is found to bear a proportion to the number of the young. In the *sow*, the *bitch*, the *rabbit*, the *cat*, the *rat*, which have numerous litters, the paps are numerous, and are disposed along the whole length of

been removed, to show the succession of teeth. This is the state at six years of age. The *temporary teeth* are all shed between the ages of seven and fourteen, and are supplied by the *permanent teeth*, already nearly perfectly formed, and situated at the roots of the former.

the belly: in the cow and mare, they are few. The most simple account of this, is to refer it to a designing Creator.

But in the argument before us, we are entitled to consider not only animal bodies when framed, but the circumstances under which they are framed: and in this view of the subject, the constitution of many of their parts is most strictly prospective.

III. The eye is of no use at the time when it is formed. It is an optical instrument made in a dungeon; constructed for the refraction of light to a focus, and perfect for its purpose, before a ray of light has had access to it; geometrically adapted to the properties and action of an element with which it has no communication. It is about indeed to enter into that communication: and this is precisely the thing which evidences intention. It is *providing* for the *future* in the closest sense which can be given to these terms; for it is providing for a future change, not for the then subsisting condition of the animal, not for any gradual progress or advance in that same condition, but for a new state, the consequence of a great and sudden alteration, which the animal is to undergo at its birth. Is it to be believed that the eye was formed, or, which is the same thing, that the series of causes was fixed by which the eye is formed, without a view to this change; without a prospect of that condition, in which its fabric, of no use at present, is about to be of the greatest; without a consideration of the qualities of that element, hitherto entirely excluded, but with which it was hereafter to hold so intimate a relation? A young man makes a pair of spectacles for himself against he grows old; for which spectacles he has no want or use whatever at the time he makes them. Could this be done without

knowing and considering the defect of vision to which advanced age is subject? Would not the precise suitableness of the instrument to its purpose, of the remedy to the defect, of the convex lens to the flattened eye, establish the certainty of the conclusion, that the case, afterwards to arise, had been considered beforehand, speculated upon, provided for? all which are exclusively the acts of a reasoning mind. The eye formed in one state, for use only in another state, and in a different state, affords a proof no less clear of destination to a future purpose; and a proof proportionably stronger, as the machinery is more complicated, and the adaptation more exact.

IV. What has been said of the eye, holds equally true of the lungs. Composed of air-vessels, where there is no air; elaborately constructed for the alternate admission and expulsion of an elastic fluid, where no such fluid exists; this great organ, with the whole apparatus belonging to it, lies collapsed in the fetal thorax, yet in order, and in readiness for action, the first moment that the occasion requires its service. This is having a machine locked up in store for future use; which incontestably proves, that the case was expected to occur, in which this use might be experienced: but expectation is the proper act of intelligence. Considering the state in which an animal exists before its birth, I should look for nothing less in its body than a system of lungs. It is like finding a pair of bellows in the bottom of the sea; of no sort of use in the situation in which they are found; formed for an action which was impossible to be exerted; holding no relation or fitness to the element which surrounds them, but both to another element in another place.

As part and parcel of the same plan, ought to be

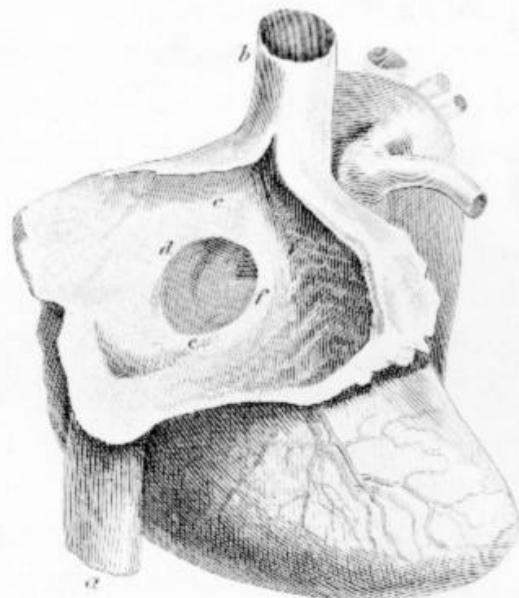

mentioned, in speaking of the lungs, the provisional contrivances of the *foramen ovale* and *ductus arteriosus*. In the foetus, pipes are laid for the passage of the blood through the lungs; but, until the lungs be inflated by the inspiration of air, that passage is impervious, or in a great degree obstructed. What then is to be done? what would an artist, what would a master do upon the occasion? He would endeavour, most probably, to provide a *temporary* passage, which might carry on the communication required, until the other was open. Now this is the thing which is actually done in the heart: instead of the circuitous route through the lungs, which the blood afterwards takes before it gets from one auricle of the heart to the other, a portion of the blood passes immediately from the right auricle to the left, through a hole placed in the partition which separates these cavities. This hole anatomists call the *foramen ovale*.\* There is likewise another cross cut, answering the same purpose, by what is called the *ductus arteriosus*, lying between the pulmonary artery and the aorta. † But both expedients are so strictly temporary, that, after birth, the one passage is closed, and the tube which forms the other shrivelled up into a ligament. If this be not contrivance, what is?

But, forasmuch as the action of the air upon the blood in the lungs appears to be necessary to the perfect concoction of that fluid, i. e. to the life and health of the

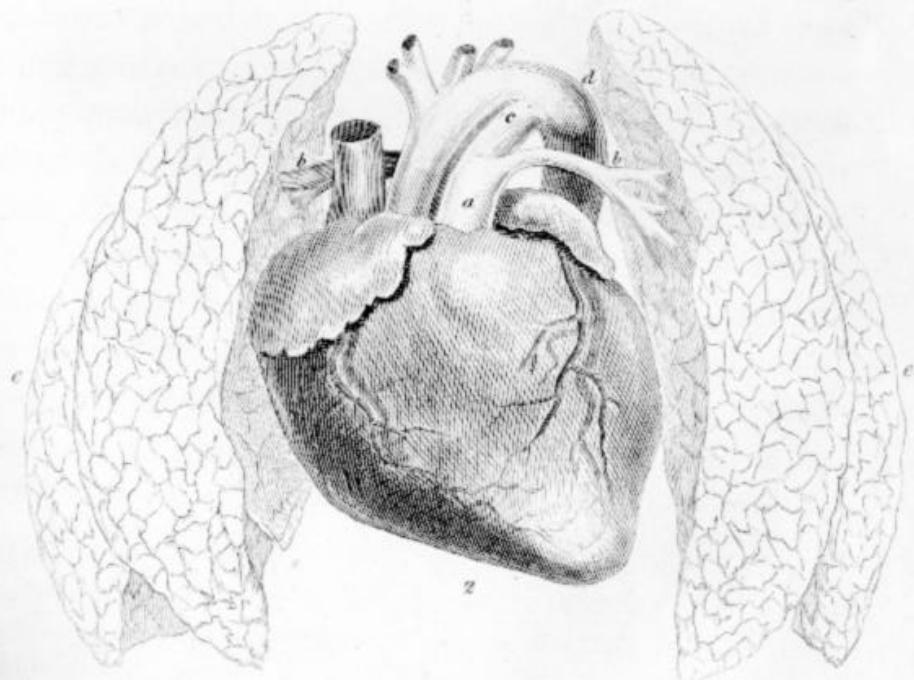

\* Tab. XXIX. Fig. 1. A view of the foetal heart: *a*, the ascending, *b*, the descending vena cava; *c*, the right auricle; *d, e, f*, mark the elevated ring of the *foramen ovale*, or the opening between the two auricles.

† Fig. 2. The foetal heart: *a*, the pulmonary artery; *b, b*, its branches; *c*, the *ductus arteriosus*, or canal for transmitting the blood into *d*, the aorta. As the lungs are useless in the foetus, unless as a "prospective contrivance," the heart has to carry on a single circulation only; the free communication between the two auricles identifies them as one cavity; and the ventricles also force the blood into one vessel, the aorta.

TAB. XXIX

I

2

Published by J. Vincent, Oxford.

animal, (otherwise the shortest route might still be the best,) how comes it to pass that *the faetus* lives and grows and thrives without it? The answer is, that the blood of the foetus is the mother's; that it has undergone that action in her habit; that one pair of lungs serves for both. When the animals are separated, a new necessity arises; and to meet this necessity as soon as it occurs, an organization is prepared. It is ready for its purpose: it only waits for the atmosphere: it begins to play the moment the air is admitted to it.

## CHAPTER XV.

### RELATIONS.

WHEN several different parts contribute to one effector, which is the same thing, when an effect is produced by the joint action of different instruments—the fitness of such parts or instruments to one another, for the purpose of producing by their united action the effect, is what I call *relation*; and wherever this is observed in the works of nature or of man, it appears to me to carry along with it decisive evidence of understanding, intention, art. In examining, for instance, the several parts of a *watch*, the spring, the barrel, the chain, the fusee, the balance, the wheels of various sizes, forms, and positions, what is it which would take an observer's attention, as most plainly evincing a construction, directed by thought, deliberation, and contrivance? It is the suitableness of these parts to one another; first, in the succession and order in which they act; and, secondly, with a view to the effect finally produced. Thus, referring the spring to the wheels, our observer sees in

it, that which originates and upholds *their* motion; in the chain, that which transmits the motion to the fusee; in the fusee, that which communicates it to the wheels; in the conical figure of the fusee, if he refer to the spring, he sees that which corrects the inequality of its force. Referring the wheels to one another, he notices, first, their teeth, which would have been without use or meaning if there had been only one wheel, or if the wheels had had no connexion between themselves, or common bearing upon some joint effect; secondly, the correspondency of their position, so that the teeth of one wheel catch into the teeth of another; thirdly, the proportion observed in the number of teeth of each wheel, which determines the rate of going. Referring the balance to the rest of the works, he saw, when he came to understand its action, that which rendered their motions equable.\* Lastly, in looking upon the index and face of the watch, he saw the use and conclusion of the mechanism, viz. marking the succession of minutes and hours; but all depending upon the motions within, all upon the system of intermediate actions between the spring and the pointer. What thus struck his attention in the several parts of the watch, he might probably designate by one general name of "relation;" and observing with respect to all cases whatever, in which the origin and formation of a thing could be ascertained by evidence, that these relations were found in things produced by art and design, and in no other things, he would rightly deem of them as characteristic of such productions.—To apply the reasoning here described to the works of nature.

The animal economy is full; is made up of these *relations*.

\* See Tab. 1.

I. There are, first, what in one form or other belong to all animals, the parts and powers which successively act upon their *food*. Compare this action with the process of a manufactory. In men and quadrupeds, the aliment is first broken and bruised by mechanical instruments of mastication, viz. sharp spikes or hard knobs, pressing against or rubbing upon one another: thus ground and comminuted, it is carried by a pipe into the stomach, where it waits to undergo a great chemical action, which we call digestion: when digested, it is delivered through an orifice,\* which opens and shuts, as there is occasion, into the first intestine; there, after being mixed with certain proper ingredients,! poured through a hole in the side of the vessel, it is farther dissolved: in this state, the milk, chyle, or part which is wanted, and which is suited for animal nourishment, is strained off by the mouths of very small tubes' opening into the cavity of the intestines: thus freed from its grosser parts, the percolated fluid is carried by a long, winding, but traceable course, into the main stream of the old circulation; which conveys it, in its progress, to every part of the body. Now I say again, compare this with the process of a manufactory; with the making of cider, for example; with the bruising of the apples in the mill, the squeezing of them when so bruised in the press, the fermentation in the vat, the bestowing of the liquor thus fermented in the hogsheads, the drawing off into bottles, the pouring out for use into the glass. Let any one show me any difference between these two cases, as to the point of

\* The right aperture, termed the *pylorus*; it divides the stomach and intestine, and is formed of circular muscular fibres interposed between the peritoneal and mucous membranes of the stomach.

† The bile and pancreatic fluids. See Tab. XVIII. and explanation.

‡ The lacteal vessels.

contrivance. That which is at present under our consideration, the "relation" of the parts successively employed, is not more clear in the last case than in the first. The aptness of the jaws and teeth to prepare the food for the stomach, is, at least, as manifest, as that of the cider-mill to crush the apples for the press. The concoction of the food in the stomach is as necessary for its future use, as the fermentation of the stum in the vat is to the perfection of the liquor. The disposal of the aliment afterwards; the action and change which it undergoes; the route which it is made to take, in order that, and until that, it arrive at its destination, is more complex indeed and intricate, but, in the midst of complication and intricacy, as evident and certain, as is the apparatus of cocks, pipes, tunnels, for transferring the cider from one vessel to another; of barrels and bottles for preserving it till fit for use; or of cups and glasses for bringing it, when wanted, to the lip of the consumer. The character of the machinery is in both cases this—that one part answers to another part, and every part to the final result.

This parallel, between the alimentary operation and some of the processes of art, might be carried farther into detail. Spallanzani has remarked a circumstantial resemblance between the stomachs of gallinaceous fowls and the structure of *corn-mills*. Whilst the two sides of the gizzard perform the office of the mill-stones, the craw or crop supplies the place of the *hopper*.

When our fowls are abundantly supplied with meat, they soon fill their craw: but it does not immediately pass thence into the gizzard; it always enters in very small quantities, in proportion to the progress of trituration; in like manner as, in a mill, a receiver is fixed above the two large stones which serve for grinding the

corn; which receiver, although the corn be put into it by bushels, allows the grain to dribble only in small quantities into the central hole in the upper millstone.\*

But we have not done with the alimentary history. There subsists a general *relation* between the external organs of an animal by which it procures its food, and the internal powers by which it digests it. Birds of prey, by their talons and beaks, are qualified to seize and devour many species, both of other birds and of quadrupeds. The constitution of the stomach agrees exactly with the form of the members. The gastric juice of a bird of prey—of an owl, a falcon, or a kite--acts upon the animal fibre alone; it will not act upon seeds or grasses at all. On the other hand, the conformation of the mouth of the sheep or the ox is suited for browsing upon herbage. Nothing about these animals is fitted for the pursuit of living prey. Accordingly it has been found by experiments, tried not many years ago, with perforated balls, that the gastric juice of ruminating animals, such as the sheep and the ox, speedily dissolves vegetables, but makes no impression upon animal bodies. This accordancy is still more particular. The gastric juice, even of granivorous birds, will not act upon the grain whilst whole and entire. In performing the experiment of digesting with the gastric juice in vessels, the grain must be crushed and bruised before it be submitted to the menstruum; that is to say, must undergo by art without the body, the preparatory action which the gizzard exerts upon it within the body; or no digestion will take place. So strict, in this case, is the relation between the offices assigned to the digestive organ,

\* See anatomical structure of the gizzard described in a subsequent note.

between the mechanical operation and the chemical process.

II. The relation of the kidneys to the bladder, and of the ureters to both, i. e. of the secreting organ to the vessel receiving the secreted liquor, and the pipe laid from one to the other, for the purpose of conveying it from one to the other, is as manifest as it is amongst the different vessels employed in a distillery, or in the communications between them. The animal structure in this case being simple, and the parts easily separated, it forms an instance of correlation which may be presented by dissection to every eye, or which indeed, without dissection, is capable of being apprehended by every understanding. This correlation of instruments to one another fixes intention somewhere; especially when every other solution is negatived by the conformation. If the bladder had been merely an expansion of the ureter, produced by retention of the fluid, there ought to have been a bladder for each ureter. One receptacle, fed by two pipes, issuing from different sides of the body, yet from both conveying the same fluid, is not to be accounted for by any such supposition as this.

III. Relation of parts to one another accompanies us throughout the whole animal economy. Can any relation be more simple, yet more convincing than this, that the eyes are so placed as to look in the direction in which the legs move and the hands work? It might have happened very differently if it had been left to chance. There were at least three quarters of the compass out of four to have erred in. Any considerable alteration in the position of the eye, or the figure of the joints, would have disturbed the line, and destroyed the alliance between the sense and the limbs.

IV. But relation perhaps is never so striking as when it subsists, not between different parts of the same thing, but between different things. The relation between a lock and a key is more obvious than it is between different parts of the lock. A bow was designed for an arrow, and an arrow for a bow; and the design is more evident for their being separate implements.

Nor do the works of the Deity want this clearest species of relation. The *sexes* are manifestly made for each other. They form the grand relation of animated nature; universal, organic, mechanical: subsisting like the clearest relations of art, in different individuals; unequivocal, inexplicable without design.

So much so, that, were every other proof of contrivance in nature dubious or obscure, this alone would be sufficient. The example is complete. Nothing is wanting to the argument. I see no way whatever of getting over it.

V. The teats of animals which give suck, bear a relation to the mouth of the suckling progeny; particularly to the lips and tongue. Here also, as before, is a correspondency of parts; which parts subsist in different individuals.

These are *general* relations, or the relations of parts which are found, either in all animals, or in large classes and descriptions of animals. *Particular* relations, or the relations which subsist between the particular configuration of one or more parts of certain species of animals, and the particular configuration of one or more other parts of the same animal, (which is the sort of relation that is perhaps most striking,) are such as the following.

I. In the *swan*; the web-foot, the spoon-bill, the

long neck, the thick down, the graminivorous stomach, bear all a relation to one another, inasmuch as they all concur in one design, that of supplying the occasions of an aquatic fowl, floating upon the surface of shallow pools of water, and seeking its food at the bottom. Begin with any one of these particularities of structure, and observe how the rest follow it. The web-foot qualifies the bird for swimming; the spoon-bill enables it to graze. But how is an animal, floating upon the surface of pools of water, to graze at the bottom, except by the mediation of a long neck? A long neck accordingly is given to it. Again, a warm-blooded animal, which was to pass its life upon water, required a defence against the coldness of that element. Such a defence is furnished to the swan, in the muff in which its body is wrapped. But all this outward apparatus would have been in vain, if the intestinal system had not been suited to the digestion of vegetable substances. I say, suited to the digestion of vegetable substances; for it is well known, that there are two intestinal systems found in birds: one with a membranous stomach and a gastric juice, capable of dissolving animal substances alone; the other with a crop and gizzard, calculated for the moistening, bruising, and afterwards digesting of vegetable aliment.

Or set off with any other distinctive part in the body of the swan; for instance, with the long neck. The long neck without the web-foot would have been an encumbrance to the bird; yet there is no necessary connexion between a long neck and a web-foot. In fact, they do not usually go together. How happens it, therefore, that they meet only when a particular design demands the aid of both?

## II. This mutual relation, arising from a subserviency

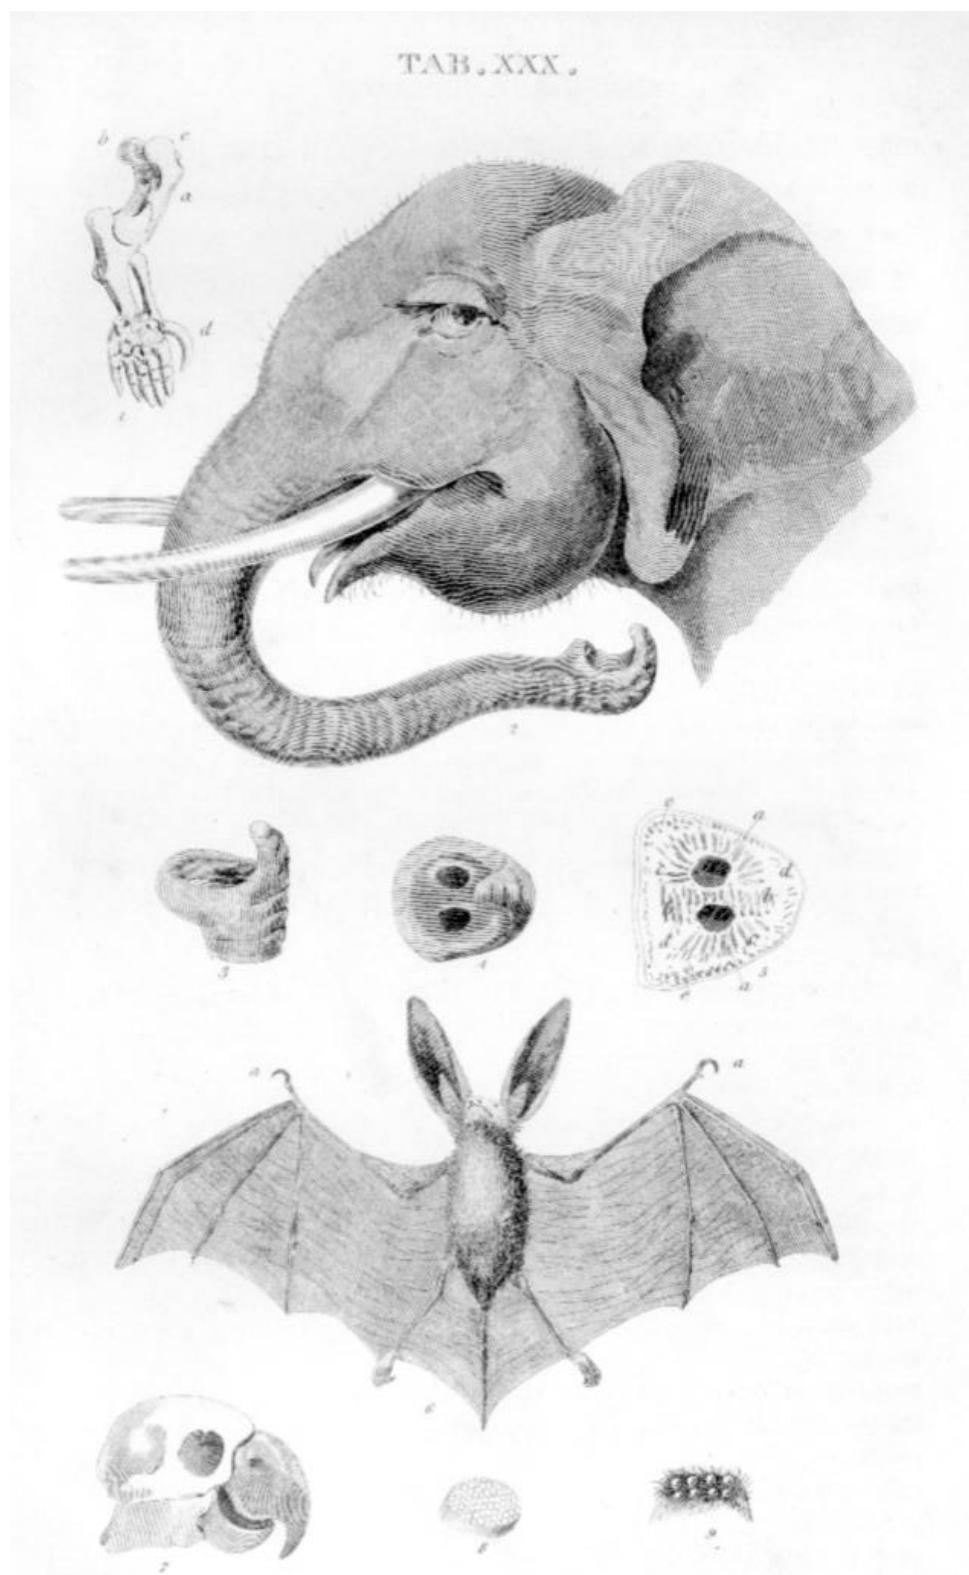

to a common purpose, is *very* observable also in the parts of a *mole*. The strong short legs of that animal, the palmated feet armed with sharp nails, the pig-like nose, the teeth, the velvet coat, the small external ear, the sagacious smell, the sunk protected eye, all conduce to the utilities or to the safety of its under-ground life. It is a special purpose, specially consulted throughout. The form of the feet fixes the character of the animal. They are so many shovels; they determine its action to that of rooting in the ground; and every thing about its body agrees with this destination. The cylindrical figure of the mole, as well as the compactness of its form, arising from the terseness of its limbs, proportionably lessens its labour; because, according to its bulk, it thereby requires the least possible quantity of earth to be removed for its progress. It has nearly the same structure of the face and jaws as a swine, and the same office for them. The nose is sharp, slender, tendinous, strong; with a pair of nerves going down to the end of it. The plush covering, which, by the smoothness, closeness, and polish of the short piles that compose it, rejects the adhesion of almost every species of earth, defends the animal from cold and wet, and from the impediment which it would experience by the mould sticking to its body. From soils of all kinds the little pioneer comes forth bright and clean. Inhabiting dirt, it is, of all animals, the neatest.

But what I have always most admired in the mole is its *eyes*. This animal occasionally visiting the surface, and wanting, for its safety and direction, to be informed when it does so, or when it approaches it, a perception of light was necessary. I do not know that the clearness of sight depends at all upon the size of the organ. what is gained by the largeness or prominence of the

globe of the eye, is width in the field of vision. Such a capacity would be of no use to an animal which was to seek its food in the dark. The mole did not want to look about it; nor would a large advanced eye have been easily defended from the annoyance to which the life of the animal must constantly expose it. How indeed was the mole, working its way under ground, to guard its eyes at all? In order to meet this difficulty, the eyes are made scarcely larger than the head of a corking-pin; and these minute globules are sunk so deeply in the skull, and lie so sheltered within the velvet of its covering, as that any contraction of what may be called the eye-brows, not only closes up the apertures which lead to the eyes, but presents a cushion, as it were, to any sharp or protruding substance which might push against them. This aperture, even in its ordinary state, is like a pin-hole in a piece of velvet, scarcely pervious to loose particles of earth.

Observe then, in this structure, that which we call relation. There is no natural connexion between a small sunk eye and a shovel palmated foot. Palmated feet might have been joined with goggle eyes; or small eyes might have been joined with feet of any other form. What was it therefore which brought them together in the mole? That which brought together the barrel, the chain, and the fusee in a watch—design: and design, in both cases, inferred from the relation which the parts bear to one another in the prosecution of a common purpose. As hath already been observed, there are different ways of stating the relation, according as we set out from a different part. In the instance before us, we may either consider the shape of the feet, as qualifying the animal for that mode of life and inhabitation to which the structure of its eyes confines it; or we

TAB. XXX.

may consider the structure of the eye, as the only one which would have suited with the action to which the feet are adapted. The relation is manifest, whichever of the parts related we place first in the order of our consideration. In a word, the feet of the mole are made for digging; the neck, nose, eyes, ears, and skin, are peculiarly adapted to an under-ground life; and this is what I call relation.\*

\* Tab. XXX. Fig. 1. is the fore extremity of the *mole*: *a*, the *os humeri*, is peculiar, not only for its shortness, but in being articulated by *b*, one head to the scapula, and by *c*, another to the clavicle; it is altogether of such a nature as to turn the palm outwards for working.

The foot, or we may name it the hand, has ten bones in the *carpus* or *wrist*, which is two more than in the carpus of man. One of which, *d*, is remarkable, and from its shape is called the *falciform bone*; it gives the shovel form to the hand. The inclination outwards and backwards well answers the purpose of digging, and at the same moment throwing back the earth. The pectoral, and other muscles concerned in moving the extremity, have great strength, so that the animal digs its way with amazing force and rapidity.

Although the eye is exceedingly small, by the assistance of a magnifier the pupil, crystalline lens, and vitreous humour may be plainly discovered.

"Insects also supply numberless exemplifications of the accurate adaptation of the structure of the organs of assimilation to the nature of the food which is to be converted into nutriment; and also of the general principle, that vegetable aliment requires, for this purpose, longer processes and a more complicated apparatus than that which has been already animalized. In the herbivorous tribes, we find the oesophagus either extremely dilatable, so as to serve as a crop or receptacle for containing the food previously to its digestion, or having a distinct pouch appended to it for the same object; to this there generally succeeds a gizzard or apparatus for trituration, furnished, not merely with a hard cuticle, as in birds, but also with numerous rows of teeth, of various forms, answering most effectually the purpose of dividing, or grinding into the minutest fragments, all the harder parts of the food; and thus supplying any deficiency of power in the jaws for accomplishing the same object. Thence the aliment, properly prepared, passes into the cavity appropriated for its digestion, which constitutes the true stomach. In the lower part of this organ, a peculiar fluid secretion is often intermixed with it, which has been supposed to be analogous to the bile of the higher animals. It is prepared by the coats of slender tubes, termed hepatic vessels, which are often of great length, and sometimes branched or tufted, or beset, like the fibres of a feather, with

## CHAPTER XVI. COMPENSATION.

COMPENSATION is a species of relation. It is relation when the *defects* of one part, or of one organ, are supplied by the structure of another part, or of another organ. Thus,

I. The short unbending neck of the *elephant* is com-

lateral rows of filaments; and which float loosely in the general cavity of the body, attached only at their termination, where they open into the alimentary canal." See Dr. Roget's Bridge water Treatise, vol. ii. p. 208.

In the *mantis religiosa*, which is purely a carnivorous insect, the whole canal is more simple, it is perfectly straight; commencing by an oesophagus of great length, which is preceded by a gizzard, hepatic vessels, and a digesting stomach, it is terminated by a short intestinal tube.

Of the perceptions of the lower animals and of the laws which they obey, our knowledge must, of necessity, be extremely imperfect, since it must be derived from a comparison with the results of our own sensitive powers, which may differ very essentially from those of the subjects of our observation. The same kind of organ which, in ourselves, convey certain definite feelings, may, when modified in other animals, be the source of very different kinds of sensations and perceptions, of which our minds have not the power to form any adequate conception. Many of the qualities of surrounding bodies, which escape our more obtuse senses, may be distinctly perceived, in all their gradations, by particular tribes of animals, furnished with more delicate organs. Many quadrupeds and birds possess powers of vision incomparably more extensive than our own; in acuteness of hearing, we are excelled by a great number of animals; and in delicacy of taste and smell, there are few quadrupeds who do not far surpass us. The organ of smell, in particular, is often spread over a vast extent of surface, in a cavity occupying the greatest part of the head; so that the perceptions of this sense must be infinitely diversified.

The perceptive powers of *insects* must embrace a very different, and, in many respects, a more extended sphere than our own. These animals manifest by their actions, that they perceive and anticipate atmospheric changes, of which our senses give no information. But neither our thermometers, nor our electroscopes, nor hygrometers, nor our galvanometers, however skilfully devised or elaborately constructed, can vie in delicacy and perfection with that refined apparatus of the senses which nature has bestowed on even the minutest insect. See Dr. Roget's Bridgewater Treatise, vol. ii. p. 671.

pensated by the length and flexibility of his *proboscis*. He could not have reached the ground without it; or, if it be supposed that he might have fed upon the fruit, leaves, or branches of trees, how was he to drink? Should it be asked, Why is the elephant's neck so short? it may be answered, that the weight of a head so heavy could not have been supported at the end of a longer lever. To a form, therefore, in some respects necessary, but in some respects also inadequate to the occasions of the animal, a supplement is added, which exactly makes up the deficiency under which he laboured.

If it be suggested that this proboscis may have been produced, in a long course of generations, by the constant endeavour of the elephant to thrust out his nose, (which is the general hypothesis by which it has lately been attempted to account for the forms of animated nature,) I would ask, How was the animal to subsist in the mean time, during the process, *until* this prolongation of snout were completed? What was to become of the individual, whilst the species was perfecting?

Our business at present is, simply to point out the relation which this organ bears to the peculiar figure of the animal to which it belongs. And herein all things correspond. The necessity of the elephant's proboscis arises from the shortness of his neck; the shortness of the neck is rendered necessary by the weight of the head. Were we to enter into an examination of the structure and anatomy of the proboscis itself, we should see in it one of the most curious of all examples of animal mechanism.\* The disposition of the ringlets

\* Tab. XXX. Fig. 2. The head of the *elephant*. Fig. 3 and 4, the digitated extremity of the proboscis.

Fig. 5. A transverse section of the proboscis, showing, *a*, *a*, the two tubes or nostrils. Between the external integuments and the tubes are

and fibres, for the purpose, first, of forming a long cartilaginous pipe; secondly, of contracting and lengthening that pipe; thirdly, of turning it in every direction at the will of the animal; with the superaddition at the end of a fleshy production, of about the length and thickness of a finger, and performing the office of a finger, so as to pick up a straw from the ground; these properties of the same organ, taken together, exhibit a specimen, not only of design, (which is attested by the advantage,) but of consummate art, and, as I may say, of elaborate preparation, in accomplishing that design.

II. The hook in the wing of a *bat* is strictly a mechanical, and also a *compensating* contrivance.\* At

two sets of small muscles; an inner one running in a transverse, and an outward one in a longitudinal direction, *b*, *b*, the *transverse* faciculi of muscles, some of which run across the proboscis, others in a radiated, and some in an oblique direction; *c*, *c*, the radiated, and *d*, *d*, the oblique fibres, approximate the skin and the tubes, without contracting the cavity of the latter. The others, which pass across the proboscis, contract both the surface of the organ, and the canals it contains; they can, at the same time, elongate the whole or a part of it: *e*, *e*, the *longitudinal* faciculi, forming four large muscles, which occupy all the exterior of the organ. These are divided by tendinous intersections, and take their origin from the bones of the face. They give that extraordinary power which the animal possesses of moving the proboscis in every direction.

The tubes are prolongations of the external openings of the nose, and are lined by a strong tendinous membrane. They are separated from each other, and are both surrounded by adipose substance, which also is extended between the muscles we have already described. The outer part is covered by a tendinous expansion, and the common skin. The proboscis serves to pump up the drink which the animal takes in, as well as for smelling, breathing, and the various offices of feeding itself, etc. which most persons who have seen the animal must have witnessed with admiration.

\* Fig. 6. The extended wings of the bat. Osteologically considered they are hands, the bony stretchers of the membrane being the finger bones extremely elongated: *a*, *a*, the thumb, is short, and armed with a hooked nail, which these animals make use of to hang by, and to creep. The hind feet are weak, and have toes of equal length, armed also with

the angle of its wing there is a bent claw, exactly in the form of a hook, by which the bat attaches itself to the sides of rocks, caves, and buildings, laying hold of crevices, joinings, chinks, and roughnesses. It hooks itself by this claw; remains suspended by this hold; takes its flight from this position: which operations compensate for the decrepitude of its legs and feet. Without her hook, the bat would be the most helpless of all animals. She can neither run upon her feet, nor raise herself from the ground. These inabilities are made up to her by the contrivance in her wing: and in placing a claw on that part, the Creator has deviated from the analogy observed in winged animals. A singular defect required a singular substitute.

III. The *crane* kind are to live and seek their food amongst the waters; yet, having no web-foot, are incapable of swimming. To make up for this deficiency, they are furnished with long legs for wading, or long bills for groping; or usually with both.\* This is *compensation*. But I think the true reflection upon the present instance is, how every part of nature is tenanted by appropriate inhabitants. Not only is the surface of deep waters peopled by numerous tribes of birds that swim, but marshes and shallow pools are furnished with hardly less numerous tribes of birds that wade.

hooked nails; the membrane, constituting the wing, is continued from the feet to the tail.

These are *waders*, a class of birds very numerous, and differing in interior and exterior conformation, but agreeing in this one particular, viz. that they are invariably bare of feathers to midway above the knees; by which peculiarity of structure they can, without inconvenience, wade in shallow water in search of food, which, for the most part, consists of fish, small aquatic animals, roots, and seeds.

In the ostrich and emu, which are unable to fly, the *compensation* is muscular and powerful limbs; so that their speed is equal to the swiftest horse.

IV. The common *parrot* has, in the structure of its beak, both an inconveniency, and a *compensation* for it. When I speak of an inconveniency, I have a view to a dilemma which frequently occurs in the works of nature, viz. that the peculiarity of structure by which an organ is made to answer one purpose, necessarily unfits it for some other purpose. This is the case before us. The upper bill of the parrot is so much hooked, and so much overlaps the lower, that if, as in other birds, the lower chap alone had motion, the bird could scarcely gape wide enough to receive its food: yet this hook and overlapping of the bill could not be spared, for it forms the very instrument by which the bird climbs; to say nothing of the use which it makes of it in breaking nuts and the hard substances upon which it feeds. How, therefore, has nature provided for the opening of this occluded mouth? By making the upper chap moveable,\* as well as the lower. In most birds, the upper chap is connected, and makes but one piece with the skull; but in the parrot, the upper chap is joined to the bone of the head by a strong membrane placed on each side of it, which lifts and depresses it at pleasure.

V. The *spider's web* is a *compensating* contrivance. The spider lives upon flies, without wings to pursue them; a case, one would have thought, of great difficulty, yet provided for, and provided for by a resource which no stratagem, no effort of the animal, could have produced, had not both its external and internal structure been specifically adapted to the operation.

\* Tab. XXX. Fig. 7. The upper *mandible* of the *parrot*, which is articulated with the cranium by an elastic ligament, admitting of a considerable degree of motion.

VI. In many species of insects, the eye is fixed; and consequently without the power of turning the pupil to the object. This great defect is, however, perfectly *compensated*, and by a mechanism which we should not suspect. The eye is a multiplying-glass,\* with a lens looking in every direction and catching every object. By which means, although the orb of the eye be stationary, the field of vision is as ample as that of other animals, and is commanded on every side. When this lattice-work was first observed, the multiplicity and minuteness of the surfaces must have added to the surprise of the discovery. Adams tells us, that fourteen hundred of these reticulations have been counted in the two eyes of a drone-bee.

In other cases, the *compensation* is effected by the number and position of the eyes themselves. † The spider has eight eyes, mounted upon different parts of the head; two in front, two in the top of the head, two on each side. These eyes are without motion; but, by their situation, suited to comprehend every view which

\* The eyes of insects differ widely from vertebrated animals, by being incapable of motion; the compensation therefore is a greater number of eyes, or an eye compounded of a number of lenses. Kerby and Spence state the cornea of the eye of a common fly to contain an immense number of squares, with a lens of the same figure set in each. The same structure obtains in the *coleoptera* and many other insects. Reamur fitted an eye to a lens, and could see objects greatly multiplied through it. Hook computed the lenses in a horse-fly to amount to seven thousand, and Leuwenhoek found the almost incredible number of twelve thousand in the dragon-fly. In some insects however they are less numerous; in *Xnos* they do not exceed fifty, and are distinctly visible to the naked eye. The latter is the best example we can give of a compound eye. See Tab. XXX. Fig. 8.

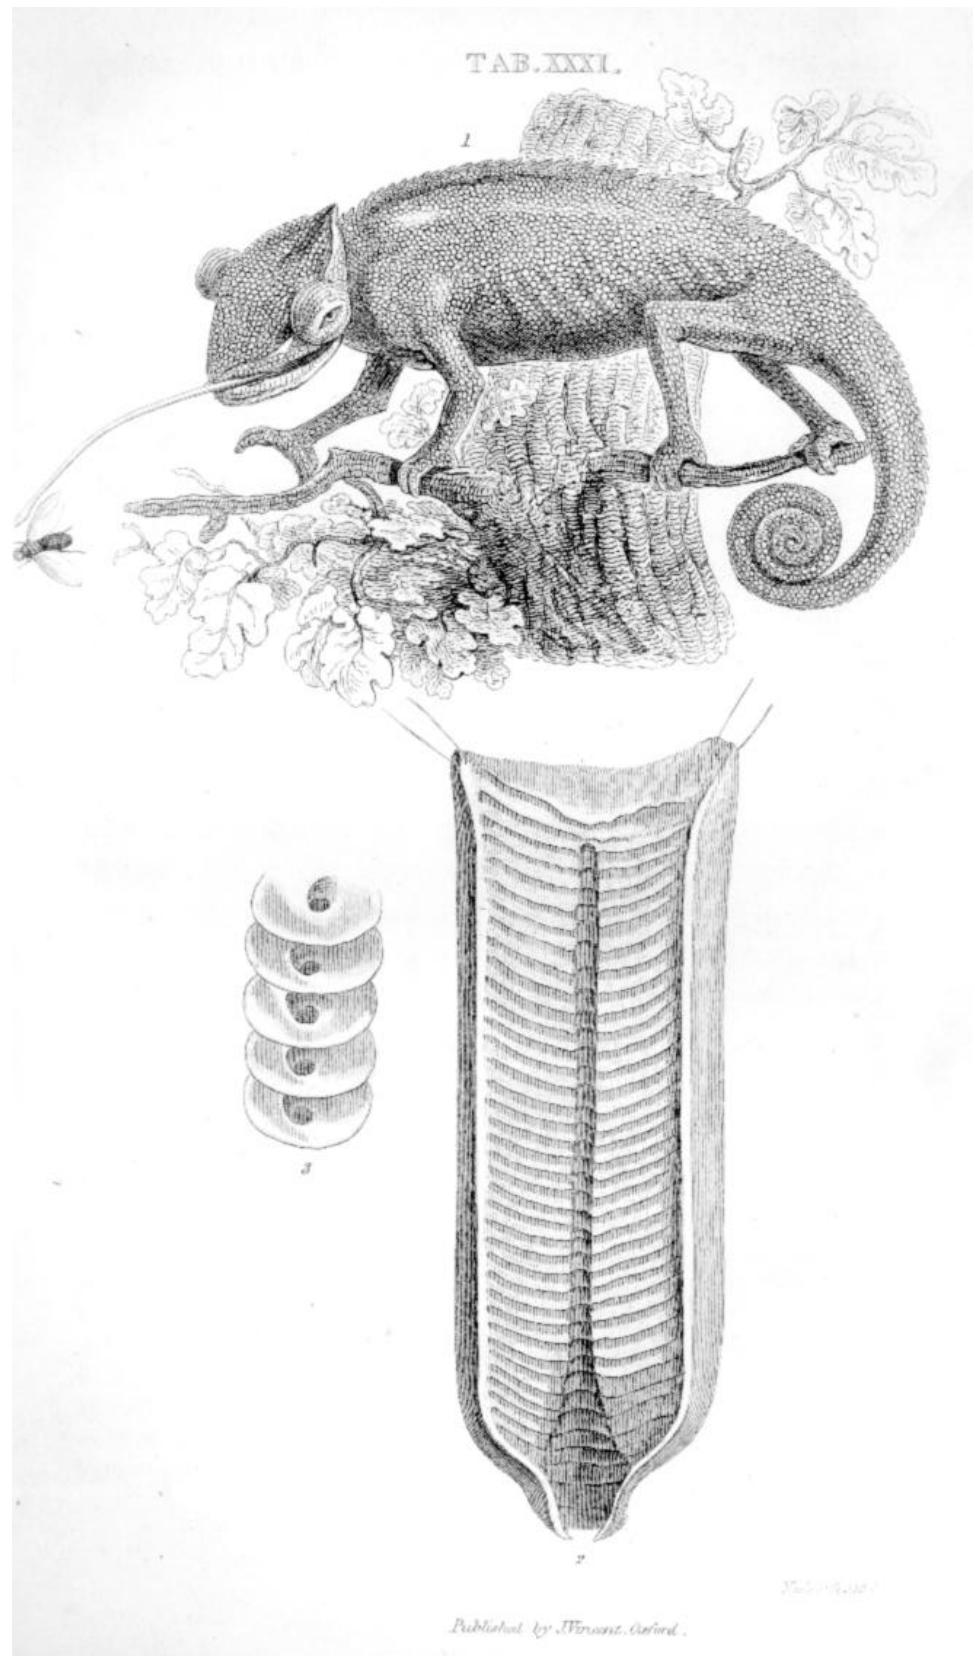

† The number of eyes in insects varies from two to sixteen. The spider here referred to answers the description of the garden spider, (*epeira diadema*), the eyes of which are planted on three tubercles, four on the central one, and two on each side of the lateral ones. Fig. 9. The eyes of a spider drawn from nature.

the wants or safety of the animal may render it necessary for it to take.

VII. The Memoirs for the Natural History of Animals, published by the French Academy, A. D. 1687, furnish us with some curious particulars in the eye of a chameleon. Instead of two eyelids, it is covered by an eyelid with a hole in it. This singular structure appears to be *compensatory*, and to answer to some other singularities in the shape of the animal. The neck of the chameleon is inflexible. To make up for this, the eye is so prominent, as that more than half of the ball stands out of the head; by means of which extraordinary projection, the pupil of the eye can be carried by the muscles in every direction, and is capable of being pointed towards every object. But then, so unusual an exposure of the globe of the eye requires, for its lubricity and defence, a more than ordinary protection of eyelid, as well as a more than ordinary supply of moisture; yet the motion of an eyelid, formed according to the common construction, would be impeded, as it should seem, by the convexity of the organ. The aperture in the lid meets this difficulty. It enables the animal to keep the principal part of the surface of the eye under cover, and to preserve it in a due state of humidity without shutting out the light; or without performing every moment a nictitation, which, it is probable, would be more laborious to this animal than to others.\*

\* Tab. XXXI. Fig. 1. The *chameleon*, drawn from one of the species preserved in the Anatomy School, Christ Church, Oxford. The eyes of this creature are very peculiar: they are remarkably large, and project more than half their diameter. They are covered with a single eye-lid, with a small opening in it opposite the pupil. The eye-lid is granulated like every part of the surface of the body, with this difference: over the eye the granulations are disposed in concentric circles, which form folds in that part to which the eye is turned; and as the lid is attached to the front of

TAB. XXXI.

Published by Worcester, Oxford.

VIII. In another animal, and in another part of the animal economy, the same Memoirs describe a most remarkable *substitution*. The reader will remember what we have already observed concerning the *intestinal* canal; that its length, so many times exceeding that of the body, promotes the extraction of the chyle from the aliment, by giving room for the lacteal vessels to act upon it through a greater space. This long intestine, wherever it occurs, is, in other animals, disposed in the abdomen from side to side in returning folds. But, in the animal now under our notice, the matter is managed otherwise. The same intention is mechanically effectuated; but by a mechanism of a different kind. The animal of which I speak is an amphibious quadruped, which our authors call the alopecias, or sea-fox. The intestine is straight from one end to the other: but in this straight, and consequently short intestine, is a winding, corkscrew, spiral passage, through which the food, not without several circumvolutions, and in fact by a long route, is conducted to its exit. Here the shortness of the gut is *compensated* by the obliquity of the perforation.\*

the eye, so it follows all its movements. The neck is not "inflexible," but its shortness, and the structure of the cervical vertebrae exceedingly limit the motion; this however is admirably compensated by the not less singular local position than motion of the eye, as the animal can see behind, before, or on either side, without turning the head.

\* Fig. 2. The spiral intestine of the *sea-fox*, taken from a preparation in the Museum of the Royal College of Surgeons, London. The sea-fox is not, as above supposed, a "quadruped," but a species of shark, (*squalus vulpes*). The convoluted intestinal tube is also found in some other genera of fish. In this specimen the internal membrane is converted into a spiral valve, having thirty-six coils; so that the alimentary substances, instead of passing speedily away, by proceeding round the turns of the valve, traverse a very considerable circuit, which is thus provided for the action of the absorbent vessels. Fig. 3. The *spiral valve* removed, showing the mode of its coiling.

IX. But the works of the Deity are known by expedients. Where we should look for absolute destitution, where we can reckon up nothing but wants, some contrivance always comes in to supply the privation. A *snail*, without wings, feet, or thread, climbs up the stalks of plants, by the sole aid of a viscid humour discharged from her skin. She adheres to the stems, leaves, and fruits of plants, by means of a sticking-plaster.\* A *muscle*, which might seem, by its helplessness, to lie at the mercy of every wave that went over it, has the singular power of spinning strong tendinous threads, by which she moors her shell to rocks and timbers. † A *cockle*, on the contrary, by means of its stiff tongue, ‡ works for itself a shelter in the sand. The provisions of nature extend to cases the most desperate. A *lobster* has in its constitution a difficulty so great, that one could hardly conjecture beforehand how nature would dispose of it. In most animals, the skin grows with their growth. If, instead of a soft skin, there be a shell, still it admits of a gradual enlargement. If the shell, as in the tortoise, consists of several pieces, the accession of substance is made at the sutures. Bivalve shells grow bigger by receiving an accretion at their edge; it is the same with spiral shells at their mouth. The simplicity of their form admits of this. But the

\* There is a viscid substance secreted from the body of the snail and slug, which enables it to attach one part of the body more firmly to the surface on which it is moving, while it drags up the remainder to a new position.

† This is performed by fixing on a point of rock the gluten which is furnished by a gland, situated at the base of the animal, which it draws out into threads while still soft, and which subsequently harden in the water into tenacious fibres.

‡ This organ is called the *foot*. In the razor-shell it is so constructed as to enable the animal to bury itself in the sand to the depth of two feet in a few seconds.

lobster's shell, being applied to the limbs of the body as well as to the body itself, allows not of either of the modes of growth which are observed to take place in other shells. Its hardness resists expansion; and its complexity renders it incapable of increasing its size by addition of substance to its edge. How then was the growth of the lobster to be provided for? Was room to be made for it in the old shell, or was it to be successively fitted with new ones? If a change of shell became necessary, how was the lobster to extricate himself from his present confinement? How was he to uncase his buckler, or draw his legs out of his boots? The process, which fishermen have observed to take place, is as follows. At certain seasons, the shell of the lobster grows soft; the animal swells its body; the seams open, and the claws burst at the joints. When the shell has thus become loose upon the body, the animal makes a second effort, and by a tremulous, spasmodic motion, casts it off. In this state, the liberated but defenceless fish retires into holes in the rock. The released body now suddenly pushes its growth. In about eight-and-forty hours, a fresh concretion of humour upon the surface, i. e. a new shell, is formed, adapted in every part to the increased dimensions of the animal. This wonderful mutation is repeated every year.

If there be imputed defects without compensation, I should suspect that they were defects only in appearance. Thus, the body of the *sloth* has often been reproached for the slowness of its motions, which has been attributed to an imperfection in the formation of its limbs. But it ought to be observed, that it is this slowness which alone suspends the voracity of the animal. He fasts during his migration from one tree to another; and [his fast may be necessary for the

relief of his overcharged vessels, as well as to allow time for the concoction of the mass of coarse and hard food which he has taken into his stomach. The tardiness of his pace seems to have reference to the capacity of his organs, and to his propensities with respect to food; i. e. is calculated to counteract the effects of repletion.\*

Or there may be cases in which a defect is artificial, and compensated by the very cause which produces it. Thus the *sheep*, in the domesticated state in which we see it, is destitute of the ordinary means of defence or escape; is incapable either of resistance or flight. But this is not so with the wild animal. The natural sheep is swift and active; and if it loose these qualities when it comes under the subjection of man, the loss is compensated by his protection. Perhaps there is no species of quadruped whatever, which suffers so little as this does from the depredation of animals of prey.

For the sake of making our meaning better understood, we have considered this business of compensation under certain *particularities* of constitution, in which it appears to be most conspicuous. This view of the subject necessarily limits the instances to single species

\* Blumenbach states, in his Manual of Natural History, that he had conversed with many Hollanders who had lived in Guiana, and from them collected, that this apparently miserable animal is rather an enviable one. First, he nourishes himself entirely from leaves, and therefore, when he has once climbed a tree, he can live on the same dish a quarter of a year. Secondly, he does not drink at all. Thirdly, on a tree he is exposed to but few enemies; and when the sloth marks that a tiger-cat is climbing up a branch, it goes softly to the end of the branch, and rocks it till the tiger-cat falls off, so that seldom is there an instance that a tiger-cat surprises one: even upon the ground, so powerful are the claws of the sloth, and so fearful its cries, that its enemies generally get the worst. So idle is Buffon's declamation against the goodness and wisdom of Providence, drawn from this beast.

of animals. But there are compensations, perhaps not less certain, which extend over large classes, and to large portions of living nature.

I. In quadrupeds, the deficiency of teeth is usually *compensated* by the faculty of rumination.\* The sheep, deer, and ox tribe are without fore-teeth in the upper jaw. † These ruminate. The horse and ass are furnished with teeth in the upper jaw, and do not ruminate. In the former class, the grass and hay descend into the stomach nearly in the state in which they are cropped from the pasture, or gathered from the bundle. In the stomach, they are softened by the gastric juice, which in these animals is unusually copious. Thus softened and rendered tender, they are returned a second time to the action of the mouth, where the grinding teeth complete at their leisure the trituration which is necessary, but which was before left imperfect. I say, the trituration which is necessary; for it appears from experiments, that the gastric fluid of sheep, for example, has no effect in digesting plants, unless they have been

\* The *ruminants* are cloven-footed animals; they have no incisor teeth in their upper jaw; they have four stomachs, and chew the cud.

The first stomach, called the *ventriculus, or paunch*, is a store-house for the food, which is afterwards thrown up to be remasticated and transmitted to the true digesting stomach.

The second appears as a globular appendage, termed the *reticulum, or honey-comb stomach*, from its inner surface being arranged into pentagonal cells.

The third stomach is the smallest, and called *amasum, or many plies*, from its consisting of numerous broad laminae.

The fourth stomach, the *obomassum or reed*, has an elongated form, with longitudinal folds on its inner or mucous membrane, and is the only true digestive stomach. In young animals it has the power of curding milk.

† The teeth for masticating grain and herbs are remarkable: they have a flattish surface, and the jaw possesses a capacity for horizontal motion. That the surface of the cheek teeth should keep that sort of inequality peculiar to a mill-stone, their substance is composed of parts of unequal hardness, some of which parts wear sooner than others.

previously masticated; that it only produces a slight maceration, nearly as common water would do in a like degree of heat; but that when once vegetables are reduced to pieces by mastication, the fluid then exerts upon them its specific operation. Its first effect is to soften them, and to destroy their natural consistency; it then goes on to dissolve them; not sparing even the toughest parts, such as the nerves of the leaves.

I think it very probable, that the gratification also of the animal is renewed and prolonged by this faculty. Sheep, deer, and oxen appear to be in a state of enjoyment whilst they are chewing the cud. It is then, perhaps, that they best relish their food.

II. In birds, the *compensation* is still more striking. They have no teeth at all. What have they then to make up for this severe want? I speak of granivorous and herbivorous birds; such as common fowls, turkeys, ducks, geese, pigeons, etc.; for it is concerning these alone that the question need be asked. All these are furnished with a peculiar and most powerful muscle, called the *gizzard*.\* the inner coat of which is fitted up with rough plaits, which, by a strong friction against one another, break and grind the hard aliment as

\* The *gizzard* of birds is the third stomach. It is of a globular figure, a little compressed, and it is composed of four immensely strong muscles. Two of these are situated laterally, and have fibres running in a radiated manner about two tendons placed at the sides of this organ. The other two muscles are much smaller than the former, and are situated at the extremities. The gizzard has an exterior tendinous covering, and within it is lined with a thick, strong callous coat; the density and hardness of which is said to compensate for the want of teeth. Herbivorous animals grind their food with their teeth, and then it passes into their stomach. On the contrary, birds of this sort first macerate and soften it in the crop, and then it is ground or comminuted in the gizzard. The small stones and gravel which are found in the gizzard of many birds, are supposed materially to assist a minute division or digestion of their food.

effectually, and by the same mechanical action, as a coffee-mill would do. It has been proved by the most correct experiments, that the gastric juice of these birds will not operate upon the *entire* grain; not even when softened by water, or macerated in the crop. Therefore, without a grinding machine within its body, without the trituration of the gizzard, a chicken would have starved upon a heap of corn. Yet why should a bill and a gizzard go together? Why should a gizzard never be found where there are teeth?

Nor does the gizzard belong to birds as such. A gizzard is not found in birds of prey.\* *Their* food requires not to be ground down in a mill. The compensatory contrivance goes no farther than the necessity. In both classes of birds, however, the digestive organ within the body bears a strict and mechanical relation to the external instruments for procuring food. † The soft membranous stomach accompanies a hooked, notched beak; short, muscular legs; strong, sharp, crooked talons: the cartilaginous stomach attends that conformation of bill and toes, which restrains the bird to the picking of seeds, or the cropping of plants.

III. But to proceed with our *compensations*. A very numerous and comprehensive tribe of terrestrial animals are entirely without feet; yet locomotive; and in a very considerable degree swift in their motion. How is the *want of feet* compensated? It is done by the disposition of the muscles and fibres of the trunk. In

\* In the majority of species which live on flesh or fish, the muscles of the gizzard are reduced to an extreme weakness, so as scarcely to be recognized, and this cavity makes only a single bag with the succentorial ventricle.

† Cuvier has observed, that you never see in nature the cloven foot of the ox joined with the pointed fang of the lion, or the sharp talons of the eagle accompanying the flattened beak of the swan.

consequence of the just collocation, and by means of the joint action of longitudinal and annular fibres, that is to say, of strings and rings, the body and train of reptiles\* are capable of being reciprocally shortened and lengthened, drawn up and stretched out. The result of this action is a progressive, and, in some cases, a rapid movement of the whole body, in any direction to which the will of the animal determines it. The meanest creature is a collection of wonders. The play of the rings in an *earth-worm*, as it crawls; the undulatory motion propagated along the body; the beards or prickles with which the annuli are armed, and which the animal can either shut up close to its body, or let out to lay hold of the roughness of the surface upon which it creeps; and the power arising from all these, of changing its place and position, affords, when compared with the provisions for motion in other animals, proofs of new and appropriate mechanism. Suppose that we had never seen an animal move upon the ground without feet, and that the problem was—muscular action, i. e. reciprocal contraction and relaxation being given, to describe how such an animal might be constructed, capable of voluntarily changing place. † Some-

\* Contraction and expansion is the mode of progression in *worms*, but not in *reptiles*; in the class of serpents, locomotion consists simply of repeated horizontal undulations, viz. flexion and extension. Thus the head being the fixed point, the body and tail assume several curves; the tail then becomes the fixed point, the curvatures are straightened, and thus the animal advances with a *serpentine* motion. By these successive curvatures and right lines alternating, it moves forward at each *step* nearly the length of the whole body; the ribs, which Sir E. Home considers to act as feet, having nothing to do with locomotion, unless as affording a fulcrum for the muscles.

† But there are other modes of moving, analogous to walking, performed by means of *suckers*; where the organ of motion is an uniform extended surface, as in the foot of the *limpet*, part of the foot is detached from the surface while the remaining points adhere by suction, until the others

thing, perhaps, like the organization of reptiles might have been hit upon by the ingenuity of an artist; or might have been exhibited in an automaton, by the combination of springs, spiral wires, and ringlets: but to the solution of the problem would not be denied, surely, the praise of invention and of successful thought; least of all could it ever be questioned, whether intelligence had been employed about it, or not.

## CHAPTER XVII.

### THE RELATION OF ANIMATED BODIES TO INANIMATE NATURE.

WE have already considered *relation*, and under different views; but it was the relation of parts to parts, of parts of an animal to other parts of the same animal, or of another individual of the same species.

But the bodies of animals hold, in their constitution and properties, a close and important relation to natures altogether external to their own; to inanimate substances, and to the specific qualities of these; e. g. *they hold a strict relation to the ELEMENTS by which they are surrounded.*

I. Can it be doubted, whether the *wings of birds* bear a relation to air, and the *fins of fish* to water? They are instruments of motion, severally suited to the

reach new points of support. Where the organ of adhesion is double, one at each extremity, as in the *leech*, the mouth adheres to one part of the surface while the tail is brought up towards it, and is then fixed, the body being at the time like an arch. The head then quits its hold, the body extends itself, and the head again is attached and the tail brought up. By those alternate movements the leech advances at each *step* the length of its own body.

properties of the medium in which the motion is to be performed: which properties are different. Was not this difference contemplated, when the instruments were differently constituted?

II. The structure of the animal *ear* depends for its use, not simply upon being surrounded by a fluid, but upon the specific nature of that fluid. Every fluid would not serve: its particles must repel one another; it must form an elastic medium: for it is by the successive pulses of *such* a medium, that the undulations excited by the surrounding body are carried to the organ; that a communication is formed between the object and the sense; which must be done before the internal machinery of the ear, subtile as it is, can act at all.

III. The *organs* of voice and respiration are, no less than the ear, indebted for the success of their operation to the peculiar qualities of the fluid in which the animal is immersed. They, therefore, as well as the ear, are constituted upon the supposition of such a fluid, i. e. of a fluid with such particular properties, being always present. Change the properties of the fluid, and the organ cannot act; change the organ, and the properties of the fluid would be lost. The structure therefore of our organs, and the properties of our atmosphere, are made for one another. Nor does it alter the relation, whether you allege the organ to be made for the element, (which seems the most natural way of considering it,) or the element as prepared for the organ.

IV. But there is another fluid with which we have to do; with properties of its own; with laws of acting, and of being acted upon, totally different from those of air and water: and that is *light*. To this new, this singular element; to qualities perfectly peculiar, perfectly distinct and remote from the qualities of any other sub-

stance with which we are acquainted, an organ is adapted, an instrument is correctly adjusted, not less peculiar amongst the parts of the body, not less singular in its form, and in the substance of which it is composed, not less remote from the materials, the model, and the analogy of any other part of the animal frame, than the element to which it relates is specific amidst the substances with which we converse. If this does not prove appropriation, I desire to know what would prove it.

Yet the element of light and the organ of vision, however related in their office and use, have no connexion whatever in their original. The action of rays of light upon the surfaces of animals, has no tendency to breed eyes in their heads. The sun might shine for ever upon living bodies, without the smallest approach towards producing the sense of sight. On the other hand, also, the animal eye does *not* generate or emit light.

V. Throughout the universe there is a wonderful *proportioning* of one thing to another. The size of animals, of the human animal especially, when considered with respect to other animals, or to the plants which grow around him, is such, as a regard to his conveniency would have pointed out. A giant or a pigmy could not have milked goats, reaped corn, or mowed grass; we may add, could not have rode a horse, trained a vine, shorn a sheep, with the same bodily ease as we do, if at all. A pigmy would have been lost amongst rushes, or carried off by birds of prey.

It may be mentioned likewise, that the model and the materials of the human body being what they are, a much greater bulk would have broken down by its own weight. The persons of men who much exceed the ordinary stature betray this tendency.

VI. Again, (and which includes a vast variety of particulars, and those of the greatest importance): how close is the *suitableness* of the earth and sea to their several inhabitants; and of these inhabitants, to the places of their appointed residence!

Take the *earth* as it is; and consider the correspondency of the powers of its inhabitants with the properties and condition of the soil which they tread. Take the inhabitants as they are; and consider the substances which the earth yields for their use. They can scratch its surface, and its surface supplies all which they want. This is the length of their faculties: and such is the constitution of the globe, and their own, that this is sufficient for all their occasions.

When we pass from the earth to the *sea*, from land to water, we pass through a great change: but an adequate change accompanies us, of animal forms and functions, of animal capacities and wants; so that *correspondency* remains. The earth in its nature is very different from the sea, and the sea from the earth; but one accords with its inhabitants as exactly as the other.

VII. The last relation of this kind which I shall mention, is that of *sleep* to *night*; and it appears to me to be a relation which was expressly intended. Two points are manifest: first, that the animal frame requires sleep; \* secondly, that night brings with it a silence,

\* "The animal frame requires sleep." For after the time of being awake has continued for sixteen or eighteen hours, we have a general feeling of fatigue and weakness; our motions become more difficult, our senses lose their activity, the mind becomes confused, receives sensations indistinctly, and governs muscular action with difficulty. We recognize by these signs the necessity of sleep; we choose a position which can be preserved without effort. The *relation* of the stillness and obscurity of night to our repose is striking, and calls for our adoration of an indulgent Creator.

The functions periodically rest, by the circulation, respiration, as well as

and a cessation of activity, which allows of sleep being taken without interruption, and without loss. Animal existence is made up of action and slumber; nature has provided a season for each. An animal which stood not in need of rest, would always live in day-light. An animal which, though made for action and delighting in action, must have its strength repaired by sleep, meets by its constitution the returns of day and night. In the human species, for instance, were the bustle, the labour, the motion of life, upheld by the constant presence of light, sleep could not be enjoyed without being disturbed by noise, and without expense of that time which the eagerness of private interest would not contentedly resign. It is happy therefore for this part of the creation, I mean that it is conformable to the frame and wants of their constitution, that nature, by the very disposition of her elements, has commanded, as it were, and imposed upon them, at moderate intervals, a general intermission of their toils, their occupations, and pursuits.

But it is not for man, either solely or principally, that night is made. Inferior, but less perverted natures, taste its solace, and expect its return, with greater exactness and advantage than he does. I have often observed, and never observed but to admire, the satisfaction, no less than the regularity, with which the greatest part of the irrational world yield to this soft necessity, this grateful vicissitude: how comfortably the birds of the air, for example, address themselves to

the different secretions, and consequently digestion, becoming modified, or less rapid. By peaceful sleep, restrained within proper limits, the powers of our constitution are restored, and the organs recover their facility of action; but if sleep is troubled with unpleasant dreams, or painful impressions, or even prolonged beyond measure, very far from repairing, it exhausts the strength, and may become the occasion of disease.

the repose of the evening; with what alertness they resume the activity of the day!

Nor does it disturb our argument to confess, that certain species of animals are in motion during the night, and at rest in the day. With respect even to them, it is still true, that there is a change of condition in the animal, and an external change corresponding with it. There is still the relation, though inverted. The fact is, that the repose of other animals sets these at liberty, and invites them to their food or their sport.

If the relation of *sleep* to *night*, and, in some instances, its converse, be real, we cannot reflect without amazement upon the extent to which it carries us. Day and night are things close to us; the change applies immediately to our sensations; of all the phenomena of nature, it is the most obvious and the most familiar to our experience; but in its cause it belongs to the great motions which are passing in the heavens. Whilst the earth glides round her axle, she ministers to the alternate necessities of the animals dwelling upon her surface, at the same time that she obeys the influence of those attractions which regulate the order of many thousand worlds. The relation therefore of sleep to night, is the relation of the inhabitants of the earth to the rotation of their globe; probably it is more; it is a relation to the system, of which that globe is a part; and, still farther, to the congregation of systems, of which theirs is only one. If this account be true, it connects the meanest individual with the universe itself; a chicken roosting upon its perch, with the spheres revolving in the firmament.

VIII. But if any one object to our representation, that the succession of day and night, or the rotation of the earth upon which it depends, is not resolvable into

central attraction, we will refer him to that which certainly is—to the change of the seasons. Now the constitution of animals susceptible of torpor bears a relation to winter, similar to that which sleep bears to night. Against not only the cold, but the want of food which the approach of winter induces, the Preserver of the world has provided in many animals by migration, in many others by torpor.\* As one example out of a thousand; the bat, if it did not sleep through the winter, must have starved, as the moths and flying insects upon which it feeds disappear. But the transition from summer to winter carries us into the very midst of physical astronomy; that is to say, into the midst of those laws which govern the solar system at least, and probably all the heavenly bodies.

## CHAPTER XVIII.

### INSTINCTS.

THE order may not be very obvious, by which I place *instincts* next to relations. But I consider them as a species of relation. They contribute, along with the

\* In this country there are a few animals which, besides daily repose, require annually some months of sleep. This is termed *hibernation*. The bat, hedge-hog, dormouse, etc. retire from active life, when there is a reduced temperature of the atmosphere, and when food is difficult to be obtained. These again revive when insects are sporting in the air, and the powers of vegetable life are exerted in the various processes of vegetation. Previous to their torpidity they have their bodies charged with fat, which is a sufficient store of nourishment during their profound slumbers, and is sufficient for their sustenance during the period of three or four months. For their temperature and respiration is greatly diminished, and their circulation, digestion, and every function of life proportionably languid. See Fleming's Philosophy of Zoology, article Torpidity.

animal organization, to a joint effect, in which view they are related to that organization. In many cases, they refer from one animal to another animal; and, when this is the case, become strictly relations in a second point of view.

An INSTINCT is a propensity prior to experience, and independent of instruction.\* We contend, that it is by *instinct* that the sexes of animals seek each other; that animals cherish their offspring; that the young quadruped is directed to the teat of its dam; that birds build their nests, and brood with so much patience upon their eggs; that insects, which do not sit upon their eggs, deposit them in those particular situations in which the young, when hatched, find their appropriate food; that it is instinct which carries the salmon, and some other fish, out of the sea into rivers, for the purpose of shedding their spawn in fresh water. †

We may select out of *this* catalogue the incubation of eggs. I entertain no doubt, but that a couple of sparrows hatched in an oven, and kept separate from the rest of their species, would proceed as other sparrows do, in

\* In this chapter it is admirably proved, that animals are not abandoned by nature to chance or to themselves, they are all employed in a series of actions; hence result those marvellous propensities "independent of instruction." To incline animals to a punctual execution of those actions which are necessary for them, nature has provided them with *instinct*; that is, propensities, inclinations, and wants, by which they are excited to fulfil the intentions of nature. For this purpose we recognize in every animal a double design: first, self preservation; second, the continuation of its own species; and every animal accomplishes this his own way, according to its organization.

† The salmon, the shad, the smelt, and the flounder annually quit the ocean, and come up our rivers to deposit their spawn. On these occasions, the salmon ascends rivers, sometimes a hundred miles from the sea, and surmounts the obstruction of high cataracts by leaping. It has been observed, that there is no danger which they will not encounter, to find a proper place for the deposition of their future offspring.

every office which related to the production and preservation of their brood. Assuming this fact, the thing is inexplicable upon any other hypothesis, than that of an instinct impressed upon the constitution of the animal. For, first, what should induce the female bird to prepare a nest before she lays her eggs? It is in vain to suppose her to be possessed of the faculty of reasoning; for no reasoning will reach the case. The fulness or distention which she might feel in a particular part of her body, from the growth and solidity of the egg within her, could not possibly inform her, that she was about to produce something, which, when produced, was to be preserved and taken care of. Prior to experience, there was nothing to lead to this inference, or to this suspicion. The analogy was *all* against it; for, in every other instance, what issued from the body was cast out and rejected.

But, secondly, let us suppose the egg to be produced into day; how should birds know that their eggs contain their young? There is nothing, either in the aspect or in the internal composition of an egg, which could lead even the most daring imagination to conjecture, that it was hereafter to turn out from under its shell, a living, perfect bird. The form of the egg bears not the rudiments of a resemblance to that of the bird. Inspecting its contents, we find still less reason, if possible, to look for the result which actually takes place. If we should go so far, as, from the appearance of order and distinction in the disposition of the liquid substances which we noticed in the egg, to guess that it might be designed for the abode and nutriment of an animal, (which would be a very bold hypothesis,) we should expect a tadpole dabbling in the slime, much rather than a dry, winged, feathered

creature; a compound of parts and properties impossible to be used in a state of confinement in the egg, and bearing no conceivable relation, either in quality or material, to any thing observed in it. From the white of an egg, would any one look for the feather of a goldfinch? or expect from a simple uniform mucilage, the most complicated of all machines, the most diversified of all collections of substances? Nor would the process of incubation, for some time at least, lead us to suspect the event. Who that saw red streaks shooting in the fine membrane which divides the white from the yolk, would suppose that these were about to become bones and limbs? Who that espied two discoloured points first making their appearance in the cicatrix, would have had the courage to predict, that these points were to grow into the heart and head of a bird?\* It is difficult to strip the mind of its experience. It is difficult to resuscitate surprise, when familiarity has once laid the sentiment asleep. But could we forget all that we know, and which *our* sparrows never knew, about oviparous generation; could we divest ourselves of every information, but what we derived from reasoning upon the appearance or quality discovered in the objects presented to us, I am convinced that harlequin coming out of an egg upon the stage, is not more astonishing to a child, than the hatching of a chicken both would be, and ought to be, to a philosopher.

\* The first day of *incubation* produces a small shining point near the yolk-bag. The following day blood-vessels are distributed on its surface. On the third or fourth day, rudiments of a new formed heart, the *punctum saliens*, is discerned. From the fourth to the eighth day all the principal parts of the chick are to be traced. On the fourteenth day ossification commences, and feathers appear. On the nineteenth day the animal is able to utter sounds, and on the twenty-first to break through its prison, and commence a second life. See Blumenbach Comp. Anat.

But admit the sparrow by some means to know, that within that egg was concealed the principle of a future bird; from what chemist was she to learn, that *warmth* was necessary to bring it to maturity, or that the degree of warmth, imparted by the temperature of her own body, was the degree required?

To suppose, therefore, that the female bird acts in this process from a sagacity and reason of her own, is to suppose her to arrive at conclusions which there are no premises to justify. If our sparrow, sitting upon her eggs, expect young sparrows to come out of them, she forms, I will venture to say, a wild and extravagant expectation, in opposition to present appearances, and to probability. She must have penetrated into the order of nature, farther than any faculties of ours will carry us: and it hath been well observed, that this deep sagacity, if it be sagacity, subsists in conjunction with great stupidity, even in relation to the same subject. "A chemical operation," says Addison, "could not be followed with greater art or diligence, than is seen in hatching a chicken; yet is the process carried on without the least glimmering of thought or common sense. The hen will mistake a piece of chalk for an egg; is insensible of the increase or diminution of their number; does not distinguish between her own and those of another species; is frightened when her supposititious breed of ducklings take the water."

But it will be said, that what reason could not do for the bird, observation, or instruction, or tradition, might. Now if it be true, that a couple of sparrows, brought up from the first in a state of separation from all other birds, would build their nest, and brood upon their eggs, then there is an end of this solution. What can be the traditional knowledge of a chicken hatched in an oven?

Of young birds taken in their nests, a few species breed when kept in cages; and they which do so, build their nests nearly in the same manner as in the wild state, and sit upon their eggs. This is sufficient to prove an instinct,\* without having recourse to experiments upon birds hatched by artificial heat, and deprived from their birth of all communication with their species; for we can hardly bring ourselves to believe, that the parent bird informed her unfledged pupil of the history of her gestation, her timely preparation of a nest, her exclusion of the eggs, her long incubation, and of the joyful eruption at last of her expected offspring; all which the bird in the cage must have learnt in her infancy, if we resolve her conduct into *institution*.

Unless we will rather suppose, that she remembers her own escape from the egg; had attentively observed the conformation of the nest in which she was nurtured; and had treasured up her remarks for future imitation; which is not only extremely improbable, (for who, that sees a brood of callow birds in their nest, can believe that they are taking a plan of their habitation?) but leaves unaccounted for, one principal part of the difficulty, "the preparation of the nest before the laying of the egg." This she could not gain from observation in her infancy.

It is remarkable also, that the hen sits upon eggs which she has laid without any communication with the male, and which are therefore necessarily unfruitful: that secret she is not let into. Yet, if incubation had been a subject of instruction or of tradition, it should seem that this distinction would have formed part of the

\* As another instance; birds of passage kept in a cage, with plenty of food and in warm chambers, yet at the given season of migration manifest extreme restlessness, and attempt to escape.

lesson: whereas the instinct of nature is calculated for a state of nature: the exception here alluded to taking place chiefly, if not solely, amongst domesticated fowls, in which nature is forced out of her course.

There is another case of oviparous economy, which is still less likely to be the effect of education than it is even in birds, namely, that of *moths* and *butterflies*, which deposit their eggs in the precise substance, that of a cabbage for example, from which, not the butterfly herself, but the caterpillar which is to issue from her egg, draws its appropriate food. The butterfly cannot taste the cabbage. Cabbage is no food for her: yet in the cabbage, not by chance, but studiously and electively, she lays her eggs. There are, amongst many other kinds, the willow-caterpillar and the cabbage-caterpillar: but we never find upon a willow the caterpillar which eats the cabbage; nor the converse. This choice, as appears to me, cannot in the butterfly proceed from instruction. She had no teacher in her caterpillar state. She never knew her parent. I do not see, therefore, how knowledge, acquired by experience, if it ever were such, could be transmitted from one generation to another. There is no opportunity either for instruction or imitation. The parent race is gone, before the new brood is hatched. And if it be original reasoning in the butterfly, it is profound reasoning indeed. She must remember her caterpillar state, its tastes and habits; of which memory she shows no signs whatever. She must conclude from analogy, (for here her recollection cannot serve her,) that the little round body which drops from her abdomen, will at a future period produce a living creature, not like herself, but like the caterpillar, which she remembers herself once to have been. Under the influence of these reflections, she goes

about to make provision for an order of things, which she concludes will, some time or other, take place. And it is to be observed, that not a few out of many, but that all butterflies argue thus; all draw this conclusion; all act upon it.\*

But suppose the address, and the selection, and the plan, which we perceive in the preparations which many irrational animals make for their young, to be traced to some probable origin; still there is left to be accounted for, that which is the source and foundation of these phenomena, that which sets the whole at work, the storgh, the parental affection, which I contend to be inexplicable upon any other hypothesis than that of instinct.

For we shall hardly, I imagine, in brutes, refer their conduct towards their offspring to a sense of duty, or of decency, a care of reputation, a compliance with public manners, with public laws, or with rules of life built upon a long experience of their utility. And all attempts to account for the parental affection from association, I think, fail. With what is it associated? Most immediately with the throes of parturition; that is, with pain, and terror, and disease. The more remote, but not less strong association, that which depends upon

\* The dragon-fly is an inhabitant of the air, and could not exist in water; yet in this element, which is alone adapted for her young, she drops her eggs.

Not less surprising is the parental instinct of the gad-fly, (*gasterophilus equi*), whose larvae are destined to be nourished in the stomach and intestines of the horse! How shall the parent convey them there? By a mode truly extraordinary:—Flying round the animal she curiously poises her body while she deposits her eggs on the hairs of his skin. Whenever therefore the horse chances to lick the part of his body to which they are attached, they adhere to the tongue, and from thence pass into the stomach and intestines. And what increases our surprise is, that the fly places her eggs almost exclusively on the knee and the shoulder, on those parts the horse is sure to lick.

analogy, is all against it. Every thing else which proceeds from the body, is cast away and rejected. In birds, is it the egg which the hen loves? Or is it the expectation which she cherishes of a future progeny that keeps her upon her nest? What cause has she to expect delight from her progeny? Can any rational answer be given to the question, why, prior to experience, the brooding hen should look for pleasure from her chickens? It does not, I think, appear, that the cuckoo ever knows her young; yet, in her way, she is as careful in making provision for them, as any other bird. She does not leave her egg in every hole.

The salmon suffers no surmountable obstacle to oppose her progress up the stream of fresh rivers. And what does she do there? She sheds a spawn, which she immediately quits, in order to return to the sea: and this issue of her body she never afterwards recognizes in any shape whatever. Where shall we find a motive for her efforts and her perseverance? Shall we seek it in argumentation, or in instinct?\* The violet crab of Jamaica performs a fatiguing march of some months' continuance, from the mountains to the sea-side. When she reaches the coast, she casts her spawn into the open sea; and sets out upon her return home. †

\* To this question we must answer that it is instinct; *blind instinct*, which, like every other vital phenomenon, evidently depends on organization, without knowledge of the end. With another mode of instinct is associated knowledge; this is *enlightened instinct*: the first belongs to animals, the second is particularly the gift to man. It inclines him to make provision for hunger, thirst, protection from the weather, and the desire of agreeable sensations; we say these are amongst many instinctive feelings, inducing him to concur in the established order of beings.

In this view of the subject we see contrivance on the part of the Creator, by providing an organization which supplies the place of foresight.

† The "violet crab." *Cancer ruricola*. It is of a blackish violet colour, and inhabits South America and its islands, in mountainous woods

Moths and butterflies, as hath already been observed, seek out for their eggs those precise situations and substances in which the offspring caterpillar will find its appropriate food. That dear caterpillar the parent butterfly must never see. There are no experiments to prove that she would retain any knowledge of it, if she did. How shall we account for her conduct? I do not mean for her art and judgment in selecting and securing a maintenance for her young, but for the impulse upon which she acts. What should induce her to exert any art, or judgment, or choice, about the matter? The undisclosed grub, the animal which she is destined not to know, can hardly be the object of a particular affection, if we deny the influence of instinct.\* There is nothing, therefore, left to her, but that of which her nature seems incapable, an abstract anxiety for the general preservation of the species; a kind of patriotism; a solicitude lest the butterfly race should cease from the creation.

Lastly, the principle of association will not explain the discontinuance of the affection when the young animal is grown up. Association, operating in its usual way, would rather produce a contrary effect. The object would become more necessary by habits of society; whereas birds and beasts, after a certain time, banish their offspring; disown their acquaintance; seem

near the sea; lives chiefly on land in holes, and crevices which it digs for itself. It migrates annually in vast numbers to the sea, to wash off its spawn; after this it returns to the mountains, and provides itself with burrows, in which it secretes itself by day, going out only by night to feed.

\* Condillac wished, with Darwin, to take away all the wonderful from the constructiveness of birds and insects, and refer it to practice: but the fallacy of the supposition is evident. There are creatures, the silk-worm, for instance, which work once, and but once, and which could have had no previous practice, no instructor—their efforts must have been from instinct only.

to have even no knowledge of the objects which so lately engrossed the attention of their minds, and occupied the industry and labour of their bodies. This change, in different animals, takes place at different distances of time from the birth; but the time always corresponds with the ability of the young animal to maintain itself; never anticipates it. In the sparrow tribe, when it is perceived that the young brood can fly and shift for themselves, then the parents forsake them for ever; and, though they continue to live together, pay them no more attention than they do to other birds in the same flock. I believe the same thing is true of all gregarious quadrupeds.

In this part of the case, the variety of resources, expedients, and materials, which animals of the same species are said to have recourse to, under different circumstances, and when differently supplied, makes nothing against the doctrine of instincts. The thing which we want to account for, is the propensity. The propensity being there, it is probable enough that it may put the animal upon different actions, according to different exigencies. And this adaptation of resources may look like the effect of art and consideration, rather than of instinct; but still the propensity is instinctive. For instance, suppose what is related of the woodpecker to be true, that, in Europe, she deposits her eggs in cavities, which she scoops out in the trunks of soft or decayed trees, and in which cavities the eggs lie concealed from the eye, and in some sort safe from the hand of man; but that, in the forests of Guinea and the Brazils, which man seldom frequents, the same bird hangs her nest to the twigs of tall trees; thereby placing them out of the reach of *monkeys* and *snakes*; i. e. that in each situation she prepares against the danger which

she has most occasion to apprehend: suppose, I say, this to be true, and to be alleged, on the part of the bird that builds these nests, as evidence of a reasoning and distinguishing precaution; still the question returns, whence the propensity to build at all?\*

Nor does parental affection accompany generation by any universal law of animal organization, if such a thing were intelligible. Some animals cherish their progeny with the most ardent fondness, and the most assiduous attention; others entirely neglect them; and this distinction always meets the constitution of the young animal, with respect to its wants and capacities. In many, the parental care extends to the young animal; in others, as in all oviparous fish, it is confined to the egg, and even, as to that, to the disposal of it in its proper element. Also, as there is generation without parental affection, so is there parental instinct, or what exactly resembles it, without generation. In the bee tribe, the grub is nurtured neither by the father nor the mother, but by the neutral bee. Probably the case is the same with ants.

I am not ignorant of the theory which resolves instinct into sensation; which asserts, that what appears to have a view and relation to the future, is the result only of the present disposition of the animal's body, and of pleasure or pain experienced *at the time*. Thus the

\* The nest is usually formed in this manner: when the time of incubation approaches, they collect a fibrous moss, not very unlike hair; this, therefore, the bird first glues by some viscid substance, gathered in the forest, to the extreme branch of a tree, then building downwards adds fresh materials to those already procured, and a nest is formed that depends, like a pouch, from the point of the branch: the hole to enter at is on the side; the interior is lined with the finer fibres of the same substance which composes the whole.

The orioles of North America are a class of birds which build in this manner to avoid the snakes.

incubation of eggs is accounted for by the pleasure which the bird is supposed to receive from the pressure of the smooth convex surface of the shells against the abdomen, or by the relief which the mild temperature of the egg may afford to the heat of the lower part of the body, which is observed at this time to be increased beyond its usual state. This present gratification is the only motive with the hen for sitting upon her nest; the hatching of the chickens is, with respect to her, an accidental consequence. The affection of viviparous animals for their young is, in like manner, solved by the relief, and perhaps the pleasure, which they receive from giving suck. The young animal's seeking, in so many instances, the teat of its darn, is explained from its sense of smell, which is attracted by the odour of milk. The salmon's urging its way up the stream of fresh-water rivers, is attributed to some gratification or refreshment, which, in this particular state of the fish's body, she receives from the change of element. Now of this theory it may be said,

First, that of the cases which require solution, there are few to which it can be applied with tolerable probability; that there are none to which it can be applied without strong objections, furnished by the circumstances of the case. The attention of the cow to its calf, and of the ewe to its lamb, appear to be prior to their sucking. The attraction of the calf or lamb to the teat of the dam, is not explained by simply referring it to the sense of smell. What made the scent of milk so agreeable to the lamb, that it should follow it up with its nose, or seek with its mouth the place from which it proceeded? No observation, no experience, no argument could teach the new-dropped animal, that the substance from which the scent issued was the material of

its food. It had never tasted milk before its birth. None of the animals which are not designed for that nourishment ever offer to suck, or to seek out any such food. What is the conclusion, but that the sugescent parts of animals are fitted for their use, and the knowledge of that use put into them?

We assert, secondly, that, even as to the cases in which the hypothesis has the fairest claim to consideration, it does not at all lessen the force of the argument for intention and design. The doctrine of instinct is that of appetencies, *superadded* to the constitution of an animal, for the effectuating of a purpose beneficial to the species. The above-stated solution would derive these appetencies from organization; but then this organization is not less specifically, not less precisely, and, therefore, not less evidently adapted to the same ends, than the appetencies themselves would be upon the old hypothesis. In this way of considering the subject, sensation supplies the place of foresight: but this is the effect of contrivance on the part of the Creator. Let it be allowed, for example, that the hen is induced to brood upon her eggs by the enjoyment or relief which, in the heated state of her abdomen, she experiences from the pressure of round smooth surfaces, or from the application of a temperate warmth. How comes this extraordinary heat or itching, or call it what you will, which you suppose to be the cause of the bird's inclination, to be felt, just at the time when the inclination itself is wanted; when it tallies so exactly with the internal constitution of the egg, and with the help which that constitution requires in order to bring it to maturity? In my opinion, this solution, if it be accepted as to the fact, ought to increase, rather than otherwise, our admiration of the contrivance. A gar-

dener lighting up his stoves, just when he wants to force his fruit, and when his trees require the heat, gives not a more certain evidence of design. So again; when a male and female sparrow come together, they do not meet to confer upon the expediency of perpetuating their species. As an abstract proposition, they care not the value of a barley-corn, whether the species be perpetuated or not: they follow their sensations; and all those consequences ensue, which the wisest counsels could have dictated, which the most solicitous care of futurity, which the most anxious concern for the sparrow-world could have produced. But how do these consequences ensue? The sensations, and the constitution upon which they depend, are as manifestly directed to the purpose which we see fulfilled by them; and the train of intermediate effects, as manifestly laid and planned with a view to that purpose; that is to say, design is as completely evinced by the phenomena, as it would be, even if we suppose the operations to begin, or to be carried on, from what some will allow to be alone properly called instincts, that is, from desires directed to a future end, and having no accomplishment or gratification distinct from the attainment of that end.

In a word: I should say to the patrons of this opinion, Be it so; be it, that those actions of animals which we refer to instinct, are not gone about with any view to their consequences, but that they are attended in the animal with a present gratification, and are pursued for the sake of that gratification alone; what does all this prove, but that the *prospection*, which must be somewhere, is not in the animal, but in the Creator?

In treating of the parental affection in brutes, our

business lies rather with the origin of the principle, than with the effects and expressions of it. Writers recount these with pleasure and admiration. The conduct of many kinds of animals towards their young has escaped no observer, no historian of nature. "How will they caress them," says Derham, "with their affectionate notes; lull and quiet them with their tender parental voice; put food into their mouths; cherish and keep them warm; teach them to pick, and eat, and gather food for themselves; and, in a word, perform the part of so many nurses, deputed by the Sovereign Lord and Preserver of the world, to help such young and shiftless creatures!" Neither ought it, under this head, to be forgotten, how much the instinct *costs* the animal which feels it; how much a bird, for example, gives up, by sitting upon her nest; how repugnant it is to her organization, her habits, and her pleasures. An animal, formed for liberty, submits to confinement in the very season when every thing invites her abroad: what is more; an animal delighting in motion, made for motion, all whose motions are so easy and so free, hardly a moment, at other times, at rest, is, for many hours of many days together, fixed to her nest, as close as if her limbs were tied down by pins and wires. For my part, I never see a bird in that situation, but I recognise an invisible hand, detaining the contented prisoner from her fields and groves, for the purpose, as the event proves, the most worthy of the sacrifice, the most important, the most beneficial.

But the loss of liberty is not the whole of what the procreant bird suffers. Harvey tells us, that he has often found the female wasted to skin and bone by sitting upon her eggs.

One observation more, and I will dismiss the subject.

The *pairing* of birds, and the *non-pairing* of beasts, forms a distinction between the two classes, which shows that the conjugal instinct is modified with a reference to utility founded on the condition of the offspring. In quadrupeds, the young animal draws its nutriment from the body of the dam. The male parent neither does, nor can contribute any part to its sustentation. In the winged race, the young bird is supplied by an importation of food, to procure and bring home which, in a sufficient quantity for the demand of a numerous brood, requires the industry of both parents. In this difference, we see a reason for the vagrant instinct of the quadruped, and for the faithful love of the feathered mate.

## CHAPTER XIX.

### OF INSECTS.

WE are not writing a system of natural history; therefore we have not attended to the classes into which the subjects of that science are distributed. What we had to observe concerning different species of animals, fell easily, for the most part, within the divisions which the course of our argument led us to adopt. There remain, however, some remarks upon the *insect* tribe, which could not properly be introduced under any of these heads; and which therefore we have collected into a chapter by themselves.

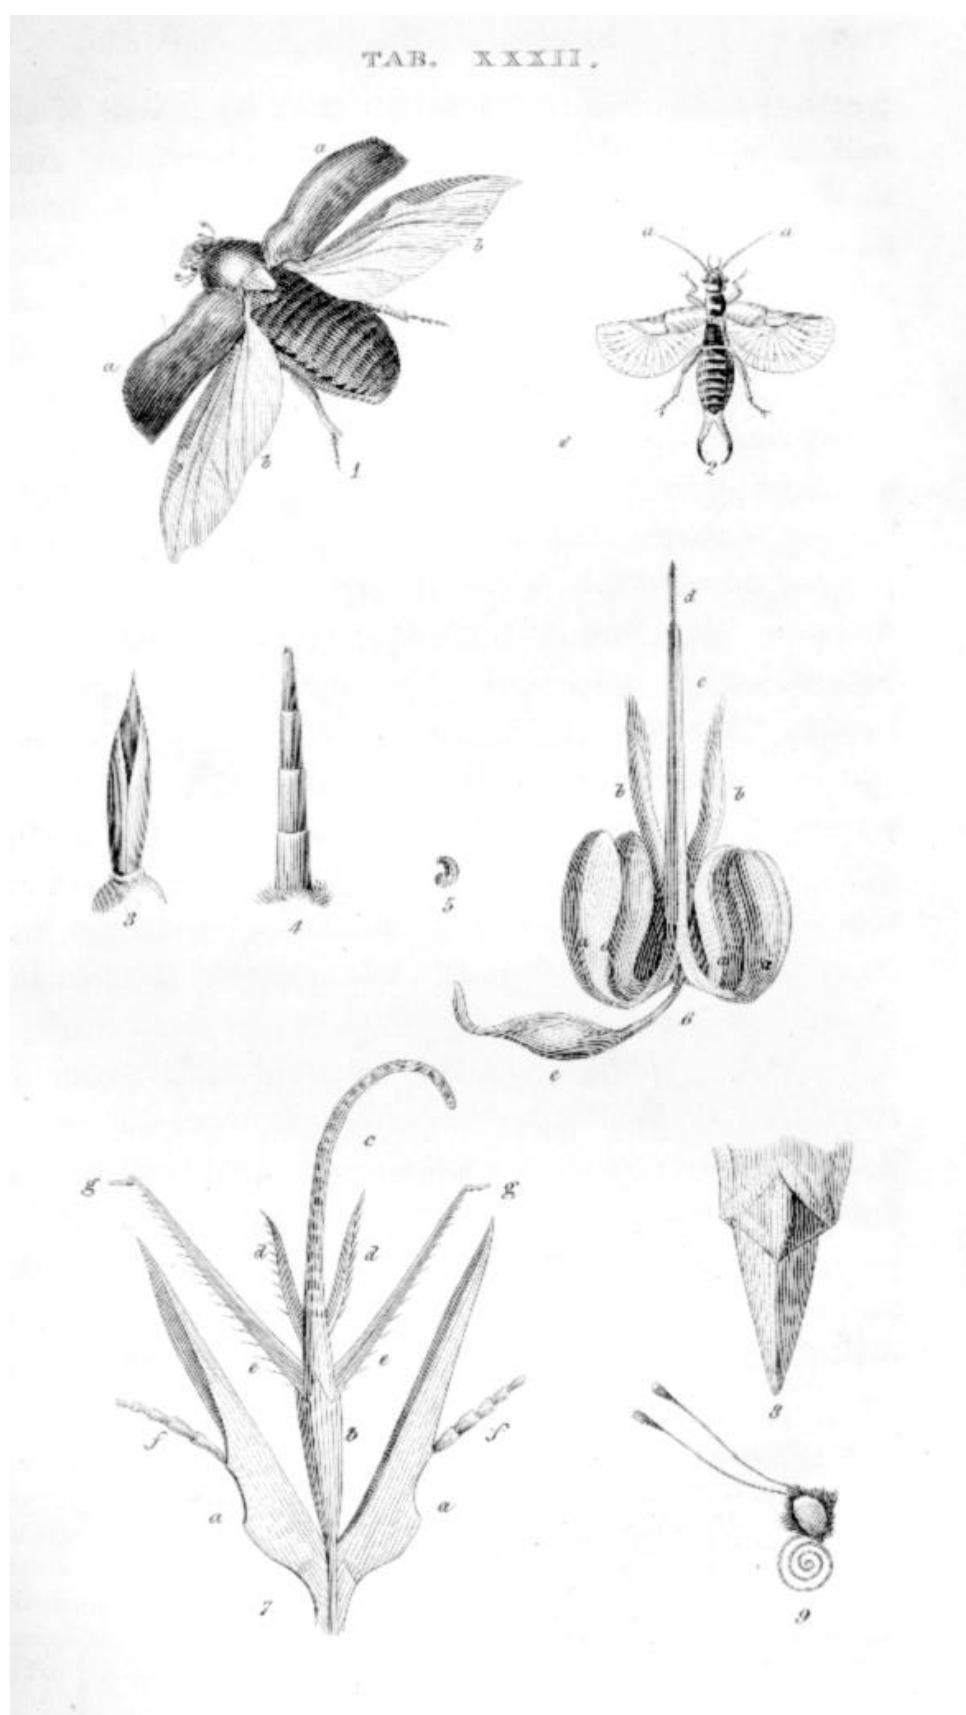

The structure, and the use of the parts of insects, are less understood than that of quadrupeds and birds, not only by reason of their minuteness, or the minuteness of their parts, (for that minuteness we can in some

measure follow with glasses,) but also by reason of the remoteness of their manners and modes of life from those of larger animals. For instance: insects, under all their varieties of form, are endowed with *antenna*, which is the name given to those long feelers that rise from each side of the head;\* but to what common use or want of the insect kind, a provision so universal is subservient, has not yet been ascertained: and it has not been ascertained, because it admits not of a clear, or very probable comparison, with any organs which we possess ourselves, or with the organs of animals which resemble ourselves in their functions and faculties, or with which we are better acquainted than we are with insects. We want a ground of analogy. This difficulty stands in our way as to some particulars in the insect constitution, which we might wish to be acquainted with. Nevertheless, there are many contrivances in the bodies of insects, neither dubious in their use, nor obscure in their structure, and most properly mechanical. These form parts of *our* argument.

I. The *elytra*, or scaly wings of the genus of scarabaeus or beetle, furnish an example of this kind. The true wing of the animal is a light transparent membrane, finer than the finest gauze, and not unlike it. It is also, when expanded, in proportion to the size of the animal, very large. In order to protect this delicate structure, and perhaps also to preserve it in a

\* Tab. XXXII. Fig. 2. *a, a.* *Antenna* usually consist of a number of tubular joints, with a free motion in each, enabling the insect to give them every necessary flexure; they vary in number and in shape in the various orders, and are covered with hair, down, or bristles, frequently elegant and diversified, as every one may observe. Entomologists conceive, that the antennae, by a peculiar structure, may collect notices from the atmosphere, receive vibrations, and communicate them to the sensorium, which, though not precisely to be called hearing, is something analogous to it, or may answer that purpose.

TAB. XXXII.

due state of suppleness and humidity, a strong hard case is given to it, in the shape of the horny wing which we call the elytron.\* When the animal is at rest, the gauze wings lie folded up under this impenetrable shield. When the beetle prepares for flying, he raises the integument, and spreads out his thin membrane to the air. And it cannot be observed without admiration, what a tissue of cordage, i. e. of muscular tendons, must run in various and complicated, but determinate directions, along this fine surface, in order to enable the animal, either to gather it up into a certain precise form, whenever it desires to place its wings under the shelter which nature hath given to them; or to expand again their folds, when wanted for action.

In some insects, the elytra cover the whole body; in others, half; † in others, only a small part of it; but in all, ‡ they completely hide and cover the true wings. Also,

Many or most of the beetle species lodge in holes in

\* Fig. 1, is an instance of the horny and gauze wings in one of the most beautiful of the beetle class of this country, the *cetonia aurata*, or rose chafer; showing the expanded *elytra*, *a, a*; the true wings, *b, b*.

Elytra are the wing-covers of all the *coleoptera* order. They are frequently grooved, and curiously ornamented, in some species with scaly variegations of metallic lustre, as in the diamond beetle, and some species of buprestis. One of the latter, of extraordinary brilliancy, forms an object in the "Cabinet of Beauty" in the Ashmolean Museum. The use of the elytra is to protect the wings and body; and they are of some assistance in flying.

† Fig. 2. A specimen of this kind of elytra in the ear-wig, (*forficula borealis*) the elytra are extended, and the membranous wings unfolded; showing the numerous diverging *nervures*, or "muscular tendons," which run in horny tubes to keep the wing extended.

‡ Some instances however are known, as in *molorchus* and *attractocarus*, etc., where the wings are only partially covered by the elytra, and not folded under thorn; probably these are less in danger of laceration from their peculiar habits, than the generality.

the earth, environed by hard rough substances, and have frequently to squeeze their way through narrow passages; in which situation, wings so tender, and so large, could scarcely have escaped injury, without both a firm covering to defend them, and the capacity of collecting themselves up under its protection.

II. Another contrivance, equally mechanical and equally clear, is the *awl*,\* or borer, fixed at the tails of various species of flies; and with which they pierce, in some cases, plants; in others, wood; in others, the skin and flesh of animals; in others, the coat of the chrysalis of insects of a different species from their own; and in others, even lime, mortar, and stone. I need not add, that having pierced the substance, they deposit their eggs in the hole. The descriptions which naturalists give of this organ, are such as the following: It is a sharp-pointed instrument, which, in its inactive state, lies concealed in the extremity of the abdomen, and which the animal draws out at pleasure, for the purpose of making a puncture in the leaves, stem, or bark, of the particular plant which is suited to the nourishment of its young. In a sheath, which divides and opens whenever the organ is used, there is enclosed a compact, solid, dentated stem, along which runs a *gutter*, or *groove*, by which groove, after the penetration is effected, the egg, assisted in some cases by a peristaltic motion, passes to its destined lodgement. † In the oestrus

\* Called the *ovipositor*, or instrument by which the numerous insects are enabled to introduce their eggs into their appropriate situations, and where the new-born larva may immediately meet with its destined food.

† There are numerous variations in the structure of this organ; an example of the one just mentioned is seen in the ovipositor of the *buprestis*, Fig. 3. It consists of three long and sharp laminae, the two lateral ones forming a sheath to the intermediate one, which is the tube which conveys the egg. In sonic cases the instrument form? a saw, or what Paley here

or gad-fly, the wimble *draws out* like the pieces of a spy-glass; the last piece is armed with three hooks, and is able to bore through the hide of an ox.\* Can any thing more be necessary to display the mechanism, than to relate the fact?

III. The *stings* of insects, though for a different purpose, are, in their structure, not unlike the piercer. The sharpness to which the point in all of them is wrought; the temper and firmness of the substance of which it is composed; the strength of the muscles by which it is darted out, compared with the smallness and weakness of the insect, and with the soft and friable texture of the rest of the body; are properties of the sting to be noticed, and not a little to be admired. The sting of a *bee* will pierce through a goat-skin glove. It penetrates the human flesh more readily than the finest point of a needle. The *action* of the sting affords an example of the union of chemistry and mechanism, such as, if it be not a proof of contrivance, nothing is. First, as to the chemistry; how highly concentrated must be the *venom*, which, in so small a quantity, can produce such powerful effects! And in the bee we may observe, that this venom is made from *honey*, the only food of the insect, but the last material from which I should have expected that an exalted poison could, by any process or digestion whatsoever, have been prepared. In the next place, with respect to the mechanism, the sting is

calls a dentated stem, which conveys the eggs, as in the *tenthredo*, *cicadae*, *cimbex*, etc.

\* Fig. 4. The *awl* of the *aestrus bovis*, or gad-fly, highly magnified. It is formed of corneous substance, consisting of four joints, which slip into each other; the last of these terminate in five points, three of which are longer than the others, and are hooked: when united, they form an instrument like an auger or gimblet, with which the skin is pierced in a few seconds.

not a simple, but a compound instrument. The visible sting, though drawn to a point exquisitely sharp, is, in strictness, only a sheath; for, near to the extremity, may be perceived, by the microscope, two minute orifices, from which orifices, in the act of stinging, and, as it should seem, after the point of the main sting has buried itself in the flesh, and launched out two subtile rays, which may be called the true or proper stings, as being those through which the poison is infused into the puncture already made by the exterior sting.\* I have said, that chemistry and mechanism are here *united*: by which observation I meant, that all this machinery would have been useless, *telum imbelle*, if a supply of poison, intense in quality, in proportion to the smallness of the drop, had not been furnished to it by the chemical elaboration which was carried on in the insect's body; and that, on the other hand, the poison, the result of this process, could not have attained its effect, or reached its enemy, if, when it was collected at the extremity of the abdomen, it had not found there a machinery, fitted to conduct it to the external situations in which it was to operate, viz. an awl to bore a hole, and a syringe to inject the fluid. Yet these attributes, though combined in their action, are independent in their origin. The venom does not breed the sting; nor does the sting concoct the venom.

#### IV. The *proboscis*, † with which many insects are

\* Fig. 6. The *sting of a bee*, drawn from nature as it appears by means of a magnifier of very high powers: *a, a, a, a*, the apparatus for projecting the sting; *b*, the exterior, *c*, the interior sheath of *d*, the *true sting*, which is divided into two parts barbed at the sides; *e*, the bag which contains the *poison*.

† Fig. 7. The proboscis of a *bombus* extended: *a, a*, the case or sheath; *b*, the tube; *e, e*, the exterior, *d, d*, the interior fringes; *c*, the tongue; *f, f*, the interior, *g, g*, the exterior palpi.

endowed, comes next in order to be considered. It is a tube attached to the head of the animal. In the bee, it is composed of two pieces, connected by a joint: for if it were constantly extended, it would be too much exposed to accidental injuries; therefore, in its indolent state, it is doubled up by means of the joint, and in that position lies secure under a scaly penthouse.\* In many species of the butterfly, the proboscis, when not in use, is coiled up like a watch-spring, † In the same bee, the proboscis serves the office of the mouth, the insect having no other: and how much better adapted it is, than a mouth would be, for the collecting of the proper nourishment of the animal, is sufficiently evident. The food of the bee is the nectar of flowers; a drop of syrup, lodged deep in the bottom of the corollae, in the recesses of the petals, or down the neck of a monopetalous glove. Into these cells the bee thrusts its long narrow pump, through the cavity of which it sucks up this precious fluid, inaccessible to every other approach. It is observable also, that the plant is not the worse for what the bee does to it. The harmless plunderer rifles the sweets, but leaves the flower uninjured. The ringlets of which the proboscis of the bee is composed, the muscles by which it is extended and contracted, form so many microscopical wonders. The agility also with which it is moved, can hardly fail to excite admiration. But it is enough for our purpose to observe in general, the suitableness of the structure to the use, of the means to the end, and especially the wisdom by which nature has departed from its most general analogy, (for animals being furnished with mouths are such,)

\* Fig. 8. The appearance of the proboscis when contracted, and folded up.

† Fig. 9. The head of a butterfly, showing the *recoiled proboscis*.

when the purpose could be better answered by the deviation.

In some insects, the proboscis, or tongue, or trunk, is shut up in a sharp-pointed sheath; which sheath being of a much firmer texture than the proboscis itself, as well as sharpened at the point, pierces the substance which contains the food, and then *opens within the wound*, to allow the enclosed tube, through which the juice is extracted, to perform its office. Can any mechanism be plainer than this is; or surpass this?

V. The *metamorphosis* of insects from grubs into moths and flies, is an astonishing process.\* A hairy caterpillar is transformed into a butterfly. Observe the change. We have four beautiful wings, where there were none before; a tubular proboscis, in the place of a mouth with jaws and teeth; six long legs, instead of fourteen feet. In another case, we see a white, smooth, soft worm, turned into a black, hard, crustaceous beetle, with gauze wings. These, as I said, are astonishing processes, and must require, as it should seem, a pro-

\* The first state in which an insect appears, is that of an *ovum* or egg. This relates to the generality of insects, for there are a few examples of viviparous insects, as in the genus *aphis*, *musca*, etc. These undergo no change, but the casting their skin from time to time, till at length they acquire the complete resemblance to the parent animal.

From the egg is hatched the insect in its second *larva*, or *caterpillar* state, in which it is extremely voracious.

In the third state, viz. that of *pupa* or *chrysalis*, it ceases to feed: they are then inclosed in a web, which they spin about themselves, or in a shell-like case, and in the fly tribe is without apparent motion. The *libellulae* or dragon-fly, however, as Paley subsequently observes, as well as the pupae of the locust tribe, is locomotive.

After remaining a proper period in this situation, the bonds which surround them are broken, and the fourth state is that in which the insect emerges from the pupa or chrysalis, in its complete and ultimate form; from which it can neither change, or receive any further increase of growth. This last state is a winged insect, in the Linnaean language termed *imago*.

portionably artificial apparatus. The hypothesis which appears to me most probable is, that, in the grub, there exist at the same time three animals, one within another, all nourished by the same digestion, and by a communicating circulation, but in different stages of maturity. The latest discoveries made by naturalists seem to favour this supposition. The insect, already equipped with wings, is descried under the membranes both of the worm and nymph. In some species, the proboscis, the antennae, the limbs, and wings of the fly, have been observed to be folded up within the body of the caterpillar, and with such nicety as to occupy a small space only under the two first wings. This being so, the outermost animal, which, besides its own proper character, serves as an integument to the other two, being the farthest advanced, dies, as we suppose, and drops off first. The second, the pupa or chrysalis, then offers itself to observation. This also in its turn dies; its dead and brittle husk falls to pieces, and makes way for the appearance of the fly or moth. Now, if this be the case, or indeed whatever explication be adopted, we have a prospective contrivance of the most curious kind: we have organizations *three deep*; yet a vascular system, which supplies nutrition, growth, and life to all of them together.

VI. Almost all insects are oviparous. Nature keeps her butterflies, moths, and caterpillars locked up during the winter in their egg state; and we have to admire the various devices to which, if we may so speak, the same nature hath resorted for the *security* of the egg. Many insects enclose their eggs in a silken web; others cover them with a coat of hair torn from their own bodies; some glue them together; and others, like (lie moth of the silkworm, glue them to the leaves

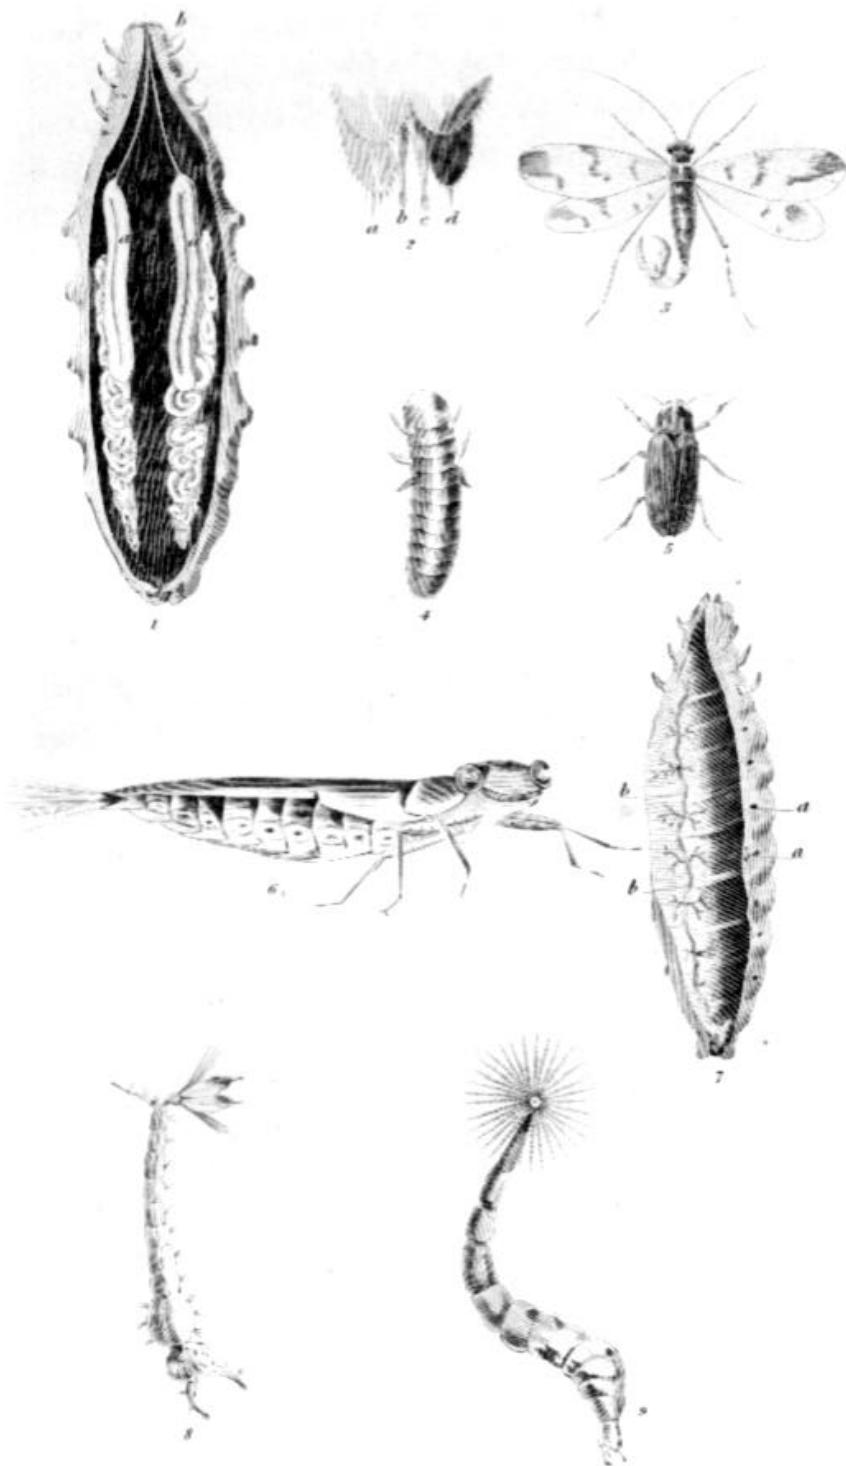

upon which they are deposited, that they may not be shaken off by the wind, or washed away by rain: some again make incisions into leaves, and hide an egg in each incision; whilst some envelop their eggs with a soft substance, which forms the first aliment of the young animal: and some again make a hole in the earth, and, having stored it with a quantity of proper food, deposit their eggs in it. In all which we are to observe, that the expedient depends, not so much upon the address of the animal, as upon the physical resources of his constitution.\*

The art also with which the young insect is *coiled up* in the egg, presents, where it can be examined, a subject of great curiosity. The insect, furnished with all the members which it ought to have, is rolled up into a form which seems to contract it into the least possible space; by which contraction, notwithstanding the smallness of the egg, it has room enough in its apartment, and to spare. This folding of the limbs appears to me to indicate a special direction; for if it were merely the effect of compression, the collocation of the parts would be more various than it is. In the same species, I believe, it is always the same.

These observations belong to the whole insect tribe, or to a great part of them. Other observations are limited to fewer species; but not, perhaps, less important or satisfactory.

\* The above describes only a part of the varied situations which insects select to deposit their eggs; some set their eggs afloat, or submerge them in water, as the *gnats* and *tipulidans*. But the *lackey moth* lays its eggs in autumn, and they are not hatched till spring; the female does not, therefore, "like most other moths, place her eggs upon a leaf, with which they might be blown by the wintry storm far from their destined food; but round the twig of some tree she ranges them in numerous circles, deposited with so much art, that you would take them rather for pearls set by the skilful hand of a jeweller, than for the eggs of an insect."

TAB. XXXIII.

I. The organization in the abdomen of the *silkworm*\* or *spider*, whereby these insects form their *thread*, is as incontestably mechanical as a wire-drawer's mill. In the body of the silkworm are two bags, remarkable for their form, position, and use. They wind round the intestine; when drawn out, they are ten inches in length, though the animal itself be only two. Within these bags is collected a glue; and communicating with the bags are two paps or outlets, perforated, like a grater, by a number of small holes. The glue or gum, being passed through these minute apertures, form hairs of almost imperceptible fineness; and these hairs, when joined, compose the silk which we wind off from the cone, in which the silkworm has wrapped itself up: in the spider, the web is formed from this thread. In both cases, the extremity of the thread, by means of its adhesive quality, is first attached by the animal to some external hold; and the end being now fastened to a point, the insect, by turning round its body, or by receding from that point, draws out the thread through the holes above described, by an operation, as hath been observed, exactly similar to the drawing of wire. The thread, like the wire, is formed by the hole through which it passes. In one respect there is a difference. The wire is the metal unaltered, except in figure. In the animal process, the nature of the substance is somewhat changed, as well as the form; for, as it exists within the insect, it is a soft clammy gum or glue. The

\* The organs for forming' the silk, or *silk secretors*, (sericteria,) are most remarkable in the caterpillars of the *nocturnal leipedoptera* or moths, especially in the *bombyces*, to which the silkworm belongs. Which consist, as above stated, of two long vessels, where they unite to form the spinneret (fusulus) through which the larva draws the silken thread employed in fabricating us cocoon. Tab. XXXIII. Fig. 1. *a, a*, the *silk bags*, *b*, the *spinneret*.

thread acquires, it is probable, its firmness and tenacity from the action of the air upon its surface, in the moment of exposure; and a thread so fine is almost all surface. This property, however, of the paste, is part of the contrivance.\*

The mechanism itself consists of the bags or reservoirs into which the glue is collected, and of the external holes communicating with these bags; and the action of the machine is seen in the forming of a thread, as wire is formed, by forcing the material already prepared through holes of proper dimensions. The secretion is an act too subtile for our discernment, except as we perceive it by the produce. But one thing answers to another; the secretory glands to the quality and consistence required in the secreted substance; the bag to its reception: the outlets and orifices are constructed, not merely for relieving the reservoirs of their burden, but for manufacturing the contents into a form and texture of great external use, or rather indeed of future necessity, to the life and functions of the insect.

II. *Bees*, under one character or other, have furnished every naturalist with a set of observations. I shall in this place confine myself to one; and that is, the *relation* which obtains between the wax and the honey. No person, who has inspected a bee-hive, can forbear remarking how commodiously the honey is

\* The web of spiders is also a kind of silk, remarkable for its lightness and tenuity; it is spun from four or six anal spinnerets, the fluid matter forming the web being secreted in adjacent vessels. When the threads have been drawn through this machinery, they unite at a small distance from the spinnerets, and form one compound thread. Each thread, however, before united, is formed of numerous filaments, to be detected only by a microscope. The probable reason of this so complex a contrivance is, that it was necessary that the gummy secretion might sufficiently dry so as to form a tenacious line, a purpose admirably effected by the minute division. See Fig. 2. *a, b, c, d*, the *spinnerets*.

bestowed in the comb; and, amongst other advantages, how effectually the fermentation of the honey is prevented by distributing it into small cells. The fact is, that when the honey is separated from the comb, and put into jars, it runs into fermentation with a much less decree of heat than what takes place in a hive. This may be reckoned a nicety: but, independently of any nicety in the matter, I would ask, what could the bee do with the honey if it had not the wax? How, at least, could it store it up for winter? The wax, therefore, answers a purpose with respect to the honey; and the honey constitutes that purpose with respect to the wax. This is the relation between them. But the two substances, though together of the greatest use, and without each other of little, come from a different origin. The bee finds the honey,\* but makes the wax. The honey is lodged in the nectaria of flowers, and probably undergoes little alteration; is merely collected: whereas the wax is a ductile, tenacious paste, made out of a dry powder, not simply by kneading it with a liquid, but by a digestive process in the body of the bee. † What account can be rendered of facts so circumstanced, but that the animal, being intended to

\* The *honey* is collected by the bee from that part of the flower called the *nectary*, by means of the proboscis, and is received into an oval receptacle termed the first stomach or honey bag; and when this is sufficiently filled it is carried to the hive, and the honey is deposited in one of the cells.

† Wax generally transpires through the pores of the skin of those insects that produce it, either partially or generally. It is formed from saccharine substances taken into the stomach. In the hive-bee it is produced partially; but in some other insects, as in aphides and cocci, it is a general transudation from the body. Immense quantities are obtained in China, from an insect, which Sir. G. Staunton supposes a species of cicada, and which in its larva state feeds upon a plant like the privit; leaving upon the stem a powder, which, when collected, for; the wax.

feed upon honey, was, by a peculiar external configuration, enabled to procure it? That, moreover, wanting the honey when it could not be procured at all, it was farther endued with the no less necessary faculty of constructing repositories for its preservation? Which faculty, it is evident, must depend, primarily, upon the capacity of providing suitable materials. Two distinct functions go to make up the ability. First, the power in the bee, with respect to wax, of loading the farina of flowers upon its thighs. Microscopic observers speak of the spoon-shaped appendages with which the thighs of bees are beset for this very purpose; but, inasmuch as the art and will of the bee may be supposed to be concerned in this operation, there is, secondly, that which doth not rest in art or will—a digestive faculty which converts the loose powder into a stiff substance. This is a just account of the honey and the honey-comb; and this account, through every part, carries a creative intelligence along with it.

The *sting* also of the bee has this relation to the honey, that it is necessary for the protection of a treasure which invites so many robbers.

III. Our business is with mechanism. In the *panorpa*\* tribe of insects, there is a forceps in the tail of the male insect, with which he catches and holds the female. Are a pair of pincers more mechanical than this provision in its structure? Or is any structure more clear and certain in its design?

IV. St. Pierre tells us, † that in a fly with six feet,

\* Fig. 3. *Panorpa communis*, (Linn.) is an insect frequently seen in meadows during the early part of summer. It is a long-bodied fly, of moderate size with four transparent wings, elegantly variegated with deep brown spots. The tail of the male insect, which is usually carried in an upright position, is furnished with a *forceps* somewhat like a lobster's claw.

† Vol. i. p. 342.

(I do not remember that he describes the species,) the pair next the head and the pair next the tail have brushes at their extremities, with which the fly dresses, as there may be occasion, the anterior or the posterior part of its body: but that the middle pair have no such brushes; the situation of these legs not admitting of the brushes, if they were there, being converted to the same use. This is a very exact mechanical distinction.

V. If the reader, looking to our distributions of science, wish to contemplate the chemistry as well as the mechanism of nature, the insect creation will afford him an example. I refer to the light in the tail\* of a *glow-worm*. Two points seem to be agreed upon by naturalists concerning it: first, that it is phosphoric; secondly, that its use is to attract the male insect. The only thing to be inquired after, is the singularity, if any such there be, in the natural history of this animal, which should render a provision of this kind more necessary for it than for other insects. That singularity seems to be the difference which subsists between the male and the female; which difference is greater than what we find in any other species of animal whatever. The glow-worm is a female *caterpillar*: † the male of which is a *fly*; lively, comparatively small, dissimilar to the female in appearance, probably also as distinguished from her in habits, pursuits, and manners, as he is unlike in form and external constitution. Here then is the diversity of the case. The caterpillar cannot meet her companion in the air. The winged rover despairs the ground. They might never therefore be

\* It is the last two or three segments of the body which emit the light.

† Fig. 4. The female glow-worm. Fig. 5. The male of the same insect.

brought together, did not this radiant torch direct the volatile mate to his sedentary female.

In this example, we also see the resources of art anticipated. One grand operation of chemistry is the making of phosphorus: and it was thought an ingenious device, to make phosphoric matches supply the place of lighted tapers. Now this very thing is done in the body of the glow-worm. The phosphorus is not only made, but kindled; and caused to emit a steady and genial beam, for the purpose which is here stated, and which I believe to be the true one.\*

VI. Nor is the last the only instance that entomology affords, in which our discoveries, or rather our projects, turn out to be imitations of nature. Some years ago,

\* The phosphorescence of this insect, *lampyris noctiluca*, is most brilliant at the season when the sexes are destined to meet; the design seems evident. In different kinds of luminous insects, however, it may serve a different purpose. Besides the different species of lampyris, another insect of the beetle tribe, *elator noctilucus*, is endowed with the same property, and that in a much higher degree. This fine fly is an inhabitant of some of the West India islands; the light is not emitted except when the insect is flying, at which time the whole body is full of light, of the most beautiful golden-blue lustre, and so considerable that the smallest print may be read by moving the insect over the book. There are not fewer than twelve species of this genus stated to be luminous.

The above are of the order *coleoptera*, but the order *hemiptera* also furnishes a genus called *fulgora*, including several species giving so powerful a light, as to obtain the name of *lantern flies*. Two of the most conspicuous are *F. candelaria*, and *F. laternaria*; the former a native of America, the latter of China: they have the material which diffuses their light included in a hollow semi-transparent projection of the head. We may easily conceive, as travelers assure us, that a tree studded with multitudes of these living sparks, some at rest and others in motion, must, at night, have a superlatively splendid appearance. In the last-mentioned insects their light is supposed to enable them to discover their prey, and to steer themselves safely by night; so that their enemies are alarmed at these living fires. See an interesting account of luminous insects in Kerby and Spence's Introduction to Entomology, 3rd edit, vol. ii. p. 469.

a plan was suggested, of producing propulsion by reaction in this way: by the force of a steam-engine, a stream of water was to be shot out of the stern of a boat; the impulse of which stream upon the water in the river, was to push the boat itself forward; it is, in truth, the principle by which sky-rockets ascend in the air. Of the use or practicability of the plan, I am not speaking; nor is it my concern to praise its ingenuity: but it is certainly a contrivance. Now, if naturalists are to be believed, it is exactly the device which nature has made use of, for the motion of some species of aquatic insects. The larva of the *dragon-fly*, according to Adams, swims by ejecting water from its tail; is driven forward by the reaction of water in the pool upon the current issuing in a direction backward from its body.\* VII. Again: Europe has lately been surprised by the elevation of bodies in the air by means of a balloon. The discovery consisted in rinding out a manageable substance, which was, bulk for bulk, lighter than air; and the application of the discovery was, to make a body composed of this substance bear up, along with its own weight, some heavier body which was attached to it. This expedient, so new to us, proves to be no other than what the Author of nature has employed in the *gossamer spider*. We frequently see this spider's thread floating in the air, and extended from hedge to hedge, across a road or brook of four or five yards width. The animal which forms the thread has no

\* Fig. 6. The larva of some dragon-flies (*aeshna* and *libellula*, F.) swim by strongly ejecting water from the anus. By first taking in the water and then expelling it, they are enabled to swim. This may be seen by putting one of these larva into a plate with water. We find that while the animal moves forward, a current of water is produced by this pumping in a contrary direction. Sometimes it will raise its tail out of the water, when a stream of water issues from it.

wings wherewith to fly from one extremity to the other of this line; nor muscles to enable it to spring or dart to so great a distance: yet its Creator hath laid for it a path in the atmosphere; and after this manner. Though the animal itself be heavier than air, the thread which it spins from its bowels is specifically lighter. This is its *balloon*.\* The spider, left to itself, would drop to the ground; but being tied to its thread, both are supported. We have here a very peculiar provision: and to a contemplative eye it is a gratifying spectacle, to see this insect wafted on her thread, sustained by a levity not her own, and traversing regions which, if we examined only the body of the animal, might seem to have been forbidden to its nature.

---

I must now crave the reader's permission to introduce into this place, for want of a better, an observation or two upon the tribe of animals, whether belonging to land or water, which are covered by *shells*.

I. The *shells* of *snails* are a wonderful, a mechanical, and, if one might so speak concerning the works of nature, an original contrivance. Other animals have their proper retreats, their hybernacula also, or winter-

\* "Spiders, long before Montgolfier, nay, ever since the creation, have been in the habit of sailing through the fields of ether in these air-light chariots!"

The spider which produces *gossamer* is described by naturalists of the size of a pin's head, the buoyance of whose web carries them about, mounting them in the air, probably in search of food, which consists of effluvia of animal and vegetable substances.

In the autumn the damp air causes the web called gossamer to descend, and it is often seen to cover a whole field to a great extent: and the films are frequently observed, in a fine clear morning, glittering with drops of dew.

For a curious account of gossamer spiders, see White's Nat. Hist. of Selborne.

quarters, but the snail carries these about with him. He travels with his tent; and this tent, though, as was necessary, both light and thin, is completely impervious either to moisture or air. The young snail comes out of its egg with the shell upon its back; and the gradual enlargement which the shell receives, is derived from slime excreted by the animal's skin. Now the aptness of this excretion to the purpose, its property of hardening into a shell, and the action, whatever it be, of the animal, whereby it avails itself of its gift, and of the constitution of its glands, (to say nothing of the work being commenced before the animal is born,) are things which can, with no probability, be referred to any other cause than to express design; and that not on the part of the animal alone, in which design, though it might build the house, it could not have supplied the material. The will of the animal could not determine the quality of the excretion. Add to which, that the shell of the snail, with its pillar and convolution, is a very artificial fabric; whilst a snail, as it should seem, is the most numb and unprovided of all artificers. In the midst of variety, there is likewise a regularity which would hardly be expected. In the same species of snail, the number of turns is usually, if not always, the same. The sealing up of the mouth of the shell by the snail, is also well calculated for its warmth and security; but the cerate is not of the same substance with the shell.

II. Much of what has been observed of snails belongs to *shell-fish* and their *shells*, particularly to those of the univalve kind; with the addition of two remarks: one of which is upon the great strength and hardness of most of these shells. I do not know whether, the weight being given, art can produce so strong a case as are some of these shells. Which defensive strength

suits well with the life of an animal, that has often to sustain the dangers of a stormy element, and a rocky bottom, as well as the attacks of voracious fish. The other remark is upon the property in the animal excretion, not only of congealing, but of congealing or, as a builder would call it, *setting* in water, and into a cretaceous substance, firm and hard. This property is much more extraordinary, and, chemically speaking, more specific, than that of hardening in the air; which may be reckoned a kind of exsiccation, like the drying of clay into bricks.\*

III. In the *bivalve* order of shell-fish—cockles, muscles, oysters, etc.—what contrivance can be so simple or so clear, as the insertion, at the back, of a tough tendinous substance, that becomes at once the ligament which binds the two shells together, and the *hinge* upon which they open and shut? †

IV. The shell of a lobster's tail, in its articulations and overlappings, represents the jointed part of a coat of mail; or rather, which I believe to be the truth, a coat of mail is an imitation of a lobster's shell. The same end is to be answered by both; the same properties, therefore, are required in both, namely, hardness and flexibility, a covering which may guard the part without ob-

\* The formation of shells, whether in the testacea or Crustacea, is an operation not to be explained on chemical principles, but depends on an animal secretion, whereby a solid matter, chiefly carbonate of lime, is first absorbed, or is taken into the stomach of the animal with its food, and is then separated and deposited by its vessels, according to the laws of its organization. The growth of shells is analogous to the growth of horn, or the hoof of a horse.

† The shells are closed by one or two muscles, according to the shape of the part. In the oyster, and others of a similar form, there is only a single muscle, but of great strength. It is situated near the centre, and firmly fixed to both the shells, and shuts them with great force. The elastic ligament at the hinge acts as an antagonist by opening the shell.

structing its motion. For this double purpose, the art of man, expressly exercised upon the subject, has not been able to devise any thing better than what nature presents to his observation. Is not this, therefore, mechanism, which the mechanic, having a similar purpose in view, adopts? Is the structure of a coat of mail to be referred to art? Is the same structure of the lobster, conducing to the same use, to be referred to any thing less than art?

Some, who may acknowledge the imitation, and assent to the inference which we draw from it in the instance before us, may be disposed, possibly, to ask, why such imitations are not more frequent than they are, if it be true, as we allege, that the same principle of intelligence, design, and mechanical contrivance was exerted in the formation of natural bodies, as we employ in the making of the various instruments by which our purposes are served? The answers to this question are, first, that it seldom happens that precisely the same purpose, and no other, is pursued in any work which we compare, of nature and of art; secondly, that it still more seldom happens, that we *can* imitate nature, if we would. Our materials and our workmanship are equally deficient. Springs and wires, and cork and leather, produce a poor substitute for an arm or a hand. In the example which we have selected, I mean a lobster's shell compared with a coat of mail, these difficulties stand less in the way, than in almost any other that can be assigned; and the consequence is, as we have seen, that art gladly borrows from nature her contrivance, and imitates it closely.

---

But to return to insects. I think it is in this class of animals above all others, especially when we take in

the multitude of species which the microscope discovers, that we are struck with what Cicero has called "the *insatiable* variety of nature." There are said to be six thousand species of flies; seven hundred and sixty butterflies; each different from all the rest. (St. Pierre.) The same writer tells us, from his own observation, that thirty-seven species of winged insects, with distinctions well expressed, visited a single strawberry-plant in the course of three weeks. Ray observed, within the compass of a mile or two of his own house, two hundred kinds of butterflies, nocturnal and diurnal. He likewise asserts, but I think without any grounds of exact computation, that the number of species of insects, reckoning all sorts of them, may not be short of ten thousand. And in this vast variety of animal forms, (for the observation is not confined to insects, though more applicable perhaps to them than to any other class,) we are sometimes led to take notice of the different methods, or rather of the studiously diversified methods, by which one and the same purpose is attained. In the article of breathing, for example, which was to be provided for in some way or other, besides the ordinary varieties of lungs, gills, and breathing-holes, (for insects in general respire, not by the mouth,\* but through holes in the sides,) the nymphs of gnats have an apparatus to raise their *backs* to the top of the water, and so take breath.†

\* Fig. 7. *a, a.* The *spiracula*, or breathing pores of insects, are small orifices in the trunk or abdomen, opening into a canal called the *trachea*; by which the air enters the body, or is expelled from it. In the larvae of caterpillars, a trachea, *b, b*, runs on each side of the body, under the skin, and generally opens externally by nine or ten apertures or *spiraculae*; from these the same number of air-vessels of a silver colour pass off to be dispersed through the body.

† Fig. 8. The pupa of gnats suspend themselves on the surface of the water, by two auriform respiratory organs on the anterior part of the trunk, their abdomen being then folded under the breast; when disposed to

The hydrocanthari do the like by thrusting their *tails* out of the water. The maggot of the *eruca labra*\* has a long tail, one part sheathed within another, (but which it can draw out at pleasure,) with a starry tuft at the end; by which *tuft*, when expanded upon the surface, the insect both supports itself in the water, and draws in the air which is necessary. In the article of natural clothing, we have the skins of animals invested with scales, hair, feathers, mucus, froth; or itself turned into a shell or crust: in the no less necessary article of offence and defence, we have teeth, talons, beaks, horns, stings, prickles, with (the most singular expedient for the same purpose) the power of giving the electric shock, † and, as is credibly related of some animals, of driving away their pursuers by an intolerable foetor, or of blackening the water through which they are pursued. ‡ The

descend the animal unfolds it, and with sudden strokes which she gives with it and her anal swimmers to the water, she swims from right to left, as well as upwards and downwards, with the greatest ease.

\* Fig. 9. This is a well known fly, (*stratyonis chamaeleon*, F.) chameleon fly, or *eruca labra*. In its first state it inhabits the water, and often remains supported by its radiated tail, consisting of beautiful feathered hairs or plumes on the surface, with its head downwards. But when it is disposed to seek the bottom or to descend, the radii of the tail is formed into a concavity, including in it an air-bubble; this is its swim-bladder, and by the bending of its body from right to left, contracting itself into the form of the letter S, and then extending itself again into a straight line, it moves itself in any direction.

† The *raja torpedo*, *gymnotus electricus*, and some other fish, have a curious apparatus of nerves, which in its effects may be compared to an electrical battery. In the first-named fish, the electrical organs are situated between the head and the pectoral fins. When the integuments are raised the organ appears, consisting of some hundred pentagonal and hexagonal cells, filled with a glary fluid. Minute blood-vessels are dispersed over it, and its nerves are of extraordinary size. When the hand is applied to the electrical organs, a benumbing effect is instantly felt in the fingers and the arm. When caught in a net, it has been known to give a violent shock to the hands of the fisherman who ventures to seize it. See Phil. Trans. 1816, p. 120. Ibid. 1817, p. 32.

‡ The several species of *sepiae* or *cuttle-fish* have this faculty. They

consideration of these appearances might induce us to believe, that *variety* itself, distinct from every other reason, was a motive in the mind of the Creator, or with the agents of his will.

To this great variety in organized life, the Deity has given, or perhaps there arises out of it, a corresponding variety of animal *appetites*. For the final cause of this we have not far to seek. Did all animals covet the same element, retreat, or food, it is evident how much fewer could be supplied and accommodated, than what at present live convenient together, and find a plentiful subsistence. What one nature rejects, another delights in. Food which is nauseous to one tribe of animals, becomes, by that very property which makes it nauseous, an alluring dainty to another tribe. Carrion is a treat to dogs, ravens, vultures, fish. The exhalations of corrupted substances attract flies by crowds. Maggots revel in putrefaction.

## CHAPTER XX.

### OF PLANTS.

I THINK a designed and studied mechanism to be, in general, more evident in animals than in *plants*; and it is unnecessary to dwell upon a weaker argument, where a stronger is at hand. There are, however, a few observations upon the vegetable kingdom, which lie so

possess a bag, situated on or near the liver, called the *ink-bag*, from its containing a black fluid, the contents of which is discharged by a muscular sheath compressing the body of the animal. By this singular evacuation the creature renders the surrounding element so black and bitter, when in danger of being attacked, that an enemy will not pursue it.

directly in our way, that it would be improper to pass by them without notice.

The one great intention of nature in the structure of plants, seems to be the perfecting of the *seed*; and, what is part of the same intention, the preserving of it until it be *perfected*. This intention shows itself, in the first place, by the care which appears to be taken, to protect and ripen, by every advantage which can be given to them of situation in the plant, those parts which most immediately contribute to fructification, viz. the antherae, the stamina, and the stigmata. These parts are usually lodged in the centre, the recesses, or the labyrinths of the flower; during their tender and immature state, are shut up in the stalk, or sheltered in the bud; as soon as they have acquired firmness of texture sufficient to bear exposure, and are ready to perform the important office which is assigned to them, they are disclosed to the light and air, by the bursting of the stem, or the expansion of the petals; after which, they have, in many cases, by the very form of the flower during its blow, the light and warmth reflected upon them from the concave side of the cup. What is called also the *sleep*\* of plants, is the leaves or

\* "The periodical change in the direction of leaves, which has been called the 'Sleep of Plants,' is undeniably connected with the stimulating operation of light. It is established, that during the clear light of the sun, the leaves become erect, and move their upper surface to the light; whilst, on the contrary, during the absence of light, they either hang downwards, and turn to the horizon, or they take an upright position, so that the under surface of the leaves is turned more outward. On account of this particular position of what has been called 'Sleeping plants,' we cannot properly ascribe this direction to sleep, because the leaves do sometimes even raise themselves during this state with greater energy; and press upon the, stern or leaf-stalk, for the purpose of turning their lower surface outwards. This change is much rather, therefore, the consequence of the contest between the activity of the plant, and the grout activity of nature. This change is the more evident, and the sleep of leaves (he more

petals disposing themselves in such a manner as to shelter the young stems, buds, or fruit. They turn up, or they fall down, according as this purpose renders either change of position requisite. In the growth of corn, whenever the plant begins to shoot, the two upper leaves of the stalk join together, embrace the ear, and protect it till the pulp has acquired a certain degree of consistency. In some water-plants, the flowering and fecundation are carried on *within* the stem, which afterwards opens to let loose the impregnated seed.\* The *pea*, or papilionaceous tribe, enclose the parts of fructification within a beautiful folding of the internal blossom, sometimes called, from its shape, the boat or keel; itself also protected under a penthouse formed by the external petals. This structure is very artificial, and, what adds to the value of it, though it may diminish the curiosity, very general. It has also this farther advantage, (and it is an advantage strictly mechanical,) that all the blossoms turn their *backs* to the wind, whenever the gale blows strong enough to endanger the delicate parts upon which the seed depends. I have observed this a hundred times in a field of peas in blossom. It is an aptitude which results

striking, the finer and more compounded the organization of the leaves are. We hence most frequently observe it in the pinnated leaves of leguminous plants, although also in some others, as in *triplex*.

"That an internal and self-dependant activity is to be taken into account in this sleep of plants, is plain from the fact that this sleep does not equally follow from a short withdrawing of the light, but only from its complete and long continued removal; as also from this other circumstance, that leaves fall asleep or awake at fixed hours, whether the sky be serene or troubled, exactly as happens with regard to animals. Other stimula, too, and especially heat, have a great influence upon this phenomenon, because, in the cold, leaves awaken later, and fall more easily asleep, notwithstanding the influence of light." Vide Elements of the Philosophy of Plants, by Decandolle.

\* Philosophical Transactions, part ii. 179G; p. 502,

from the figure of the flower, and, as we have said, is strictly mechanical; as much so as the turning of a weather-board or tin cap upon the top of a chimney. Of the *poppy*, and of many similar species of flowers, the head, while it is growing, hangs down, a rigid curvature in the upper part of the stem giving to it that position; and in that position it is impenetrable by rain or moisture. When the head has acquired its size, and is ready to open, the stalk *erects* itself, for the purpose, as it should seem, of presenting the flower, and, with the flower, the instruments of fructification, to the genial influence of the sun's rays. This always struck me as a curious property; and specifically, as well as originally, provided for in the constitution of the plant; for if the stern be only bent by the weight of the head, how comes it to straighten itself when the head is the heaviest? These instances show the attention of nature to this principal object, the safety and maturation of the parts upon which the seed depends.

In *trees*, especially in those which are natives of colder climates, this point is taken up earlier. Many of these trees (observe in particular the *ash* and *horse-chestnut*) produce the embryos of the leaves and flowers in one year, and bring them to perfection the following. There is a winter therefore to be gotten over. Now what we are to remark is, how nature has prepared for the trials and seventies of that season. These tender embryos are, in the first place, wrapped up, with a com-

POPPY, *Papaver rhoeas*.

pactness which no art can imitate; in which state they compose what we call the bud. This is not all. The bud itself is enclosed in scales; which scales are formed from the remains of past leaves, and the rudiments of future ones. Neither is this the whole. In the coldest climates a third preservative is added, by the bud having a *coat* of gum or resin, which, being congealed, resists the strongest frosts. On the approach of the warm weather, this gum is softened, and ceases to be a hindrance to the expansion of the leaves and flowers. All this care is part of that system of provisions, which has for its object and consummation the production and perfecting of the seeds.

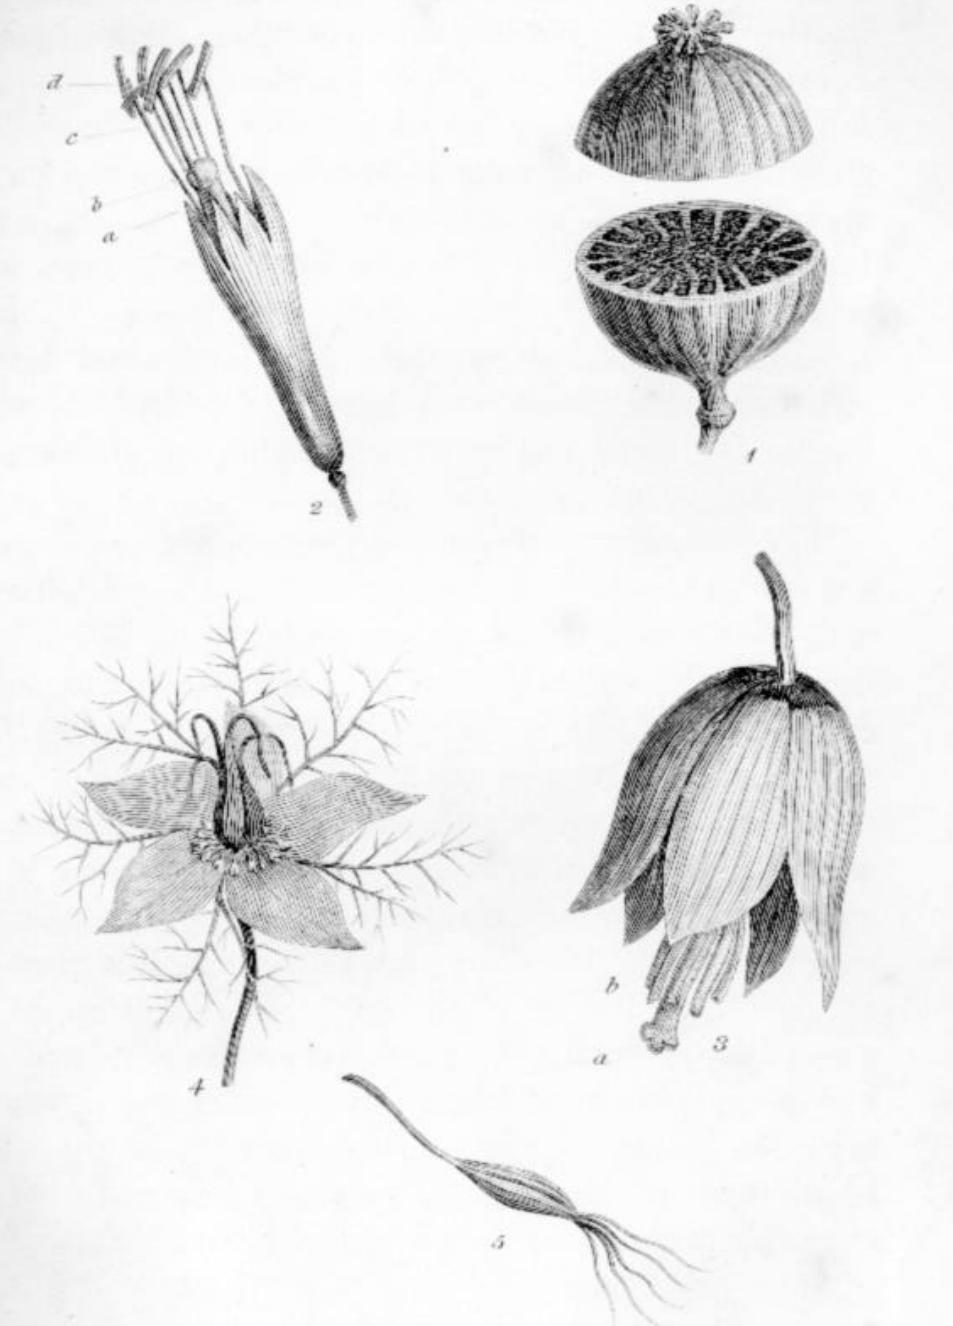

The SEEDS themselves are packed up in a *capsule*,\* a vessel composed of coats, which, compared with the rest of the flower, are strong and tough. From this vessel projects a tube, through which tube the farina, or some subtle fecundating effluvium that issues from it, is admitted to the seed. And here also occurs a mechanical variety, accommodated to the different circumstances under which the same purpose is to be accomplished. In flowers which are erect, the pistil is shorter than the stamens; and the pollen, shed from the antherae into the cup of the flower, is caught in its descent by the head of the pistil, called the stigma. † But how is this managed when the flowers hang down, (as does the crown-imperial for instance,) and in which position the farina, in its fall, would be carried from the stigma, and not towards it? The relative length of the parts is now inverted. ‡ The pistil in these flowers is

\* Tab. XXXIV. Fig. 1. The *capsule* or seed-vessel of the poppy: (*papaver somniferum*:) it is divided to exhibit its internal structure.

† Fig. 2. is an instance of this kind in a flower of the agave Americana: *a*, the *pistil*; *b*, the *stigma*; *c*, the *stamens*; *d*, the *antherae*.

TAB. XXXIV.

usually longer instead of shorter than the stamens, that its protruding summit may receive the pollen as it drops to the ground. In some cases, (as in the *nigella*, \*) where the shafts of the pistils or styles are disproportionately long, they bend down their extremities upon the antherae, that the necessary approximation may be effected.†

\* Fig. 4. A blossom of the *nigella*.

† Amongst the various means which nature has provided for the purpose of assisting the impregnation of plants, that afforded by the agency of insects is not one of the least. In the spring and summer months, numerous species of these lively little beings may be seen in almost every expanded flower; and whether they are in search of honey, which is contained in the nectaries of many flowers, or whatever may be the object of their attraction, by being continually on the move, they, no doubt, further the dispersion of the pollen, and thus, in a great measure, contribute to the fertility of the plants they visit.

In many plants, as those which belong to the Linnaean class *dioecia*, where the stamens and pistils are in separate flowers, and those flowers situated on two separate plants of the same species, the operation of insects, or the efficacy of winds, is indispensably necessary to the perfecting the fruit, by transporting the pollen of the one to the stigma of the other.

Some plants, indeed, that have perfect, or united flowers, have the anthers so situated that it is almost impossible the pollen can, of itself, reach the stigma; in this case insects generally become the auxiliaries to the fertilization of the seed. An instance of this may be seen in the *aristolochia clematitis*. "According to Professor Willdenow, the flower of this plant is so formed, that the anthers of themselves cannot impregnate the stigma; but this important affair is devolved upon a particular species of *tipula*, (*T. pennicornis*.) The throat of the flower is lined with dense hair, pointing downward so as to form a kind of funnel or entrance, like that of some kinds of mouse-traps, through which the insects may easily enter but not return: several creep in, and, uneasy at their confinement, are constantly moving to and fro, and so deposit the pollen upon the stigma: but when the work intrusted to them is completed, and impregnation has taken place, the hair which prevented their escape shrinks, and adheres closely to the sides of the flower, and these little go-betweens of Flora, at length leave their prison. A writer, however, in the Annual Medical Review, (ii. 400.) doubts the accuracy of this fact, on the ground that he could never find *T. pennicornis*, though *A. clematitis* has produced fruit two years at Brompton." Introduction to Entomology by Kirby and Spence, vol. i. p. 298.

That the *tipula pennicornis* does enter the flowers of *aristolochia cle-*

But (to pursue this great work in its progress) the impregnation, to which all this machinery relates, being completed, the other parts of the flower fade and drop off, whilst the *gravid seed-vessel*, on the contrary, proceeds to increase its bulk, always to a great, and in some species (in the gourd, for example, and melon) to a surprising comparative size; assuming in different plants an incalculable variety of forms, but all evidently conduced to the security of the seed. By virtue of this process, so necessary but so diversified, we have the seed, at length, in stone-fruits and nuts, incased in a strong shell, the shell itself enclosed in a pulp or husk, by which the seed within is, or hath been, fed; or, more generally, (as in grapes, oranges, and the numerous kinds of berries,) plunged over-head in a glutinous syrup, contained within a skin or bladder: at other times (as in apples and pears) embedded in the heart of a firm fleshy substance; or (as in strawberries) pricked into the surface of a soft pulp.

These and many more varieties exist in what we call *fruits*.\* In pulse, and grain, and grasses; in trees, and

*matitis*, as recorded by Professor Willdenow, I can confidently affirm, from having observed them in great plenty in the inflated base of the corolla every year, for these last fifteen years, in the Oxford Botanic Garden, where the plant generally forms fruit. The first time I found this insect in the flowers of the above species of *aristolochia*, was, on the 12th of July, 1812, at Godstow, near Oxford, where the plant was then growing in a wild state near the ruins of the nunnery.

For the above observations the editor is indebted to an excellent botanist, Mr. W. Baxter.

\* From the conformation of fruits alone, one might be led, even without experience, to suppose, that part of this provision was destined for the utilities of animals. As limited to the plant, the provision itself seems to go beyond its object. The flesh of an apple, the pulp of an orange, the meat of a plumb, the fatness of the olive, appear to be *more* than sufficient for the nourishing of the seed or kernel. The event shows, that this redundancy, if it be one, ministers to the support and gratification of animal natures; and when we observe a provision to be more than sufficient for

shrubs, and flowers; the variety of the seed-vessels is incomputable. We have the seeds (as in the pea tribe) regularly disposed in parchment pods, which, though soft and membranous, completely exclude the wet, even in the heaviest rains! the pod also, not seldom (as in the bean) lined with a fine down; at other times (as in the senna) distended like a blown bladder: or we have the seed enveloped in wool, (as in the cotton plant,) lodged (as in pines) between the hard and compact scales of a cone, or barricaded (as in the artichoke and thistle) with spikes and prickles; in mushrooms, placed under a penthouse; in ferns, within slits in the back part of the leaf; or (which is the most general organization of all) we find them covered by strong, close tunics, and attached to the stem according to an order appropriated to each plant, as is seen in the several kinds of grains and of grasses.

In which enumeration, what we have first to notice

one purpose, yet wanted for another purpose, it is not unfair to conclude, that both purposes were contemplated together. It favours this view of the subject to remark, that fruits are not (which they might have been) ready altogether, but that they ripen in succession throughout a great part of the year; some in summer, some in autumn: that some require the slow maturation of the winter, and supply the spring; also that the coldest fruits grow in the hottest places. Cucumbers, pine-apples, melons, are the natural produce of warm climates, and contribute greatly, by their coolness, to the refreshment of the inhabitants of those countries.

I will add to this note the following observation communicated to me by Mr. Brinkley: (PALEY.)

"The eatable part of the cherry or peach first serve the purposes of perfecting the seed or kernel, by means of vessels passing through the stone, and which are very visible in a peach-stone. After the kernel is perfected, the stone becomes hard, and the vessels cease their functions. But the substance surrounding the stone is not then thrown away as useless. That which was before only an instrument for perfecting the kernel now receives and retains to itself the whole of the sun's influence, and thereby becomes a grateful food to man. Also, what an evident mark of design is the stone protecting the kernel! The intervention of the stone prevents the second use from interfering with the first."

is, unity of purpose under variety of expedients. Nothing can be more *single* than the design; more *diversified* than the means. Pellicles, shells, pulps, pods, husks, skin, scales armed with thorns, are all employed in prosecuting the same intention. Secondly; we may observe, that, in all these cases, the purpose is fulfilled within a just and *limited* degree. We can perceive, that if the seeds of plants were more strongly guarded than they are, their greater security would interfere with other uses. Many species of animals would suffer, and many perish, if they could not obtain access to them. The plant would overrun the soil; or the seed be wasted for want of room to sow itself. It is sometimes as necessary to destroy particular species of plants, as it is at other times to encourage their growth. Here, as in many cases, a balance is to be maintained between opposite uses. The provisions for the preservation of seeds appear to be directed, chiefly, against the inconstancy of the elements, or the sweeping destruction of inclement seasons. The depredation of animals, and the injuries of accidental violence, are allowed for in the abundance of the increase. The result is, that out of the many thousand different plants which cover the earth, not a single species, perhaps, has been lost since the creation.

When nature has perfected her seeds, her next care is to disperse them. The seed cannot answer its purpose while it remains confined in the capsule. After the seeds therefore are ripened, the pericarpium opens to let them out: and the opening is not like an accidental bursting, but, for the most part, is according to a certain rule in each plant. What I have always thought very extraordinary, nuts and shells, which we can hardly crack with our teeth, divide and make way for the little

tender sprout which proceeds from the kernel. Handling the nut, I could hardly conceive how the plantule was ever to get out of it. There are cases, it is said, in which the seed-vessel, by an elastic jerk at the moment of its explosion, casts the seeds to a distance.\* We all however know, that many seeds (those of most composite flowers, as of the thistle, dandelion, etc.) are endowed with what are most improperly called *wings*; that is, downy appendages, by which they are enabled to float in the air, and are carried oftentimes by the wind to great distances from the plant which produces them. It is the swelling also of this downy tuft within the seed-vessel, that seems to overcome the resistance of its coats, and to open a passage for the seed to escape.

But the *constitution* of seeds is still more admirable

\* This mode of the dispersion of seeds is exemplified in the common furze, *ulex Europaeus*; in most species of *euphorbia*, or spurge; and in *fraxinella*, *dictamnus albus*.

Many species of *pines* discharge their seeds by the opening of the scales of their cones, in hot sunny weather, with a sudden jerk, which is accompanied by a crackling noise: and when a number of these cones happen to burst together, the noise is said to be heard at some considerable distance. The Rev. P. Keith, in his excellent System of Physiological Botany, vol. ii. p. 399, informs us, that this crackling noise was observed and traced to a fir-tree, named *pinus pinea*, at Rendlesham. Parsonage, on July 14, 1808, by two young gentlemen, his pupils, who thought the tree was bewitched, till the cause of the noise was pointed out to them.

If the seed-vessel of the touch-me-not, *impatiens noli-me-tangere*, which is composed of five valves and five cells, be touched ever so slightly, when quite ripe, it immediately bursts open, and the valves, separating elastically, and coiling themselves up in a spiral form, discharge the seeds with considerable force, and thus scatter them in all directions around the parent plant.

Some species of *cardamine*, or cuckoo flower, discharge their seed in a similar manner, especially *cardamine impatiens*. The least pressure on the summit of the seed-vessel, or *siliqua*, of this species, when it is ripe, will disengage the two valves, which immediately, and with an elastic spring, roll themselves up from the base to the summit, at the same time ejecting the seed with violence, and throwing it around to some distance. —BAXTER.

than either their preservation or their dispersion. In the body of the seed of every species of plant, or nearly of every one, provision is made for two grand purposes: first, for the safety of the *germ*; secondly, for the temporary support of the future plant. The sprout, as folded up in the seed, is delicate and brittle beyond any other substance. It cannot be touched without being broken. Yet, in beans, peas, grass-seeds, grain, fruits, it is so fenced on all sides, so shut up and protected, that, whilst the seed itself is rudely handled, tossed into sacks, shoveled into heaps, the sacred particle, the miniature plant, remains unhurt. It is wonderful, also, how long many kinds of seeds, by the help of their integuments, and perhaps of their oils, stand out against decay. A grain of mustard-seed has been known to lie in the earth for a hundred years; and, as soon as it had acquired a favourable situation, to shoot as vigorously as if just gathered from the plant. Then, as to the second point, the temporary support of the future plant, the matter stands thus. In grain, and pulse, and kernels, and pippins, the germ composes a very small part of the seed. The rest consists of a nutritious substance, from which the sprout draws its aliment for some considerable time after it is put forth; viz. until the fibres, shot out from the other end of the seed, are able to imbibe juices from the earth, in a sufficient quantity for its demand. It is owing to this constitution, that we see seeds sprout, and the sprouts make a considerable progress without any earth at all. It is an economy, also, in which we remark a close analogy between the seeds of plants and the eggs of animals. The same point is provided for, in the same manner, in both. In the egg, the residence of the living principle, the cicatrix forms a very minute part of the contents.

The white and the white only is expended in the formation of the chicken. The yolk, very little altered or diminished, is wrapped up in the abdomen of the young bird when it quits the shell, and serves for its nourishment till it have learnt to pick its own food. This perfectly resembles the first nutrition of a plant. In the plant, as well as in the animal, the structure has every character of contrivance belonging to it: in both, it breaks the transition from prepared to unprepared aliment; in both, it is prospective and compensatory. In animals which suck, this intermediate nourishment is supplied by a different source.

In all subjects, the most common observations are the best, when it is their truth and strength which have made them common. There are, of this sort, *two* concerning plants, which it falls within our plan to notice. The *first* relates to, what has already been touched upon, their germination. When a grain of corn is cast into the ground, this is the change which takes place. From one end of the grain issues a green sprout; from the other, a number of white fibrous threads. How can this be explained? Why not sprouts from both ends? Why not fibrous threads from both ends?\* To what is the difference to be referred, but to design; to the different uses which the parts are thereafter to serve; uses which discover themselves in the sequel of the process? The sprout, or *plumule*, struggles into the air, and becomes the plant, of which, from the first, it contained the rudiments: the fibres shoot into the earth; and thereby both fix the plant to the ground, and collect nourishment from the soil for its support. †

\* Fig. 5. A grain of barley, showing the *plumule* and *radicle* growing from it.

† "The *seed*, the last production of vigorous vegetation, is wonderfully diversified in form. Being of the highest importance to the resources of

Now, what is not a little remarkable, the parts issuing from the seed take their respective directions, into whatever position the seed itself happens to be cast. If the seed be thrown into the wrongest possible position, that is, if the ends point in the ground the reverse of what they ought to do, every thing, nevertheless, goes on right. The sprout, after being pushed down a little way, makes a bend, and turns upwards; the fibres, on the contrary, after shooting at first upwards, turn down. Of this extraordinary vegetable fact, an account has lately been attempted to be given: "The plumule (it is said) is stimulated by the *air* into action, and elongates itself when it is thus most excited; the

nature, it is defended above all other parts of the plant, by soft, pulpy substances, as in the esculent fruits; by thick membranes, as in the leguminous vegetables; and by hard shells, or a thick epidermis, as in the palms and grasses.

"In every seed there is to be distinguished, first, the *organ of nourishment*; secondly, the nascent plant, or the *plume*; thirdly, the nascent root, or the *radicle*.

"In the common garden bean, the organ of nourishment is divided into two lobes, called *cotyledons*: the plume is the small white point between the upper part of the lobes; and the radicle is the small curved cone at their base.

"In wheat, and in many of the grasses, the organ of nourishment is a single part, and these plants are called *monocotyledonous*. In other cases it consists of more than two parts, when the plants are called *polycotyledonous*. In the greater number of instances it is, however, simply divided into two, and is *dicotyledonous*.

"The matter of the seed, when examined in its common state, appears dead and inert; it exhibits neither the forms nor the functions of life. But let it be acted upon by moisture, heat, and air, and its organized powers are soon distinctly developed. The cotyledons expand, the membranes burst, the radicle acquires new matter, descends into the soil, and the plume rises towards the free air. By degrees, the organs of nourishment of dicotyledonous plants become vascular, and are converted into seed-leaves, and the perfect plant appears above the soil. Nature has provided the elements of germination on every part of the surface; water and pure air and heat are universally active, and the means for the preservation and multiplication of life, are at once simple and grand." See Sir H. Davy's Elements of Agricultural Chemistry, edit. 2. p. 70.

radicle is stimulated by *moisture*, and elongates itself when *it* is thus most excited. Whence one of these grows upward in quest of its adapted object, and the other downward."\* Were this account better verified by experiment † than it is, it only shifts the contrivance.

\* Darwin's *Phytologia*, p. 144.

† "Gravitation has a very important influence on the growth of plants; and it is rendered probable, by the experiments of Mr. Knight, that they owe the peculiar direction of their roots and branches almost entirely to its force.

"That gentleman fixed some seeds of the garden bean on the circumference of a wheel, which in one instance was placed vertically, and in the other horizontally, and made to revolve, by means of another wheel worked by water, in such a manner, that the number of the revolutions could be regulated; the beans were supplied with moisture, and were placed under circumstances favourable to germination. The great velocity of motion given to the wheel was such, that it performed two hundred and fifty revolutions in a minute. It was found that in all cases the beans grew, and that the direction of the roots and stems was influenced by the motion of the wheel. When the centrifugal force was made superior to the force of gravitation, which was supposed to be done when the vertical wheel performed one hundred and fifty revolutions in a minute, all the radicles, in whatever way they were protruded from the position of the seeds, turned their points outwards from the circumference of the wheel, and in their subsequent growth receded nearly at right angles from its axis; the germens, (plumules,) on the contrary, took the opposite direction, and in a few days their points all met in the centre of the wheel.

"When the centrifugal force was made merely to modify the force of gravitation in the horizontal wheel, where the greatest velocity of revolution was given, the radicles pointed downwards about ten degrees below, and the germens (plumules) as many degrees above the horizontal line of the wheel's motion; and the deviation from the perpendicular was less in proportion as the motion was less rapid.

"These facts afford a rational solution of this curious problem, respecting which different philosophers have given such different opinions: some referring it to the nature of the sap, as De la Hire; others, as Darwin, to the living powers of the plant, and the stimulus of air upon the leaves, and of moisture upon the roots. The effect is now shown to be connected with mechanical causes; and there seems no other power in nature to which it can with propriety be referred but gravity, which acts universally, and which must tend to dispose the parts to take a uniform direction.

“The direction of the radicles and germens (plumules) is such, that

It does not disprove the contrivance; it only removes it a little farther back. Who, to use our author's own language, "*adapted* the objects?" Who gave such a quality to these connate parts, as to be susceptible of *different* "stimulation;" as to be "excited" each only by its own element, and precisely by that which the success of the vegetation requires? I say, "which the success of the vegetation requires:" for the toil of the husbandman would have been in vain, his laborious and expensive preparation of the ground in vain, if the event must, after all, depend upon the position in which the scattered seed was sown. Not one seed out of a hundred would fall in a right direction.

Our *second* observation is upon a general property of climbing plants, which is strictly mechanical. In these plants, from each knot or joint, or, as botanists call it, axilla, of the plant, issue, close to each other, two shoots; one bearing the flower and fruit; the other, drawn out into a wire, a long, tapering, spiral tendril, that twists itself round any thing which lies within its reach. Considering, that in this class two purposes are to be provided for, (and together,) fructification and support, the fruitage of the plant, and the sustentation of the stalk, what means could be used more effectual, or, as I have said, more mechanical, than what this structure presents to our eyes? Why, or how, without a view to this double purpose, do two shoots, of such different and appropriate forms, spring from the same joint, from contiguous points of the same stalk? It

both are supplied with food, and acted upon by those external agents which are necessary for their development and growth. The roots come in contact with the fluids in the ground; the leaves are exposed to light and air; and the same grand law which preserves the planets in their orbits is thus essential to the functions of vegetable life." See Sir H. Davy's Elements of Agricultural Chemistry, edit. 2. p. 32.

never happens thus in robust plants, or in trees. "We see not (says Ray) so much as one tree, or shrub, or herb, that hath a firm and strong stem, and that is able to mount up and stand alone without assistance, *furnished with these tendrils*" Make only so simple a comparison as that between a pea and a bean. Why does the pea put forth tendrils, the bean not; but because the stalk of the pea cannot support itself, the stalk of the bean can? We may add, also, as a circumstance not to be overlooked, that in the pea tribe these clasps do not make their appearance till they are wanted; till the plant has grown to a height to stand in need of support.

This word "support" suggests to us a reflection upon a property of grasses, of corn, and canes. The hollow stems of these classes of plants are set, at certain intervals, with joints. These joints are not found in the trunks of trees, or in the solid stalks of plants. There may be other uses of these joints; but the fact is, and it appears to be at least one purpose designed by them, that they *corroborate* the stem; which, by its length and hollowness, would otherwise be too liable to break or bend.\*

\* Plants are not only supplied with various appendages for procuring support to the weaker species: "The *stipulae* protect the nascent leaves; and the *bracteae* perform a similar office to the blossom. The different kinds of hairs of down, of thorns, and prickles, which are found on the surface of different plants, have various uses, some of which are easily understood, particularly that defending the plant from molestation by animals. The sting of the nettle is of this class; and its structure bears a striking analogy to that of the poisonous fangs of serpents. The purposes answered by the down which covers a great number of plants, are not very obvious. It perhaps serves as a protection from (he injurious effects of cold winds on the tender surface; or it may have a relation to the deposition of moisture; or, as it may be farther conjectured, the number of points which are presented to the air may be designed to convey electricity from the atmosphere, or to restore the electric equilibrium which

*Grasses* are Nature's care. With these she clothes the earth; with these she sustains its inhabitants. Cattle feed upon their leaves; birds upon their smaller seeds; men upon the larger: for few readers need be told, that the plants which produce our bread-corn belong to this class. In those tribes which are more generally considered as grasses, their extraordinary means and powers of preservation and increase, their hardiness, their almost unconquerable disposition to spread, their faculties of reviviscence, coincide with the intention of nature concerning them. They thrive under a treatment by which other plants are destroyed. The more their leaves are consumed, the more their roots increase. The more they are trampled upon, the thicker they grow. Many of the seemingly dry and dead leaves of grasses revive, and renew their verdure in the spring. In lofty mountains, where the summer heats are not sufficient to ripen the seeds, grasses abound which are viviparous, and consequently able to propagate themselves without seed. It is an observation, likewise, which has often been made, that herbivorous animals attach themselves to the leaves of grasses; and, if at liberty in their pastures to range and choose, leave untouched the straws which support the flowers.\*

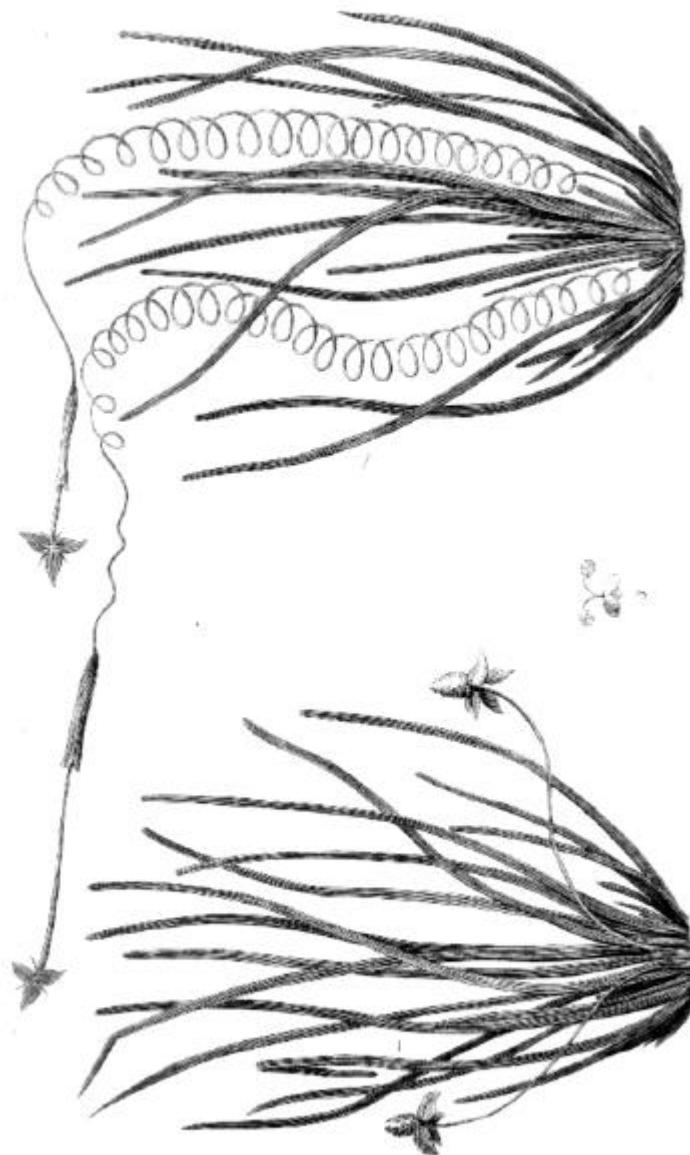

The GENERAL properties of vegetable nature, or properties common to large portions of that kingdom, are almost all which the compass of our argument allows to bring forward. It is impossible to follow plants into their several species. We may be allowed, however, to single out three or four of these species as worthy of a

may have been disturbed by the process of vegetation." Dr. Roget's Bridgewater Treatise, p. 94.

particular notice, either by some singular mechanism, or by some peculiar provision, or by both.

I. In Dr. Darwin's Botanic Garden, (i. 395, note,) is the following account of the *vallisneria*, as it has been observed in the river Rhone: "They have roots at the bottom of the Rhone. The flowers of the *female plant* float on the surface of the water, and are furnished with an *elastic spiral stalk*, which extends or contracts as the water rises or falls; this rise or fall, from the torrents which flow into the river, often amounting to many feet in a few hours. The flowers of the *male plant* are produced under water; and, as soon as the fecundating farina is mature, they separate themselves from the plant, rise to the surface, and are wafted by the air, or borne by the currents, to the female flowers."\* Our attention in this narrative will be directed to two particulars: first, to the mechanism, the "elastic spiral stalk," which lengthens or contracts itself according as the water rises or falls; secondly, to the provision which is made for bringing the male flower, which is produced *under* water, to the female flower which floats upon the surface.

II. My second example I take from Withering's Arrangement, vol. ii. p. 209. edit. 3. "The *cuscuta Europaea* is a parasitical plant. † The seed opens, and

\* Tab. XXXV. *Vallisneria spiralis*. Fig. 1, the *female plant*, the flowers of which are purple. Fig. 2, the *male plant*, producing white flowers; these when mature rise like air-bubbles, and suddenly expanding when they reach the surface of the water, float about in such abundance as to cover it entirely. "Thus their pollen is scattered over the stigmas of the first-mentioned blossoms, whose stalks soon afterwards resume their spiral figure, and the fruit comes to maturity at the bottom of the water." Fig. 3, one of the separated *male* flowers magnified.

† Tab. XXXVI. "Of all the parasitical plants, the dodder (*cuscuta*) tribe are the most singular, trusting for their nourishment entirely to those vegetables about which they twine, and into whose tender bark they insert

puts forth a *little spiral body*, which does NOT seek the earth to take root, but *climbs* in a spiral direction, from right to left, up other plants, from which, by means of vessels, it draws its nourishment." The "little spiral body" proceeding from the seed, is to be compared with the fibres which seeds send out in ordinary cases: and the comparison ought to regard both the form of the threads and the direction. They are straight; this is spiral. They shoot downwards; this points upwards. In the rule, and in the exception, we equally perceive design.

III. A better known parasitical plant is the evergreen shrub, called the *mistletoe*. What we have to remark in it, is a singular instance of *compensation*.

No art hath yet made these plants take root in the earth. Here therefore might seem to be a mortal defect in their constitution. Let us examine how this defect is made up to them. The seeds are endued with an adhesive quality, so tenacious, that if they be rubbed upon the smooth bark of almost any tree, they will stick to it. And then what follows? Roots springing from these seeds insinuate their fibres into the woody substance of the tree; and the event is, that a mistletoe plant is produced next winter.\* Of no other plant do the roots refuse to shoot in the ground; of no other plant do the seeds possess this adhesive, generative quality, when applied to the bark of trees.

IV. Another instance of the *compensatory* system is in the autumnal crocus, or meadow saffron, (*colchicum autumnale*.) † I have pitied this poor plant a thousand

small villous tubercles serving as roots, the original root of the dodder withering away entirely as soon as the young stem has fixed itself to any other plant; so that its connexion with the earth is cut off." English Botany, p. 55.

\* Withering's Botanical Arrangement, vol. i. p. 203. edit. 2.

† Tab. XXXVII. The *colchicum autumnale*. This plant before us ex-

TAB. XXXVII.

times. Its blossom rises out of the ground in the most forlorn condition possible; without a sheath, a fence, a calyx, or even a leaf to protect it; and that, not in the spring, not to be visited by summer suns, but under all the disadvantages of the declining year. When we come, however, to look more closely into the structure of this plant, we find that, instead of its being neglected, Nature has gone out of her course to provide for its security, and to make up to it for all its defects. The seed-vessel, which in other plants is situated within the cup of the flower, or just beneath it, in this plant lies buried ten or twelve inches under ground within the bulbous root. The tube of the flower, which is seldom more than a few tenths of an inch long, in this plant extends down to the root. The styles in all cases reach the seed-vessel; but it is in this, by an elongation unknown to any other plant. All these singularities contribute to one end. "As this plant blossoms late in the year, and probably would not have time to ripen its seeds before the access of winter, which would destroy them, Providence has contrived its structure such, that this important office may be performed at a depth in the earth out of reach of the usual effects of frost."\* That is to say, in the autumn nothing is done above ground but the business of impregnation; which is an affair between the antherae and the stigmata, and is probably soon over. The maturation of the impregnated seed,

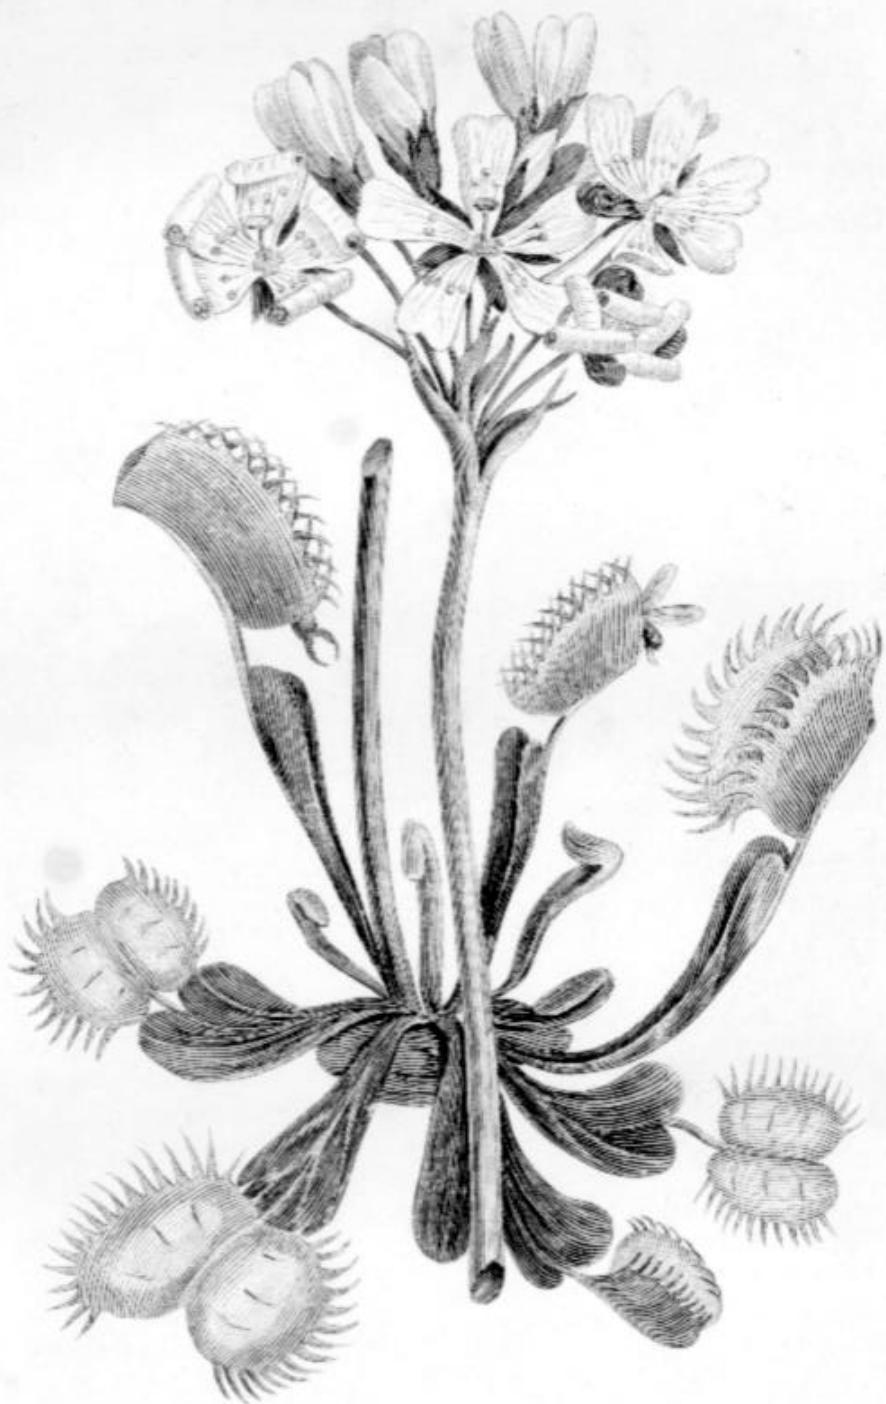

hibits a mode of fructification scarcely paralleled among British vegetables. The flowers appearing very late in autumn, the impregnated germen remains latent under ground close to the bulb till the following spring, when the capsule rises above the surface accompanied by several long upright leaves, and the seeds are ripened about June, after which the leaves decay. See British Botany, vol. i. p. 133. The plant is represented as it appears in *spring*; the root is divided to show the *seed-vessel* near the bulb. The flower is remarkable for the length of its tube. \* Withering's Botanical Arrangement, p. 360.

which in other plants proceeds within a capsule, exposed together with the rest of the flower to the open air, is here carried on, and during the whole winter, within the heart, as we may say, of the earth, that is, "out of the reach of the usual effects of frost." But then a new difficulty presents itself. Seeds, though perfected, are known not to vegetate at this depth in the earth. Our seeds, therefore, though safely so lodged, would, after all, be lost to the purpose for which all seeds are intended. Lest this should be the case, "a second admirable provision is made to raise them above the surface when they are perfected, and to sow them at a proper distance;" viz. the germ grows up *in the spring*, upon a fruit-stalk, accompanied with leaves. The seeds now, in common with those of other plants, have the benefit of the summer, and are sown upon the surface. The order of vegetation externally is this:—the plant produces its flowers in September; its leaves and fruits in the spring following.

V. I give the account of the *dionaea muscipula*, an extraordinary American plant, as some late authors have related it; but whether we be yet enough acquainted with the plant, to bring every part of this account to the test of repeated and familiar observation, I am unable to say. "Its leaves are jointed, and furnished with two rows of strong prickles; their surfaces covered with a number of minute glands, which secrete a sweet liquor that allures the approach of flies. When these parts are touched by the legs of flies, the two lobes of the leaf instantly spring up, the rows of prickles lock themselves fast together, and squeeze the unwary animal to death."<sup>\*</sup> Here, under a new model, we recognize the ancient plan of nature, viz. the relation of parts and provisions to

\* Smellie's Philosophy of Natural History, vol. i. p. 5.

TAB. XXXVIII.

one another, to a common office, and to the utility of the organized body to which they belong.\* The attracting syrup, the rows of strong prickles, their position so as to interlock the joints of the leaves, and, what is more than the rest, that singular irritability of their surfaces by which they close at a touch, all bear a contributory part in producing an effect, connected either with the defence or with the nutrition of the plant.

## CHAPTER XXI THE ELEMENTS.

WHEN we come to the elements, we take leave of our mechanics; because we come to those things, of the organization of which, if they be organized, we are confessedly ignorant. This ignorance is implied by their name. To say the truth, our investigations are stopped long before we arrive at this point. But then it is for our comfort to find, that a knowledge of the

\* Tab. XXXVIII. The *dionaea muscipula*, or Venus's fly-trap. Some parts of this plant are so remarkable as to deserve a more particular description. It is a native of North Carolina; the root perennial; leaves all radicle, supported on long fleshy and strongly veined footstalks, leaving a small portion of this next the leaf naked: the leaf itself consists of two semi-oval lobes jointed at the back, so as to allow them to fold close together; they are fleshy, and, when viewed through a lens, glandular, sometimes of a reddish colour on the upper surface; the sides of both lobes are furnished with a row of cartilaginous cilia, which stand nearly at right angles with the surface of the leaf, and lock into each other when they close. Near the middle of each lobe are three small spines, which are supposed to assist in destroying the entrapped insect. In warm weather, the lobes are fully expanded and highly irritable; and if a fly or other insect at this time light upon them they suddenly close, and the poor animal is imprisoned till it dies. See Curtis's Botanical Magazine, No. 785.

constitution of the elements is not necessary for us. For instance, as Addison has well observed, "we know *water* sufficiently, when we know how to boil, how to freeze, how to evaporate, how to make it fresh, how to make it run or spout out in what quantity and direction we please, without knowing what water is." The observation of this excellent writer has more propriety in it now, than it had at the time it was made: for the constitution, and the constituent parts of water, appear in some measure to have been lately discovered; yet it does not, I think, appear, that we can make any better or greater use of water since the discovery than we did before it.

We can never think of the elements without reflecting upon the number of distinct uses which are *consolidated* in the same substance. The *air* supplies the lungs, supports fire, conveys sound, reflects light, diffuses smells, gives rain, wafts ships, bears up birds. **'Ec udatoj ta panta:**

*water*, besides maintaining its own inhabitants, is the universal nourisher of plants, and through them of terrestrial animals; is the basis of their juices and fluids; dilutes their food; quenches their thirst; floats their burdens. *Fire* warms, dissolves, enlightens; is the great promoter of vegetation and life, if not necessary to the support of both.

We might enlarge, to almost any length we please, upon each of these uses; but it appears to me almost sufficient to state them. The few remarks which I judge it necessary to add, are as follow:

I. *Air* is essentially different from earth. There appears to be no necessity for an atmosphere's investing our globe; yet it does invest it: and we see how many, how various, and how important are the purposes which it answers to every order of animated, not to say of

organized beings, which are placed upon the terrestrial surface. I think that every one of these uses will be understood upon the first mention of them, except it be that of *reflecting* light, which may be explained thus: —If I had the power of seeing only by means of rays coming directly from the sun, whenever I turn my back upon the luminary, I should find myself in darkness. If I had the power of seeing by reflected light, yet by means only of light reflected from solid masses, these masses would shine, indeed, and glisten, but it would be in the dark. The hemisphere, the sky, the world, could only be *illuminated*, as it is illuminated, by the light of the sun being from all sides, and in every direction, reflected to the eye, by particles, as numerous, as thickly scattered, and as widely diffused as are those of the air.

Another general quality of the atmosphere is the power of evaporating fluids. The adjustment of this quality to our use is seen in its action upon the sea. In the sea, water and salt are mixed together most intimately; yet the atmosphere raises the water, and leaves the salt. Pure and fresh as drops of rain descend, they are collected from brine. If evaporation be solution, (which seems to be probable,) then the air dissolves the water, and not the salt. Upon whatever it be founded, the distinction is critical; so much so, that when we attempt to imitate the process by art, we must regulate our distillation with great care and nicety, or, together with the water, we get the bitterness, or, at least, the distastefulness, of the marine substance; and, after all, it is owing to this original elective power in the air, that we can effect the separation which we wish, by any art or means whatever.

By evaporation, water is carried up into the air; by

the converse of evaporation, it falls down upon the earth. And how does it fall? Not by the clouds being all at once reconverted into water, and descending like a sheet; not in rushing down in columns from a spout; but in moderate drops, as from a colander. Our watering-pots are made to imitate showers of rain. Yet, *a priori*, I should have thought either of the two former methods more likely to have taken place than the last.

By respiration, flame, putrefaction, air is rendered unfit for the support of animal life. By the constant operation of these corrupting principles, the whole atmosphere, if there were no restoring causes, would come at length to be deprived of its necessary degree of purity. Some of these causes seem to have been discovered, and their efficacy ascertained by experiment. And so far as the discovery has proceeded, it opens to us a beautiful and a wonderful economy. *Vegetation* proves to be one of them. A sprig of mint corked up with a small portion of foul air placed in the light, renders it again capable of supporting life or flame. Here, therefore, is a constant circulation of benefits maintained between the two great provinces of organized nature. The plant purifies what the animal has poisoned; in return, the contaminated air is more than ordinarily nutritious to the plant. *Agitation with water* turns out to be another of these restoratives. The foulest air, shaken in a bottle with water for a sufficient length of time, recovers a great degree of its purity. Here then again, allowing for the scale upon which nature works, we see the salutary effects of *storms* and *tempests*. The yesty waves which confound the heaven and the sea, are doing the very thing which was done in the bottle. Nothing can be of greater importance to the living

creation, than the salubrity of their atmosphere. It ought to reconcile us, therefore, to these agitations of the elements, of which we sometimes deplore the consequences, to know, that they tend powerfully to restore to the air that purity which so many causes are constantly impairing.

II. In Water, what ought not a little to be admired are those negative qualities which constitute its *purity*. Had it been vinous, or oleaginous, or acid; had the sea been filled, or the rivers flowed, with wine or milk; fish, constituted as they are, must have died; plants, constituted as they are, would have withered; the lives of animals which feed upon plants must have perished. Its very *insipidity*, which is one of those negative qualities, renders it the best of all menstrua. Having no taste of its own, it becomes the sincere vehicle of every other. Had there been a taste in water, be it what it might, it would have infected every thing we ate or drank, with an importunate repetition of the same flavour.

Another thing in this element, not less to be admired, is the constant *round* which it travels; and by which, without suffering either adulteration or waste, it is continually offering itself to the wants of the habitable globe. From the sea are exhaled those vapours which form the clouds; these clouds descend in showers, which, penetrating into the crevices of the hills, supply springs; which springs flow in little streams into the valleys, and there uniting become rivers; which rivers, in return, feed the ocean. So there is an incessant circulation of the same fluid; and not one drop probably more or less now than there was at the creation. A particle of water takes its departure from the surface of the sea, in order to fulfil certain important

offices to the earth; and, having executed the service which was assigned to it, returns to the bosom which it left.

Some have thought, that we have too much water upon the globe, the sea occupying above three-quarters of its whole surface. But the expanse of ocean, immense as it is, may be no more than sufficient to fertilize the earth. Or, independently of this reason, I know not why the sea may not have as good a right to its place as the land. It may proportionably support as many inhabitants; minister to as large an aggregate of enjoyment. The land only affords a habitable surface; the sea is habitable to a great depth.

III. Of Fire, we have said that it *dissolves*. The only idea probably which this term raised in the reader's mind, was that of fire melting metals, resins, and some other substances, fluxing ores, running glass, and assisting us in many of our operations, chemical or culinary. Now these are only uses of an occasional kind, and give us a very imperfect notion of what fire does for us. The grand importance of this dissolving power, the great office indeed of fire in the economy of nature, is keeping things in a state of solution, that is to say, in a state of fluidity. Were it not for the presence of heat, or of a certain degree of it all fluids would be frozen. The ocean itself would be a quarry of ice; universal nature stiff and dead.

We see, therefore, that the elements bear not only a strict relation to the constitution of organized bodies, but a relation to each other. Water could not perform its office to the earth without air; nor exist, as water, without fire.

IV. Of Light (whether we regard it as of the same substance with fire, or as a different substance) it is

altogether superfluous to expatiate upon the use. No man disputes it. The observations, therefore, which I shall offer, respect that little which we seem to know of its constitution.

Light travels from the sun at the rate of twelve millions of miles in a minute. Urged by such a velocity, with what *force* must its particles drive against (I will not say the eye, the tenderest of animal substances, but) every substance, animate or inanimate, which stands in its way! It might seem to be a force sufficient to shatter to atoms the hardest bodies.

How then is this effect, the consequence of such prodigious velocity, guarded against? By a proportionable *minuteness* of the particles of which light is composed. It is impossible for the human mind to imagine to itself any thing so small as a particle of light. But this extreme exility, though difficult to conceive, it is easy to prove. A drop of tallow, expended in the wick of a farthing candle, shall send forth rays sufficient to fill a hemisphere of a mile diameter; and to fill it so full of these rays, that an aperture not larger than the pupil of an eye, wherever it be placed within the hemisphere, shall be sure to receive some of them. What floods of light are continually poured from the sun, we cannot estimate; but the immensity of the sphere which is filled with its particles, even if it reached no farther than the orbit of the earth, we can in some sort compute; and we have reason to believe, that, throughout this whole region, the particles of light lie, in latitude at least, near to one another. The spissitude of the sun's rays at the earth is such, that the number which falls upon a burning-glass of an inch diameter, is sufficient, when concentrated, to set wood on fire.

The tenuity and the velocity of particles of light, as

ascertained by separate observations, may be said to be proportioned to each other; both surpassing our utmost stretch of comprehension; but proportioned. And it is this proportion alone which converts a tremendous element into a welcome visitor.

It has been observed to me by a learned friend, as having often struck his mind, that if light had been made by a common artist, it would have been of one uniform *colour*: whereas, by its present composition, we have that variety of colours which is of such infinite use to us for the distinguishing of objects; which adds so much to the beauty of the earth, and augments the stock of our innocent pleasures.

With which may be joined another reflection, viz. that, considering light as compounded of rays of seven different colours, (of which there can be no doubt, because it can be resolved into these rays by simply passing it through a prism,) the constituent parts must be well mixed and blended together to produce a fluid so clear and colourless as a beam of light is, when received from the sun.

## CHAPTER XXII.

### ASTRONOMY.\*

MY opinion of Astronomy has always been, that it is *not* the best medium through which to prove the agency of an intelligent Creator; but that, this being proved, it shows, beyond all other sciences, the magnificence of

\* For the articles in this chapter marked with an asterisk, I am indebted to some obliging communications received (through the hands of the Lord Bishop of Elphin) from the Rev. J. Brinkley, D. D. Andrew's Professor of Astronomy in the University of Dublin.—PALEY.

his operations. The mind which is once convinced, it raises to sublimer views of the Deity than any other subject affords; but it is not so well adapted as some other subjects are to the purpose of argument. We are destitute of the means of examining the constitution of the heavenly bodies. The very simplicity of their appearance is against them. We see nothing but bright points, luminous circles, or the phases of spheres reflecting the light which falls upon them. Now we deduce design from relation, aptitude, and correspondence of *parts*. Some degree therefore of *complexity* is necessary to render a subject fit for this species of argument. But the heavenly bodies do not, except perhaps in the instance of Saturn's ring,\* present themselves to our observation as compounded of parts at all. This, which may be a perfection in them, is a disadvantage to us, as inquirers after their nature. They do not come within our mechanics.

And what we say of their forms, is true of their *motions*. Their motions are carried on without any sensible intermediate apparatus: whereby we are cut off from one principal ground of argumentation—analogy. We have nothing wherewith to compare them; no invention, no discovery, no operation or resource of art, which, in this respect, resembles them. Even those things which are made to imitate and represent them, such as orgeries, planetaria, celestial globes, etc., bear no affinity to them,

\* The remarkable appearance of the ring which surrounds the planet Saturn is represented in Tab. XXXIX. As this ring is inclined to the plane, in which the earth is moving, it sometimes appears as a narrow oval, as in Fig 1, and sometimes in a more open form, as in Fig. 2. In this latter situation, Sir William Herschell observed that it was divided into two, by a vacant space, the breadth of which was about two thousand five hundred and thirteen miles. He saw the shadows of the two rings on the body of the planet.

in the cause and principle by which their motions are actuated. I can assign for this difference a reason of utility, viz. a reason why, though the action of *terrestrial* bodies upon each other be, in almost all cases, through the intervention of solid or fluid substances, yet central attraction does not operate in this manner. It was necessary that the intervals between the planetary orbs should be devoid of any *inert* matter, either fluid or solid, because such an intervening substance would, by its resistance, destroy those very motions which attraction is employed to preserve. This may be a final cause of the difference; but still the difference destroys the analogy.\*

Our ignorance, moreover, of the *sensitive* natures by which other planets are inhabited, necessarily keeps from us the knowledge of numberless utilities, relations, and subserviences, which we perceive upon our own globe.

After all, the real subject of admiration is, that we understand so much of astronomy as we do. That an animal confined to the surface of one of the planets; bearing a less proportion to it than the smallest microscopic insect † does to the plant it lives upon; that

\* The moon has no perceptible atmosphere: and as no effects have been observed like those which would be produced by vapours or exhalations from its surface, it is possible that there are no fluids upon it. There is no reason, however, from these circumstances for denying the existence of sensitive beings upon it, although they must be very differently constituted from ourselves, to whom air and water are essentially necessary.

† Hooke describes a minute animalcule, which he discovered with a microscope, upon the vine. From his data an estimate may be made of its bulk; but it is not so easy to fix upon any determinate quantity for the size of the plant. However, to put the case strongly, let the bulk of it be taken as equal to that of a cylinder one inch in diameter and a mile in length. Such a cylinder would contain above three hundred and forty-five cubic feet, and yet it would be many million times less when com-

this little, busy, inquisitive creature, by the use of senses which were given to it for its domestic necessities, and by means of the assistance of those senses which it has had the art to procure, should have been enabled to observe the whole system of worlds to which its own belongs; the changes of place of the immense globes which compose it; and with such accuracy, as to mark out, beforehand, the situation in the heavens in which they will be found at any future point of time; and that these bodies, after sailing through regions of void and trackless space, should arrive at the place where they were expected, not within a minute, but within a few seconds of a minute, of the time prefixed and predicted: all this is wonderful, whether we refer our admiration to the constancy of the heavenly motions themselves, or to the perspicacity and precision with which they have been noticed by mankind. Nor is this the whole, nor indeed the chief part of what astronomy teaches. By bringing reason to bear upon observation, (the acutest reasoning upon the exactest observation,) the astronomer has been able, out of the "mystic dance," and the confusion (for such it is) under which the motions of the heavenly bodies present themselves to the eye of a mere gazer upon the skies, to elicit their order and their real paths.

Our knowledge, therefore, of astronomy is admirable, though imperfect; and, amidst the confessed desiderata and desideranda which impede our investigation of the wisdom of the Deity in these the grandest of his works, there are to be found, in the phenomena, ascertained circumstances and laws, sufficient to indicate an intellectual agency in three of its principal operations, viz.

pared with the animalcule than the earth is when compared with the bulk of a man.

in choosing, in determining, in regulating: in *choosing*, out of a boundless variety of suppositions which were equally possible, that which is beneficial; in *determining*, what, left to itself, had a thousand chances against conveniency, for one in its favour; in *regulating* subjects, as to quantity and degree, which, by their nature, were unlimited with respect to either. It will be our business to offer, under each of these heads, a few instances, such as best admit of a popular explication.

I. Amongst proofs of choice, one is, fixing the source of light and heat in the *centre* of the system. The sun is ignited and luminous; the planets which move round him, cold and dark. There seems to be no antecedent necessity for this order. The sun might have been an opaque mass; some one, or two, or more, or any, or all the planets, globes of fire. There is nothing in the nature of the heavenly bodies, which requires that those which are stationary should be on fire, that those which move should be cold; for, in fact, comets are bodies on fire,\* or at least capable of the most intense heat, yet revolve round a centre; nor does this order obtain between the primary planets and their secondaries, which are all opaque. When we consider, therefore, that the sun is one; that the planets going round it are at least seven; † that it is indifferent

\* It may be reasonably doubted whether comets are ever absolutely "on fire," and yet some of them, from their near approach to the sun, must certainly be "capable of intense heat." If we conceive the earth's distance from the sun to be divided into one thousand parts, the comet of 1680 was, at one time, not more distant than six of those parts from the sun. From hence Sir I. Newton calculated that it was exposed to a heat which was two thousand times greater than that of a red-hot iron.

† The seven planets here alluded to are Mercury, Venus, the Earth, Mars, Jupiter, Saturn, and the Georgium Sidus: we now know that there are four more, Ceres, Pallas, Juno, and Vesta; the first of these was discovered in 1801, the second was observed in March 1802, the third was

to their mature, which are luminous and which are opaque; and also in what order, with respect to each other, these two kinds of bodies are disposed; we may judge of the improbability of the present arrangement taking place by chance.

If, by way of accounting for the state in which we find the solar system, it be alleged, (and this is one amongst the guesses of those who reject an intelligent Creator,) that the planets themselves are only cooled or cooling masses, and were once, like the sun, many thousand times hotter than red-hot iron; then it follows, that the sun also himself must be in his progress towards growing cold; which puts an end to the possibility of his having existed, as he is, from eternity. This consequence arises out of the hypothesis with still more certainty, if we make a part of it, what the philosophers who maintain it have usually taught, that the planets were originally masses of matter, struck off in a state of fusion from the body of the sun by the percussion of a comet,\* or by a shock from some other cause, with which we are not acquainted: for if these masses, partaking of the nature and substance of the sun's body, have in process of time lost their heat, that body itself, in time likewise, no matter in how much longer time, must lose its heat also, and therefore be incapable of an eternal duration in the state in which we see it, either for the time to come, or the time past.

not discovered till 1804, nor the last till 1807. Now Dr. Paley's dedication is dated July 1802; it is very possible, therefore, that this twenty-second chapter was written before he had heard of Pallas, and even while it was yet doubtful whether Ceres was a comet or a planet. This will explain the reason for his having qualified the expression, and having said "at least seven."

\* This hypothesis is examined more particularly in the latter part of the chapter.

The preference of the present to any other mode of distributing luminous and opaque bodies, I take to be evident. It requires more astronomy than I am able to lay before the reader, to show, in its particulars, what would be the effect to the system, of a dark body at the centre, and of one of the planets being luminous: but I think it manifest, without either plates or calculation, first, that supposing the necessary proportion of magnitude between the central and the revolving bodies to be preserved, the ignited planet would not be sufficient to illuminate and warm the rest of the system; secondly, that its light and heat would be imparted to the other planets much more irregularly than light and heat are now received from the sun.

(\*) II. Another thing, in which a choice appears to be exercised, and in which, amongst the possibilities out of which the choice was to be made, the number of those which were wrong bore an infinite proportion to the number of those which were right, is in what geometricians call the *axis of rotation*. This matter I will endeavour to explain. The earth, it is well known, is not an exact globe, but an oblate spheroid, something like an orange. Now the axes of rotation, or the diameters upon which such a body may be made to turn round, are as many as can be drawn through its centre to opposite points upon its whole surface: but of these axes none are *permanent*, except either its shortest diameter, i. e. that which passes through the heart of the orange from the place where the stalk is inserted into it, and which is but one; or its longest diameters, at right angles with the former, which must all terminate in the single circumference which goes round the thickest part of the orange. The shortest diameter is that upon which in fact the earth turns: and it is, as the reader

sees, what it ought to be, a permanent axis; whereas, had blind chance, had a casual impulse, had a stroke or push at random, set the earth a spinning, the odds were infinite but that they had sent it round upon a wrong axis. And what would have been the consequence? The difference between a permanent axis and another axis is this: when a spheroid in a state of rotatory motion gets upon a permanent axis, it keeps there; it remains steady and faithful to its position; its poles preserve their direction with respect to the plane and to the centre of its orbit: but, whilst it turns upon an axis which is *not* permanent, (and the number of those we have seen infinitely exceeds the number of the other,) it is always liable to shift and vacillate from one axis to another, with a corresponding change in the inclination of its poles. Therefore, if a planet once set off revolving upon any other than its shortest, or one of its longest axes,\* the poles on its surface would keep perpetually changing, and it never would attain a permanent axis of rotation. The effect of this unfixedness and instability would be, that the equatorial parts of the earth might become the polar, or the polar the equatorial; to the utter destruction of plants and animals, which are not capable of interchanging their situations, but are re-

\* The earth being an oblate spheroid, we may suppose it to be cut by a plane passing through A B, Fig. 3, which may represent its axis, and the common section of this plane with the spheroid will be an ellipse like A D B E; of this ellipse A B will be an axis; and, from the property of the curve, it will also be the shortest line which can be drawn through the centre C. If now the diameter D E be drawn at right angles to A B, it will be the longest line which can be drawn in the ellipse, and it will represent a diameter of the equator. As the plane passing through A B is not confined to one situation more than another, D E may represent any "one of the longest axes of the spheroid," and will, as well as A B, always be a "permanent axis of rotation." But if any other diameter, as G H, is taken, the earth could not continue to revolve permanently about it.

spectively adapted to their own. As to ourselves, instead of rejoicing in our temperate zone, and annually preparing for the moderate vicissitude, or rather the agreeable succession of seasons which we experience and expect, we might come to be locked up in the ice and darkness of the arctic circle, with bodies neither inured to its rigours, nor provided with shelter or defence against them. Nor would it be much better, if the trepidation of our pole, taking an opposite course, should place us under the heats of a vertical sun. But if it would fare so ill with the human inhabitant, who can live under greater varieties of latitude than any other animal, still more noxious would this translation of climate have proved to life in the rest of the creation, and most perhaps of all in plants. The habitable earth, and its beautiful variety, might have been destroyed by a simple mischance in the axis of rotation.

(\*) III. All this, however, proceeds upon a supposition of the earth having been formed at first an oblate spheroid. There is another supposition; and perhaps our limited information will not enable us to decide between them. The second supposition is, that the earth, being a mixed mass somewhat fluid, took, as it might do, its present form, by the joint action of the mutual gravitation of its parts and its rotatory motion. This, as we have said, is a point in the history of the earth, which our observations are not sufficient to determine. For, a very small depth below the surface, (but extremely small—less, perhaps, than an eight-thousandth part,\* compared with the depth of the centre,)

\* The "deep St. John," one of the deepest mines in the Hartz, was found by M. Deluc to sink 1359 feet. This was in 1778, and it may, since that time, have been carried lower, but probably not to the depth of the mine of Valenciana in New Spain, the bottom of which, according to Humboldt, is 1681 feet below the surface. Now the diameter of the earth being

we find vestiges of ancient fluidity. But this fluidity must have gone down many hundred times farther than we can penetrate, to enable the earth to take its present oblate form; and whether any traces of this kind exist to that depth, we are ignorant. Calculations were made a few years ago, of the mean density of the earth, by comparing the force of its attraction with the force of attraction of a rock of granite, the bulk of which could be ascertained: and the upshot of the calculation was, that the earth upon an average, through its whole sphere, has twice the density of granite, or about five times that of water.\* Therefore it cannot be a hollow shell, as some have formerly supposed; nor can its internal parts be occupied by central fire, or by water. The solid parts must greatly exceed the fluid parts; and the probability is, that it is a solid mass throughout, composed of substances more ponderous the deeper we go. Nevertheless, we may conceive the present face of the earth to have originated from the revolution of a sphere, covered by a surface of a compound mixture; the fluid and solid parts separating, as the surface becomes quiescent. Here then comes in the *moderating* hand of the Creator. If the water had exceeded its present proportion, even but by a trifling quantity compared with the whole globe, all the land would have been covered; had there been much less than there is, there would not have been enough to fertilize the continent. † Had the exsiccation been progressive, such

about 7912 miles, "the eight-thousandth part of the depth of the centre" must be 2611 feet, or nearly half a mile.

\* These calculations will be found in the Philosophical Transactions for 1778, 1798, 1811, and 1821.

† Nearly three-quarters of the earth's surface are covered by the sea. Now evaporation is proportionate to the surface of the fluid, and consequently a less expanse of waters would not have afforded a sufficient supply

as we may suppose to have been produced by an evaporating heat, how came it to stop at the point at which we see it? Why did it not stop sooner? Why at all? The mandate of the Deity will account for this; nothing else will.

IV. OF CENTRIPETAL FORCES. By virtue of the simplest law that can be imagined, viz. that a body *continues* in the state in which it is, whether of motion or rest; and, if in motion, goes on in the line in which it was proceeding, and with the same velocity, *unless* there be some cause for change; by virtue, I say, of this law, it comes to pass (what may appear to be a strange consequence) that cases arise, in which attraction, incessantly drawing a body towards a centre, never brings, nor ever will bring, the body to that centre, but keep it in eternal circulation round it. If it were possible to fire off a cannon-ball with a velocity of five miles in a second, and the resistance of the air could be taken away, the cannon-ball would for ever wheel round the earth, instead of falling down upon it.\* This is the principle which sustains the heavenly motions. The Deity, having appointed this law to matter, (than which, as we have said before, no law could be more simple,) has turned it to a wonderful account in constructing planetary systems.

The actuating cause in these systems, is an attrac-

of rain, which does not now fall, upon the whole, in greater quantities than are required "to fertilize the earth."

\* If a body be projected horizontally from a station, A, Fig. 6, which is at a certain height, its weight, or the force of gravity, will draw it towards the earth. It may be supposed to come down, for example, at B. But from the tendency which the body has to continue in the state of motion which is communicated to it, it will be carried further before it falls, if it is projected with a greater force. Hence, if this force be increased, it may be made to reach C; by a greater increase it may be carried to D; or even round to A, from whence it originally set out.

tion, which varies reciprocally as the square of the distance; that is, at double the distance, has a quarter of the force; at half the distance, four times the strength; and so on. Now, concerning this law of variation, we have three things to observe: first, that attraction, for any thing we know about it, was just as capable of one law of variation as of another: secondly, that out of an infinite number of possible laws, those which were admissible for the purpose of supporting the heavenly motions lay within certain narrow limits: thirdly, that of the admissible laws, or those which come within the limits prescribed, the law that actually prevails is the most beneficial. So far as these propositions can be made out, we may be said, I think, to prove *choice* and *regulation*: choice, out of boundless variety; and regulation, of that which, by its own nature, was, in respect of the property regulated, indifferent and indefinite.

I. First then, attraction, for any thing we know about it, was originally indifferent to all laws of variation depending upon change of distance, i. e. just as susceptible of one law as of another. It might have been the same at all distances; it might have increased as the distance increased; or it might have diminished with the increase of the distance, yet in ten thousand different proportions from the present; it might have followed no stated law at all. If attraction be what Cotes, with many other Newtonians, thought it to be, a primordial property of matter, not dependent upon, or traceable to, any other material cause; then, by the very nature and definition of a primordial property, it stood indifferent to all laws. If it be the agency of something immaterial, then also, for any thing we know of it, it was indifferent to all laws. If the revolution of

bodies round a centre depend upon vortices,\* neither are these limited to one law more than another.

There is, I know, an account given of attraction, which should seem, in its very cause, to assign to it the law which we find it to observe; and which, therefore, makes that law, a law not of choice but of necessity: and it is the account, which ascribes attraction to an *emanation* from the attracting body. It is probable, that the influence of such an emanation will be proportioned to the spissitude of the rays of which it is composed; which spissitude, supposing the rays to issue in right lines on all sides from a point, will be reciprocally as the square of the distance. † The mathematics of this solution we do not call in question: the question with us is, whether there be any sufficient reason for believing that attraction is produced by an emanation. For my part, I am totally at a loss to comprehend how particles streaming *from* a centre

\* Descartes supposed that there was a fluid, which, moving round in a continued stream, carried the planets with it in their orbits. These circular streams were called vortices.

† Let the light of a candle fall upon a square object like A B C D, Fig. 4, and if a screen be placed parallel to the object and at double the distance, the shadow E F G H, received upon it, will be four times the size of the object itself. For the rays passing in straight lines by the angles A B C D, the sides E F, F G, G H, H E, must be each double of A B, B C, C D, D A: therefore the shadow may be divided into four squares, each equal in size to the object. At three times the distance from the candle, the sides of the shadow would each be three times as large as the sides of the object, and its area would, therefore, contain nine times the space. For the same reason, if the distance be increased four, five, or six times, the area of the shadow will contain sixteen, twenty-five, or thirty-six squares, each equal to the object. Now the quantity of light which falls upon the object would, if it had not been intercepted, have spread over that part of the screen which is occupied by the shadow; and as the surface is increased, over which a certain quantity of rays is spread, in the same ratio their spissitude or density will be diminished; consequently this spissitude will be reciprocally as the squares of the distances.

should draw a body *towards* it. The impulse, if impulse it be, is all the other way. Nor shall we find less difficulty in conceiving a conflux of particles, incessantly flowing to a centre, and carrying down all bodies along with it, that centre also itself being in a state of rapid motion through absolute space: for by what source is the stream fed, or what becomes of the accumulation? Add to which, that it seems to imply a contrariety of properties, to suppose an ethereal fluid to *act*, but not to *resist*; powerful enough to carry down bodies with great force towards a centre, yet, inconsistently with the nature of inert matter, powerless and perfectly yielding with respect to the motions which result from the projectile impulse. By calculations drawn from ancient notices of eclipses of the moon, we can prove that, if such a fluid exist at all, its resistance has had no sensible effect upon the moon's motion for two thousand five hundred years. The truth is, that, except this one circumstance of the variation of the attracting force at different distances agreeing with the variation of the spissitude, there is no reason whatever to support the hypothesis of an emanation; and, as it seems to me, almost insuperable reasons against it.

(\*) II. Our second proposition is, that whilst the possible laws of variation were infinite, the *admissible* laws, or the laws compatible with the preservation of the system, He within narrow limits. If the attracting force had varied according to any *direct* law of the distance, let it have been what it would, great destruction and confusion would have taken place. The direct simple proportion of the distance would, it is true, have produced an ellipse; but the perturbing forces would have acted with so much advantage, as to be continually

changing the dimensions of the ellipse, in a manner inconsistent with our terrestrial creation. For instance; if the planet Saturn, so large and so remote, had attracted the earth, both in proportion to the quantity of matter contained in it, which it does; and also in any proportion to its distance; i. e. if it had pulled the harder for being the farther off, (instead of the reverse of it,) it would have dragged out of its course the globe which we inhabit, and have perplexed its motions, to a degree incompatible with our security, our enjoyments, and probably our existence. Of the *inverse* laws, if the centripetal force had changed as the cube of the distance, or in any higher proportion, that is, (for I speak to the unlearned,) if, at double the distance, the attractive force had been diminished to an eighth part, or to less than that, the consequence would have been, that the planets, if they once began to approach the sun, would have fallen into his body; if they once, though by ever so little, increased their distance from the centre, would for ever have receded from it. The laws therefore of attraction, by which a system of revolving bodies could be upholding in their motions, lie within narrow limits, compared with the possible laws. I much underrate the restriction, when I say that, in a scale of a mile, they are confined to an inch. All direct ratios of the distance are excluded, on account of danger from perturbing forces; all reciprocal ratios, except what lie beneath the cube of the distance, by the demonstrable consequence, that every the least change of distance would, under the operation of such laws, have been fatal to the repose and order of the system. We do not know, that is, we seldom reflect, how interested we are in this matter. Small irregularities may be endured; but, changes within these limits being allowed for, the

permanency of our ellipse is a question of life and death to our whole sensitive world.

(\*) III. That the subsisting law of attraction falls within the limits which utility requires, when these limits bear so small a proportion to the range of possibilities upon which chance might equally have cast it, is not, with any appearance of reason, to be accounted for by any other cause than a regulation proceeding from a designing mind. But our next proposition carries the matter somewhat farther. We say, in the third place, that, out of the different laws which lie within the limits of admissible laws, the *best* is made choice of; that there are advantages in this particular law which cannot be demonstrated to belong to any other law; and, concerning some of which, it can be demonstrated that they do not belong to any other.

(\*) 1. Whilst this law prevails between each particle of matter, the *united* attraction of a sphere, composed of that matter, observes the same law. This property of the law is necessary, to render it applicable to a system composed of spheres, but it is a property which belongs to no other law of attraction that is admissible. The law of variation of the united attraction is in no other case the same as the law of attraction of each particle, one case excepted, and that is of the attraction varying directly as the distance;\* the inconveniency of which law, in other respects, we have already noticed.

We may follow this regulation somewhat farther, and still more strikingly perceive that it proceeded from a

\* Fig. 5. Let A represent a sphere composed of particles, which mutually attract each other with a force, which varies reciprocally as the squares of the distances; their united attraction, on a similar particle P without the sphere, will be according to the same law; that is, the particle will be attracted towards the sphere with a force, which will also vary reciprocally as the square of C P, its distance from the centre of the sphere.

designing mind. A law both admissible and convenient was requisite. In what way is the law of the attracting globes obtained? Astronomical observations and terrestrial experiments show, that the attraction of the globes of the system is made up of the attraction of their parts; the attraction of each globe being compounded of the attractions of its parts. Now, the admissible and convenient law which exists, could not be obtained in a system of bodies gravitating by the united gravitation of their parts, unless each particle of matter were attracted by a force varying by one particular law, viz. varying inversely as the square of the distance; for, if the action of the particles be according to any other law whatever, the admissible and convenient law which is adopted could not be obtained. Here then are clearly shown regulation and design. A law both admissible and convenient was to be obtained: the mode chosen for obtaining that law was by making *each* particle of matter act. After this choice was made, then farther attention was to be given to each particle of matter, and one, and one only particular law of action to be assigned to it. No other law would have answered the purpose intended.

(\*) 2. All systems must be liable to *perturbations*. And therefore, to guard against these perturbations, or rather to guard against their running to destructive lengths, is perhaps the strongest evidence of care and foresight that can be given. Now we are able to demonstrate of our law of attraction, what can be demonstrated of no other, and what qualifies the dangers which arise from cross but unavoidable influences; that the action of the parts of our system upon one another will not cause permanently increasing irregularities, but merely periodical or vibratory ones; that is, they will

come to a limit, and then go back again. This we can demonstrate only of a system, in which the following properties concur, viz. that the force shall be inversely as the square of the distance; the masses of the revolving bodies small, compared with that of the body at the centre; the orbits not much inclined to one another; and their eccentricity little. In such a system the grand points are secure. The mean distances and periodic times, upon which depend our temperature and the regularity of our year, are constant. The eccentricities, it is true, will still vary; but so slowly, and to so small an extent, as to produce no inconveniency from fluctuation of temperature and season. The same as to the obliquity of the planes of the orbits. For instance, the inclination of the ecliptic to the equator will never change above two degrees (out of ninety), and that will require many thousand years in performing.

It has been rightly also remarked, that if the great planets, Jupiter and Saturn, had moved in lower spheres, their influences would have had much more effect, as to disturbing the planetary motions, than they now have. While they revolve at so great distances from the rest, they act almost equally on the sun and on the inferior planets; which has nearly the same consequence as not acting at all upon either.

If it be said, that the planets might have been sent round the sun in exact circles, in which case, no change of distance from the centre taking place, the law of variation of the attracting power would have never come in question, one law would have served as well as another; an answer to the scheme may be drawn from the consideration of these same perturbing forces. The system retaining in other respects its present constitution, though the planets had been at first sent round in

exact circular orbits, they could not have kept them: and if the law of attraction had not been what it is, or, at least, if the prevailing law had transgressed the limits above assigned, every evagation would have been fatal: the planet once drawn, as drawn it necessarily must have been, out of its course, would have wandered in endless error.

(\*) V. What we have seen in the law of the centripetal force, viz. a choice guided by views of utility, and a choice of one law out of thousands which might equally have taken place, we see no less in the *figures* of the planetary orbits. It was not enough to fix the law of the centripetal force, though by the wisest choice; for, even under that law, it was still competent to the planets to have moved in paths possessing so great a degree of eccentricity, as, in the course of every revolution, to be brought very near to the sun, and carried away to immense distances from him. The comets actually move in orbits of this sort; and had the planets done so, instead of going round in orbits nearly circular, the change from one extremity of temperature to another must, in ours at least, have destroyed every animal and plant upon its surface. Now, the distance from the centre at which a planet sets off, and the absolute force of attraction at that distance, being fixed, the figure of its orbit, its being a circle, or nearer to, or farther off from a circle, viz. a rounder or a longer oval, depends upon two things, the velocity with which, and the direction in which, the planet is projected. And these, in order to produce a right result, must be both brought within certain narrow limits. One, and only one, velocity, united with one, and only one, direction, will produce a perfect circle. And the velocity must be near to this velocity, and the direction also near to this di-

rection, to produce orbits, such as the planetary orbits are, nearly circular; that is, ellipses with small eccentricities. The velocity and the direction must *both* be right. If the velocity be wrong, no direction will cure the error; if the direction be in any considerable degree oblique, no velocity will produce the orbit required. Take for example the attraction of gravity at the surface of the earth. The force of that attraction being what it is, out of all the degrees of velocity, swift and slow, with which a ball might be shot off, none would answer the purpose of which we are speaking, but what was nearly that of five miles in a second.\* If it were less than that, the body would not get round at all, but would come to the ground; if it were in any considerable degree more than that, the body would take one of those eccentric courses, those long ellipses, of which we have noticed the inconveniency. If the velocity reached the rate of seven miles in a second, or went beyond that, the ball would fly off from the earth and never be heard of more. In like manner with respect to the *direction*; out of the in-

\* The moon describes in one second of time nearly two-thirds of a mile in its orbit round the earth: and if its distance were diminished it might still continue to revolve nearly in a circle round the same centre, if its velocity were increased so as to compensate for the greater attraction, which would now draw it constantly out of the rectilinear direction, in which it would otherwise move. This distance may be supposed to be diminished till the moon is brought near to the earth's surface, and it would, under these circumstances, still continue to complete its revolution, if its velocity were increased to about five miles in a second. Now for the description of such a revolution, there is no difference between the moon and any other material substance at the same distance; for they would both be drawn down through the same space in the same time by the force of attraction towards the earth's centre; and therefore a cannon-ball projected parallel to the horizon with this velocity would (if there were no resistance from the air or other accidental circumstance) complete its circular revolution, and come back to the place from which it had set out, in a few minutes less than an hour and a half, which is equivalent to the velocity of about five miles in a second.

numerable angles in which the ball might be sent off, (I mean angles formed with a line drawn to the centre,) none would serve but what was nearly a right one;\* out of the various directions in which the cannon might be pointed, upwards and downwards, every one would fail, but what was exactly or nearly horizontal. The same thing holds true of the planets; of our own amongst the rest. We are entitled therefore to ask, and to urge the question, Why did the projectile velocity and projectile direction of the earth happen to be nearly those which

\* The ball is supposed to be fired from a place not far from the earth's surface, it can therefore be easily conceived, that if its direction is much depressed below the horizon, it must be soon brought down to the ground; but it is not equally obvious that an elevation of any magnitude would likewise prevent its completing its revolution round the earth. Abstracting from the air's resistance, and of course omitting the supposition of a projectile force sufficient to carry the ball off into infinite space, it will move in the curve of an ellipse, of which one of the foci is situated in the centre of the earth. Now a body moving uninterruptedly in an ellipse must return in time to the same point from which it set out. The body therefore which, when projected from A, Fig. 6, comes down to the earth at C, would have continued its course along the dotted line and returned to A, if the mass of matter in the earth had been collected together at its centre, so as not to interfere with the motion of the projectile. Let us now conceive the body to be projected back from C, with the velocity which it had acquired in its fall, and with the direction in which it reached the earth, it would then pass through A, and come down on the other side of A I, in just the same curve in which it had fallen from A to C. The same would apply to bodies projected upwards *from B or D*; and if the velocities of projection were less or greater than what would have been acquired in falling from A, the bodies would still turn, but at some less or more distant point. The longest diameter, however, of the ellipsis in which they move must always pass through the earth's centre, and if the bodies rise on one side of this diameter they must fall down on the other. Now it will be seen that the curves at B, C, and D, make the angles ABI, ACI, ADI less, as the body is supposed to go farther and farther before it falls, and that the curves, in which the body can complete a revolution near the surface, will in all its parts be nearly parallel to it. Hence the cannon-ball tired upwards will come back again to the ground and not be able completely to go round the earth, upon any other supposition excepting that of its being fired in nearly an horizontal direction.

would retain it in a *circular* form? Why not one of the infinite number of velocities, one of the infinite number of directions, which would have made it approach much nearer to, or recede much farther from the sun?

The planets going round, all in the same direction, and all nearly in the same plane, afforded to Buffon a ground for asserting, that they had all been shivered from the sun by the same stroke of a comet, and by that stroke projected into their present orbits. Now, besides that this is to attribute to chance the fortunate concurrence of velocity and direction which we have been here noticing, the hypothesis, as I apprehend, is inconsistent with the physical laws by which the heavenly motions are governed. If the planets were struck off from the surface of the sun, they would return to the sun again. Nor will this difficulty be got rid of, by supposing that the same violent blow which shattered the sun's surface, and separated large fragments from it, pushed the sun himself out of his place; for the consequence of this would be, that the sun and system of shattered fragments would have a progressive motion, which indeed may possibly be the case with our system; but then each fragment would, in every revolution, return to the surface of the sun again. The hypothesis is also contradicted by the vast difference which subsists between the *diameters* of the planetary orbits. The distance of Saturn from the sun (to say nothing of the Georgium Sidus) is nearly five-and-twenty times that of Mercury; a disparity, which it seems impossible to reconcile with Buffon's scheme.\* Bodies starting

\* Buffon published his "Theoric de la Terre" in 1744, and afterwards incorporated it in the first volume of his "Histoire Naturelle," which he published in 1749. M. La Place, in the last chapter of his "System du Monde," discusses and refutes this hypothesis of the planets having been struck off from the sun by the collision of a comet.

from the same place, with whatever difference of direction or velocity they set off, could not have been found, at these different distances from the centre, still retaining their nearly circular orbits. They must have been carried to their proper distances before they were projected.\*

To conclude: in astronomy, the great thing is to raise the imagination to the subject, and that oftentimes in opposition to the impression made upon the senses. An illusion, for example, must be gotten over, arising from the distance at which we view the heavenly bodies, viz. the apparent *slowness* of their motions. The moon shall take some hours in getting half a yard from a star which it touched. A motion so deliberate, we may think easily guided. But what is the fact? The moon, in fact, is, all this while, driving through the heavens at the rate of considerably more than two thousand miles in an hour; which is more than double of that with which a ball is shot off from the mouth of a cannon. Yet is this prodigious rapidity as much under government as if the planet proceeded ever so slowly, or were conducted in its course inch by inch. It is also difficult to bring the imagination to conceive, (what yet, to judge tolerably of the matter, it is necessary to conceive,) how *loose*, if we may so express it, the heavenly bodies are.

\* "If we suppose the matter of the system to be accumulated in the centre by its gravity, *no* mechanical principles, with the assistance of this power of gravity, could separate the vast mass into such parts as the sun and planets; and after carrying them to their different distances, project them in their several directions, preserving still the quality of action and reaction, or the state of the centre of gravity of the system. Such an exquisite structure of things could only arise from the contrivance and powerful influences of an intelligent, free, and most potent agent. The same powers, therefore, which at present govern the material universe, and conduct its various motions, are *very different* from those which were necessary to have produced it from nothing, or to have disposed it in the admirable form in which it now proceeds."—Maclaurin's Account of Newton's Philosophy, p. 407. edit. 3.—PALEY.

Enormous globes, held by nothing, confined by nothing,\* are turned into free and boundless space, each to seek its course by the virtue of an invisible principle; but a principle, one, common, and the same in all; and ascertainable. To preserve such bodies from being lost, from running together in heaps, from hindering and distracting one another's motions, in a degree inconsistent with any continuing order; i. e. to cause them to form planetary systems, systems that, when formed, can be upheld, and more especially, systems accommodated to the organized and sensitive natures which the planets sustain, as we know to be the case, where alone we can know what the case is, upon our earth: all this requires an intelligent interposition, because it can be demonstrated concerning it, that it requires an adjustment, of force, distance, direction, and velocity, out of the reach of chance to have produced; an adjustment, in its view to utility, similar to that which we see in ten thousand subjects of nature which are nearer to us, but in power, and in extent of space through which that power is exerted, stupendous. But many of the heavenly bodies, as the sun and fixed stars, are *stationary*. Their rest must be the effect of an absence or of an equilibrium of attractions. It proves also, that a projectile impulse was originally given to some of the heavenly bodies, and not to others. But farther; if attraction acts at all distances, there can be only one quiescent centre of gravity in the universe: and all bodies whatever must be approaching this centre, or revolving round it. According to the first of these suppositions, if the duration of the world had been long enough to allow of it, all its parts, all the great bodies

\* "Held by nothing, confined by nothing," which is material or mechanical.

of which it is composed, must have been gathered together in a heap round this point. No changes, however, which have been observed, afford us the smallest reason for believing, that either the one supposition or the other is true: and then it will follow, that attraction itself is controlled or suspended by a superior agent; that there is a power above the highest of the powers of material nature; a will which restrains and circumscribes the operations of the most extensive.\*

### CHAPTER XXIII. OF THE PERSONALITY OF THE DEITY.

CONTRIVANCE, if established, appears to me to prove

\* It must here however be stated, that many astronomers deny that any of the heavenly bodies are absolutely stationary. Some of the brightest of the fixed stars have certainly small motions; and of the rest the distance is too great, and the intervals of our observation too short, to enable us to pronounce with certainty that they may not have the same. The motions in the fixed stars which have been observed, are considered either as proper to each of them, or as compounded of the motion of our system, and of motions proper to each star. By a comparison of these motions, a motion in our system is supposed to be discovered. By continuing this analogy to other, and to all systems, it is possible to suppose that attraction is unlimited, and that the whole material universe is revolving round some fixed point within its containing sphere or space.—PALEY.

The milky way is known to derive its appearance from a congeries of very small stars, but there are luminous spots in the heavens which cannot be separated into distinct stars by the most powerful telescopes; these have been observed in some instances to alter their form, which Sir W. Herschell attributed to the mutual attraction of the luminous particles which compose them.

Some of the fixed stars appear double and even multiple when highly magnified. The same great astronomer whom we have just mentioned, was induced to believe that these were separate systems; and his son, assisted by Mr. South, has established that some of them have undoubtedly a revolution round a common centre of gravity analogous to the motions of the sun and planets.

every thing which we wish to prove. Amongst other things, it proves the *personality* of the Deity, as distinguished from what is sometimes called nature, sometimes called a principle: which terms, in the mouths of those who use them philosophically, seem to be intended to admit and to express an efficacy, but to exclude and to deny a personal agent. Now that which can contrive, which can design, must be a person. These capacities constitute personality, for they imply consciousness and thought. They require that which can perceive an end or purpose; as well as the power of providing means, and of directing them to their end.\* They require a centre in which perceptions unite, and from which volitions flow; which is mind. The acts of a mind prove the existence of a mind; and in whatever a mind resides, is a person. The seat of intellect is a person. We have no authority to limit the properties of mind to any particular corporeal form, or any particular circumspection of space. These properties subsist in created nature, under a great variety of sensible forms. Also every animated being has its *sensorium*; that is, a certain portion of space, within which perception and volition are exerted. This sphere may be enlarged to an indefinite extent; may comprehend the universe; and, being so imagined, may serve to furnish us with as good a notion as we are capable of forming, of the *immensity* of the Divine Nature, i. e. of a Being, infinite, as well in essence as in power; yet nevertheless a person.

"No man hath seen God at any time." And this, I believe, makes the great difficulty. Now it is a difficulty which chiefly arises from our not duly estimating the state of our faculties. The Deity, it is true, is the object of none of our senses: but reflect what limited

\* Priestley's Letters to a Philosophical Unbeliever, p. 153. edit. 2.

capacities animal senses are. Many animals seem to have but one sense, or perhaps two at the most; touch and taste. Ought such an animal to conclude against the existence of odours, sounds, and colours? To another species is given the sense of smelling. This is an advance in the knowledge of the powers and properties of nature: but if this favoured animal should infer from its superiority over the class last described, that it perceived every thing which was perceptible in nature, it is known to us, though perhaps not suspected by the animal itself, that it proceeded upon a false and presumptuous estimate of its faculties. To another is added the sense of hearing; which lets in a class of sensations entirely unconceived by the animal before spoken of; not only distinct, but remote from any which *it* had ever experienced, and greatly superior to them. Yet this last animal has no more ground for believing, that its senses comprehend all things, and all properties of things, which exist, than might have been claimed by the tribes of animals beneath it; for we know that it is still possible to possess another sense, that of sight, which shall disclose to the percipient a new world. This fifth sense makes the animal what the human animal is: but to infer, that possibility stops here; that either this fifth sense is the last sense, or that the five comprehend all existence, is just as unwarrantable a conclusion, as that which might have been made by any of the different species which possessed fewer, or even by that, if such there be, which possessed only one. The conclusion of the one-sense animal, and the conclusion of the five-sense animal, stand upon the same authority. There may be more and other senses than those which we have. There may be senses suited to the perception of the powers, properties, and substance of spirits. These

may belong to higher orders of rational agents: for there is not the smallest reason for supposing that we are the highest, or that the scale of creation stops with us.

The great *energies* of nature are known to us only by their effects. The substances which produce them are as much concealed from our senses as the Divine Essence itself. *Gravitation*, though constantly present, though constantly exerting its influence, though every where around us, near us, and within us; though diffused throughout all space, and penetrating the texture of all bodies with which we are acquainted, depends, if upon a fluid, upon a fluid which, though both powerful and universal in its operation, is no object of sense to us; if upon any other kind of substance or action, upon a substance and action from which *we* receive no distinguishable impressions. Is it then to be wondered at, that it should, in some measure, be the same with the Divine Nature?

Of this, however, we are certain, that whatever the Deity be, neither the *universe*, nor any part of it which we see, can be He. The universe itself is merely a collective name: its parts are all which are real; or which are *things*. Now inert matter is out of the question; and organized substances include marks of contrivance. But whatever includes marks of contrivance, whatever, in its constitution, testifies design, necessarily carries us to something beyond itself, to some other being, to a designer prior to, and out of itself. No animal, for instance, can have contrived its own limbs and senses; can have been the author to itself of the design with which they were constructed. That supposition involves all the absurdity of self-creation, i. e. of acting without existing. Nothing can be God, which is ordered

by a wisdom and a will which itself is void of, which is indebted for any of its properties to contrivance *ab extra*. The *not* having that in his nature which requires the exertion of another prior being, (which property is sometimes called self-sufficiency, and sometimes self-comprehension,) appertains to the Deity, as his essential distinction, and removes his nature from that of all things which we see. Which consideration contains the answer to a question that has sometimes been asked, namely, Why, since something or other must have existed from eternity, may not the present universe be that something? The contrivance perceived in it proves that to be impossible. Nothing contrived can, in a strict and proper sense, be eternal, forasmuch as the contriver must have existed before the contrivance.

Wherever we see marks of contrivance, we are led for its cause to an *intelligent* author. And this transition of the understanding is founded upon uniform experience. We see intelligence constantly contriving; that is, we see intelligence constantly producing effects, marked and distinguished by certain properties; not certain particular properties, but by a kind and class of properties, such as relation to an end, relation of parts to one another, and to a common purpose. We see, wherever we are witnesses to the actual formation of things, nothing except intelligence producing effects so marked and distinguished. Furnished with this experience, we view the productions of nature. We observe *them* also marked and distinguished in the same manner. We wish to account for their origin. Our experience suggests a cause perfectly adequate to this account. No experience, no single instance or example, can be offered in favour of any other. In this cause therefore we ought to rest; in this cause the common sense of

mankind has, in fact, rested, because it agrees with that which, in all cases, is the foundation of knowledge—the undeviating course of their experience. The reasoning is the same as that by which we conclude any ancient appearances to have been the effects of volcanoes or inundations, namely, because they resemble the effects which fire and water produce before our eyes, and because we have never known these effects to result from any other operation. And this resemblance may subsist in so many circumstances, as not to leave us under the smallest doubt in forming our opinion. Men are not deceived by this reasoning: for whenever it happens, as it sometimes does happen, that the truth comes to be known by direct information, it turns out to be what was expected. In like manner, and upon the same foundation, (which in truth is that of experience,) we conclude that the works of nature proceed from intelligence and design; because, in the properties of relation to a purpose, subserviency to a use, they resemble what intelligence and design are constantly producing, and what nothing except intelligence and design ever produce at all. Of every argument, which would raise a question as to the safety of this reasoning, it may be observed, that if such argument be listened to, it leads to the inference, not only that the present order of nature is insufficient to prove the existence of an intelligent Creator, but that no imaginable order would be sufficient to prove it; that *no* contrivance, were it ever so mechanical, ever so precise, ever so clear, ever so perfectly like those which we ourselves employ, would support this conclusion. A doctrine to which, I conceive, no sound mind can assent.

The force, however, of the reasoning is sometimes sunk by our taking up with mere names. We have

already noticed,\* and we must here notice again, the misapplication of the term "law," and the mistake concerning the idea which that term expresses in physics, whenever such idea is made to take the place of power, and still more of an intelligent power, and, as such, to be assigned for the cause of any thing, or of any property of any thing, that exists. This is what we are secretly apt to do, when we speak of organized bodies, (plants, for instance, or animals,) owing their production, their form, their growth, their qualities, their beauty, their use, to any law or laws of nature; and when we are contented to sit down with that answer to our inquiries concerning them. I say once more, that it is a perversion of language to assign any law as the efficient operative cause of any thing. A law presupposes an agent, for it is only the mode according to which an agent proceeds; it implies a power, for it is the order according to which that power acts. Without this agent, without this power, which are both distinct from itself the "law" does nothing; is nothing.

What has been said concerning "law" holds true of *mechanism*. Mechanism is not itself power. Mechanism, without power, can do nothing. Let a watch be contrived and constructed ever so ingeniously; be its parts ever so many, ever so complicated, ever so finely wrought or artificially put together, it cannot *go* without a weight or spring, i. e. without a force independent of, and ulterior to, its mechanism. The spring, acting at the centre, will produce different motions and different results, according to the variety of the intermediate mechanism. One and the self-same spring, acting in one and the same manner, viz. by simply expanding itself, may be the cause of a hundred different, and all

\* Chap. i. sect. 7.

useful, movements, if a hundred different and well-devised sets of wheels be placed between it and the final effect; e. g. may point out the hour of the day, the day of the month, the age of the moon, the position of the planets, the cycle of the years, and many other serviceable notices: and these movements may fulfil their purposes with more or less perfection, according as the mechanism is better or worse contrived, or better or worse executed, or in a better or worse state of repair: *but, in all cases, it is necessary that the spring act at the centre.* The course of our reasoning upon such a subject would be this: By inspecting the watch, even when standing still, we get a proof of contrivance, and of a contriving mind, having been employed about it. In the form and obvious relation of its parts, we see enough to convince us of this. If we pull the works in pieces, for the purpose of a closer examination, we are still more fully convinced. But when we see the watch *going*, we see proof of another point, viz. that there is a power somewhere, and somehow or other, applied to it; a power in action; that there is more in the subject than the mere wheels of the machine; that there is a secret spring, or a gravitating plummet; in a word, that there is force and energy, as well as mechanism.

So, then, the watch in motion establishes to the observer two conclusions: one; that thought, contrivance, and design have been employed in the forming, proportioning, and arranging of its parts; and that whoever or wherever he be, or were, such a contriver there is, or was: the other; that force or power, distinct from mechanism, is at this present time acting upon it. If I saw a hand-mill even at rest, I should see contrivance: but if I saw it grinding, I should be assured

that a hand was at the windlass, though in another room. It is the same in nature. In the works of nature we trace mechanism; and this alone proves contrivance: but living, active, moving, productive nature, proves also the exertion of a power at the centre; for wherever the power resides may be denominated the centre.

The intervention and disposition of what are called "*second causes*" fall under the same observation. This disposition is or is not mechanism, according as we can or cannot trace it by our senses and means of examination. That is all the difference there is; and it is a difference which respects our faculties, not the things themselves. Now, where the order of second causes is mechanical, what is here said of mechanism strictly applies to it. But it would be always mechanism, (natural chemistry, for instance, would be mechanism,) if our senses were acute enough to descry it. Neither mechanism therefore in the works of nature, nor the intervention of what are called second causes, (for I think that they are the same thing,) excuses the necessity of an agent distinct from both.

If, in tracing these causes, it be said, that we find certain general properties of matter which have nothing in them that bespeaks intelligence, I answer, that still the *managing* of these properties, the pointing and directing them to the uses which we see made of them, demands intelligence in the highest degree. For example: suppose animal secretions to be elective attractions, and that such and such attractions universally belong to such and such substances; in all which there is no intellect concerned; still the choice and collocation of these substances, the fixing upon right substances, and disposing them in right places, must be

an act of intelligence. What mischief would follow, were there a single transposition of the secretory organs; a single mistake in arranging the glands which compose them!

There may be many second causes, and many courses of second causes, one behind another, between what we observe of nature and the Deity: but there must be intelligence somewhere; there must be more in nature than what we see; and, amongst the things unseen, there must be an intelligent, designing author. The philosopher beholds with astonishment the production of things around him. Unconscious particles of matter take their stations, and severally arrange themselves in an order, so as to become collectively plants or animals, i. e. organized bodies, with parts bearing strict and evident relation to one another, and to the utility of the whole: and it should seem that these particles could not move in any other way than as they do; for they testify not the smallest sign of choice, or liberty, or discretion. There may be particular intelligent beings guiding these motions in each case; or they may be the result of trains of mechanical dispositions, fixed beforehand by an intelligent appointment, and kept in action by a power at the centre. But, in either case, there must be intelligence.

The minds of most men are fond of what they call a *principle*, and of the appearance of simplicity, in accounting for phenomena. Yet this principle, this simplicity, resides merely in the *name*; which name, after all, comprises perhaps under it a diversified, multifarious, or progressive operation, distinguishable into parts. The power in organized bodies, of producing bodies like themselves, is one of these principles. Give a philosopher this, and he can get on. But he does not reflect

what this mode of production, this principle, (if such he choose to call it,) requires; how much it presupposes; what an apparatus of instruments, some of which are strictly mechanical, is necessary to its success; what a train it includes of operations and changes, one succeeding another, one related to another, one ministering to another; all advancing, by intermediate, and frequently by sensible steps, to their ultimate result I Yet, because the whole of this complicated action is wrapped up in a single term, *generation*, we are to set it down as an elementary principle; and to suppose, that when we have resolved the things which we see into this principle, we have sufficiently accounted for their origin, without the necessity of a designing, intelligent Creator. The truth is, generation is not a principle, but a *process*. We might as well call the casting of metals a principle; we might, so far as appears to me, as well call spinning and weaving principles; and then referring the texture of cloths, the fabric of muslins and calicoes, the patterns of diapers and damasks, to these, as principles, pretend to dispense with intention, thought, and contrivance on the part of the artist; or to dispense, indeed, with the necessity of any artist at all, either in the manufacturing of the article, or in the fabrication of the machinery by which the manufacture was carried on.

And, after all, how, or in what sense, is it true, that animals produce their *like*? A butterfly, with a proboscis instead of a mouth, with four wings and six legs, produces a hairy caterpillar, with jaws and teeth, and fourteen feet. A frog produces a tadpole. A black beetle, with gauze wings, and a crusty covering, produces a white, smooth, soft worm; an ephemeron fly, a cod-bait maggot. These, by a progress through

different stages of life, and action, and enjoyment, (and in each state provided with implements and organs appropriated to "the temporary nature which they bear,) arrive at last at the form and fashion of the parent animal. But all this is process, not principle; and proves, moreover, that the property of animated bodies, of producing their like, belongs to them, not as a primordial property, not by any blind necessity in the nature of things, but as the effect of economy, wisdom, and design; because the property itself assumes diversities, and submits to deviations dictated by intelligible utilities, and serving distinct purposes of animal happiness.

The opinion which would consider "generation" as a *principle* in nature, and which would assign this principle as the cause, or endeavour to satisfy our minds with such a cause, of the existence of organized bodies, is confuted, in my judgment, not only by every mark of contrivance discoverable in those bodies, for which it gives us no contriver, offers no account whatever, but also by the farther consideration, that things generated possess a clear relation to things *not* generated. If it were merely one part of a generated body bearing a relation to another part of the same body—as the mouth of an animal to the throat, the throat to the stomach, the stomach to the intestines, those to the recruiting of the blood, and, by means of the blood, to the nourishment of the whole frame; or if it were only one generated body bearing a relation to another generated body—as the sexes of the same species to each other, animals of prey to their prey, herbivorous and granivorous animals to the plants or seeds upon which they feed; it might be contended, that the whole of this correspondency was attributable to generation, the common

origin from which these substances proceeded. But what shall we say to agreements which exist between things generated and things *not generated*? Can it be doubted, was it ever doubted, but that the *lungs* of animals bear a relation to the *air*, as a permanently elastic fluid? They act in it and by it; they cannot act without it. Now, if generation produced the animal, it did not produce the air; yet their properties correspond.\* The *eye* is made for *light*, and light for the eye. The eye would be of no use without light, and light perhaps of little without eyes: yet one is produced by generation; the other not. The *ear* depends upon *undulations* of air. Here are two sets of motions: first, of the pulses of the air; secondly, of the drum, bones, and nerves of the ear: sets of motions bearing an evident reference to each other: yet the one, and the apparatus for the one, produced by the intervention of generation; the other altogether independent of it.

If it be said, that the air, the light, the elements, the world itself, is *generated*; I answer, that I do not comprehend the proposition. If the term mean any thing similar to what it means when applied to plants or animals, the proposition is certainly without proof; and, I think, draws as near to absurdity as any proposition can do, which does not include a contradiction in its terms. I am at a loss to conceive, how the formation

\* In *fish*, the apparatus for breathing bears a relation to the medium in which they live. The gills, which are the respiratory organs, are situated on each side of the throat, and consist of myriads of blood-vessels, disposed so as to have a fringed appearance, like the barbs of a feather; which being attached on each side of the convex margins of four cartilaginous or osseous arches, are themselves connected to the jaws. As the water contains a large quantity of air, it thus, by continually passing over the gills, decarbonises and oxidates the blood, producing similar effects to the gaseous respiration in the lungs of the higher orders of animals.

of the world can be compared to the generation of an animal. If the term generation signify something quite different from what it signifies on ordinary occasions, it may, by the same latitude, signify any thing. In which case, a word or phrase taken from the language of Otaheite would convey as much theory concerning the origin of the universe, as it does to talk of its being generated.

We know a cause (intelligence) adequate to the appearances which we wish to account for; we have this cause continually producing similar appearances; yet, rejecting this cause, the sufficiency of which we know, and the action of which is constantly before our eyes, we are invited to resort to suppositions destitute of a single fact for their support, and confirmed by no analogy with which we are acquainted. Were it necessary to inquire into the *motives* of men's opinions, I mean their motives separate from their arguments, I should almost suspect that, because the proof of a Deity drawn from the constitution of nature is not only popular but vulgar, 'which may arise from the cogency of the proof, and be indeed its highest recommendation,) and because it is a species almost of *puerility* to take up with it; for these reasons, minds, which are habitually in search of invention and originality, feel a resistless inclination to strike off into other solutions and other expositions. The truth is, that many minds are not so indisposed to any thing which can be offered to them, as they are to the *flatness* of being content with common reasons: and, what is most to be lamented, minds conscious of superiority are the most liable to this repugnancy.

The "suppositions" here alluded to, all agree in one character: they all endeavour to dispense with the necessity in nature, of a particular, personal intelligence;

that is to say, with the exertion of an intending, contriving mind, in the structure and formation of the organized constitutions which the world contains. They would resolve all productions into *unconscious* energies, of a like kind, in that respect, with attraction, magnetism, electricity, etc., without any thing farther.

In this, the old system of atheism and the new agree. And I much doubt, whether the new schemes have advanced any thing upon the old, or done more than changed the terms of the nomenclature. For instance, I could never see the difference between the antiquated system of atoms, and Buffon's organic molecules. This philosopher, having made a planet by knocking off from the sun a piece of melted glass, in consequence of the stroke of a comet, and having set it in motion, by the same stroke, both round its own axis and the sun, finds his next difficulty to be, how to bring plants and animals upon it. In order to solve this difficulty, we are to suppose the universe replenished with particles endowed with life, but without organization or senses of their own; and endowed also with a tendency to marshal themselves into organized forms. The concourse of these particles, by virtue of this tendency, but without intelligence, will, or direction, (for I do not find that any of these qualities are ascribed to them,) has produced the living forms which we now see.

Very few of the conjectures which philosophers hazard upon these subjects have more of pretension in them, than the challenging you to show the direct impossibility of the hypothesis. In the present example, there seemed to be a positive objection to the whole scheme upon the very face of it: which was that, if the case were as here represented, *new* combinations ought to be perpetually taking place; new plants and animals, or organized

bodies which were neither, ought to be starting up before our eyes every day. For this, however, our philosopher has an answer. Whilst so many forms of plants and animals are already in existence, and, consequently, so many "internal moulds," as he calls them, are prepared and at hand, the organic particles run into these moulds, and are employed in supplying an accession of substance to them, as well for their growth as for their propagation. By which means, things keep their ancient course. But, says the same philosopher, should any general loss or destruction of the present constitution of organized bodies take place, the particles, for want of "moulds" into which they might enter, would run into different combinations, and replenish the waste with new species of organized substances.

Is there any history to countenance this notion? Is it known, that any destruction has been so repaired? any desert thus repeopled?

So far as I remember, the only natural appearance mentioned by our author, by way of fact whereon to build his hypothesis, is the formation of *worms* in the intestines of animals, which is here ascribed to the coalition of superabundant organic particles, floating about in the first passages; and which have combined themselves into these simple animal forms, for want of internal moulds, or of vacancies in those moulds, into which they might be received. The thing referred to, is rather a species of facts, than a single fact; as some other cases may, with equal reason, be included under it. But to make it a fact at all, or in any sort applicable to the question, we must begin with asserting an *equivocal* generation, contrary to analogy, and without necessity: contrary to an analogy, which accompanies us to the very limits of our knowledge or inquiries;

for wherever, either in plants or animals, we are able to examine the subject, we find procreation from a parent form: without necessity; for I apprehend that it is seldom difficult to suggest methods by which the eggs, or spawn, or yet invisible rudiments of these vermin, may have obtained a passage into the cavities in which they are found.\* Add to this, that their *constancy to their species*, which, I believe, is as regular in these as in the other vermes, decides the question against our philosopher, if in truth any question remained upon the subject. †

Lastly; these wonder-working instruments, these "internal moulds," what are they after all? what, when examined, but a name without signification; unintelligible, if not self-contradictory; at the best, differing in nothing from the "essential forms" of the Greek philosophy? One short sentence of Buffon's work exhibits his scheme as follows: "When this nutritious and prolific matter, which is diffused throughout all nature, passes through the *internal mould* of an animal or vegetable, and finds a proper matrix, or receptacle, it gives rise to an animal or vegetable of the same species." Does any reader annex a meaning to the expression "internal mould," in this sentence? Ought it then to be said, that though we have little notion of an internal mould, we have not much more of a designing mind?

\* I trust I may be excused for not citing, as another fact which is to confirm the hypothesis, the grave assertion of this writer, that the branches of trees upon which the stag feeds, break out again in his horns. Such *facts* merit no discussion.  
PALEY.

† The difficulty of the hypothesis of the spontaneous production of organized beings, consists in our inability to trace the pre-existence of the germs, and to follow the operations of nature, in regions of infinite minuteness. The terms spontaneous, or equivocal generation, explain nothing. With the conception of creation in all its modes, whether the object be a world or a worm, our limited faculties are altogether incommensurate.

The very contrary of this assertion is the truth. When we speak of an artificer or an architect, we talk of what is comprehensible to our understanding, and familiar to our experience. We use no other terms, than what refer us for their meaning to our consciousness and observation; what express the constant objects of both: whereas names like that we have mentioned, refer us to nothing; excite no idea; convey a sound to the ear, but I think do no more.

Another system, which has lately been brought forward, and with much ingenuity, is that of *appetencies*. The principle and the short account of the theory is this: Pieces of soft, ductile matter, being endued with propensities or appetencies for particular actions, would, by continual endeavours, carried on through a long series of generations, work themselves gradually into suitable forms; and at length acquire, though perhaps by obscure and almost imperceptible improvements, an organization fitted to the action which their respective propensities led them to exert. A piece of animated matter, for example, that was endued with a propensity to *fly*, though ever so shapeless, though no other we will suppose than a round ball, to begin with, would, in a course of ages, if not in a million of years, perhaps in a hundred millions of years, (for our theorists, having eternity to dispose of, are never sparing in time,) acquire *wings*. The same tendency to locomotion in an aquatic animal, or rather in an animated lump which might happen to be surrounded by water, would end in the production of *fins*; in a living substance, confined to the solid earth, would put out *legs* and *feet*; or, if it took a different turn, would break the body into ringlets, and conclude by *crawling* upon the ground.

Although I have introduced the mention of this

theory into this place, I am unwilling to give to it the name of an *atheistic* scheme, for two reasons: first, because, so far as I am able to understand it, the original propensities, and the numberless varieties of them, (so different, in this respect, from the laws of mechanical nature, which are few and simple,) are, in the plan itself, attributed to the ordination and appointment of an intelligent and designing Creator; secondly, because, likewise, that large postulatum, which is all along assumed and presupposed, the faculty in living bodies of producing other bodies organized like themselves, seems to be referred to the same cause; at least is not attempted to be accounted for by any other. In one important respect, however, the theory before us coincides with atheistic systems, viz. in that, in the formation of plants and animals, in the structure and use of their parts, it does away final causes. Instead of the parts of a plant or animal, or the particular structure of the parts, having been intended for the action or the use to which we see them applied, according to this theory they have themselves grown out of that action, sprung from that use. The theory therefore dispenses with that which we insist upon, the necessity, in each particular case, of an intelligent, designing mind, for the contriving and determining of the forms which organized bodies bear. Give our philosopher these appetencies; give him a portion of living irritable matter (a nerve, or the clipping of a nerve) to work upon 5 give also to his incipient or progressive forms, the power, in every stage of their alteration, of propagating their like; and, if he is to be believed, he could replenish the world with all the vegetable and animal productions which we at present see in it.

The scheme under consideration is open to the same

objection with other conjectures of a similar tendency, viz. a total defect of evidence. No changes, like those which the theory requires, have ever been observed. All the changes in Ovid's Metamorphoses might have been effected by these appetencies, if the theory were true: yet not an example, nor the pretence of an example, is offered of a single change being known to have taken place. Nor is the order of generation obedient to the principle upon which this theory is built. The mammae\* of the male have not vanished by inusitation; *nec curtorum, per multa saecula, Judaeorum propagini deest praeputium.* It is easy to say, and it has been said, that the alterative process is too slow to be perceived; that it has been carried on through tracts of immeasurable time; and that the present order of things is the result of a gradation, of which no human records can trace the steps. It is easy to say this; and yet it is still true, that the hypothesis remains destitute of evidence.

The *analogies* which have been alleged are of the following kind. The *bunch* of a camel is said to be no other than the effect of carrying burdens; a service in which the species has been employed from the most ancient times of the world. The first race, by the daily loading of the back, would probably find a small grumous tumour to be formed in the flesh of that part. †

\* I confess myself totally at a loss to guess at the reason, either final or efficient, for this part of the animal frame, unless there be some foundation for an opinion, of which I draw the hint from a paper of Sir Everard Home, (*Philosophical Transactions*, 1799, p. 2.) viz. that the mammae of the foetus may be formed before the sex is determined.

† It is more easy to believe, that the original organization of the camel should have been adapted to the services to which it is destined, than that the services should have altered the organization. The hump on the back is so far from being a callosity produced by friction, that it is a soft, fatty substance, which is gradually absorbed into the system when the animal is

The next progeny would bring this tumour into the world with them. The life to which they were destined would increase it. The cause which first generated the tubercle being continued, it would go on, through every succession, to augment its size, till it attained the form and the bulk under which it now appears. This may serve for one instance: another, and that also of the passive sort, is taken from certain species of birds. Birds of the *crane* kind, as the crane itself, the heron, bittern, stork, have, in general, their thighs bare of feathers. This privation is accounted for from the habit of wading in water, and from the effect of that element to check the growth of feathers upon these parts; in consequence of which, the health and vegetation of the feathers declined through each generation of the animal; the tender down, exposed to cold and wetness, became weak, and thin, and rare, till the deterioration ended in the result which we see, of absolute nakedness. I will mention a third instance, because it is drawn from an active habit, as the two last were from passive habits, and that is the *pouch* of the pelican. The description which naturalists give of this organ is as follows: "From the lower edges of the under chap hangs a bag, reaching from the whole length of the bill to the neck, which is said to be capable of containing fifteen quarts of water. This bag the bird has a power of wrinkling up into the hollow of the under chap. When the bag is empty, it is not seen; but when the bird has fished with success, it is incredible to what an extent it is often dilated. The first thing the pelican does in fishing, is to fill the bag; and then it returns to digest its burden

without food, and is renewed when he obtains pasturage: an evident proof that it is one of the several admirable provisions which he possesses for his support in the desert.

at leisure. The bird preys upon the large fishes, and hides them by dozens in its pouch. When the bill is opened to its widest extent, a person may run his head into the bird's mouth, and conceal it in this monstrous pouch, thus adapted for very singular purposes." Now this extraordinary conformation is nothing more, say our philosophers, than the result of habit; not of the habit or effort of a single pelican, or of a single race of pelicans, but of a habit perpetuated through a long series of generations. The pelican soon found the conveniency of reserving in its mouth, when its appetite was glutted, the remainder of its prey, which is fish. The fulness produced by this attempt, of course stretched the skin which lies between the under chaps, as being the most yielding part of the mouth. Every distention increased the cavity. The original bird, and many generations which succeeded him, might find difficulty enough in making the pouch answer this purpose: but future pelicans, entering upon life with a pouch derived from their progenitors, of considerable capacity, would more readily accelerate its advance to perfection, by frequently pressing down the sack with the weight of fish which it might now be made to contain.

These, or of this kind, are the analogies relied upon. Now, in the first place, the instances themselves are unauthenticated by testimony; and, in theory, to say the least of them, open to great objections. Who ever read of camels without bunches, or with bunches less than those with which they are at present usually formed? A bunch, not unlike the camel's, is found between the shoulders of the buffalo; of the origin of which it is impossible to give the account here given. In the second example; why should the application of water, which appears to promote and thicken the growth

of feathers upon the bodies and breasts of geese, and swans, and other water-fowls, have divested of this covering the thighs of cranes? The third instance, which appears to me as plausible as any that can be produced, has this against it, that it is a singularity restricted to the species: whereas, if it had its commencement in the cause and manner which have been assigned, the like conformation might be expected to take place in other birds which feed upon fish. How comes it to pass, that the pelican alone was the inventress, and her descendants the only inheritors, of this curious resource?

But it is the less necessary to controvert the instances themselves, as it is a straining of analogy beyond all limits of reason and credibility, to assert that birds, and beasts, and fish, with all their variety and complexity of organization, have been brought into their forms, and distinguished into their several kinds and natures, by the same process, (even if that process could be demonstrated, or had it ever been actually noticed,) as might seem to serve for the gradual generation of a camel's bunch, or a pelican's pouch.

The solution, when applied to the works of nature *generally*, is contradicted by many of the phenomena, and totally inadequate to others. The *ligaments* or strictures, by which the tendons are tied down at the angles of the joints, could by no possibility be formed by the motion or exercise of the tendons themselves, by any appetency exciting these parts into action, or by any tendency arising therefrom. The tendency is all the other way; the *conatus* in constant opposition to them. Length of time does not help the case at all, but the reverse. The *valves* also in the blood-vessels could never be formed in the manner which our theorist

proposes. The blood, in its right and natural course, has no tendency to form them. When obstructed or refluent, it has the contrary. These parts could not grow out of their use, though they had eternity to grow in.\*

The *senses* of animals appear to me altogether incapable of receiving the explanation of their origin which this theory affords. Including under the word "sense" the organ and the perception, we have no account of either. How will our philosopher get at *vision*, or make an eye? How should the blind animal affect sight, of which blind animals, we know, have neither conception nor desire? Affecting it, by what operation of its will, by what endeavour to see, could it so determine the fluids of its body, as to inchoate the formation of the eye? Or suppose the eye formed, would the perception follow? The same of the other senses. And this objection holds its force, ascribe what you will to the hand of time, to the power of habit, to changes too slow to be observed by man, or brought within any comparison which he is able to make of past things with the present: concede what you please to these arbitrary and unattested suppositions, how will they help you? Here is no inception. No laws, no course, no powers of nature which prevail at present, nor any analogous to these, would give commencement to a new sense. And it is in vain to inquire how that might proceed, which could never *begin*.

\* The inner membrane of the vein is folded in a semilunar form across the calibre of the vessel, the lower margin being placed towards the heart. The valves of veins, therefore, in dependent situations, support the column of blood, and prevent its return to the surface of the body; for the valves are pressed close to the sides of the vessels during its flow towards the heart, but they are raised when the blood, from any accidental circumstance, is disposed to flow in a retrograde direction.

I think the senses to be the most inconsistent with the hypothesis before us, of any part of the animal frame. But other parts are sufficiently so. The solution does not apply to the parts of animals which have little in them of motion. If we could suppose joints and muscles to be gradually formed by action and exercise, what action or exercise could form a skull, or fill it with brains? No effort of the animal could determine the clothing of its skin. What *conatus* could give prickles to the porcupine or hedgehog, or to the sheep its fleece?

In the last place; what do these appetencies mean when applied to plants? I am not able to give a signification to the term, which can be transferred from animals to plants; or which is common to both. Yet a no less successful organization is found in plants, than what obtains in animals. A solution is wanted for one as well as the other.

Upon the whole; after all the schemes and struggles of a reluctant philosophy, the necessary resort is to a Deity. The marks of *design* are too strong to be gotten over. Design must have had a designer. That designer must have been a person. That person is GOD.

## CHAPTER XXIV.

### OF THE NATURAL ATTRIBUTES OF THE DEITY.

IT is an immense conclusion, that there is a GOD, a perceiving, intelligent, designing Being, at the head of creation, and from whose will it proceeded. The *attributes* of such a Being, suppose his reality to be proved, must be adequate to the magnitude, extent, and multiplicity of his operations: which are not only vast beyond comparison with those performed by any other power,

but, so far as respects our conceptions of them, infinite, because they are unlimited on all sides.

Yet the contemplation of a nature so exalted, however surely we arrive at the proof of its existence, overwhelms our faculties. The mind feels its powers sink under the subject. One consequence of which is, that from painful abstraction the thoughts seek relief in sensible images. Whence may be deduced the ancient and almost universal propensity to idolatrous substitutions. They are the resources of a labouring imagination. False religions usually fall in with the natural propensity; true religions, or such as have derived themselves from the true, resist it.

It is one of the advantages of the revelations which we acknowledge, that whilst they reject idolatry, with its many pernicious accompaniments, they introduce the Deity to human apprehension, under an idea more personal, more determinate, more within its compass, than the theology of nature can do. And this they do by representing him exclusively under the relation in which he stands to ourselves; and, for the most part, under some precise character, resulting from that relation, or from the history of his providences. Which method suits the span of our intellects much better than the universality which enters into the idea of God, as deduced from the views of nature. When, therefore, these representations are well founded in point of authority, (for all depends upon that,) they afford a condescension to the state of our faculties, of which they who have most reflected on the subject will be the first to acknowledge the want and the value.

Nevertheless, if we be careful to imitate the documents of our religion, by confining our explanations to what concerns ourselves, and do not affect more pre-

cision in our ideas than the subject allows of, the several terms which are employed to denote the attributes of the Deity may be made, even in natural religion, to bear a sense consistent with truth and reason, and not surpassing our comprehension.

These terms are, omnipotence, omniscience, omnipresence, eternity, self-existence, necessary existence, spirituality.

"Omnipotence," "omniscience," "infinite" power, "infinite" knowledge, are *superlatives*; expressing our conception of these attributes in the strongest and most elevated terms which language supplies. We ascribe power to the Deity under the name of "omnipotence," the strict and correct conclusion being, that a power which could create such a world as this is, must be, beyond all comparison, greater than any which we experience in ourselves, than any which we observe in other visible agents; greater also than any which we can want, for our individual protection and preservation, in the Being upon whom we depend. It is a power, likewise, to which we are not authorized, by our observation or knowledge, to assign any limits of space or duration.

Very much of the same sort of remark is applicable to the term "omniscience," infinite knowledge or infinite wisdom. In strictness of language, there is a difference between knowledge and wisdom; wisdom always supposing action, and action directed by it. With respect to the first, viz. *knowledge*, the Creator must know, intimately, the constitution and properties of the things which he created; which seems also to imply a foreknowledge of their action upon one another, and of their changes; at least, so far as the same result from trains of physical and necessary causes. His omniscience

also, as far as respects things present, is deducible from his nature, as an intelligent being, joined with the extent, or rather the universality, of his operations. Where he acts, he is; and where he is, he perceives. The *wisdom* of the Deity, as testified in the works of creation, surpasses all idea we have of wisdom, drawn from the highest intellectual operations of the highest class of intelligent beings with whom we are acquainted; and, which is of the chief importance to us, whatever be its compass or extent, which it is evidently impossible that we should be able to determine, it must be adequate to the conduct of that order of things under which we live. And this is enough. It is of very inferior consequence, by what terms we express our notion, or rather our admiration, of this attribute. The terms, which the piety and the usage of language have rendered habitual to us, may be as proper as any other. We can trace this attribute much beyond what is necessary for any conclusion to which we have occasion to apply it. The degree of knowledge and power requisite for the formation of created nature cannot, with respect to us, be distinguished from infinite.

The Divine "omnipresence" stands, in natural theology, upon this foundation: In every part and place of the universe with which we are acquainted, we perceive the exertion of a power, which we believe, mediately or immediately, to proceed from the Deity. For instance; in what part or point of space, that has ever been explored, do we not discover attraction? In what regions do we not find light? In what accessible portion of our globe do we not meet with gravity, magnetism, electricity; together with the properties also and powers of organized substances, of vegetable or of animated nature? Nay, farther, we may ask, What kingdom is there

of nature, what corner of space, in which there is any thing that can be examined by us, where we do not fall upon contrivance and design? The only reflection perhaps which arises in our minds from this view of the world around us is, that the laws of nature every where prevail; that they are uniform and universal. But what do we mean by the laws of nature, or by any law? Effects are produced by power, not by laws. A law cannot execute itself. A law refers us to an agent. Now an agency so general, as that we cannot discover its absence, or assign the place in which some effect of its continued energy is not found, may, in popular language at least, and, perhaps, without much deviation from philosophical strictness, be called universal: and, with not quite the same, but with no inconsiderable propriety, the Person, or Being, in whom that power resides, or from whom it is derived, may be taken to be *omnipresent*. He who upholds all things by his power, may be said to be every where present.

This is called a virtual presence. There is also what metaphysicians denominate an essential ubiquity; and which idea the language of Scripture seems to favour: but the former, I think, goes as far as natural theology carries us.

“Eternity” is a negative idea, clothed with a positive name. It supposes, in that to which it is applied, a present existence; and is the negation of a beginning or an end of that existence. As applied to the Deity, it has not been controverted by those who acknowledge a Deity at all. Most assuredly, there never was a time in which nothing existed, because that condition must have continued. The universal *blank* must have remained; nothing could rise up out of it; nothing could ever have existed since; nothing could exist now. In

strictness, however, we have no concern with duration prior to that of the visible world. Upon this article, therefore, of theology, it is sufficient to know, that the contriver necessarily existed before the contrivance.

"Self-existence" is another negative idea, viz. the negation of a preceding cause, as of a progenitor, a maker, an author, a creator.

"Necessary existence" means demonstrable existence.

"Spirituality" expresses an idea, made up of a negative part, and of a positive part. The negative part consists in the exclusion of some of the known properties of matter, especially of solidity, of the *vis inertiae*, and of gravitation. The positive part comprises perception, thought, will, power, *action*; by which last term is meant, the origination of motion; the quality, perhaps, in which resides the essential superiority of spirit over matter, "which cannot move, unless it be moved; and cannot but move, when impelled by another."<sup>\*</sup> I apprehend that there can be no difficulty in applying to the Deity both parts of this idea.

## CHAPTER XXV.

### THE UNITY OF THE DEITY.

OF the "Unity of the Deity," the proof is, the *uniformity* of plan observable in the universe. The universe itself is a system; each part either depending upon other parts, or being connected with other parts by some common law of motion, or by the presence of some common substance. One principle of gravitation

\* Bishop Wilkins's Principles of Natural Religion, p. 106.

causes a stone to drop towards the earth, and the moon to wheel round it. One law of attraction carries all the different planets about the sun. This philosophers demonstrate. There are also other points of agreement amongst them, which may be considered as marks of the identity of their origin, and of their intelligent Author. In all are found the conveniency and stability derived from gravitation. They all experience vicissitudes of days and nights, and changes of season. They all—at least Jupiter, Mars, and Venus—have the same advantages from their atmosphere as we have. In all the planets, the axes of rotation are permanent. Nothing is more probable, than that the same attracting influence, acting according to the same rule, reaches to the fixed stars: but, if this be only probable, another thing is certain, viz. that the same element of light does. The light from a fixed star affects our eyes in the same manner, is refracted and reflected according to the same laws, as the light of a candle. The velocity of the light of the fixed stars is also the same as the velocity of the light of the sun, reflected from the satellites of Jupiter. The heat of the sun, in kind, differs nothing from the heat of a coal fire.

In our own globe the case is clearer. New countries are continually discovered, but the old laws of nature are always found in them: new plants, perhaps, or animals, but always in company with plants and animals which we already know; and always possessing many of the same general properties. We never get amongst such original, or totally different modes of existence, as to indicate that we are come into the province of a different Creator, or under the direction of a different will. In truth, the same order of things attends us wherever we go. The elements act upon

one another, electricity operates, the tides rise and fall, the magnetic needle elects its position in one region of the earth and sea as well as in another. One atmosphere invests all parts of the globe, and connects all; one sun illuminates, one moon exerts its specific attraction upon all parts. If there be a variety in natural effects, as, e. g. in the tides of different seas, that very variety is the result of the same cause, acting under different circumstances. In many cases this is proved; in all, is probable.

The inspection and comparison of *living* forms add to this argument examples without number. Of all large terrestrial animals, the structure is very much alike; their senses nearly the same; their natural functions and passions nearly the same; their viscera nearly the same, both in substance, shape, and office: digestion, nutrition, circulation, secretion, go on, in a similar manner, in all: the great circulating fluid is the same; for, I think, no difference has been discovered in the properties of *blood*, from whatever animal it be drawn. The experiment of transfusion\* proves, that the blood of one animal will serve for another. The *skeletons* also of the larger terrestrial animals, show particular varieties, but still under a great general affinity. The resemblance is somewhat less, yet sufficiently evident, between quadrupeds and birds. They are all alike in five respects, for one in which they differ.

\* The experiment has been recently tried, and the principle is rendered extremely doubtful, whether the blood of one animal can be substituted for that of another. The blood of an animal of the same species may with safety be transferred into another animal of the same species; but the transfusion of the blood of an animal of different species generally proves fatal. See Dr. Blundell's experiment? on transfusion in Med. Chir. Trans, vol. ix.

In *fish*, which belong to another department, as it were, of nature, the points of comparison become fewer. But we never lose sight of our analogy, e. g. we still meet with a stomach, a liver, a spine; with bile and blood; with teeth; with eyes; (which eyes are only slightly varied from our own, and which variation, in truth, demonstrates, not an interruption, but a continuance of the same exquisite plan; for it is the adaptation of the organ to the element, viz. to the different refraction of light passing into the eye out of a denser medium.) The provinces, also, themselves of water and earth, are connected by the species of animals which inhabit both; and also by a large tribe of aquatic animals, which closely resemble the terrestrial in their internal structure; I mean the cetaceous\* tribe, which have hot blood, respiring lungs, bowels, and other essential parts, like those of land animals. This similitude, surely, bespeaks the same creation and the same Creator.

*Insects* and *shell-fish* appear to me to differ from other classes of animals the most widely of any. Yet even here, beside many points of particular resemblance, there exists a general relation of a peculiar kind. It is the relation of inversion; the law of contrariety; namely, that whereas, in other animals, the bones, to which the muscles are attached, lie *within* the body; in insects and shell-fish they lie on the *outside* of it. The shell of a lobster performs to the animal the office of a *bone*, by furnishing to the tendons that fixed basis or

\* This order consists of four genera, viz: the *narwal*, *whale*, *cachalot*, and *dolphin*; the whole of which, though inhabiting the ocean, and possessing the habits and manners *oafish*, yet from their similarity of structure, their being viviparous, and giving suck to their young, they necessarily ci with the *mammalia*.

immovable fulcrum, without which, mechanically, they could not act. The crust of an insect is its shell, and answers the like purpose. The shell also of an oyster stands in the place of a *bone*; the bases of the muscles being fixed to it, in the same manner as, in other animals, they are fixed to the bones. All which (under wonderful varieties, indeed, and adaptations of form) confesses an imitation, a remembrance, a carrying on of the same plan.\*

The observations here made are equally applicable to plants; but, I think, unnecessary to be pursued. It is a very striking circumstance, and alone sufficient to prove all which we contend for, that, in this part likewise of organized nature, we perceive a continuation of the *sexual system*.

Certain however it is, that the whole argument for the divine unity goes no farther than to a unity of counsel.

\* If we take a rapid survey of the different animated beings, we may perceive in the more perfect animals, that while the bones of the head and vertebrae are always present, particular classes and orders are destitute of clavicles, sternum, and extremities. But animals possessing a skeleton, including those of the most simple form, are few in number in comparison with those whose hard parts are connected with the integuments, as is above noticed of the lobster, etc. or form solid pieces of support, as shellfish, insects, worms, etc. These circumstances have given rise to an arrangement of animals into two grand divisions; the *vertebral* and *invertebral*; the former possessing a vertebral column of which the latter have none. The honour of forming these divisions is claimed by M. Lamark, in his "Systeme des Animaux sans Vertebres," 8vo. 1801. The vertebral animals include mammalia, birds, reptiles, and fishes; the invertebral, those which were termed by Linnaeus insects and worms.

Paley has recognized these primary divisions of the animal kingdom, and has justly observed, that the shell of the invertebral animals, and the crust of an insect, serve the purpose in the animal economy of bone, and, we would add, the additional purpose of armour, so that, as well as support, it gives protection to the softer parts. Shell is formed by successive depositions of earthy particles, with a portion of animal matter. The covering of insects has a horny character, like the nails, in which the earthy matter is almost absent.

It may likewise be acknowledged, that no arguments which we are in possession of, exclude the ministry of subordinate agents. If such there be, they act under a presiding, a controlling will; because they act according to certain general restrictions, by certain common rules, and, as it should seem, upon a general plan: but still such agents, and different ranks, and classes, and degrees of them, may be employed.

## CHAPTER XXVI.

### THE GOODNESS OF THE DEITY.

THE proof of the *divine goodness* rests upon two propositions; each, as we contend, capable of being made out by observations drawn from the appearances of nature.

The first is, "that in a vast plurality of instances in which contrivance is perceived, the design of the contrivance is *beneficial*"

The second, "that the Deity has superadded *pleasure* to animal sensations, beyond what was necessary for any other purpose, or when the purpose, so far as it was necessary, might have been effected by the operation of pain."

First, "in a vast plurality of instances in which contrivance is perceived, the design of the contrivance is *beneficial*."

No productions of nature display contrivance so manifestly as the parts of animals; and the parts of animals have all of them, I believe, a real, and, with very few exceptions, all of them a known and intelligible, subserviency to the use of the animal. Now, when the

multitude of animals is considered, the number of parts in each, their figure and fitness, the faculties depending upon them, the variety of species, the complexity of structure, the success, in so many cases, and felicity of the result, we can never reflect, without the profoundest adoration, upon the character of that Being from whom all these things have proceeded: we cannot help acknowledging, what an exertion of benevolence creation was; of a benevolence how minute in its care, how vast in its comprehension!

When we appeal to the parts and faculties of animals, and to the limbs and senses of animals in particular, we state, I conceive, the proper medium of proof for the conclusion which we wish to establish. I will not say that the insensible parts of nature are made solely for the sensitive parts; but this I say, that, when we consider the benevolence of the Deity, we can only consider it in relation to sensitive being. Without this reference, or referred to any thing else, the attribute has no object; the term has no meaning. Dead matter is nothing. The parts, therefore, especially the limbs and senses of animals, although they constitute, in mass and quantity, a small portion of the material creation, yet, since they alone are instruments of perception, they compose what may be called the whole of visible nature, estimated with a view to the disposition of its Author. Consequently, it is in *these* that we are to seek its character. It is by these that we are to prove, that the world was made with a benevolent design.

Nor is the design abortive. It is a happy world after all. The air, the earth, the water, teem with delighted existence. In a spring noon, or a summer evening, on whichever side I turn my eyes, myriads of happy beings crowd upon my view. "The insect youth are on the

wing." Swarms of new-born *flies* are trying their pinions in the air. Their sportive motions, their wanton mazes, their gratuitous activity, their continual change of place without use or purpose, testify their joy, and the exultation which they feel in their lately discovered faculties. A *bee* amongst the flowers in spring, is one of the most cheerful objects that can be looked upon. Its life appears to be all enjoyment; so busy, and so pleased: yet it is only a specimen of insect life, with which, by reason of the animal being half domesticated, we happen to be better acquainted than we are with that of others. The *whole winged* insect tribe, it is probable, are equally intent upon their proper employments, and, under every variety of constitution, gratified, and perhaps equally gratified, by the offices which the Author of their nature has assigned to them. But the atmosphere is not the only scene of enjoyment for the insect race. Plants are covered with aphides, greedily sucking their juices, and constantly, as it should seem, in the act of sucking. It cannot be doubted but that this is a state of gratification. What else should fix them so close to the operation, and so long? Other species are *running about*, with an alacrity in their motions which carries with it every mark of pleasure. Large patches of ground are sometimes half covered with these brisk and sprightly natures. If we look to what the *waters* produce, shoals of the fry offish frequent the margins of rivers, of lakes, and of the sea itself. These are so happy, that they know not what to do with themselves. Their attitudes, their vivacity, their leaps out of the water, their frolics in it, (which I have noticed a thousand times with equal attention and amusement,) all conduce to show their excess of spirits, and are simply the effects of that excess. Walking by the sea-side, in a calm evening,

upon a sandy shore, and with an ebbing tide, I have frequently remarked the appearance of a dark cloud, or, rather, very thick mist, hanging over the edge of the water, to the height, perhaps, of half a yard, and of the breadth of two or three yards, stretching along the coast as far as the eye could reach, and always retiring with the water. When this cloud came to be examined, it proved to be nothing else than so much space, filled with young *shrimps* in the act of bounding into the air from the shallow margin of the water, or from the wet sand. If any motion of a mute animal could express delight, it was this: if they had meant to make signs of their happiness, they could not have done it more intelligibly. Suppose, then, what I have no doubt of, each individual of this number to be in a state of positive enjoyment; what a sum, collectively, of gratification and pleasure have we here before our view!

The *young* of all animals appear to me to receive pleasure simply from the exercise of their limbs and bodily faculties, without reference to any end to be attained, or any use to be answered by the exertion. A child, without knowing any thing of the use of language, is in a high degree delighted with being able to speak. Its incessant repetition of a few articulate sounds, or perhaps of the single word which it has learnt to pronounce, proves this point clearly. Nor is it less pleased with its first successful endeavours to walk, or rather to run, (which precedes walking,) although entirely ignorant of the importance of the attainment to its future life, and even without applying it to any present purpose. A child is delighted with speaking, without having any thing to say; and with walking, without knowing where to go. And, prior to both these, I am disposed to believe, that the waking hours of infancy are agreeably

taken up with the exercise of vision, or perhaps, more properly speaking, with learning to see.

But it is not for youth alone that the great Parent of creation hath provided. Happiness is found with the purring cat, no less than with the playful kitten; in the arm-chair of dozing age, as well as in either the sprightliness of the dance, or the animation of the chase. To novelty, to acuteness of sensation, to hope, to ardour of pursuit, succeeds, what is, in no inconsiderable degree, an equivalent for them all, "perception of ease." Herein is the exact difference between the young and the old. The young are not happy but when enjoying pleasure; the old are happy when free from pain. And this constitution suits with the degrees of animal power which they respectively possess. The vigour of youth was to be stimulated to action by impatience of rest; whilst to the imbecility of age, quietness and repose become positive gratifications. In one important respect the advantage is with the old. A state of ease is, generally speaking, more attainable than a state of pleasure. A constitution therefore which can enjoy ease, is preferable to that which can taste only pleasure. This same perception of ease oftentimes renders old age a condition of great comfort; especially when riding at its anchor after a busy or tempestuous life. It is well described by Rousseau, to be the interval of repose and enjoyment, between the hurry and the end of life. How far the same cause extends to other animal natures cannot be judged of with certainty. The appearance of satisfaction, with which most animals, as their activity subsides, seek and enjoy rest, affords reason to believe, that this source of gratification is appointed to advanced life, under all, or most, of its various forms. In the species with which we are best acquainted,

namely, our own, I am far, even as an observer of human life, from thinking that youth is its happiest season, much less the only happy one: as a Christian, I am willing to believe that there is a great deal of truth in the following representation, given by a very pious writer, as well as an excellent man:\*

"To the intelligent and virtuous, old age presents a scene of tranquil enjoyments, of obedient appetite, of well-regulated affections, of maturity in knowledge, and of calm preparation for immortality. In this serene and dignified state, placed as it were on the confines of two worlds, the mind of a good man reviews what is past with the complacency of an approving conscience; and looks forward with humble confidence to the mercy of God, and with devout aspirations towards his eternal and ever-increasing favour."

What is seen in different stages of the same life, is still more exemplified in the lives of different animals. Animal enjoyments are infinitely *diversified*. The modes of life to which the organization of different animals respectively determines them, are not only of various but of opposite kinds. Yet each is happy in its own. For instance: animals of prey live much alone; animals of a milder constitution, in society. Yet the herring, which lives in shoals, and the sheep, which lives in flocks, are not more happy in a crowd, or more contented amongst their companions, than is the pike, or the lion, with the deep solitudes of the pool, or the forest.

But it will be said, that the instances which we have here brought forward, whether of vivacity or repose, or of apparent enjoyment derived from either, are picked and favourable instances. We answer, first, that they

\* Father's Instructions; by Dr. Percival, of Manchester, p. 317.

are instances, nevertheless, which comprise large provinces of sensitive existence; that every case which we have described, is the case of millions. At this moment, in every given moment of time, how many myriads of animals are eating their food, gratifying their appetites, ruminating in their holes, accomplishing their wishes, pursuing their pleasures, taking their pastimes! In each individual, how many things must go right for it to be at ease; yet how large a proportion out of every species is so in every assignable instant! Secondly, we contend, in the terms of our original proposition, that throughout the whole of life, as it is diffused in nature, and as far as we are acquainted with it, looking to the average of sensations, the plurality and the preponderancy is in favour of happiness by a vast excess. In our own species, in which perhaps the assertion may be more questionable than in any other, the preponency of good over evil, of health, for example, and ease, over pain and distress, is evinced by the very notice which calamities excite. What inquiries does the sickness of our friends produce! What conversation their misfortunes! This shows that the common course of things is in favour of happiness; that happiness is the rule, misery the exception. Were the order reversed, our attention would be called to examples of health and competency, instead of disease and want.

One great cause of our insensibility to the goodness of the Creator, is the very *extensiveness* of his bounty. We prize but little what we share only in common with the rest, or with the generality of our species. When we hear of blessings, we think forthwith of successes, of prosperous fortunes, of honours, riches, preferments; i. e. of those advantages and superiorities over others, which we happen either to possess, or to be in pursuit

of, or to covet. The common benefits of our nature entirely escape us. Yet these are the great things. These constitute what most properly ought to be accounted blessings of Providence; what alone, if we might so speak, are worthy of its care. Nightly rest and daily bread, the ordinary use of our limbs, and senses, and understandings, are gifts which admit of no comparison with any other. Yet, because almost every man we meet with possesses these, we leave them out of our enumeration. They raise no sentiment; they move no gratitude. Now herein is our judgment perverted by our selfishness. A blessing ought in truth to be the *more* satisfactory, the bounty at least of the donor is rendered more conspicuous, by its very diffusion, its commonness, its cheapness; by its falling to the lot, and forming the happiness, of the great bulk and body of our species, as well as of ourselves. Nay, even when we do not possess it, it ought to be matter of thankfulness that others do. But we have a different way of thinking. We court distinction. That is not the worst: we *see* nothing but what has distinction to recommend it. This necessarily contracts our views of the Creator's beneficence within a narrow compass; and most unjustly. It is in those things which are so common as to be no distinction, that the amplitude of the Divine benignity is perceived.

But pain, no doubt, and privations exist, in numerous instances, and to a degree which, collectively, would be very great, if they were compared with any other thing than with the mass of animal fruition. For the application, therefore, of our proposition to that *mixed* state of things which these exceptions induce, two rules are necessary, and both, I think, just and fair rules. One is, that we regard those effects alone which are

accompanied with proofs of intention: the other, that when we cannot resolve all appearances into benevolence of design, we make the few give place to the many; the little to the great; that we take our judgment from a large and decided preponderancy, if there be one.

I crave leave to transcribe into this place, what I have said upon this subject in my Moral Philosophy:—

"When God created the human species, either he wished their happiness, or he wished their misery, or he was indifferent and unconcerned about either.

"If he had wished our misery, he might have made sure of his purpose, by forming our senses to be so many sores and pains to us, as they are now instruments of gratification and enjoyment: or by placing us amidst objects so ill suited to our perceptions, as to have continually offended us, instead of ministering to our refreshment and delight. He might have made, for example, every thing we tasted, bitter; every thing we saw, loathsome; every thing we touched, a sting; every smell, a stench; and every sound, a discord.

"If he had been indifferent about our happiness or misery, we must impute to our good fortune (as all design by this supposition is excluded) both the capacity of our senses to receive pleasure, and the supply of external objects fitted to produce it.

"But either of these, and still more both of them, being too much to be attributed to accident, nothing remains but the first supposition, that God, when he created the human species, wished their happiness; and made for them the provision which he has made, with that view and for that purpose.

"The same argument may be proposed in different terms; *thus*: contrivance proves design; and the predominant tendency of the contrivance indicates the dis-

position of the designer. The world abounds with contrivances: and all the contrivances which we are acquainted with, are directed to beneficial purposes. Evil, no doubt, exists; but is never, that we can perceive, the *object* of contrivance. Teeth are contrived to eat, not to ache; their aching now and then is incidental to the contrivance, perhaps inseparable from it: or even, if you will, let it be called a defect in the contrivance; but it is not the object of it. This is a distinction which well deserves to be attended to. In describing implements of husbandry, you would hardly say of the sickle, that is it made to cut the reaper's hand; though, from the construction of the instrument, and the manner of using it, this mischief often follows. But if you had occasion to describe instruments of torture or execution, this engine, you would say, is to extend the sinews; this to dislocate the joints; this to break the bones; this to scorch the soles of the feet. Here pain and misery are the very objects of the contrivance. Now nothing of this sort is to be found in the works of nature. We never discover a train of contrivance to bring about an evil purpose. No anatomist ever discovered a system of organization calculated to produce pain and disease; or, in explaining the parts of the human body, ever said, this is to irritate; this to inflame; this duct is to convey the gravel to the kidneys; this gland to secrete the humour which forms the gout: if by chance he come at a part of which he knows not the use, the most he can say is, that it is useless; no one ever suspects that it is put there to inconvenience, to annoy, or to torment."

The TWO CASES which appear to me to have the most difficulty in them, as forming the most of the appearance of exception to the representation here given, are

those of *venomous* animals, and of animals *preying* upon one another. These properties of animals, wherever they are found, must, I think, be referred to design; because there is, in all cases of the first, and in most cases of the second, an express and distinct organization provided for the producing of them. Under the first head, the fangs of vipers, the stings of wasps and scorpions, are as clearly intended for their purpose, as any animal structure is for any purpose the most incontestably beneficial. And the same thing must, under the second head, be acknowledged of the talons and beaks of birds, of the tusks, teeth, and claws of beasts of prey; of the shark's mouth, of the spider's web, and of numberless weapons of offence belonging to different tribes of voracious insects. We cannot, therefore, avoid the difficulty by saying, that the effect was not intended. The only question open to us is, whether it be ultimately evil. From the confessed and felt imperfection of our knowledge, we ought to presume, that there may be consequences of this economy which are hidden from us: from the benevolence which pervades the general designs of nature, we ought also to presume, that these consequences, if they could enter into our calculation, would turn the balance on the favourable side. Both these I contend to be reasonable presumptions. Not reasonable presumptions, if these two cases were the only cases which nature presented to our observation; but reasonable presumptions under the reflection, that the cases in question are combined with a multitude of intentions, all proceeding from the same author, and all, except these, directed to ends of undisputed utility. Of the vindications, however, of this economy, which we are able to assign, such as most extenuate the difficulty, are the following.

With respect to *venomous* bites and stings, it may be observed,

1. That, the animal itself being regarded, the faculty complained of is *good*: being conducive, in all cases, to the defence of the animal; in some cases, to the subduing of its prey; and in some, probably, to the killing of it, when caught, by a mortal wound, inflicted in the passage to the stomach, which may be no less merciful to the victim than salutary to the devourer. In the viper, for instance, the poisonous fang may do that which, in other animals of prey, is done by the crush of the teeth. Frogs and mice might be swallowed alive without it.

2. But it will be said, that this provision, when it comes to the case of bites, deadly even to human bodies and to those of large quadrupeds, is greatly *overdone*; that it might have fulfilled its use, and yet have been much less deleterious than it is. Now I believe the case of bites which produce death in large animals (of stings I think there are none) to be very few. The experiments of the Abbe Fontana, which were numerous, go strongly to the proof of this point. He found that it required the action of five exasperated vipers to kill a dog of a moderate size; but that, to the killing of a mouse or a frog, a single bite was sufficient; which agrees with the use which we assign to the faculty. The abbe seemed to be of opinion, that the bite even of the rattlesnake would not usually be mortal; allowing, however, that in certain particularly unfortunate cases, as when the puncture had touched some very tender part, pricked a principal nerve for instance, or, as it is said, some more considerable lymphatic vessel, death might speedily ensue.

3. It has been, I think, very justly remarked, concerning serpents, that, whilst only a few species possess

the venomous property, that property guards the whole tribe. The most innocuous snake is avoided with as much care as a viper. Now the terror with which large animals regard this class of reptiles, is its protection; and this terror is founded on the formidable revenge which a few of the number, compared with the whole, are capable of taking. The species of serpents, described by Linnaeus, amount to two hundred and eighteen, of which thirty-two only are poisonous.

4. It seems to me, that animal constitutions are provided, not only for each element, but for each state of the elements, i. e. for every climate and for every temperature; and that part of the mischief complained of, arises from animals (the human animal most especially) occupying situations upon the earth which do not belong to them, nor were ever intended for their habitation. The folly and wickedness of mankind, and necessities proceeding from these causes, have driven multitudes of the species to seek a refuge amongst burning sands, whilst countries, blessed with hospitable skies, and with the most fertile soils, remain almost without a human tenant. We invade the territories of wild beasts and venomous reptiles, and then complain that we are infested by their bites and stings. Some accounts of Africa place this observation in a strong point of view. "The deserts," says Adanson, "are entirely barren, except where they are found to produce serpents; and in such quantities, that some extensive plains are almost entirely covered with them." These are the natures appropriated to the situation. Let them enjoy their existence; let them have their country. Surface enough will be left to man, though his numbers were increased a hundred-fold, and left to him where he might live exempt from these annoyances.

The SECOND CASE, viz. that of animals *devouring* one another, furnishes a consideration of much larger extent. To judge whether, as a general provision, this can be deemed an *evil*, even so far as we understand its consequences, which, probably, is a partial understanding, the following reflections are fit to be attended to.

1. Immortality upon this earth is out of the question. Without death there could be no generation, no sexes, no parental relation, i. e. as things are constituted, no animal happiness. The particular duration of life, assigned to different animals, can form no part of the objection; because, whatever that duration be, whilst it remains finite and limited, it may always be asked, why it is no longer. The natural age of different animals varies, from a single day to a century of years. No account can be given of this; nor could any be given, whatever other proportion of life had obtained amongst them.

The term then of life in different animals being the same as it is, the question is, what mode of taking it away is the best even for the animal itself?

Now, according to the established order of nature, (which we must suppose to prevail, or we cannot reason at all upon the subject,) the three methods by which life is usually put an end to, are acute diseases, decay, and violence. The simple and natural life of *brutes* is not often visited by acute distempers; nor could it be deemed an improvement of their lot, if they were. Let it be considered, therefore, in what a condition of suffering and misery a brute animal is placed, which is left to perish by *decay*. In human sickness or infirmity there is the assistance of man's rational fellow-creatures, if not to alleviate his pains, at least to minister to his

necessities, and to supply the place of his own activity. A brute, in his wild and natural state, does every thing for himself. When his strength, therefore, or his speed, or his limbs, or his senses fail him, he is delivered over, either to absolute famine, or to the protracted wretchedness of a life slowly wasted by the scarcity of food. Is it then to see the world filled with drooping, superannuated, half-starved, helpless, and unhelped animals, that you would alter the present system of pursuit and prey?

2. Which system is also to them the spring of motion and activity on both sides. The pursuit of its prey forms the employment, and appears to constitute the pleasure, of a considerable part of the animal creation. The using of the means of defence, or flight, or precaution, forms also the business of another part. And even of this latter tribe, we have no reason to suppose that their happiness is much molested by their fears. Their danger exists continually; and in some cases they seem to be so far sensible of it, as to provide in the best manner they can against it; but it is only when the attack is actually made upon them that they appear to suffer from it. To contemplate the insecurity of their condition with anxiety and dread, requires a degree of reflection which (happily for themselves) they do not possess. A *hare*, notwithstanding the number of its dangers and its enemies, is as playful an animal as any other.

3. But, to do justice to the question, the system of animal *destruction* ought always to be considered in strict connexion with another property of animal nature, *viz.* *superfecundity*. They are countervailing qualities. One subsists by the correction of the other. In treating, therefore, of the subject under this view, (which is, I

believe, the true one,) our business will be, first, to point out the advantages which are gained by the powers in nature of a superabundant multiplication; and then to show, that these advantages are so many reasons for appointing that system of national hostilities which we are endeavouring to account for.

In almost all cases, nature produces her supplies with profusion. A single cod-fish spawns, in one season, a greater number of eggs than all the inhabitants of England amount to. A thousand other instances of prolific generation might be stated, which, though not equal to this, would carry on the increase of the species with a rapidity which outruns calculation, and to an immeasurable extent. The advantages of such a constitution are two: first, that it tends to keep the world always full; whilst, secondly, it allows the proportion between the several species of animals to be differently modified, as different purposes require, or as different situations may afford for them room and food. Where this vast fecundity meets with a vacancy fitted to receive the species, there it operates with its whole effect; there it pours in its numbers, and replenishes the waste. We complain of what we call the exorbitant multiplication of some troublesome insects; not reflecting, that large portions of nature might be left void without it. If the accounts of travelers may be depended upon, immense tracts of forest in North America would be nearly lost to sensitive existence, if it were not for *gnats*. "In the thinly inhabited regions of America, in which the waters stagnate and the climate is warm, the whole air is filled with crowds of these insects." Thus it is, that where we looked for solitude and death-like silence, we meet with animation, activity, enjoyment; with a busy, a happy, and a peopled world. Again; hosts of *mice*

are reckoned amongst the plagues of the north-east part of Europe; whereas vast plains in Siberia, as we learn from good authority, would be lifeless without them. The Caspian deserts are converted by their presence into crowded warrens. Between the Volga and the Yaik, and in the country of Hyrcania, the ground, says Pallas, is in many places *covered* with little hills, raised by the earth cast out in forming the burrows. Do we so envy these blissful abodes, as to pronounce the fecundity by which they are supplied with inhabitants to be an evil; a subject of complaint, and not of praise? Farther; by virtue of this same superfecundity, what we term destruction, becomes almost instantly the parent of life. What we call blights, are oftentimes legions of animated beings, claiming their portion in the bounty of nature. What corrupts the produce of the earth to us, prepares it for them. And it is by means of their rapid multiplication, that they take possession of their pasture; a slow propagation would not meet the opportunity.

But in conjunction with the occasional use of this fruitfulness, we observe, also, that it allows the proportion between the several species of animals to be differently modified, as different purposes of utility may require. When the forests of America come to be cleared, and the swamps drained, our gnats will give place to other inhabitants. If the population of Europe should spread to the north and the east, the mice will retire before the husbandman and the shepherd, and yield their station to herds and flocks. In what concerns the human species, it may be a part of the scheme of Providence, that the earth should be inhabited by a shifting, or perhaps a circulating population. In this economy, it is possible that there may be the following

advantages: when old countries are become exceedingly corrupt, simpler modes of life, purer morals, and better institutions, may rise up in new ones, whilst fresh soils reward the cultivator with more plentiful returns. Thus the different portions of the globe come into use in succession as the residence of man; and, in his absence, entertain other guests, which, by their sudden multiplication, fill the chasm. In domesticated animals, we find the effect of their fecundity to be, that we can always command *numbers*; we can always have as many of any particular species as we please, or as we can support. Nor do we complain of its excess: it being much more easy to regulate abundance, than to supply scarcity.

But then this *superfecundity*, though of great occasional use and importance, exceeds the ordinary capacity of nature to receive or support its progeny. All superabundance supposes destruction, or must destroy itself. Perhaps there is no species of terrestrial animals whatever, which would not overrun the earth, if it were permitted to multiply in perfect safety; or of fish, which would not fill the ocean: at least, if any single species were left to their natural increase without disturbance or restraint, the food of other species would be exhausted by their maintenance. It is necessary, therefore, that the effects of such prolific faculties be curtailed. In conjunction with other checks and limits, all subservient to the same purpose, are the *thinnings* which take place among animals, by their action upon one another. In some instances, we ourselves experience, very directly, the use of these hostilities. One species of insects rids us of another species; or reduces their ranks. A third species, perhaps, keeps the second within bounds; and birds or lizards are a fence against

the inordinate increase by which even these last might infest us. In other, more numerous, and possibly more important instances, this disposition of things, although less necessary or useful to us, and of course less observed by us, may be necessary and useful to certain other species; or even for the preventing of the loss of certain species from the universe: a misfortune which seems to be studiously guarded against. Though there may be the appearance of failure in some of the details of Nature's works, in her great purposes there never are. Her species never fail. The provision which was originally made for continuing the replenishment of the world, has proved itself to be effectual through a long succession of ages.

What farther shows, that the system of destruction amongst animals holds an express relation to the system of fecundity, that they are parts indeed of one compensatory scheme, is, that in each species the fecundity bears a proportion to the smallness of the animal, to the weakness, to the shortness of its natural term of life, and to the dangers and enemies by which it is surrounded. An elephant produces but one calf; a butterfly lays six hundred eggs. Birds of prey seldom produce more than two eggs: the sparrow tribe, and the duck tribe, frequently sit upon a dozen. In the rivers, we meet with a thousand minnows for one pike; in the sea, a million of herrings for a single shark. Compensation obtains throughout. Defencelessness and devastation are repaired by fecundity.

We have dwelt the longer on these considerations, because the subject to which they apply, namely, that of animals *devouring* one another, forms the chief, if not the only instance, in the works of the Deity, of an economy, stamped by marks of design, in which the

character of utility can be called in question. The case of *venomous* animals is of much inferior consequence to the case of prey, and in some degree is also included under it. To both cases it is probable that many more reasons belong, than those of which we are in possession.

Our FIRST PROPOSITION, and that which we have hitherto been defending, was, "that, in a vast plurality of instances in which *contrivance* is perceived, the design of the contrivance is beneficial."

Our SECOND PROPOSITION is, "that the Deity has added *pleasure* to animal sensations, beyond what was necessary for any other purpose, or when the purpose, so far as it was necessary, might have been effected by the operation of pain."

This proposition may be thus explained. The capacities, which, according to the established course of nature, are *necessary* to the support or preservation of an animal, however manifestly they may be the result of an organization contrived for the purpose, can only be deemed an act or a part of the same will, as that which decreed the existence of the animal itself; because, whether the creation proceeded from a benevolent or a malevolent being, these capacities must have been given, if the animal existed at all. Animal properties, therefore, which fall under this description, do not strictly prove the goodness of God: they may prove the existence of the Deity; they may prove a high degree of power and intelligence: but they do not prove his goodness; forasmuch as they must have been found in any creation which was capable of continuance, although it is possible to suppose, that such a creation might have been produced by a being whose views rested upon misery.

But there is a class of properties, which may be said

to be superadded from an intention expressly directed to happiness; an intention to give a happy existence distinct from the general intention of providing the means of existence; and that is, of capacities for pleasure, in cases wherein, so far as the conservation of the individual or of the species is concerned, they were not wanted, or wherein the purpose might have been secured by the operation of pain. The provision which is made of a variety of objects, not necessary to life, and ministering only to our pleasures; and the properties given to the necessaries of life themselves, by which they contribute to pleasure as well as preservation; show a farther design than that of giving existence.\*

A single instance will make all this clear. Assuming the necessity of food for the support of animal life; it is requisite, that the animal be provided with organs, fitted for the procuring, receiving, and digesting of its food. It may also be necessary, that the animal be impelled by its sensations to exert its organs. But the pain of hunger would do all this. Why add pleasure to the act of eating; sweetness and relish to food? Why a new and appropriate sense for the perception of the pleasure? Why should the juice of a peach, applied to the palate, affect the pare so differently from what it does when rubbed upon the palm of the hand? This is a constitution which, so far as appears to me, can be resolved into nothing but the pure benevolence of the Creator. Eating is necessary; but the pleasure attending it is not necessary: and that this pleasure depends, not only upon our being in possession of the sense of taste,

\* See this topic considered in Dr. Balguy's Treatise upon the Divine Benevolence. This excellent author, first, I think, proposed it; and nearly in the terms in which it is here stated. Some other observations also under this head are taken from that Treatise. PALEY.

which is different from every other, but upon a particular state of the organ in which it resides, a felicitous adaptation of the organ to the object, will be confessed by any one, who may happen to have experienced that vitiation of taste which frequently occurs in fevers, when every taste is irregular, and every one bad.

In mentioning the gratifications of the palate, it may be said, that we have made choice of a trifling example. I am not of that opinion. They afford a share of enjoyment to man: but to brutes, I believe they are of very great importance. A horse at liberty passes a great part of his waking hours in eating. To the ox, the sheep, the deer, and other ruminating animals, the pleasure is doubled. Their whole time almost is divided between browsing upon their pasture and chewing their cud. Whatever the pleasure be, it is spread over a large portion of their existence. If there be animals, such as the lupous fish, which swallow their prey whole, and at once, without any time, as it should seem, for either drawing out, or relishing the taste in the mouth, is it an improbable conjecture, that the seat of taste with them is in the stomach? or, at least, that a sense of pleasure, whether it be taste or not, accompanies the dissolution of the food in that receptacle, which dissolution in general is carried on very slowly? If this opinion be right, they are more than repaid for the defect of the palate. The feast lasts as long as the digestion.

In seeking for argument, we need not stay to insist upon the comparative importance of our example; for the observation holds equally of all, or of three, at least, of the other senses. The necessary purposes of hearing might have been answered without harmony; of smell, without fragrance; of vision, without beauty. Now,

"if the Deity had been indifferent about our happiness or misery, we must impute to our good fortune, (as all design by this supposition is excluded,) both the capacity of our senses to receive pleasure, and the supply of external objects fitted to excite it." I allege these as *two* felicities, for they are different things, yet both necessary: the sense being formed, the objects which were applied to it might not have suited it; the objects being fixed, the sense might not have agreed with them. A coincidence is here required, which no accident can account for. There are three possible suppositions upon the subject, and no more. The first; that the sense, by its original constitution, was made to suit the object: the second; that the object, by the original constitution, was made to suit the sense: the third; that the sense is so constituted, as to be able, either universally, or within certain limits, by habit and familiarity, to render every object pleasant. Whichever of these suppositions we adopt, the effect evinces, on the part of the Author of nature, a studious benevolence. If the pleasures which we derive from any of our senses depend upon an original congruity between the sense and the properties perceived by it, we know by experience, that the adjustment demanded, with respect to the qualities which were conferred upon the objects that surround us, not only choice and selection, out of a boundless variety of possible qualities with which these objects might have been endued, but a *proportioning also of degree*, because an excess or defect of intensity spoils the perception, as much almost as an error in the kind and nature of the quality. Likewise the degree of dullness or acuteness in the sense itself is no arbitrary thing, but, in order to preserve the congruity here spoken of, requires to be in an exact or near correspondency with

the strength of the impression. The dullness of the senses forms the complaint of old age. Persons in fevers, and, I believe, in most maniacal cases, experience great torment from their preternatural acuteness. An increased, no less than an impaired sensibility, induces a state of disease and suffering.

The doctrine of a specific congruity between animal senses and their objects, is strongly favoured by what is observed of insects in the election of their food. Some of these will feed upon one kind of plant or animal, and upon no other: some caterpillars upon the cabbage alone; some upon the black currant alone. The species of caterpillar which eats the vine, will starve upon the elder; nor will that which we find upon fennel touch the rose-bush. Some insects confine themselves to two or three kinds of plants or animals. Some again show so strong a preference, as to afford reason to believe, that, though they may be driven by hunger to others, they are led by the pleasure of taste to a few particular plants alone: and all this, as it should seem, independently of habit or imitation.

But should we accept the third hypothesis, and even carry it so far, as to ascribe every thing which concerns the question to habit, (as in certain species, the human species most particularly, there is reason to attribute something,) we have then before us an animal capacity, not less perhaps to be admired than the native congruities which the other scheme adopts. It cannot be shown to result from any fixed necessity in nature, that what is frequently applied to the senses should of course become agreeable to them. It is, so far as it subsists, a power of accommodation provided in these senses by the Author of their structure, and forms a part of their perfection.

In whichever way we regard the senses, they appear to be specific gifts, ministering, not only to preservation, but to pleasure. But what we usually call the *senses*, are probably themselves far from being the only vehicles of enjoyment, or the whole of our constitution which is calculated for the same purpose. We have many internal sensations of the most agreeable kind, hardly referable to any of the five senses. Some physiologists have holden, that all secretion is pleasurable; and that the complacency which in health, without any external assignable object to excite it, we derive from life itself, is the effect of our secretions going on well within us. All this may be true; but if true, what "reason can be assigned for it, except the will of the Creator? It may reasonably be asked, why is any thing a pleasure? and I know no answer which can be returned to the question, but that which refers it to appointment.

We can give no account whatever of our pleasures in the simple and original perception; and, even when physical sensations are assumed, we can seldom account for them in the secondary and complicated shapes in which they take the name of diversions. I never yet met with a sportsman, who could tell me in what the sport consisted; who could resolve it into its principle, and state that principle. I have been a great follower of fishing myself, and in its cheerful solitude have passed some of the happiest hours of a sufficiently happy life; but, to this moment, I could never trace out the source of the pleasure which it afforded me.

The "quantum in rebus inane!" whether applied to our amusements or to our graver pursuits, (to which in truth it sometimes equally belongs,) is always an unjust complaint. If trifles engage, and if trifles make

us happy, the true reflection suggested by the experiment, is upon the tendency of nature to gratification and enjoyment; which is, in other words, the goodness of its Author towards his sensitive creation.

Rational natures also, as such, exhibit qualities which help to confirm the truth of our position. The degree of understanding found in mankind, is usually much greater than what is necessary for mere preservation. The pleasure of choosing for themselves, and of prosecuting the object of their choice, should seem to be an original source of enjoyment. The pleasures received from things, great, beautiful, or new, from imitation, or from the liberal arts, are in some measure not only superadded, but unmixed, gratifications, having no pains to balance them.\*

I do not know whether our attachment to *property* be not something more than the mere dictate of reason, or even than the mere effect of association. Property communicates a charm to whatever is the object of it. It is the first of our abstract ideas; it cleaves to us the closest and the longest. It endears to the child its plaything, to the peasant his cottage, to the landholder his estate. It supplies the place of prospect and scenery. Instead of coveting the beauty of distant situations, it teaches every man to find it in his own. It gives boldness and grandeur to plains and fens, tinge and colouring to clays and fallows.

All those considerations come in aid of our *second* proposition. The reader will now bear in mind what our two propositions were. They were, firstly, that in a vast plurality of instances, in which contrivance is perceived, the design of the contrivance is beneficial:

\* Balguy on the Divine Benevolence.

secondly, that the Deity has added pleasure to animal sensations beyond what was necessary for any other purpose; or when the purpose, so far as it was necessary, might have been effected by the operation of pain.

Whilst these propositions can be maintained, we are authorized to ascribe to the Deity the character of benevolence: and what is benevolence at all, must in him be *infinite* benevolence, by reason of the infinite, that is to say, the incalculably great, number of objects upon which it is exercised.

---

Of the ORIGIN OF EVIL, no universal solution has been discovered; I mean, no solution which reaches to all cases of complaint. The most comprehensive is that which arises from the consideration of *general rules*. We may, I think, without much difficulty, be brought to admit the four following points: first, that important advantages may accrue to the universe from the order of nature proceeding according to general laws: secondly, that general laws, however well set and constituted, often thwart and cross one another: thirdly, that from these thwartings and crossings, frequent particular inconveniences will arise: and, fourthly, that it agrees with our observation to suppose, that some degree of these inconveniences takes place in the works of nature. These points may be allowed; and it may also be asserted, that the general laws with which we are acquainted, are directed to beneficial ends. On the other hand, with many of these laws we are not acquainted at all, or we are totally unable to trace them in their branches, and in their operation; the effect of which ignorance is, that they cannot be of importance

to us as measures by which to regulate our conduct. The conservation of them may be of importance in other respects, or to other beings, but we are uninformed of their value or use; uninformed, consequently, when, and how far, they may or may not be suspended, or their effects turned aside, by a presiding and benevolent will, without incurring greater evils than those which would be avoided. The consideration, therefore, of general laws, although it may concern the question of the origin of evil very nearly, (which I think it does,) rests in views disproportionate to our faculties, and in a knowledge which we do not possess. It serves rather to account for the obscurity of the subject, than to supply us with distinct answers to our difficulties. However, whilst we assent to the above-stated propositions, as principles, whatever uncertainty we may find in the application, we lay a ground for believing, that cases of apparent evil, for which we can suggest no particular reason, are governed by reasons, which are more general, which lie deeper in the order of second causes, and which on that account are removed to a greater distance from us.

The doctrine of *imperfections*, or, as it is called, of evils of imperfection, furnishes an account, founded, like the former, in views of universal nature. The doctrine is briefly this:—It is probable, that creation may be better replenished by sensitive beings of different sorts, than by sensitive beings all of one sort. It is likewise probable, that it may be better replenished by different orders of beings rising one above another in gradation, than by beings possessed of equal degrees of perfection. Now, a gradation of such beings, implies a gradation of imperfections. No class can justly complain of the imperfections which belong to its place

in the scale, unless it were allowable for it to complain, that a scale of being was appointed in nature; for which appointment there appear to be reasons of wisdom and goodness.

In like manner, *finiteness*, or what is resolvable into finiteness, in inanimate subjects, can never be a just subject of complaint; because if it were ever so, it would be always so: we mean, that we can never reasonably demand that things should be larger or more, when the same demand might be made, whatever the quantity or number was.

And to me it seems, that the sense of mankind has so far acquiesced in these reasons, as that we seldom complain of evils of this class, when we clearly perceive them to be such. What I have to add, therefore, is, that we ought not to complain of some other evils which stand upon the same foot of vindication as evils of confessed imperfection. We never complain that the globe of our earth is too small; nor should we complain, if it were even much smaller. But where is the difference to us, between a less globe, and part of the present being uninhabitable? The inhabitants of an island may be apt enough to murmur at the sterility of some parts of it, against its rocks, or sands, or swamps; but no one thinks himself authorized to murmur, simply because the island is not larger than it is. Yet these are the same griefs.

The above are the two metaphysical answers which have been given to this great question. They are not the worse for being metaphysical, provided they be founded (which I think they are) in right reasoning: but they are of a nature too wide to be brought under our survey, and it is often difficult to apply them in the detail. Our speculations, therefore, are perhaps better

employed when they confine themselves within a narrower circle.

The observations which follow, are of this more limited, but more determinate kind.

Of *bodily pain*, the principal observation, no doubt, is that which we have already made, and already dwelt upon, viz. "that it is seldom the object of contrivance; that when it is so, the contrivance rests ultimately in good."

To which, however, may be added, that the annexing of pain to the means of destruction is a salutary provision; inasmuch as it teaches vigilance and caution; both gives notice of danger, and excites those endeavours which may be necessary to preservation. The evil consequence, which sometimes arises from the want of that timely intimation of danger which pain gives, is known to the inhabitants of cold countries by the example of frost-bitten limbs. I have conversed with patients who have lost toes and fingers by this cause. They have in general told me, that they were totally unconscious of any local uneasiness at the time. Some I have heard declare, that, whilst they were about their employment, neither their situation nor the state of the air was unpleasant. They felt no pain; they suspected no mischief; till, by the application of warmth, they discovered, too late, the fatal injury which some of their extremities had suffered. I say that this shows the use of pain, and that we stand in need of such a monitor. I believe also, that the use extends farther than we suppose, or can now trace; that to disagreeable sensations we, and all animals, owe, or have owed, many habits of action which are salutary, but which are become so familiar as not easily to be referred to their origin.

PAIN also itself is not without its *alleviations*. It may be violent and frequent; but it is seldom both violent

and long-continued; and its pauses and intermissions become positive pleasures. It has the power of shedding a satisfaction over intervals of ease, which, I believe, few enjoyments exceed. A man resting from a fit of the stone or gout, is, for the time, in possession of feelings which undisturbed health cannot impart. They may be dearly bought, but still they are to be set against the price. And indeed it depends upon the duration and urgency of the pain, whether they be dearly bought or not. I am far from being sure, that a man is not a gainer by suffering a moderate interruption of bodily ease for a couple of hours out of the four-and-twenty. Two very common observations favour this opinion: one is, that remissions of pain call forth, from those who experience them, stronger expressions of satisfaction and of gratitude towards both the author and the instruments of their relief, than are excited by advantages of any other kind: the second is, that the spirits of sick men do not sink in proportion to the acuteness of their sufferings; but rather appear to be roused and supported, not by pain, but by the high degree of comfort which they derive from its cessation, or even its subsideney, whenever that occurs; and which they taste with a relish that diffuses some portion of mental complacency over the whole of that mixed state of sensations in which disease has placed them.

In connexion with bodily pain may be considered bodily *disease*, whether painful or not. Few diseases are fatal. I have before me the account of a dispensary in the neighbourhood, which states six years' experience as follows:

Admitted .....	6420
Cured .....	5476
Dead .....	234

And this I suppose nearly to agree with what other similar institutions exhibit. Now, in all these cases, some disorder must have been felt, or the patients would not have applied for a remedy; yet we see how large a proportion of the maladies which were brought forward, have either yielded to proper treatment, or, what is more probable, ceased of their own accord. We owe these frequent recoveries, and, where recovery does not take place, this patience of the human constitution under many of the distempers by which it is visited, to two benefactions of our nature. One is, that she works within certain limits; allows of a certain latitude within which health may be preserved, and within the confines of which it only suffers a graduated diminution. Different quantities of food, different degrees of exercise, different portions of sleep, different states of the atmosphere, are compatible with the possession of health. So likewise it is with the secretions and excretions, with many internal functions of the body, and with the state, probably, of most of its internal organs. They may vary considerably, not only without destroying life, but without occasioning any high degree of inconveniency. The other property of our nature, to which we are still more beholden, is its constant endeavour to restore itself, when disordered, to its regular course. The fluids of the body appear to possess a power of separating and expelling any noxious substance which may have mixed itself with them. This they do, in eruptive fevers, by a kind of despumation, as Sydenham calls it, analogous in some measure to the intestine action by which fermenting liquors work the yeast to the surface. The solids, on their part, when their action is obstructed, not only resume that action as soon as the obstruction is removed, but they struggle

with the impediment. They take an action as near to the true one, as the difficulty and the disorganization, with which they have to contend, will allow of.

Of *mortal* diseases, the great use is to reconcile us to death. The horror of death proves the value of life. But it is in the power of disease to abate, or even extinguish, this horror; which it does in a wonderful manner, and oftentimes by a mild and imperceptible gradation. Every man who has been placed in a situation to observe it, is surprised with the change which has been wrought in himself, when he compares the view which he entertains of death upon a sick-bed, with the heart-sinking dismay with which he should some time ago have met it in health. There is no similitude between the sensations of a man led to execution, and the calm expiring of a patient at the close of his disease. Death to him is only the last of a long train of changes; in his progress through which, it is possible that he may experience no shocks or sudden transitions.

*Death* itself, as a mode of removal and of succession, is so connected with the whole order of our animal world, that almost every thing in that world must be changed, to be able to do without it. It may seem likewise impossible to separate the fear of death from the enjoyment of life, or the perception of that fear from rational natures. Brutes are, in a great measure, delivered from all anxiety on this account by the inferiority of their faculties; or, rather, they seem to be armed with the apprehension of death just sufficiently to put them upon the means of preservation, and no farther. But would a human being wish to purchase this immunity at the expense of those mental powers which enable him to look forward to the future?

Death implies *separation*: and the loss of those whom we love, must necessarily, so far as we can conceive, be accompanied with pain. To the brute creation, nature seems to have stepped in with some secret provision for their relief, under the rupture of their attachments. In their instincts towards their offspring, and of their offspring to them, I have often been surprised to observe how ardently they love, and how soon they forget. The pertinacity of human sorrow (upon which, time also, at length, lays its softening hand) is probably, therefore, in some manner connected with the qualities of our rational or moral nature. One thing however is clear, viz. that it is better that we should possess affections, the sources of so many virtues, and so many joys, although they be exposed to the incidents of life, as well as the interruptions of mortality, than, by the want of them, be reduced to a state of selfishness, apathy, and quietism.

Of other external evils, (still confining ourselves to what are called physical or natural evils,) a considerable part come within the scope of the following observation:—The great principle of human satisfaction is *engagement*. It is a most just distinction, which the late Mr. Tucker has dwelt upon so largely in his works, between pleasures in which we are passive, and pleasures in which we are active. And, I believe, every attentive observer of human life will assent to his position, that, however grateful the sensations may occasionally be in which we are passive, it is not these, but the latter class of our pleasures, which constitute satisfaction; which supply that regular stream of moderate and miscellaneous enjoyments, in which happiness, as distinguished from voluptuousness, consists. Now for rational occupation, which is, in other words, for the

very material of contented existence, there would be no place left, if either the things with which we had to do were absolutely impracticable to our endeavours, or if they were too obedient to our uses. A world, furnished with advantages on one side, and beset with difficulties, wants, and inconveniences on the other, is the proper abode of free, rational, and active natures, being the fittest to stimulate and exercise their faculties. The very *refractoriness* of the objects they have to deal with, contributes to this purpose. A world in which nothing depended upon ourselves, however it might have suited an imaginary race of beings, would not have suited mankind. Their skill, prudence, industry; their various arts, and their best attainments, from the application of which they draw, if not their highest, their most permanent gratifications, would be insignificant, if things could be either moulded by our volitions, or, of their own accord, conformed themselves to our views and wishes. Now it is in this refractoriness that we discern the seed and principle of *physical* evil, as far as it arises from that which is external to us.

*Civil* evils, or the evils of civil life, are much more easily disposed of than physical evils; because they are, in truth, of much less magnitude; and also because they result, by a kind of necessity, not only from the constitution of our nature, but from a part of that constitution which no one would wish to see altered. The case is this: Mankind will in every country *breed up* to a certain point of distress. That point may be different in different countries or ages, according to the established usages of life in each. It will also shift upon the scale, so as to admit of a greater or less number of inhabitants, according as the quantity of provision, which is either produced in the country, or

supplied to it from other countries, may happen to vary. But there must always be such a point, and the species will always breed up to it. The order of generation proceeds by something like a geometrical progression. The increase of provision, under circumstances even the most advantageous, can only assume the form of an arithmetic series. Whence it follows, that the population will always overtake the provision, will pass beyond the line of plenty, and will continue to increase till checked by the difficulty of procuring subsistence.\* Such difficulty therefore, along with its attendant circumstances, *must* be found in every old country: and these circumstances constitute what we call poverty, which necessarily imposes labour, servitude, restraint.

It seems impossible to people a country with inhabitants who shall be all easy in circumstances. For suppose the thing to be done, there would be such marrying and giving in marriage amongst them, as would in a few years change the face of affairs entirely; i. e. as would increase the consumption of those articles, which supplied the natural or habitual wants of the country, to such a degree of scarcity, as must leave the greatest part of the inhabitants unable to procure them without toilsome endeavours, or, out of the different kinds of these articles, to procure any kind except that which was most easily produced. And this, in fact, describes the condition of the mass of the community in all countries; a condition unavoidably, as it should seem, resulting from the provision which is made in the human, in common with all animal constitutions, for the perpetuity and multiplication of the species.

\* See a statement of this subject, in a late treatise upon population.

It need not however dishearten any endeavours for the public service, to know that population naturally treads upon the heels of improvement. If the condition of a people be meliorated, the consequence will be, either that the *mean* happiness will be increased, or a greater number partake of it; or which is most likely to happen, that both effects will take place together. There may be limits fixed by nature to both, but they are limits not yet attained, nor even approached, in any country of the world.

And when we speak of limits at all, we have respect only to provisions for animal wants. There are sources, and means, and auxiliaries, and augmentations of human happiness, communicable without restriction of numbers; as capable of being possessed by a thousand persons as by one. Such are those which flow from a mild, contrasted with a tyrannic government, whether civil or domestic; those which spring from religion; those which grow out of a sense of security; those which depend upon habits of virtue, sobriety, moderation, order; those, lastly, which are found in the possession of well-directed tastes and desires, compared with the dominion of tormenting, pernicious, contradictory, unsatisfied, and unsatisfiable passions.

The *distinctions* of civil life are apt enough to be regarded as evils, by those who sit under them; but, in my opinion, with very little reason.

In the first place, the advantages which the higher conditions of life are supposed to confer, bear no proportion in value to the advantages which are bestowed by nature. The gifts of nature always surpass the gifts of fortune. How much, for example, is activity better than attendance; beauty than dress; appetite, digestion, and tranquil bowels, than all the studies of cookery,

or than the most costly compilation of forced or farfetched dainties!

Nature has a strong tendency to equalisation. Habit, the instrument of nature, is a great leveller; the familiarity which it induces, taking off the edge both of our pleasures and our sufferings. Indulgences which are habitual keep us in ease, and cannot be carried much farther. So that, with respect to the gratifications of which the senses are capable, the difference is by no means proportionable to the apparatus. Nay, so far as superfluity generates fastidiousness, the difference is on the wrong side.

It is not necessary to contend, that the advantages derived from wealth are none, (under due regulations they are certainly considerable,) but that they are not greater than they ought to be. *Money* is the sweetener of human toil; the substitute for coercion; the reconciler of labour with liberty. It is, moreover, the stimulant of enterprize in all projects and undertakings, as well as of diligence in the most beneficial arts and employments. Now did affluence, when possessed, contribute nothing to happiness, or nothing beyond the mere supply of necessaries; and the secret should come to be discovered; we might be in danger of losing great part of the uses which are at present derived to us through this important medium. Not only would the tranquillity of social life be put in peril by the want of a motive to attach men to their private concerns; but the satisfaction which all men receive from success in their respective occupations, which collectively constitutes the great mass of human comfort, would be done away in its very principle.

With respect to *station*, as it is distinguished from riches, whether it confer authority over others, or be

invested with honours which apply solely to sentiment and imagination, the truth is, that what is gained by rising through the ranks of life, is not more than sufficient to draw forth the exertions of those who are engaged in the pursuits which lead to advancement, and which in general are such as ought to be encouraged. Distinctions of this sort are subjects much more of competition than of enjoyment: and in that competition their use consists. It is not, as hath been rightly observed, by what the *Lord Mayor* feels in his coach, but by what the *apprentice* feels who gazes at him, that the public is served.

As we approach the summits of human greatness, the comparison of good and evil, with respect to personal comfort, becomes still more problematical; even allowing to ambition all its pleasures. The poet asks, "What is grandeur, what is power?" The philosopher answers, "Constraint and plague: *et in maxima quaque fortuna minimum licere.*" One very common error misleads the opinion of mankind on this head, viz. that, universally, authority is pleasant, submission painful. In the general course of human affairs, the very reverse of this is nearer to the truth. Command is anxiety, obedience ease.

Artificial distinctions sometimes promote real equality. Whether they be hereditary, or be the homage paid to office, or the respect attached by public opinion to particular professions, they serve to *confront* that grand and unavoidable distinction which arises from property, and which is most overbearing where there is no other. It is of the nature of property, not only to be irregularly distributed, but to run into large masses. Public laws should be so constructed as to favour its diffusion as much as they can. But all that can be done by laws,

consistently with that degree of government of his property which ought to be left to the subject, will not be sufficient to counteract this tendency. There must always therefore be the difference between rich and poor; and this difference will be the more grinding, when no pretension is allowed to be set up against it.

So that the evils, if evils they must be called, which spring either from the necessary subordinations of civil life, or from the distinctions which have naturally, though not necessarily, grown up in most societies, so long as they are unaccompanied by privileges injurious or oppressive to the rest of the community, are such as may, even by the most depressed ranks, be endured with very little prejudice to their comfort.

The mischiefs of which mankind are the occasion to one another, by their private wickedness, and cruelties; by tyrannical exercises of power; by rebellions against just authority; by wars; by national jealousies and competitions operating to the destruction of third countries; or by other instances of misconduct either in individuals or societies, are all to be resolved into the character of man as a *free agent*. Free agency, in its very essence, contains liability to abuse. Yet if you deprive man of his free agency, you subvert his nature. You may have order from him and regularity, as you may from the tides or the trade-winds, but you put an end to his moral character, to virtue, to merit, to accountableness, to the use indeed of reason. To which must be added the observation, that even the bad qualities of mankind have an origin in their good ones. The case is this: Human passions are either necessary to human welfare, or capable of being made, and, in a great majority of instances, in fact made conducive to its happiness. These passions are strong and general; and perhaps

would not answer their purpose unless they were so. But strength and generality, when it is expedient that particular circumstances should be respected, become, if left to themselves, excess and misdirection. From which excess and misdirection, the vices of mankind (the causes no doubt of much misery) appear to spring. This account, whilst it shows us the principle of vice, shows us, at the same time, the province of reason and of self-government; the want also of every support which can be procured to either from the aids of religion; and it shows this, without having recourse to any native gratuitous malignity in the human constitution. Mr. Hume, in his posthumous dialogues, asserts indeed of *idleness*, or aversion to labour, (which he states to lie at the root of a considerable part of the evils which mankind suffer,) that it is simply and merely bad. But how does he distinguish idleness from the love of ease? Or is he sure, that the love of ease in individuals is not the chief foundation of social tranquillity. It will be found, I believe, to be true, that in every community there is a large class of its members, whose idleness is the best quality about them, being the corrective of other bad ones. If it were possible, in every instance, to give a right determination to industry, we could never have too much of it. But this is not possible, if men are to be free. And without this, nothing would be so dangerous as an incessant, universal, indefatigable activity. In the civil world, as well as in the material, it is the *vis inertiae* which keeps things in their places.

---

NATURAL THEOLOGY has ever been pressed with this question: Why, under the regency of a supreme and

benevolent Will, should there be, in the world, so much as there is of the appearance of *chance*?

The question in its whole compass lies beyond our reach: but there are not wanting, as in the origin of evil, answers which seem to have considerable weight in particular cases, and also to embrace a considerable number of cases.

I. There must be *chance* in the midst of design: by which we mean, that events which are not designed necessarily arise from the pursuit of events which are designed. One man travelling to York, meets another man travelling to London. Their meeting is by chance, is accidental, and so would be called and reckoned, though the journeys which produced the meeting were, both of them, undertaken with design and from deliberation. The meeting, though accidental, was nevertheless hypothetically necessary, (which is the only sort of necessity that is intelligible;) for, if the two journeys were commenced at the time, pursued in the direction, and with the speed, in which and with which they were in fact begun and performed, the meeting could not be avoided. There was not, therefore, the less necessity in it for its being by chance. Again, the encounter might be most unfortunate, though the errands, upon which each party set out upon his journey, were the most innocent or the most laudable. The bye effect may be unfavourable, without impeachment of the proper purpose, for the sake of which the train, from the operation of which these consequences ensued, was put in motion. Although no cause acts without a good purpose, accidental consequences, like these, may be either good or bad.

II. The appearance of *chance* will always bear a proportion to the ignorance of the observer. The cast

of a die as regularly follows the laws of motion, as the going of a watch; yet because we can trace the operation of those laws through the works and movements of the watch, and cannot trace them in the shaking and throwing of the die, (though the laws be the same, and prevail equally in both cases,) we call the turning up of the number of the die, chance; the pointing of the index of the watch, machinery, order, or by some name which excludes chance. It is the same in those events which depend upon the will of a free and rational agent. The verdict of a jury, the sentence of a judge, the resolution of an assembly, the issue of a contested election, will have more or less of the appearance of chance, might be more or less the subject of a wager, according as we were less or more acquainted with the reasons which influenced the deliberation. The difference resides in the information of the observer, and not in the thing itself; which, in all the cases proposed, proceeds from intelligence, from mind, from counsel, from design.

Now when this one cause of the appearance of chance, viz. the ignorance of the observer, comes to be applied to the operations of the Deity, it is easy to foresee how fruitful it must prove of difficulties, and of seeming confusion. It is only to think of the Deity, to perceive what variety of objects, what distance of time, what extent of space and action, his counsels may, or rather must, comprehend. Can it be wondered at, that, of the purposes which dwell in such a mind as this, so small a part should be known to us? It is only necessary, therefore, to bear in our thought, that in proportion to the inadequateness of our information, will be the quantity, in the world, of apparent chance.

III. In a great variety of cases, and of cases comprehending numerous subdivisions, it appears, for many

reasons, to be better that events rise up by *chance*, or, more properly speaking, with the appearance of chance, than according to any observable rule whatever. This is not seldom the case even in human arrangements. Each person's place and precedence in a public meeting may be determined by *lot*. Work and labour may be *allotted*. Tasks and burdens may be *allotted*:—

Operumque labore  
Partibus aequabat justis, aut *sorte* trahebat.

Military service and station may be *allotted*. The distribution of provision may be made by *lot*, as it is in a sailor's mess; in some cases, also, the distribution of favours may be made by *lot*. In all these cases, it seems to be acknowledged, that there are advantages in permitting events to chance, superior to those which would or could arise from regulation. In all these cases, also, though events rise up in the way of chance, it is by appointment that they do so.

In other events, and such as are independent of human will, the reasons for this preference of uncertainty to rule appear to be still stronger. For example: it seems to be expedient that the period of human life should be *uncertain*. Did mortality follow any fixed rule, it would produce a security in those that were at a distance from it, which would lead to the greatest disorders; and a horror in those who approached it, similar to that which a condemned prisoner feels on the night before his execution. But, that death be uncertain, the young must sometimes die, as well as the old. Also, were deaths never *sudden*, they who are in health would be too confident of life. The strong and the active, who want most to be warned and checked, would live without apprehension or restraint. On the

other hand, were sudden deaths very frequent, the sense of constant jeopardy would interfere too much with the degree of ease and enjoyment intended for us, and human life be too precarious for the business and interest which belong to it. There could not be dependence either upon our own lives, or the lives of those with whom we are connected, sufficient to carry on the regular offices of human society. The manner, therefore, in which death is made to occur, conduces to the purposes of admonition, without overthrowing the necessary stability of human affairs.

*Disease* being the forerunner of death, there is the same reason for its attacks coming upon us under the appearance of chance, as there is for uncertainty in the time of death itself.

The *seasons* are a mixture of regularity and chance. They are regular enough to authorize expectation, whilst their being in a considerable degree irregular, induces, on the part of the cultivators of the soil, a necessity for personal attendance, for activity, vigilance, precaution. It is this necessity which creates farmers; which divides the profit of the soil between the owner and the occupier; which, by requiring expedients, by increasing employment, and by rewarding expenditure, promotes agricultural arts and agricultural life, of all modes of life the best, being the most conducive to health, to virtue, to enjoyment. I believe it to be found in fact, that where the soil is the most fruitful, and the seasons the most constant, there the condition of the cultivators of the earth is the most depressed. Uncertainty, therefore, has its use, even to those who sometimes complain of it the most. Seasons of scarcity themselves are not without their advantages. They call forth new exertions; they set contrivance and ingenuity

at work; they give birth to improvements in agriculture and economy; they promote the investigation and management of public resources.

Again; there are strong intelligible reasons, why there should exist in human society great disparity of *wealth* and *station*; not only as these things are acquired in different degrees, but at the first setting out of life. In order, for instance, to answer the various demands of civil life, there ought to be amongst the members of every civil society a diversity of education, which can only belong to an original diversity of circumstances. As this sort of disparity, which ought to take place from the beginning of life, must, *ex hypothesi*, be previous to the merit or demerit of the persons upon whom it falls, can it be better disposed of than by chance? *Parentage* is that sort of chance: yet it is the commanding circumstance which in general fixes each man's place in civil life, along with every thing which appertains to its distinctions. It may be the result of a beneficial rule, that the fortunes or honours of the father devolve upon the son; and, as it should seem, of a still more necessary rule, that the low or laborious condition of the parent be communicated to his family; but with respect to the successor himself, it is the drawing of a ticket in a lottery. Inequalities therefore of fortune, at least the greatest part of them, viz. those which attend us from our birth, and depend upon our birth, may be left, as they are left, to *chance*, without any just cause for questioning the regency of a supreme Disposer of events.

But not only the donation, when by the necessity of the case they must be gifts, but even the *acquirability* of civil advantages, ought perhaps, in a considerable degree, to lie at the mercy of chance. Some would

have all the virtuous rich, or at least removed from the evils of poverty, without perceiving, I suppose, the consequence, that all the poor must be wicked. And how such a society could be kept in subjection to government, has not been shown: for the poor, that is, they who seek their subsistence by constant manual labour, must still form the mass of the community; otherwise the necessary labour of life could not be carried on; the work could not be done, which the wants of mankind, in a state of civilization, and still more in a state of refinement, require to be done.

It appears to be also true, that the exigencies of social life call not only for an original diversity of *external* circumstances, but for a mixture of different faculties, tastes, and tempers. Activity and contemplation, restlessness and quiet, courage and timidity, ambition and contentedness, not to say even indolence and dullness, are all wanted in the world, all conduce to the well going on of human affairs, just as the rudder, the sails, and the ballast of a ship, all perform their part in the navigation. Now, since these characters require for their foundation different original talents, different dispositions, perhaps also different bodily constitutions; and since, likewise, it is apparently expedient, that they be promiscuously scattered amongst the different classes of society; can the distribution of talents, dispositions, and the constitutions upon which they depend, be better made than by *chance*?

The *opposites* of apparent chance are, constancy and sensible interposition; every degree of *secret* direction being consistent with it. Now, of *constancy*, or of fixed and known rules, we have seen in some cases the inapplicability; and inconveniences which we do not see, might attend their application in other cases.

Of *sensible* interposition we may be permitted to remark, that a Providence, always and certainly distinguishable, would be neither more nor less than miracles rendered frequent and common. It is difficult to judge of the state into which this would throw us. It is enough to say, that it would cast us upon a quite different dispensation from that under which we live. It would be a total and radical change. And the change would deeply affect, or perhaps subvert, the whole conduct of human affairs. I can readily believe, that, other circumstances being adapted to it, such a state might be better than our present state. It may be the state of other beings; it may be ours hereafter. But the question with which we are now concerned is, how far it would be consistent with our condition, supposing it in other respects to remain as it is? And in this question there seem to be reasons of great moment on the negative side. For instance; so long as bodily labour continues, on so many accounts, to be necessary for the bulk of mankind, any dependency upon a supernatural aid, by unfixing those motives which promote exertion, or by relaxing those habits which engender patient industry, might introduce negligence, inactivity, and disorder, into the most useful occupations of human life; and thereby deteriorate the condition of human life itself.

As moral agents, we should experience a still greater alteration; of which, more will be said under the next article.

Although therefore the Deity, who possesses the power of winding and turning, as he pleases, the course of causes which issue from himself, do in fact interpose to alter or intercept effects, which without such interposition would have taken place; yet it is by no means

incredible, that his Providence, which always rests upon final good, may have made a *reserve* with respect to the manifestation of his interference, a part of the very plan which he has appointed for our terrestrial existence, and a part conformable with, or in some sort required by, other parts of the same plan. It is at any rate evident, that a large and ample province remains for the exercise of Providence, without its being naturally perceptible by us; because obscurity, when applied to the interruption of laws, bears a necessary proportion to the imperfection of our knowledge when applied to the laws themselves, or rather to the effects which these laws, under their various and incalculable combinations, would of their own accord produce. And if it be said, that the doctrine of Divine Providence, by reason of the ambiguity under which its exertions present themselves, can be attended with no *practical* influence upon our conduct; that, although we believe ever so firmly that there is a Providence, we must prepare, and provide, and act, as if there were none: I answer, that this is admitted; and that we farther allege, that so to prepare, and so to provide, is consistent with the most perfect assurance of the reality of a Providence; and not only so, but that it is probably one advantage of the present state of our information, that our provisions and preparations are not disturbed by it. Or if it be still asked, Of what use at all then is the doctrine, if it neither alter our measures nor regulate our conduct? I answer again, that it is of the greatest use, but that it is a doctrine of sentiment and piety, not (immediately at least) of action or conduct; that it applies to the consolation of men's minds, to their devotions, to the excitement of gratitude, the support of patience, the keeping alive and the strengthening of every motive for

endeavouring to please our Maker; and that these are great uses.

OF ALL VIEWS under which human life has ever been considered, the most reasonable, in my judgment, is that which regards it as a state of *probation*. If the course of the world was separated from the contrivances of nature, I do not know that it would be necessary to look for any other account of it than what, if it may be called an account, is contained in the answer, that events rise up by chance. But since the contrivances of nature decidedly evince *intention*, and since the course of the world and the contrivances of nature have the same author, we are, by the force of this connexion, led to believe, that the appearance under which events take place is reconcilable with the supposition of design on the part of the Deity. It is enough that they be reconcilable with this supposition; and it is undoubtedly true, that they may be reconcilable, though we cannot reconcile them. The mind, however, which contemplates the works of nature, and in those works sees so much of means directed to ends, of beneficial effects brought about by wise expedients, of concerted trains of causes terminating in the happiest results; so much, in a word, of counsel, intention, and benevolence; a mind, I say, drawn into the habit of thought which these observations excite, can hardly turn its view to the condition of our own species, without endeavouring to suggest to itself some purpose, some design, for which the state in which we are placed is fitted, and which it is made to serve. Now we assert the most probable supposition to be, that it is a state of moral probation; and that many things in it suit with this hypothesis, which suit no other. It is not a state of unmixed happiness, or of happiness simply; it is not a

state of designed misery, or of misery simply: it is not a state of retribution; it is not a state of punishment. It suits with none of these suppositions. It accords much better with the idea of its being a condition calculated for the production, exercise, and improvement of moral qualities, with a view to a future state, in which these qualities, after being so produced, exercised, and improved, may, by a new and more favouring constitution of things, receive their reward, or become their own. If it be said, that this is to enter upon a religious rather than a philosophical consideration; I answer, that the name of Religion ought to form no objection, if it shall turn out to be the case, that the more religious our views are, the more probability they contain. The degree of beneficence, of benevolent intention, and of power, exercised in the construction of sensitive beings, goes strongly in favour, not only of a creative, but of a continuing care, that is, of a ruling Providence. The degree of chance which appears to prevail in the world requires to be reconciled with this hypothesis. Now it is one thing to maintain the doctrine of Providence along with that of a future state, and another thing without it. In my opinion, the two doctrines must stand or fall together. For although more of this apparent chance may perhaps, upon other principles, be accounted for than is generally supposed, yet a future state alone rectifies all disorders: and if it can be shown, that the appearance of disorder is consistent with the uses of life as a *preparatory* state, or that in some respects it promotes these uses, then, so far as this hypothesis may be accepted, the ground of the difficulty is done away.

In the wide scale of human condition, there is not perhaps one of its manifold diversities which does not bear

upon the design here suggested. Virtue is infinitely various. There is no situation in which a rational being is placed, from that of the best-instructed Christian down to the condition of the rudest barbarian, which affords not room for moral agency; for the acquisition, exercise, and display of voluntary qualities, good and bad. Health and sickness, enjoyment and suffering, riches and poverty, knowledge and ignorance, power and subjection, liberty and bondage, civilization and barbarity, have all their offices and duties, all serve for the *formation* of character: for when we speak of a state of trial, it must be remembered, that characters are not only tried, or proved, or detected, but that they are generated also, and *formed* by circumstances. The best dispositions may subsist under the most depressed, the most afflicted fortunes. A West-Indian slave, who, amidst his wrongs, retains his benevolence, I, for my part, look upon as amongst the foremost of human candidates for the rewards of virtue. The kind master of such a slave, that is, he who, in the exercise of an inordinate authority, postpones in any degree his own interest to his slave's comfort, is likewise a meritorious character: but still he is inferior to his slave. All however which I contend for is, that these destinies, opposite as they may be in every other view, are both *trials*; and equally such. The observation may be applied to every other condition; to the whole range of the scale, not excepting even its lowest extremity. *Savages* appear to us all alike; but it is owing to the distance at which we view savage life, that we perceive in it no discrimination of character. I make no doubt, but that moral qualities, both good and bad, are called into action as much, and that they subsist in as great variety in these inartificial societies, as they are, or do, in polished life. Certain at least it is,

that the good and ill treatment which each individual meets with, depends more upon the choice and voluntary conduct of those about him, than it does, or ought to do, under regular civil institutions, and the coercion of public laws. So again, to turn our eyes to the other end of the scale, namely, that part of it which is occupied by mankind enjoying the benefits of learning, together with the lights of revelation there also, the advantage is all along *probationary*. Christianity itself, I mean the revelation of Christianity, is not only a blessing, but a trial. It is one of the diversified means by which the character is exercised: and they who require of Christianity, that the revelation of it should be universal, may possibly be found to require, that one species of probation should be adopted, if not to the exclusion of others, at least to the narrowing of that variety which the wisdom of the Deity hath appointed to this part of his moral economy.\*

Now if this supposition be well founded; that is, if it be true that our ultimate, or our most permanent happiness will depend, not upon the temporary condition into which we are cast, but upon our behaviour in it; then is it a much more fit subject of *chance* than we usually allow or apprehend it to be, in what manner the variety of external circumstances which subsist in the human world is distributed amongst the individuals of the species. "This life being a state of probation, it is

\* The reader will observe, that I speak of the revelation of Christianity as distinct from Christianity itself. The *dispensation* may already be universal. That part of mankind which never heard of Christ's name, may nevertheless be redeemed; that is, be placed in a better condition, with respect to their future state, by his intervention; may be the objects of his benignity and intercession, as well as of the propitiatory virtue of his passion. But this is not "natural theology;" therefore I will not dwell longer upon it. PALEY.

immaterial," says Rousseau, "what kind of trials we experience in it, provided they produce their effects." Of two agents who stand indifferent to the moral Governor of the universe, one may be exercised by riches, the other by poverty. The treatment of these two shall appear to be very opposite, whilst in truth it is the same: for though, in many respects, there be great disparity between the conditions assigned, in one main article there may be none, viz. in that they are alike trials; have both their duties and temptations, not less arduous or less dangerous in one case than the other; so that if the final award follow the character, the original distribution of the circumstances under which that character is formed, may be defended upon principles not only of justice but of equality. What hinders, therefore, but that mankind may draw lots for their condition? They take their portion of faculties and opportunities, as any unknown cause, or concourse of causes, or as causes acting for other purposes, may happen to set them out: but the event is governed by that which depends upon themselves, the application of what they have received. In dividing the talents, no rule was observed; none was necessary: in rewarding the use of them, that of the most correct justice. The chief difference at last appears to be, that the right use of more talents, i. e. of a greater trust, will be more highly rewarded, than the right use of fewer talents, i. e. of a less trust. And since, for other purposes, it is expedient that there be an inequality of concredited talents here, as well, probably, as an inequality of conditions hereafter, though all remuneratory; can any rule, adapted to that inequality, be more agreeable, even to our apprehensions of distributive justice, than this is? We have said, that the appearance of *casualty*, which

attends the occurrences and events of life, not only does not interfere with its uses, as a state of probation, but that it promotes these uses.

*Passive* virtues, of all others the severest, and the most sublime—of all others, perhaps, the most acceptable to the Deity—would, it is evident, be excluded from a constitution in which happiness and misery regularly followed virtue and vice. Patience and composure under distress, affliction, and pain; a steadfast keeping up of our confidence in God, and of our reliance upon his final goodness, at the time when every thing present is adverse and discouraging; and (what is no less difficult to retain) a cordial desire for the happiness of others, even when we are deprived of our own: these dispositions, which constitute, perhaps, the perfection of our moral nature, would not have found their proper office and object in a state of avowed retribution; and in which, consequently, endurance of evil would be only submission to punishment.

Again; one man's sufferings may be another man's trial. The family of a sick parent is a school of filial piety. The charities of domestic life, and not only these, but all the social virtues, are called out by distress. But then, misery, to be the proper object of mitigation, or of that benevolence which endeavours to relieve, must be really or apparently casual. It is upon such sufferings alone that benevolence can operate. For were there no evils in the world, but what were punishments, properly and intelligibly such, benevolence would only stand in the way of justice. Such evils, consistently with the administration of moral government, could not be prevented or alleviated; that is to say, could not be remitted in whole or in part, except by the authority which inflicted them, or by an appellate or superior au-

thority. This consideration, which is founded in our most acknowledged apprehensions of the nature of penal justice, may possess its weight in the Divine counsels. Virtue perhaps is the greatest of all ends. In human beings, relative virtues form a large part of the whole. Now relative virtue presupposes, not only the existence of evil, without which it could have no object, no material to work upon, but that evils be, apparently at least, *misfortunes*; that is, the effects of apparent chance. It may be in pursuance, therefore, and in furtherance of the same scheme of probation, that the evils of life are made so to present themselves.

I have already observed, that when we let in religious considerations, we often let in light upon the difficulties of nature. So in the fact now to be accounted for, the *degree* of happiness, which we usually enjoy in this life, may be better suited to a state of trial and probation, than a greater degree would be. The truth is, we are rather too much delighted with the world, than too little. Imperfect, broken, and precarious as our pleasures are, they are more than sufficient to attach us to the eager pursuit of them. A regard to a *future* state can hardly keep its place as it is. If we were designed, therefore, to be influenced by that regard, might not a more indulgent system, a higher or more uninterrupted state of gratification, have interfered with the design? At least it seems expedient, that mankind should be susceptible of this influence, when presented to them: that the condition of the world should not be such as to exclude its operation, or even to weaken it more than it does. In a religious view, (however we may complain of them in every other,) privation, disappointment, and satiety, are not without the most salutary tendencies.

## CHAPTER XXVII.

## CONCLUSION.

IN all cases, wherein the mind feels itself in danger of being confounded by variety, it is sure to rest upon a few strong points, or perhaps upon a single instance. Amongst a multitude of proofs, it is *one* that does the business. If we observe in any argument, that hardly two minds fix upon the same instance, the diversity of choice shows the strength of the argument, because it shows the number and competition of the examples. There is no subject in which the tendency to dwell upon select or single topics is so usual, because there is no subject, of which, in its full extent, the latitude is so great, as that of natural history applied to the proof of an intelligent Creator. For my part, I take my stand in human anatomy; and the examples of mechanism I should be apt to draw out from the copious catalogue which it supplies, are the pivot upon which the head turns, the ligament within the socket of the hip-joint, the pulley or trochlear muscles of the eye, the epiglottis, the bandages which tie down the tendons of the wrist and instep, the slit or perforated muscles at the hands and feet, the knitting of the intestines to the mesentery, the course of the chyle into the blood, and the constitution of the sexes as extended throughout the whole of the animal creation. To these instances the reader's memory will go back, as they are severally set forth in their places; there is not one of the number which I do not think decisive; not one which is not strictly mechanical: nor have I read or heard of any solution

of these appearances, which, in the smallest degree, shakes the conclusion that we build upon them.

But of the greatest part of those who, either in this book or any other, read arguments to prove the existence of a God, it will be said, that they leave off only where they began; that they were never ignorant of this great truth, never doubted of it; that it does not therefore appear, what is gained by researches from which no new opinion is learned, and upon the subject of which no proofs were wanted. Now I answer, that, by *investigation*, the following points are always gained, in favour of doctrines even the most generally acknowledged, (supposing them to be true,) viz. stability and impression. Occasions will arise to try the firmness of our most habitual opinions. And upon these occasions, it is a matter of incalculable use to feel our foundation; to find a support in argument for what we had taken up upon authority. In the present case, the arguments upon which the conclusion rests, are exactly such as a truth of universal concern ought to rest upon. "They are sufficiently open to the views and capacities of the unlearned, at the same time that they acquire new strength and lustre from the discoveries of the learned." If they had been altogether abstruse and recondite, they would not have found their way to the understandings of the mass of mankind; if they had been merely popular, they might have wanted solidity.

But, secondly, what is gained by research in the stability of our conclusion, is also gained from it in *impression*. Physicians tell us, that there is a great deal of difference between taking a medicine, and the medicine getting into the constitution. A difference not unlike which, obtains with respect to those great moral

propositions, which ought to form the directing principles of human conduct. It is one thing to assent to a proposition of this sort; another, and a very different thing, to have properly imbibed its influence. I take the case to be this: perhaps almost every man living has a particular train of thought, into which his mind glides and falls, when at leisure from the impressions and ideas that occasionally excite it; perhaps, also, the train of thought here spoken of, more than any other thing, determines the character. It is of the utmost consequence, therefore, that this property of our constitution be well regulated. Now it is by frequent or continued meditation upon a subject, by placing a subject in different points of view, by induction of particulars, by variety of examples, by applying principles to the solution of phenomena, by dwelling upon proofs and consequences, that mental exercise is drawn into any particular channel. It is by these means, at least, that we have any power over it. The train of spontaneous thought, and the choice of that train, may be directed to different ends, and may appear to be more or less judiciously fixed, according to the purpose in respect of which we consider it: but, in a *moral view*, I shall not, I believe, be contradicted, when I say, that, if one train of thinking be more desirable than another, it is that which regards the phenomena of nature with a constant reference to a supreme intelligent Author. To have made this the ruling, the habitual sentiment of our minds, is to have laid the foundation of every thing which is religious. The world thenceforth becomes a temple, and life itself one continued act of adoration. The change is no less than this; that whereas formerly God was seldom in our thoughts, we can now scarcely look upon any thing without perceiving its relation to

to him. Every organized natural body, in the provisions which it contains for its sustentation and propagation, testifies a care, on the part of the Creator, expressly directed to these purposes. We are on all sides surrounded by such bodies; examined in their parts, wonderfully curious; compared with one another, no less wonderfully diversified. So that the mind, as well as the eye, may either expatiate in variety and multitude, or fix itself down to the investigation of particular divisions of the science. And in either case it will rise up from its occupation, possessed by the subject, in a very different manner, and with a very different degree of influence, from what a mere assent to any verbal proposition which can be formed concerning the existence of the Deity, at least that merely complying assent with which those about us are satisfied, and with which we are too apt to satisfy ourselves, will or can produce upon the thoughts. More especially may this difference be perceived, in the degree of admiration and of awe with which the Divinity is regarded, when represented to the understanding by its own remarks, its own reflections, and its own reasonings, compared with what is excited by any language that can be used by others. The works of nature want only to be contemplated. When contemplated, they have every thing in them which can astonish by their greatness: for, of the vast scale of operation through which our discoveries carry us, at one end we see an intelligent Power arranging planetary systems, fixing, for instance, the trajectory of *Saturn*, or constructing a ring of two hundred thousand miles diameter to surround his body, and be suspended like a magnificent arch over the heads of his inhabitants; and, at the other, bending a hooked tooth,concerting and providing an appropriate mechanism, for the clasping

and reclasping of the filaments of the feather of the humming-bird. We have proof, not only of both these works proceeding from an intelligent agent, but of their proceeding from the same agent: for, in the first place, we can trace an identity of plan, a connexion of system, from Saturn to our own globe; and when arrived upon our globe, we can, in the second place, pursue the connexion through all the organized, especially the animated, bodies which it supports. We can observe marks of a common relation, as well to one another, as to the elements of which their habitation is composed. Therefore one mind hath planned, or at least hath prescribed, a general plan for all these productions. One Being has been concerned in all.

Under this stupendous Being we live. Our happiness, our existence, is in his hands. All we expect must come from him. Nor ought we to feel our situation insecure. In every nature, and in every portion of nature, which we can descry, we find attention bestowed upon even the minutest parts. The hinges in the wings of an *earwig*, and the joints of its antennae, are as highly wrought, as if the Creator had nothing else to finish. We see no signs of diminution of care by multiplicity of objects, or of distraction of thought by variety. We have no reason to fear, therefore, our being forgotten, or overlooked, or neglected.

The existence and character of the Deity is, in every view, the most interesting of all human speculations. In none, however, is it more so, than as it facilitates the belief of the fundamental articles of *Revelation*. It is a step to have it proved, that there must be something in the world more than what we see. It is a farther step to know, that, amongst the invisible things of nature, there must be an intelligent mind, concerned in its production,

order, and support. These points being assured to us by Natural Theology, we may well leave to Revelation the disclosure of many particulars, which our researches cannot reach, respecting either the nature of this Being as the original cause of all things, or his character and designs as a moral governor; and not only so, but the more full confirmation of other particulars, of which, though they do not lie altogether beyond our reasonings, and our probabilities, the certainty is by no means equal to the importance. The true theist will be the first to listen to *any* credible communication of Divine knowledge. Nothing which he has learned from Natural Theology will diminish his desire of farther instruction, or his disposition to receive it with humility and thankfulness. He wishes for light: he rejoices in light. His inward veneration of this great Being will incline him to attend with the utmost seriousness, not only to all that can be discovered concerning him by researches into nature, but to all that is taught by a revelation, which gives reasonable proof of having proceeded from him.

But above every other article of revealed religion, does the anterior belief of a Deity bear with the strongest force upon that grand point, which gives indeed interest and importance to all the rest—the resurrection of the human dead. The thing might appear hopeless, did we not see a power at work adequate to the effect, a power under the guidance of an intelligent will, and a power penetrating the inmost recesses of all substance. I am far from justifying the opinion of those, who "thought it a thing incredible that God should raise the dead:" but I admit, that it is first necessary to be persuaded, that there *is* a God to do so. This being thoroughly settled in our minds, there seems to be nothing in this process (concealed as

we confess it to be) which need to shock our belief. They who have taken up the opinion, that the acts of the human mind depend upon *organization*, that the mind itself indeed consists in organization, are supposed to find a greater difficulty than others do, in admitting a transition by death to a new state of sentient existence, because the old organization is apparently dissolved. But I do not see that any impracticability need be apprehended even by these; or that the change, even upon their hypothesis, is far removed from the analogy of some other operations, which we know with certainty that the Deity is carrying on. In the ordinary derivation of plants and animals from one another, a particle, in many cases, minuter than all assignable, all conceivable dimension—an aura, an effluvium, an infinitesimal—determines the organization of a future body; does no less than fix, whether that which is about to be produced shall be a vegetable, a merely sentient, or a rational being; an oak, a frog, or a philosopher; makes all these differences; gives to the future body its qualities, and nature, and species. And this particle, from which springs, and by which is determined a whole future nature, itself proceeds from, and owes its constitution to, a prior body; nevertheless, which is seen in plants most decisively, the incepted organization, though formed within, and through, and by a preceding organization, is not corrupted by its corruption, or destroyed by its dissolution: but, on the contrary, is sometimes extricated and developed by those very causes; survives and comes into action, when the purpose for which it was prepared requires its use. Now an economy which nature has adopted, when the purpose was to transfer an organization from one individual to another, may have something analogous to

it, when the purpose is to transmit an organization from one state of being to another state: and they who found thought in organization, may see something in this analogy applicable to their difficulties; for whatever can transmit a similarity of organization will answer their purpose, because, according even to their own theory, it may be the vehicle of consciousness; and because consciousness carries identity and individuality along with it through all changes of form or of visible qualities. In the most general case, that, as we have said, of the derivation of plants and animals from one another, the latent organization is either itself similar to the old organization, or has the power of communicating to new matter the old organic form. But it is not restricted to this rule. There are other cases, especially in the progress of insect life, in which the dormant organization does not much resemble that which encloses it, and still less suits with the situation in which the enclosing body is placed, but suits with a different situation to which it is destined. In the larva of the libellula, which lives constantly, and has still long to live, under water, are descried the wings of a fly, which two years afterwards is to mount into the air. Is there nothing in this analogy? It serves at least to show, that even in the observable course of nature, organizations are formed one beneath another; and, amongst a thousand other instances, it shows completely, that the Deity can mould and fashion the parts of material nature, so as to fulfil any purpose whatever which he is pleased to appoint.

They who refer the operations of mind to a substance totally and essentially different from matter, (as most certainly these operations, though affected by material causes, hold very little affinity to any properties of

matter with which we are acquainted,) adopt perhaps a juster reasoning and a better philosophy; and by these the considerations above suggested are not wanted, at least in the same degree. But to such as find, which some persons do find, an insuperable difficulty in shaking off an adherence to those analogies which the corporeal world is continually suggesting to their thoughts; to such I say, every consideration will be a relief, which manifests the extent of that intelligent power which is acting in nature, the fruitfulness of its resources, the variety, and aptness, and success of its means; most especially, every consideration which tends to show that, in the translation of a conscious existence, there is not, even in their own way of regarding it, any thing greatly beyond, or totally unlike, what takes place in such parts (probably small parts) of the order of nature, as are accessible to our observation.

Again; if there be those who think, that the contractedness and debility of the human faculties in our present state seem ill to accord with the high destinies which the expectations of religion point out to us; I would only ask them, whether any one, who saw a child two hours after its birth, could suppose that it would ever come to understand *fluxions*?\* or who then shall say, what farther amplification of intellectual powers, what accession of knowledge, what advance and improvement, the rational faculty, be its constitution what it will, may not admit of, when placed amidst new objects, and endowed with a sensorium adapted, as it undoubtedly will be, and as our present senses are, to the perception of those substances, and of those properties of things, with which our concern may lie?

Upon the whole; in every thing which respects this

\* See Search's Light of Nature, *passim*.

awful, but, as we trust, glorious change, we have a wise and powerful Being (the author, in nature, of infinitely various expedients, for infinitely various ends) upon whom to rely for the choice and appointment of means, adequate to the execution of any plan which his goodness or his justice may have formed, for the moral and accountable part of his terrestrial creation. That great office rests with *him*: be it *ours* to hope and to prepare, under a firm and settled persuasion, that, living and dying, we are his; that life is passed in his constant presence, that death resigns us to his merciful disposal.

## SERMONS.

### SERIOUSNESS IN RELIGION INDISPENSABLE ABOVE ALL OTHER DISPOSITIONS.

1 PETER iv. 7.

*Be ye therefore sober, and watch unto prayer.*

THE first requisite in religion is seriousness. No impression can be made without it. An orderly life, so far as others are able to observe us, is now and then produced by prudential motives, or by dint of habit; but without seriousness there can be no religious principle at the bottom, no course of conduct flowing from religious motives; in a word, there can be no religion. This cannot exist without seriousness upon the subject. Perhaps a teacher of religion has more difficulty in producing seriousness amongst his hearers than in any other part of his office. Until he succeed in this, he loses his labour: and when once, from any cause whatever, a spirit of levity has taken hold of a mind, it is next to impossible to plant serious considerations in that mind. It is seldom to be done, except by some great shock or alarm, sufficient to make a radical change in the disposition; and which is God's own way of bringing about the business.

One might have expected that events so awful and tremendous, as death and judgment; that a question so deeply interesting, as whether we shall go to heaven or to hell, could, in no possible case, and in no constitution of mind whatever, fail of exciting the most serious apprehension and concern. But this is not so.

In a thoughtless, a careless, a sensual world, many are always found who can resist, and who do resist, the force and importance of all these reflections; that is to say, they suffer nothing of the kind to enter into their thoughts. There are grown men and women, nay, even middle-aged persons, who have not thought seriously about religion an hour, nor a quarter of an hour, in the whole course of their lives. This great object of human solicitude affreets not them in any manner whatever.

It cannot be without its use to inquire into the causes of a levity of temper, which so effectually obstructs the admission of every religious influence, and which I should almost call unnatural.

1. Now there is a numerous class of mankind who are wrought upon by nothing but what applies immediately to their senses; by what they see, or by what they feel; by pleasures or pains, or by the near prospect of pleasures and pains which they actually experience or actually observe. But it is the characteristic of religion to hold out to our consideration consequences which we do not perceive at the time. That is its very office and province. Therefore, if men will restrict and confine all their regards and all their cares to things which they perceive with their outward senses; if they will yield up their understandings to their senses, both in what these senses are fitted to apprehend, and in what they are not fitted to apprehend, it is utterly impossible for religion to settle in their hearts, or for them to entertain any serious concern about the matter. But surely this conduct is completely irrational, and can lead to nothing but ruin. It proceeds upon the supposition, that there is nothing above us, about us, or future, by which we can be affected, but the things which we see with our eyes or feel by our touch. All

which is untrue. “The invisible things of God from the creation of the world are clearly seen, being understood by the things that are seen; even his eternal power and Godhead:” which means, that the order, contrivance, and design, displayed in the creation, prove with certainty that there is more in nature than what we really see; and that amongst the invisible things of the universe, there is a Being, the author and origin of all this contrivance and design, and, by consequence, a Being of stupendous power, and of wisdom and knowledge incomparably exalted above any wisdom or knowledge which we see in man; and that he stands in the same relation to us as the maker does to the thing made. The things which are seen are not made of the things which do appear. This is plain: and this argument is independent of Scripture and revelation. What farther moral or religious consequences properly follow from it is another question; but the proposition itself shows that they who cannot, and they who will not, raise their minds above the mere information of their senses, are in a state of gross error as to the real truth of things, and are also in a state to which the faculties of man ought not to be degraded. A person of this sort may, with respect to religion, remain a child all his life. A child naturally has no concern but about the things which directly meet its senses; and the person we describe is in the same condition.

Again; there is a race of giddy thoughtless men and women, of young men and young women more especially, who look no farther than the next day, the next week, the next month; seldom or ever so far as the next year. Present pleasure is every thing with them. The sports of the clay, the amusements of the evening, entertainments and diversions, occupy all their

concern; and so long as these can be supplied in succession, so long as they can go from one diversion to another, their minds remain in a state of perfect indifference to every thing except their pleasures. Now what chance has religion with such dispositions as these? Yet these dispositions, begun in early life, and favoured by circumstances, that is, by affluence and health, cleave to a man's character much beyond the period of life in which they might seem to be excusable. Excusable did I say? I ought rather to have said that they are contrary to reason and duty, in every condition and at every period of life. Even in youth they are built upon falsehood and folly. Young persons, as well as old, find that things do actually come to pass. Evils and mischiefs, which they regarded as distant, as out of their view, as beyond the line and reach of their preparations or their concern, come, they find, to be actually felt. They find that nothing is done by slighting them beforehand; for, however neglected or despised, perhaps ridiculed and derided, they come not only to be things present, but the very things and the only things about which their anxiety is employed; become serious things indeed, as being the things which now make them wretched and miserable. Therefore a man must learn to be affected by events which appear to lie at some distance, before he will be seriously affected by religion. Again; the general course of education is much against religious seriousness, even without those who conduct education foreseeing or intending any such effect. Many of us are brought up with this world set before us, and nothing else. Whatever promotes this world's prosperity is praised; whatever hurts and obstructs and prejudices this world's prosperity is blamed: and there all praise and censure end. We see mankind about us

in motion and action, but all these motions and actions directed to worldly objects. We hear their conversation, but it is all the same way. And this is what we see and hear from the first. The views which are continually placed before our eyes regard this life alone and its interests. Can it then be wondered at, that an early worldly mindedness is bred in our hearts, so strong as to shut out heavenly mindedness entirely? In the contest which is always carrying on between this world and the next, it is no difficult thing to see what advantage this world has. One of the greatest of these advantages is, that it preoccupies the mind: it gets the first hold and the first possession. Childhood and youth, left to themselves, are necessarily guided by sense: and sense is all on the side of this world. Meditation brings us to look towards a future life; but then meditation comes afterward: it only comes when the mind is already filled and engaged and occupied, nay often crowded and surcharged with worldly ideas. It is not only, therefore, fair and right, but it is absolutely necessary to give to religion all the advantage we can give it by dint of education; for all that can be done is too little to set religion upon an equality with its rival; which rival is the world. A creature which is to pass a small portion of its existence in one state, and that state to be preparatory to another, ought, no doubt, to have its attention constantly fixed upon its ulterior and permanent destination. And this would be so, if the question between them came fairly before the mind. We should listen to the Scriptures, we should embrace religion, we should enter into every thing which had relation to the subject, with a concern and impression, even far more than the pursuits of this world, eager and ardent as they are, excite. But

the question between religion and the world does not come fairly before us. What surrounds us is this world; what addresses our senses and our passions is this world; what is at hand, what is in contact with us, what acts upon us, what we act upon, is this world. Reason, faith, and hope are the only principles to which religion applies, or possibly can apply; and it is reason, faith, and hope, striving with sense, striving with temptation, striving for things absent against things which are present. That religion, therefore, may not be quite excluded and overborne, may not quite sink under these powerful causes, every support ought to be given to it which can be given by education, by instruction, and, above all, by the example of those to whom young persons look up, acting with a view to a future life themselves.

Again; it is the nature of worldly business of all kinds, especially of much hurry or over-employment, or over-anxiety in business, to shut out and keep out religion from the mind. The question is, whether the state of mind which this cause produces ought to be called a want of seriousness in religion. It becomes coldness and indifference towards religion; but is it properly a want of seriousness upon the subject? I think it is; and in this way. We are never serious upon any matter which we regard as trifling. This is impossible. And we are led to regard a thing as trifling, which engages no portion of our habitual thoughts, in comparison with what other things do.

But farther; the world, even in its innocent pursuits and pleasures, has a tendency unfavourable to the religious sentiment. But were these all it had to contend with, the strong application which religion makes to the thoughts whenever we think of it at all, the strong interest which it presents to us, might enable it to

overcome and prevail in the contest. But there is another adversary to oppose, much more formidable; and that is sensuality; an addiction to sensual pleasures. It is the flesh which lusteth against the spirit; that is the war which is waged within us. So it is, no matter what may be the cause, that sensual indulgences, over and above their proper criminality, as sins, as offences against God's commands, have a specific effect upon the heart of man in destroying the religious principle within him; or still more surely in preventing the formation of that principle. It either induces an open profaneness of conversation and behaviour, which scorns and contemns religion; a kind of profligacy, which rejects and sets at nought the whole thing; or it brings upon the heart an averseness to the subject, a fixed dislike and reluctance to enter upon its concerns in any way whatever. That a resolved sinner should set himself against a religion which tolerates no sin, is not to be wondered at. He is against religion, because religion is against the course of life upon which he has entered, and which he does not feel himself willing to give up. But this is not the whole, nor is it the bottom of the matter. The effect we allude to is not so reasoning or argumentative as this. It is a specific effect upon the mind. The heart is rendered unsusceptible of religious impressions, incapable of a serious regard to religion. And this effect belongs to sins of sensuality more than to other sins. It is a consequence which almost universally follows from them.

We measure the importance of things, not by what, or according to what they are in truth, but by and according to the space and room which they occupy in our minds. Now our business, our trade, our schemes, our pursuits, our gains, our losses, our fortunes,

possessing so much of our minds, whether we regard the hours we expend in meditating upon them, or the earnestness with which we think about them; and religion possessing so little share of our thought either in time or earnestness; the consequence is, that worldly interest comes to be the serious thing with us, religion comparatively the trifle. Men of business are naturally serious; but all their seriousness is absorbed by their business. In religion they are no more serious than the most giddy characters are; than those characters are which betray levity in all things.

Again; the want of due seriousness in religion is almost sure to be the consequence of the absence or disuse of religious ordinances and exercise. I use two terms; *absence* and *disuse*. Some have never attended upon any religious ordinance, or practised any religious exercises since the time they were born; some a very few times in their lives. With these it is the *absence* of religious ordinances and exercises. There are others (and many we fear of this description) who, whilst under the guidance of their parents, have frequented religious ordinances, and been trained up to religious exercises, but who, when they came into more public life, and to be their own masters, and to mix in the pleasures of the world, or to engage themselves in its business and pursuits, have forsaken these duties in whole or in a great degree. With these it is the *disuse* of religious ordinances and exercises. But I must also explain what I mean by *religious ordinances and exercises*. By *religious ordinances* I mean the being instructed in our catechism in our youth; attending upon public worship at church; the keeping holy the Lord's day regularly and most particularly, together with a few other days in the year, by which some very principal

events and passages of the Christian history are commemorated; and at its proper season the more solemn office of receiving the Lord's Supper. These are so many rites and ordinances of Christianity; concerning all which it may be said, that with the greater part of mankind, especially of that class of mankind which must or does give much of its time and care to worldly concerns, they are little less than absolutely necessary; if we judge it to be necessary to maintain and uphold any sentiment, any impression, any seriousness, about religion in the mind at all. They are necessary to preserve in the thoughts *a place* for the subject; they are necessary that the train of our thoughts may not even be closed up against it. Were all days of the week alike, and employed alike; was there no difference or distinction between Sunday and work-day; was there not a church in the nation; were we never from one year's end to another called together to participate in public worship; were there no set forms of public worship; no particular persons appointed to minister and officiate, indeed no assemblies for public worship at all; no joint prayers; no preaching; still religion in itself, in its reality and importance, in its end and event, would be the same thing as what it is: we should still have to account for our conduct; there would still be heaven and hell; salvation and perdition; there would still be the laws of God, both natural and revealed; all the obligation which the authority of a Creator can impose upon a creature; all the gratitude which is due from a rational being to the Author and Giver of every blessing which he enjoys; lastly, there would still be the redemption of the world by Jesus Christ. All these things would, with or without religious ordinances, be equally real, and existing, and valid:

but men would not think equally about them. Many would entirely and totally neglect them. Some there would always be of a more devout or serious or contemplative disposition, who would retain a lively sense of these things under all circumstances and all disadvantages, who would never lose their veneration for them, never forget them. But from others, from the careless, the busy, the followers of pleasure, the pursuers of wealth or advancement, these things would slip away from the thoughts entirely.

Together with *religious ordinances* we mentioned *religious exercises*. By the term *religious exercises*, I in particular mean private prayer; whether it be at set times, as in the morning and evening of each day; or whether it be called forth by occasions, as when we are to form some momentous decision, or enter upon some 'great undertaking; or when we are under some pressing difficulty or deep distress, some excruciating bodily pain or heavy affliction; or, on the other hand, and no less properly, when we have lately been receiving some signal benefit, experiencing some signal mercy; such as preservation from danger, relief from difficulty or distress, abatement of pain, recovery from sickness: for by prayer, let it be observed, we mean devotion in general; and thanksgiving is devotion as much as prayer itself. I mean private prayer, as here described; and I also mean, what is perhaps the most natural form of private prayer, short ejaculatory extemporaneous addresses to God, as often as either the reflections which rise up in our minds, let them come from what quarter they may, or the objects and incidents which seize our attention, prompt us to utter them; which in a religiously disposed mind will be the case, I may say, every hour, and which ejaculation may be offered up

to God in any posture, in any place, or in any situation. Amongst religious exercises I also reckon family prayer, which unites many of the uses both of public worship and private prayer. The reading of religious books is likewise to be accounted a religious exercise. Religious meditation still more so; and more so for this reason, that it implies and includes that most important duty, self-examination; for I hold it to be next to impossible for a man to meditate upon religion, without meditating at the same time upon his own present condition with respect to the tremendous alternative which is to take place upon him after his death.

These are what we understand by religious exercises; and they are all so far of the same nature with religious ordinances that they are aids and helps of religion itself; and I think that religious seriousness cannot be maintained in the soul without them.

But again; a cause which has a strong tendency to destroy religious seriousness, and which almost infallibly prevents its formation and growth in young minds, is levity in conversation upon religious subjects, or upon subjects connected with religion. Whether we regard the practice with respect to those who use it, or to those who hear it, it is highly to be blamed, and is productive of great mischief. In those who use it, it amounts almost to a proof that they are destitute of religious seriousness. The principle itself is destroyed in them, or was never formed in them. Upon those who hear, its effect is this. If they have concern about religion, and the disposition towards religion which they ought to have, and which we signify by this word *seriousness*, they will be inwardly shocked and offended by the levity with which they hear it treated. They will, as it were, resent such treatment of a subject, which by them has always

been thought upon with awe and dread and veneration. But the pain with which they were at first affected goes off by hearing frequently the same sort of language; and then they will be almost sure, if they examine the state of their minds as to religion, to feel a change in themselves for the worse. This is the danger to which those are exposed who had before imbibed serious impressions. Those who had not will be prevented by such sort of conversation from ever imbibing them at all; so that its influence is in all cases pernicious.

The turn which this levity usually takes is in jests and raillery upon the opinions, or the peculiarities, or the persons of those who happen to be more serious than ourselves. But against whomsoever it happens to be pointed, it has the bad effects both upon the speaker and the hearer which we have noticed. It tends to destroy our own seriousness, together with the seriousness of those who hear or join in such sort of conversation; especially if they be young persons: and I am persuaded that much mischief is actually done in this way.

It has been objected that so much regard, or, as the objectors would call it, over regard for religion, is inconsistent with the interest and welfare of our families, and with success and prosperity in our worldly affairs. I believe that there is very little ground for this objection in fact, and even as the world goes: in reason and principle there is none. A good Christian divides his time between the duties of religion, the calls of business, and those quiet relaxations which may be innocently allowed to his circumstances and condition, and which will be chiefly in his family or amongst a few friends. In this plan of life there is no confusion or interference of its parts; and unless a man be given to sloth and laziness, which are what religion condemns, he

will find time enough for them all. This calm system may not be sufficient for that unceasing eagerness, hurry, and anxiety about worldly affairs, in which some men pass their lives; but it is sufficient for every thing which reasonable prudence requires; and it is perfectly consistent with usefulness in our stations, which is a main point. Indeed, compare the hours which serious persons spend in religious exercises and meditations with the hours which the thoughtless and irreligious spend in idleness and vice and expensive diversions, and you will perceive on which side of the comparison the advantage lies, even in this view of the subject.

Nor is there any thing in the nature of religion to support the objection. In a certain sense it is true, what has been sometimes said, that religion ought to be the rule of life, not the business; but which is meant, that the subject matter even of religious duties lies in the common affairs and transactions of the world. Diligence in our calling is an example of this; which, however, keeps both a man's head and hands at work upon business merely temporal; yet religion may be governing him here meanwhile. God may be feared in the busiest scenes.

In addition to the above, there exists another prejudice against religious seriousness, arising from a notion very commonly entertained, viz. that religion leads to gloom and melancholy. This notion, I am convinced, is a mistake. Some persons are constitutionally subject to melancholy, which is as much a disease in them as the ague is a disease; and it may happen that such men's melancholy shall fall upon religious ideas, as it may upon any other subject which seizes their distempered imagination. But this is not religion leading to melancholy. Or it sometimes is the case that

men are brought to a sense of religion by calamity and affliction, which produce at the same time depression of spirits. But neither here is religion the cause of this distress or dejection, or to be blamed for it. These cases being excepted, the very reverse of what is alleged against religion is the truth. No man's spirits were ever hurt by doing his duty. On the contrary, one good action, one temptation resisted and overcome, one sacrifice of desire or interest purely for conscience' sake, will prove a cordial for weak and low spirits beyond what either indulgence or diversion or company can do for them. And a succession and course of such actions and self-denials, springing from a religious principle and manfully maintained, is the best possible course that can be followed as a remedy for sinkings and oppressions of this kind. Can it then be true, that religion leads to melancholy? Occasions arise to every man living; to many very severe as well as repeated occasions, in which the hopes of religion are the only stay that is left him. Godly men have that within them which cheers and comforts them in their saddest hours: ungodly men have that which strikes their heart, like a dagger, in its gayest moments. Godly men discover, what is very true, but what by most men is found out too late, namely, that a good conscience and the hope of our Creator's final favour and acceptance are the only solid happiness to be attained in this world. Experience corresponds with the reason of the thing. I take upon me to say, that religious men are generally cheerful. If this be not observed, as might be expected, supposing it to be true, it is because the cheerfulness which religion inspires does not show itself in noise, or in fits and starts of merriment, but is calm and constant. Of this the only true and valuable kind of cheerfulness, for all other

kinds are hollow and unsatisfying, religious men possess not less but a greater share than others.

Another destroyer of religious seriousness, and which is the last I shall mention, is a certain fatal turn which some minds take, namely, that when they find difficulties in or concerning religion, or any of the tenets of religion, they forthwith plunge into irreligion; and make these difficulties, or any degree of uncertainty which seems to their apprehension to hang over the subject, a ground and occasion for giving full liberty to their inclinations, and for casting off the restraints of religion entirely. This is the case with men who, at the best perhaps, were only balancing between the sanctions of religion and the love of pleasure or of unjust gain, but especially the former. In this precarious state, any objection or appearance of objection, which diminishes the force of religious impression, determines the balance against the side of virtue, and gives up the doubter to sensuality, to the world, and to the flesh. Now, of all ways which a man can take, this is the surest way to destruction; and it is completely irrational. I say it is completely irrational; for when we meditate upon the tremendous consequences which form the subject of religion, we cannot avoid this reflection, that any degree of probability whatever, I had almost said any degree of possibility whatever, of religion being true, ought to determine a rational creature so to act as to secure himself from punishment in a future state, and the loss of that happiness which may be attained. Therefore he has no pretence for alleging uncertainty as an excuse for his conduct, because he does not act in conformity with that in which there is no uncertainty at all. In the next place, it is giving to apparent difficulties more weight than they are entitled to. I only request any man to consider, first,

the necessary allowances to be made for the short-sightedness and the weakness of the human understanding; secondly, the nature of those subjects concerning which religion treats, so remote from our senses, so different from our experience, so above and beyond the ordinary train and course of our ideas; and then say, whether difficulties, and great difficulties also, were not to be expected; nay, farther, whether they be not in some measure subservient to the very purpose of religion. The reward of everlasting life, and the punishment or misery of which we know no end, if they were present and immediate, could not be withheld, and would not leave any room for liberty or choice. But this sort of force upon the will is not what God designed; nor is suitable indeed to the nature of free, moral, and accountable agents. The truth is, and it was most likely seen beforehand that it would be so, that amidst some points which are dark, some which are dubious, there are many which are clear and certain. Now I apprehend that, if we act faithfully up to those points concerning which there is no question, most especially if we determine upon and choose our rule and course of life according to those principles of choice which all men whatever allow to be wise and safe principles, and the only principles which are so, and conduct ourselves steadfastly according to the rule thus chosen, the difficulties which remain in religion will not move or disturb us much; and will, as we proceed, become gradually less and fewer. Whereas, if we begin with objections; if all we consider about religion be its difficulties; but most especially if we permit the suggestion of difficulties to drive us into a practical rejection of religion itself, and to afford us, which is what we wanted, an excuse to ourselves for casting off its restraints; (hen the event will be, that its difficulties

will multiply upon us; its light grow more and more dim, and we shall settle in the worst and most hopeless of all conditions; the last condition, I will venture to say, in which any man living would wish his son, or any one whom he loved and for whose happiness he was anxious, to be placed; a life of confirmed vice and dissoluteness, founded in a formal renunciation of religion.

He that has to preach Christianity to persons in this state has to preach to stones. He must not expect to be heard either with complacency, or seriousness, or patience, or even to escape contempt and derision. Habits of thinking are fixed by habits of acting; and both too solidly fixed to be moved by human persuasion. God in his mercy and by his providences, as well as by his Spirit, can touch and soften the heart of stone. And it is seldom, perhaps, that, without some strong and, it may be, sudden impressions of this kind and from this source, serious sentiments ever penetrate dispositions hardened in the manner which we have here described.

## TASTE FOR DEVOTION.

JOHN iv. 23, 24.

*But the hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth: for the Father seeketh such to worship him. God is a Spirit: and they that worship him must worship him in spirit and in truth.*

A TASTE and relish for religious exercise, or the want of it, is one of the marks and tokens by which we may judge whether our heart be right towards God or not. God is unquestionably an object of devotion to every creature which he has made capable of devotion; consequently our minds can never be right towards him unless they be in a devotional frame. It cannot be disputed but that the Author and Giver of all things, upon whose will and whose mercy we depend for every thing we have and for every thing we look for, ought to live in the thoughts and affections of his rational creatures. “Through thee have I been holden up ever since I was born: thou art he that took me from my mother's womb: my praise shall be always of thee.” If there be such things as first sentiments towards God, these words of the Psalmist express them. That devotion to God is a duty, stands upon the same proof as that God exists. But devotion is an act of the mind strictly. In a certain sense, duty to a fellow creature may be discharged if the outward act be performed, because the benefit to him depends upon the act. Not so with devotion. It is altogether the operation of the mind. God is a spirit, and must be worshipped in spirit; that is, in mind and thought. The devotion of the

mind may be, will be, ought to be testified and accompanied by outward performances and expressions; but without the mind going along with it, no form, no solemnity can avail, as a service to God. It is not so much a question under what mode men worship their Maker; but this is the question, whether their mind and thoughts and affections accompany the mode which they adopt or not. I do not say that modes of worship are indifferent things; for certainly one mode may be more rational, more edifying, more pure than another; but they are indifferent in comparison with the question, whether the heart attend the worship or be estranged from it.

These two points then being true; first, that devotion is a duty; secondly, that the heart must participate to make any thing we do devotion; it follows, that the heart cannot be right towards God, unless it be possessed with a taste and relish for his service, and for what relates to it.

Men may, and many undoubtedly do, attend upon acts of religious worship, and even from religious motives, yet, at the same time, without this taste and relish of which we are speaking. Religion has no savour for them. I do not allude to the case of those who attend upon the public worship of the church, or of their communion, from compliance with custom, out of regard to station, for example's sake merely, from habit merely; still less to the case of those who have particular worldly views in so doing. I lay the case of such persons, for the present, out of the question; and I consider only the case of those who, knowing and believing the worship of God to be a duty, and that the wilful neglect of this, as of other duties, must look forward to future punishment, do join in worship from a principle of obedience, from a consideration of those

consequences which will follow disobedience; from the fear indeed of God, and the dread of his judgments, (and so far from motives of religion,) yet without any taste or relish for religious exercise itself. That is the case I am considering. It is not for us to presume to speak harshly of any conduct which proceeds in any manner from a regard to God and the expectation of a future judgment. God, in his Scriptures, holds out to man terrors as well as promises; punishment after death as well as reward. Undoubtedly he intended those motives which he himself proposes to operate and have their influence. Wherever they operate good ensues; very great and important good compared with the cases in which they do not operate; yet not all the good we would desire, not all which is attainable, not all which we ought to aim at in our Christian course. The fear of the Lord is the beginning of knowledge: but calling it the beginning implies that we ought to proceed farther; namely, from his fear to his love.

To apply this distinction to the subject before us: the man who serves God from a dread of his displeasure, and therefore in a certain sense by constraint, is, beyond all comparison, in a better situation, as touching his salvation, than he who defies this dread, and breaks through this constraint. He, in a word, who obeys, from whatever motive his obedience springs, provided it be a religious motive, is of a character, as well as in a condition, infinitely preferable to the character and condition of the man whom no motives whatever can induce to perform his duty. Still it is true, that if he feels not within himself a taste and relish for the service which he performs, (to say nothing of the consideration how much less acceptable his service may be,) and for devotion itself, he wants one satisfactory evidence of

his heart being right towards God. A farther progress in religion will give him this evidence, but it is not yet attained: as yet, therefore, there is a great deficiency. The taste and relish for devotion, of which we are speaking, is what good men in all ages have felt strongly. It appears in their history: it appears in their writings. The Book of Psalms, in particular, was, great part of it, composed under the impression of this principle. Many of the Psalms are written in the truest spirit of devotion; and it is one test of the religious frame of our own minds, to observe whether we have a relish for these compositions; whether our hearts are stirred as we read them; whether we perceive in them words alone, a mere letter, or so many grateful, gratifying sentiments towards God, in unison with what we ourselves feel or have before felt. And what we are saying of the Book of Psalms is true of many religious books that are put into our hands, especially books of devotional religion; which, though they be human compositions, and nothing more, are of a similar cast with the devotional writings of Scripture, and excellently calculated for their purpose.\* We read of aged persons, who passed the greatest part of their time in acts of devotion, and passed it with enjoyment. “Anna, the prophetess, was of great age, which departed not from the temple, but served God with fastings and prayers, night and day.” The first Christians, so far as can be

\* Amongst these, I particularly recommend the prayers and devotions annexed to the New Whole Duty of Man. Bishop Burnet, in speaking of such kind of books, very truly says, “By the frequent reading of these books, by the relish that one has in them, by the delight they give, and the effects they produce, a man will plainly perceive whether his soul is made for divine matters, or not; what suitableness there is between him and them, and whether he is yet touched with such a sense of religion as to be capable of dedicating himself to it.”

gathered from their history in the Acts of the Apostles and the Epistles, as well as from the subsequent accounts that are left of them, took great delight in exercises of devotion. These seemed to form, indeed, the principal satisfaction of their lives in this world. "Continuing daily with one accord in the temple, and breaking bread," that is, celebrating the holy communion, "from house to house, they eat their meat with gladness and singleness of heart, praising God." In this spirit Christians set out, finding the greatest gratification they were capable of, in acts and exercises of devotion. A great deal of what is said in the New Testament, by St. Paul in particular, about "rejoicing in the Lord, rejoicing in the Holy Ghost, rejoicing in hope, rejoicing in consolation, rejoicing in themselves, as sorrowful, yet always rejoicing," refer to the pleasure, and the high and spiritual comfort, which they found in religious exercises. Much, I fear, of this spirit is fled. There is a coldness in our devotions, which argues a decay of religion amongst us. Is it true that men, in these days, perform religious exercises as frequently as they ought, or as those did who have gone before us in the Christian course? that is one question to be asked: but there is also another question of still greater importance, viz. Do they find in these performances that gratification which the first and best disciples of the religion actually found? which they ought to find; and which they would find, did they possess the taste and relish concerning which we are discoursing, and which if they do not possess, they want one great proof of their heart being right towards God.

If the spirit of prayer, as it is sometimes called, if the state and relish for devotion, if a devotional frame of mind be within us, it will show itself in the turn and

cast of our meditations, in the warmth and earnestness and frequency of our secret applications to God in prayer; in the deep, unfeigned, heart piercing, heart sinking sorrow of our confessions and our penitence; in the sincerity of our gratitude, and of our praise; in our admiration of the divine bounty to his creatures; in our sense of particular mercies to ourselves. We shall pray much in secret. We shall address ourselves to God of our own accord in our walks, our closet, our bed. Form in these addresses will be nothing. Every thing will come from the heart. We shall feed the flame of devotion by continually returning to the subject. No man who is endued with the taste and relish we speak of will have God long out of his mind. Under one view or other, God cannot be long out of a devout mind. "Neither was God in all his thoughts," is a true description of a complete dereliction of religious principle; but it can, by no possibility, be the case with a man who has the spirit of devotion, or any portion of that spirit within him.

But it is not in our private religion alone, that the effect and benefit of this principle is perceived. The true taste and relish we so much dwell upon will bring a man to the public worship of God; and what is more, will bring him in such a frame of mind as to enable him to join in it with effect; with effect as to his own soul; with effect as to every object, both public and private, intended by public worship. Wanderings and forgetfulness, remissions and intermissions of attention, there will be; but these will be fewer and shorter, in proportion as more of this spirit is prevalent within us; and *some* sincere, some hearty, some deep, some true, and, as we trust, acceptable service will be performed before we leave the place; some pouring forth of the soul unto

God in prayer and in thanksgiving; in prayer, excited by wants and weaknesses; I fear also, by sins and neglects without number; and in thanksgivings, such as mercies the most undeserved ought to call forth from a heart, filled, as the heart of man should be, with a thorough consciousness of dependency and obligation.

Forms of public worship must, by their very nature, be in a great degree general; that is, must be calculated for the average condition of human and of Christian life; but it is one property of the devotional spirit, which we speak of, to give a particularity to our worship, though it be carried on in a congregation of fellow Christians, and expressed in terms which were framed and conceived for the use of all. And it does this by calling up recollections which will apply most closely, and bring home most nearly to ourselves those terms and those expressions. For instance, in public worship, we thank God in general terms, that is, we join with the congregation in a general thanksgiving; but a devout man brings to church the recollection of special and particular mercies, particular bounties, particular providences, particular deliverances, particular relief recently experienced, specially and critically granted in the moment of want or danger, or eminently and supereminently vouchsafed to us individually. These he bears in his thoughts; he applies as he proceeds; that which was general, he makes close and circumstantial; his heart rises towards God by a sense of mercies vouchsafed to himself. He does not, however, confine himself to those favours of Providence which he enjoys above many others, or more than most others; he does not dwell upon distinctions alone; he sees God in all his goodness, in all his bounty. Bodily ease, for instance, is not less valuable, not less a mercy, because others are

at ease as well as himself. The same of his health, the use of his limbs, the faculties of his understanding. But what I mean is, that in his mind he brings to church mercies in which he is interested, and that the most general expressions of thankfulness attach with him, upon particular recollections of goodness, particular subjects of gratitude; so that the holy fervor of his devotion is supported; never wants, nor can want, materials to act upon. It is the office, therefore, of an internal spirit of devotion to make worship personal. We have seen that it will be so with thanksgiving. It will be the same likewise with every other part of divine worship. The confession of sins in our liturgy, and perhaps in all liturgies, is general; but our sins, alas! are particular: our conscience not only acknowledges a deplorable weakness and imperfection in the discharge of our duty, but is stung also with remembrances and compunctions, excited by particular offences. When we come, therefore, to confess our sins, let memory do its office faithfully. Let these sins rise up before our eyes. All language is imperfect. Forms intended for general use must consist of general terms, and are so far inadequate. They *may* be rehearsed by the lips with very little of application to our own case. But this *will* never be so, if the spirit of devotion be within us. A devout mind is exceedingly stirred when it has sins to confess. None but a hardened sinner can even think of his sins without pain. But when he is to lay them, with supplications for pardon, before his Maker; when he is to expose his heart to God; it will always be with powerful inward feelings of guilt and calamity. It hath been well said of prayer, that prayer will either make a man leave off sinning, or sin will make him leave off prayer. And the same is true of confession. If

confession be sincere, if it be such as a right capacity for devotion will make it to be, it will call up our proper and particular sins so distinctly to our view, their guilt, their danger, their end; whither they are carrying us; in what they will conclude; that, if we can return to them again without molestation from our conscience, then religion is not within us. If we have approached God in his worship so ineffectually as to ourselves, it is because we have not worshipped him in spirit; we may say of all we have done, "We drew near with our lips, but our hearts were far from him."

What we have said concerning thanksgiving and confession is likewise true of prayer universally. The spirit of devotion will apply our prayers to our wants. In forms of worship, be they ever so well composed, it is impossible to exhibit human wants otherwise than in general expressions. But devotion will apply them; it will teach every man, in the first place, to know how indigent, how poor a creature, without a continued exercise of mercy and supply of bounty from God, he would be; because when he begins to enumerate his wants, he will be astonished at their multitude. What are we, any of us, but a complication of wants, which we have not in ourselves the power of supplying! But, besides those numerous wants, and that common helplessness, in which we all partake, every man has his own sore, his own grief, his own difficulties; every man has some distress which he is suffering or fearing. Nay, were worldly wishes satisfied, was worldly prosperity complete, he has always what is of more consequence than worldly prosperity to pray for; he has always his sins to pray against. Where temporal wants are few, spiritual wants are often the most and the greatest. The grace of God is always wanted. His governing, his prevent-

ing, his inspiring, his assisting grace is always wanted. Here, therefore, is a subject for prayer, were there no other; a subject personally and individually interesting in the highest degree; a subject, above all others, upon which the spirit of devotion will be sure to fix.

I assign, therefore, as the first effect of a right spirit of devotion, that it gives particularity to all our worship. It applies and it appropriates. Forms of worship may be general, but a spirit of devotion brings them home and close to each and every one.

One happy consequence of which is, that it prevents the tediousness of worship. Things which interest us are not tedious. If we find worship tedious, it is because it does not interest us as it ought to do. We must allow (experience compels us to allow) for wanderings and inattentions, as amongst the infirmities of our infirm nature. But, as I have already said, even these will be fewer and shorter, in proportion as we are possessed of the spirit of devotion. Weariness will not be perceived, by reason of that succession of devout feelings and consciousness which the several offices of worship are calculated to excite. If our heart be in the business, it will not be tedious. If in thanksgiving it be lifted up by a sense of mercies, and a knowledge from whom they proceed, thanksgiving will be a grateful exercise, and not a tedious form. What relates to our sins and wants, though not of the same gratifying nature, though accompanied with deep, nay, with afflicting cause of humiliation and fear, must nevertheless be equally interesting, or more so, because it is of equal concernment to us, or of greater. In neither case, therefore, if our duty be performed as it ought to be, will tediousness be perceived.

I say that the spirit of devotion removes from the

worship of God the perception of tediousness, and with that also every disposition to censure or cavil at particular phrases or expressions used in public worship. All such faults, even if they be real, and such observations upon them, are absorbed by the immense importance of the business in which we are engaged. Quickness in discovering blemishes of this sort is not the gift of a pious mind; still less either levity or acrimony in speaking of them.

Moreover, the spirit of devotion reconciles us to *repetitions*. In other subjects repetition soon becomes tiresome and offensive. In devotion it is different. Deep, earnest, heartfelt devotion, naturally vents itself in repetition. Observe a person racked by excruciating bodily pain; or a person suddenly struck with the news of some dreadful calamity; or a person labouring under some cutting anguish of soul; and you will always find him breaking out into ejaculations, imploring from God support, mercy, and relief, over and over again, uttering the same prayer in the same words. Nothing, he finds, suits so well the extremity of his sufferings, the urgency of his wants, as a continual recurrence to the same cries, and the same call for divine aid. Our Lord himself, in his last agony, affords a high example of what we are saying: thrice he besought his heavenly Father; and thrice he used the same words. Repetition, therefore, is not only tolerable in devotion, but is natural; it is even dictated by a sense of suffering and an acuteness of feeling. It is coldness of affection which requires to be enticed and gratified by continual novelty of idea, or expression, or action. The repetitions and prolixity of pharisaical prayers, which our Lord censures, are to be understood of those prayers which run out into mere formality and into great length: no sentiment or affection

of the heart accompanying them; but uttered as a task, from an opinion, (of which our Lord justly notices the absurdity,) that they should really be heard for their much speaking. Actuated by the spirit of devotion, we can never offend in this way, we can never be the object of this censure.

Lastly, and what has already been intimated, the spirit of devotion will cause our prayers to have an effect upon our practice. For example: if we repeated the *confession* in our liturgy with a true penitential sense of guilt upon our souls, we should not, day after day, be acknowledging to God our transgressions and neglects, and yet go on exactly in the same manner, without endeavouring to make them less and fewer. We should plainly perceive that this was doing nothing towards salvation; and that, at this rate, we may be sinning and confessing all our lives. Whereas, was the right spirit of confessional piety, viz. thoughtfulness of the soul, within us at the time, this would be the certain benefit, especially in the case of an often repeated sin, that the mind would become more and more concerned, more and more filled with compunction and remorse, so as to be forced into amendment. Even the most heartfelt confession might not immediately do for us all that we could wish: yet, by perseverance in the same, it would certainly in a short time produce its desired effect. For the same reason we should not time after time *pray* that we might thenceforward, viz. after each time of so praying, lead godly, righteous, and sober lives, yet persist, just as usual, in ungodliness, unrighteousness, and intemperance. The thing would be impossible, if we prayed as we ought. So, likewise, if real thankfulness of heart accompanied our *thanksgivings*, we should not pray in vain, that we might show forth

the praises of God, not only with our lips, but in our lives. As it is, thousands repeat these words without doing a single deed for the sake of pleasing God, exclusive of other motives, or refraining from a single thing they like to do out of the fear of displeasing him. So again, every time we hear the third service at church, we pray that God would incline our hearts to keep his commandments; yet immediately, perhaps, afterward, allow our hearts and inclinations to wander without control to whatever sinful temptation entices them. This, I say, all proceeds from the want of earnestness in our devotions. Strong devotion is an antidote against sin.

To conclude: a spirit of devotion *is* one of the greatest blessings; and, by consequence, the want of it one of the greatest misfortunes which a Christian can experience. When it is present, it gives life to every act of worship which we perform; it makes every such act interesting and comfortable to ourselves. It is felt in our most retired moments, in our beds, our closets, our rides, our walks. It is stirred within us, when we are assembled with our children and servants in family prayer. It leads us to church, to the congregation of our fellow Christians there collected; it accompanies us in our joint offices of religion in an especial manner; and it returns us to our homes holier and happier and better; and, lastly, what greatly enhances its value to every anxious Christian, it affords to himself a proof that his heart is right towards God: when it is followed up by a good life, by abstinence from sin, and endeavours after virtue, by avoiding evil and doing good, the proof and the satisfaction to be drawn from it are complete.

## THE LOVE OF GOD.

1 JOHN iv. 19.

*We love him, because he first loved us.*

RELIGION may, and it can hardly, I think, be questioned but that it sometimes does spring from terror, from grief, from pain, from punishment, from the approach of death; and, provided it be sincere, that is, such as either actually produces, or as would produce a change of life, it is genuine religion, notwithstanding the bitterness, the violence, or, if it must be so called, the baseness and unworthiness of the motive from which it proceeds. We are not to narrow the promises of God; and acceptance is promised to sincere penitence, without specifying the cause from which it originates, or confining it to one origin more than another. There are, however, higher, and worthier, and better motives from which religion may begin in the heart; and on this account especially are they to be deemed better motives, that the religion which issues from them has a greater probability of being sincere. I repeat again, that sincere religion from any motive will be effectual; but there is a great deal of difference in the probability of its being sincere, according to the different cause in the mind from which it sets out.

The purest motive of human action is the love of God. There may be motives stronger and more general, but none so pure. The religion, the virtue, which owes its birth in the soul to this motive, is always genuine religion, always true virtue. Indeed, speaking of religion, I should call the love of God not so much the groundwork of religion as religion itself. So far as

religion is disposition, it is religion itself. But though of religion it be more than the groundwork, yet, being a disposition of mind like other dispositions, it is the groundwork of action. Well might our blessed Saviour preach up, as he did, the love of God. It is the source of every thing which is good in man. I do not mean that it is the only source, or that goodness can proceed from no other, but that of all principles of conduct it is the safest, the best, the truest, the highest. Perhaps it is peculiar to the Jewish and Christian dispensations, (and, if it be, it is a peculiar excellency in them,) to have formally and solemnly laid down this principle, as a ground of human action. I shall not deny, that elevated notions were entertained of the Deity by some wise and excellent heathens: but even *these* did not, that I can find, so inculcate the love of that Deity, or so propose and state it to their followers, as to make it a governing actuating principle of life amongst them. This did Moses, or rather God by the mouth of Moses, expressly, formally, solemnly. This did Christ, adopting, repeating, ratifying what the law had already declared; and not only ratifying, but singling it out from the body of precepts which composed the old institution, and giving it a preeminence to every other.

Now this love, so important to our religious character, and, by its effect upon that to our salvation, which is the end of religion; this love, I say, is to be engendered in the soul, not so much by hearing the words of others, or by instruction from others, as by a secret and habitual contemplation of God Almighty's bounty, and by a constant referring of our enjoyments and our hopes to his goodness. This is in a great degree a matter of habit: and, like all good habits, particularly mental habits, is what every person must form in himself and

for himself by endeavour and perseverance. In this great article, as well as in others which are less, every man must be the author to himself of his train of thinking, be it good or bad. I shall only observe, that when this habit, or, as some would call it, this turn and course of thought is once happily generated, occasions will continually arise to minister to its exercise and augmentation. A night's rest, or a comfortable meal, will immediately direct our gratitude to God. The use of our limbs, the possession of our senses; every degree of health, every hour of ease, every sort of satisfaction which we enjoy, will carry our thoughts to the same object. But if our enjoyments raise our affections, still more will our hopes do the same; and, most of all beyond comparison, those hopes which religion inspires. Think of man, and think of heaven; think what he is, and what it is in his power hereafter to become. Think of this again and again; and it is impossible but that the prospect of being so rewarded for our poor labours, so resting from our past troubles, so forgiven for our repented sins, must fill our hearts with the deepest thankfulness; and thankfulness is love. Towards the author of an obligation which is infinite, thankfulness is the only species of love that can exist.

But, moreover, the love of God is specifically represented in Scripture as one of the gifts of the Holy Ghost. The love of God shed abroad in the heart is described as one of the works of the Spirit upon the souls of Christians. Now whatever is represented in Scripture to be the gift of the Spirit, is to be sought for by earnest and peculiar prayer. That is the practical use to be made of, and the practical consequence to be drawn from such representations; the very purpose probably for which they were delivered: the mere point

of doctrine being seldom that in which Scripture declarations rest. Let us not fail therefore; let us not cease to entreat the Father of mercies, that the love of him may be shed abroad in our hearts continually. It is one of the things in which we are sure that our prayers are right in their object; in which also we may humbly hope that, unless obstructed by ourselves, they will not be in vain.

Nor let it be said that this aid is superfluous, forasmuch as nature herself had provided sufficient means for exciting this sentiment. This is true with respect to those who are in the full, or in any thing near the full enjoyment of the gifts of nature. With them I do allow that nothing but a criminal stupefaction can hinder the love of God from being felt. But this is not the case with all; nor with any at all times. Afflictions, sickness, poverty, the maladies and misfortunes of life, will interrupt and damp this sensation, so far as it depends upon our actual experience of God's bounty. I do not say that the evils of life ought to have this effect: taken in connexion with a future state, they certainly ought not; because, when viewed in that relation, afflictions and calamities become trials, warnings, chastisements; and when sanctified by their fruits, when made the means of weaning us from the world, bringing us nearer to God, and of purging away that dross and defilement which our souls have contracted, are in truth amongst the first of favours and of blessings: nevertheless, as an apostle himself confesses, they are for a season grievous; they are disheartening; and they are too apt to produce an unfavourable effect upon our gratitude. Wherefore it is upon these occasions most especially, that the aid of God's Spirit may be required to maintain in our souls the love of God.

Let those, therefore, who are conscious to themselves that they have not the love of God within them as they ought to have it, endeavour to acquire and to increase this holy principle by seriousness of mind, by habitual meditation, by devout reading, devout conversation, devout society. These are all aids and helps towards inducing upon the mind this most desirable, nay, rather let me call it this blessed frame and temper, and of fixing us in it: and forasmuch as it is declared in Scripture to be shed abroad in the heart by the Spirit of God, let us labour in our prayers for this best gift.

The next consideration upon the subject is, the fruit and effect of this disposition upon our lives. If it be asked, how does the love of God operate in the production of virtuous conduct? I shall answer, that it operates exactly in the same manner as affection towards a parent or gratitude towards a human benefactor operates, by stirring up a strong rebuke in the mind upon the thought of offending him. This lays a constant check upon our conduct. And this sensation is the necessary accompaniment of love; it cannot, I think, be separated from it. But it is not the whole of its influence. Love and gratitude towards a benefactor not only fill us with remorse and with internal shame, whenever, by our wilful misbehaviour, we have given cause to that benefactor to be displeased with us, but also prompts us with a desire upon all occasions of doing what we believe he wills to be done, which, with respect to God, is in other words a desire to serve him. Now this is not only a restraint from vice, but an incitement to action. Instructed, as in Christian countries mankind generally are, in the main articles of human duty, this motive will seldom mislead them.

In one important respect, the love of God excels all

moral principles whatever; and that is in its comprehensiveness. It reaches every action; it includes every duty. You cannot mention another moral principle which has this property in the same perfection. For instance, I can hardly name a better moral principle than humanity. It is a principle which every one commends, and justly: yet in this very article of comprehensiveness it is deficient when compared with the love of God. It will prompt us undoubtedly to do kind, and generous, and compassionate things towards our friends, our acquaintance, our neighbours, and towards the poor. In our relation to, and in our intercourse with mankind, especially towards those who are dependent upon us, or over whom we have power, it will keep us from hardness, and rigour, and cruelty. In all this it is excellent. But it will not regulate us, as we require to be regulated, in another great branch of Christian duty—self-government and self-restraint. We may be exceedingly immoral and licentious in sinful indulgences without violating our principles of humanity; at least, without specifically violating it, and without being sensible of violating it. And this is by no means an uncommon case or character, namely, humanity of temper subsisting along with the most criminal licentiousness, and under a total want of personal self-government. The reason is, that the principle of conduct, though excellent as far as it goes, fails in comprehensiveness. Not so with the love of God. He, who is influenced by that, feels his influence in all parts of duty, upon every occasion of action, throughout the whole course of conduct.

The thing with most of us to be examined into and ascertained is, whether it indeed guide us at all; whether it be within us an efficient motive. I am far from taking

upon me to say, that it is essential to this principle to exclude all other principles of conduct, especially the dread of God's wrath, and of its tremendous consequences; or that a person, who is deterred from evil actions by the dread of God's wrath, is obliged to conclude, that because he so much dreads God, he cannot love him. I will not venture to say any such thing. The Scripture, it is true, speaking of the love of God, hath said, that "perfect love casteth out fear;" but it hath not said, that in the soul of man this love is ever perfect: what the Scripture hath thus declared of perfect love is no more than what is just. The love of God, were it perfect, that is to say, were it such as his nature, his relation, his bounty to us deserves; were it adequate either to its object or to our obligation, were it carried up as high as in a perfectly virtuous and rational soul it might be carried, would, I believe, absorb every other motive and every other principle of action whatever, even the fear of God amongst the rest. This principle, by its nature, *might* gain a complete possession of the heart and will, so that a person acting under its influence would take nothing else into the account, would reflect upon no other consequence or consideration whatever. Possibly, nay, probably, this is the condition of some higher orders of spirits, and may become ours by future improvement, and in a more exalted state of existence; but it cannot, I am afraid, be said to be our condition now. The love of God subsists in the heart of good men as a powerful principle of action: but it subsists there in conjunction with other principles, especially with the fear of him. All goodness is in a certain degree comparative; and I think that he may be called a good man in whom this principle dwells and operates at all. Wherefore to obtain; when obtained, to cultivate, to

cherish, to strengthen, to improve it, ought to form the most anxious concern of our spiritual life. He that loveth God keepeth his commandments; but still the love of God is something more than keeping the commandments. For which reason we must acquire, what many, it is to be feared, have even yet to begin, a habit of contemplating God in the bounties and blessings of his creation. I think that religion can hardly subsist in the soul without this habit in some degree. But the greater part of us, such is the natural dullness of our souls, require something more exciting and stimulating than the sensations which large and general views of nature or of providence produce; something more particular to ourselves, and which more nearly touches our separate happiness. Now of examples of this kind, namely, of direct and special mercies towards himself, no one, who calls to mind the passages and providences of his life, can be destitute. There is one topic of gratitude falling under this head, which almost every man, who is tolerably faithful and exact in his self-recollections, will find in events upon which he has to look back; and it is this: How often have we been spared, when we might have been overtaken and cut off in the midst of sin! Of all the attributes of God, forbearance, perhaps, is that which we have most to acknowledge. We cannot want occasions to bring the remembrance of it to our thoughts. Have there not been occasions, in which, insnared in vice, we might have been detected and exposed; have been crushed by punishment or shame, have been irrecoverably ruined? Occasions in which we might have been suddenly stricken with death, in a state of soul the most unfit for it that it was possible? That we were none of these, that we have been preserved from these clangers, that our sin

was not our destruction, that instant judgment did not overtake us, is to be attributed to the long-suffering of God. Supposing, what is undoubtedly true, that the secrets of our conduct were known to him at the time, it can be attributed to no other cause. Now this is a topic which can never fail to supply subjects of thankfulness, and of a species of thankfulness which must bear with direct force upon the regulation of our conduct. We were not destroyed when we might have been destroyed, and when we merited destruction. We have been preserved for farther trial. This is, or ought to be, a touching reflection. How deeply, therefore, does it behove us not to trifle with the patience of God, not to abuse this enlarged space, this respited, protracted season of repentance, by plunging afresh into the same crimes, or others, or greater crimes? It shows that we are not to be wrought upon by mercy; that our gratitude is not moved; that things are wrong within us; that there is a deplorable void and chasm in our religious principles, the love of God not being present in our hearts.

But to return to that with which we set out: religion may spring from various principles, begin in various motives. It is not for us to narrow the promises of God which belong to sincere religion, from whatever cause it originates. But of these principles, the purest, the surest, is the love of God, forasmuch as the religion which proceeds from it is sincere, constant, and universal. It will not, like fits of terror and alarm, (which yet we do not despise,) produce a temporary religion. The love of God is an abiding principle. It will not, like some other, (and these also good and laudable principles of action, as far as they go,) produce a partial religion. It is co-extensive with all our obligations. Practical

Christianity may be comprised in three words: devotion, self-government, and benevolence. The love of God in the heart is a fountain, from which these three streams of virtue will not fail to issue. The love of God also is a guard against error in conduct, because it is a guard against those evil influences which mislead the understanding in moral questions. In some measure, it supplies the place of every rule. He who has it truly within him has little to learn. Look steadfastly to the will of God, which he who loves God necessarily does, practise what you believe to be well pleasing to him, leave off what you believe to be displeasing to him; cherish, confirm, strengthen the principle itself which sustains this course of external conduct, and you will not want many lessons, you need not listen to any other monitor.

## MEDITATING UPON RELIGION.

PSALM LXIII. 7.

*Have I not remembered thee in my bed: and thought upon thee when I was waking?*

THE life of God in the soul of man, as it is sometimes emphatically called, the Christian life, that is, or the progress of Christianity in the heart of any particular person, is marked, amongst other things, by religion gradually gaining possession of the thoughts. It has been said, that if we thought about religion as it deserved, we should never think about any thing else; nor with strictness, perhaps, can we deny the truth of this proposition. Religious concerns do so surpass and outweigh in value and importance all concerns beside, that, did they occupy a place in our minds proportioned to that importance, they would, in truth, exclude every other but themselves. I am not, therefore, one of those who wonder when I see a man *engrossed* with religion: the wonder with me is, that men care and think so little concerning it. With all the allowances which must be made for our employments, our activities, our anxieties about the interests and occurrences of the present life, it is still true, that our forgetfulness and negligence and indifference about religion are much greater than can be excused, or can easily be accounted for by these causes. Few men are so busy, but that they contrive to find time for any gratification their heart is set upon, and thought for any subject in which they are interested: they want not leisure for these, though they want leisure for religion.

Notwithstanding, therefore, singular cases, if indeed there be any cases, of being over religious, over intent upon spiritual affairs, the real and true complaint is all on the other side, that men think not about them enough, as they ought, as is reasonable, as it is their duty to do. That *is* the malady and the mischief. The cast and turn of our infirm and fleshly nature lean all on that side. For, first, this nature is affected chiefly by what we see. Though the things which concern us most deeply be not seen; for this very reason, that they are not seen, they do not affect us as they ought. That these things ought to be meditated upon, and must be acted upon, one way or other, long before we come actually to experience them, yet in fact we do not meditate upon them, we do not act with a view to them, till something gives us alarm, gives reason to believe that they are approaching fast upon us, that they are at hand, or shortly will be, that we shall indeed experience what they are.

The world of spirits, the world for which we are destined, is invisible to us. Hear St. Paul's account of this matter: "We look not at the things which are seen, but at the things which are not seen; for the things which are seen are temporal, but the things which are not seen are eternal." "We walk by faith, not by sight: faith is the evidence of things not seen." Some great invisible agent there must be in the universe; "the things which are seen were not made of things which do appear." Now if the great Author of all things be himself invisible to our senses, and if our relation to him must necessarily form the greatest interest and concern of our existence, then it follows, that our greatest interest and concern are with those things which are now invisible. "We are saved by

hope, but hope that is seen is not hope: for what a man seeth, why doth he yet hope for? but if we hope for that we see not, then do we with patience wait for it." The first infirmity, therefore, which religion has to conquer within us, is that which binds down our attention to the things which we see. The natural man is immersed in sense: nothing takes hold of his mind but what applies immediately to his sense: but this disposition will not do for religion: the religious character is founded in hope, as contradistinguished from experience, in perceiving by the mind what is not perceived by the eye: unless a man can do this, he cannot be religious: and with many it is a great difficulty. This power of hope, which, as St. Paul observes of it, is that which places the invisible world before our view, is specifically described in Scripture, as amongst the gifts of the Spirit, the natural man standing indeed much in need of it, being altogether of an opposite tendency. Hear St. Paul's prayer for his Roman converts: "The God of hope fill you with all joy and peace in believing, that you may abound in hope through the power of the Holy Ghost." Again, to the Galatians, how does he describe the state of mind of a Christian? "We through the Spirit wait for the hope of righteousness by faith."

Again; another impediment to the thought of religion is the faculty and the habit we have acquired of regarding its concerns as at a distance. A child is affected by nothing but what is present, and many thousands in this respect continue children all their lives. In a degree, this weakness cleaves to us all; produces upon us the same effect under a different form; namely, in this way, when we find ourselves necessarily disturbed by near or approaching evil, we have the means of forgetting the nearness or the

approach of that which must bring with it the greatest evil or the greatest good we are capable of, our change at death. Though we cannot exactly offer any arguments to show that it is either certainly or probably at a distance, yet we have the means of regarding it in our minds as though it were at a distance; and this even in cases in which it cannot possibly be so. Do we prepare for it? No. Why? Because we regard it in our imaginations as at a distance: we cannot prove that it is at a distance; nay, the contrary may be proved against us: but still we regard it so in our imaginations, and regard it so practically; for imagination is with most men the practical principle. But, however strong and general this delusion be, has it any foundation in reason? Can that be thought at a distance which may come to-morrow, which must come in a few years? In *a very* few years to most of us, in a few years to all, it will be fixed and decided, whether we are to be in heaven or hell; yet we go on without thinking of it, without preparing for it: and it is exceedingly observable, that it is only in religion we thus put away the thought from us. In the settlement of our worldly affairs after our deaths, which exactly depend upon the same event, commence at the same time, are equally distant, if either were distant, equally liable to uncertainty, as to when the disposition will take place; in these, I say, men are not usually negligent, or think that by reason of its distance it can be neglected, or by reason of the uncertainty when it may happen, left unprovided for. This is a flagrant inconsistency, and proves decisively that religion possesses a small portion of our concern, in proportion with what it ought to do. For instead of giving to it that superiority which is due to immortal concerns, above

those which are transitory, perishable, and perishing, it is not even put upon an equality with them; nor with those which, in respect to time, and the uncertainty of time, are under the same circumstances with itself.

Thirdly; the spiritual character of religion is another great impediment to its entering our thoughts. All religion, which is effectual, is and must be spiritual. Offices and ordinances are the handmaids and instruments of the spiritual religion, calculated to generate, to promote, to maintain, to uphold it in the heart, but the thing itself is purely spiritual. Now the flesh weigheth down the spirit, as with a load and burden. It is difficult to rouse the human constitution to a sense and perception of what is purely spiritual. They who are addicted, not only to vice, but to gratifications and pleasures; they who know no other rule than to go with the crowd in their career of dissipation and amusement; they whose attentions are all fixed and engrossed by business, whose minds from morning to night are counting and computing; the weak, and foolish, and stupid; lastly, which comprehends a class of mankind deplorably numerous, the indolent and slothful; none of these can bring themselves to meditate upon religion. The last class slumber over its interests and concerns; perhaps they cannot be said to forget it absolutely, but they slumber over the subject, in which state nothing as to their salvation gets done, no decision, no practice. There are, therefore, we see, various obstacles and infirmities in our constitutions, which obstruct the reception of religious ideas in our mind, still more such a voluntary entertainment of them as may bring forth fruit. It ought, therefore, to be our constant prayer to God, that he will open our hearts to

the influence of his word; by which is meant, that he will so quicken and actuate the sensibility and vigour of our minds, as to enable us to attend to the things which really and truly belong to our peace.

So soon as religion gains that hold and that possession of the heart, which it must do to become the means of our salvation, things change within us, as in many other respects, so especially in this. We think a great deal more frequently about it, we think of it for a longer continuance, and our thoughts of it have much more of vivacity and impressiveness. First, we begin to think of religion more frequently than we did. Heretofore we never thought of it at all, except when some melancholy incident had sunk our spirits, or had terrified our apprehensions; it was either from lowness or from fright that we thought of religion at all. Whilst things went smoothly and prosperously and gaily with us, whilst all was well and safe in our health and circumstances, religion was the last thing we wished to turn our minds to; we did not want to have our pleasure disturbed by it. But it is not so with us now; there is a change in our minds in this respect. It enters our thoughts very often, both by day and by night: "Have I not remembered thee in my bed, and thought upon thee when I was waking?" This change is one of the prognostications of the religious principle forming within us. Secondly, these thoughts *settle* themselves upon our minds. They were formerly fleeting and transitory, as the cloud which passes along the sky; and they were so for two reasons: first, they found no congenial temper and disposition to rest upon, no seriousness, no posture of mind proper for their reception; and, secondly, because we, of our own accord, by a positive exertion and endeavour of our will, put

them away from us; we disliked their presence, we rejected and cast them out. But it is not so now; we entertain and retain religious meditations, as being, in fact, those which concern us most deeply. I do not speak of the solid comfort which is to be found in them, because that belongs to a more advanced state of Christian life than I am now considering: that will come afterward; and, when it does come, will form the support, and consolation, and happiness of our lives. But whilst the religious principle is forming, at least during the first steps of that formation, we are induced to think about religion chiefly from a sense of its vast consequences; and this reason is enough to make wise men think about it both long and closely. Lastly, our religious thoughts come to have a vivacity and impressiveness in them which they had not hitherto; that is to say, they interest us much more than they did. There is a wonderful difference in the light in which we see the same thing, in the force and strength with which it rises up before our view, in the degree with which we are affected by it. This difference is experienced in no one thing more than in religion, not only between different persons, but by the same person at different times, the same person in different stages of the Christian progress, the same person under different measures of divine grace.

Finally, would we know whether we have made, or are making, any advances in Christianity, or not? These are the marks which will tell us. Do we think more frequently about religion than we used to do? Do we cherish and entertain these thoughts for a longer continuance than we did? Do they interest us more than formerly? Do they impress us more, do they strike us more forcibly, do they sink deeper? If we perceive

this, then we perceive a change, upon which we may ground good hopes and expectations; if we perceive it not, we have cause for very afflicting apprehensions, that the power of religion hath not yet visited us; cause for deep and earnest intercession with God for the much wanted succour of his Holy Spirit.

## OF THE STATE AFTER DEATH.

1 JOHN iii. 2.

*Beloved, now are we the sons of God; and it doth not yet appear what we shall be: but we know that, when he shall appear, we shall be like him; for we shall see him as he is.*

ONE of the most natural solicitudes of the human mind is to know what will become of us after death, what is already become of those friends who are gone. I do not so much mean the great question, whether we and they shall be happy or miserable, as I mean the question, what is the nature and condition of that state which we are so soon to try. This solicitude, which is both natural and strong, is sometimes, however, carried too far: and this is the case when it renders us uneasy, or dissatisfied, or impatient, under the obscurity in which the subject is placed; and placed, not only in regard to us, or in regard to common men, but in regard even to the apostles themselves of our Lord, who were taught from his mouth, as well as immediately instructed by his Spirit. St. John, the author of the text which I have read to you, was one of these; not only an apostle, but of all the apostles, perhaps, the most closely connected with his Master, and admitted to the most intimate familiarity with him. What it was allowed, therefore, for man to know, St. John knew. Yet this very St. John acknowledges, "that it doth not yet appear what we shall be;" the exact nature and condition and circumstances of our future state are yet hidden from us.

I think it credible that this may, in a very great degree, arise from the nature of the human under-

standing itself. Our Saviour said to Nicodemus, “If I have told you earthly things, and ye believe not, how shall ye believe if I tell you of heavenly things?” It is evident, from the strain of this extraordinary conversation, that the disbelief on the part of Nicodemus, to which our Saviour refers, was that which arose from the difficulty of comprehending the subject. Therefore our Saviour's words to him may be construed thus: If what I have just now said concerning the new birth, concerning being born again, concerning being born of the Spirit, concerning the agency of the Spirit, which are all “earthly things,” that is, are all things that pass in the hearts of Christians in this their present life, and upon this earth: if this information prove so difficult that you cannot bring yourself to believe it, by reason of the difficulty of apprehending it; “how shall ye believe?” how would ye be able to conquer the much greater difficulties which would attend my discourse, “if I told you of heavenly things?” that is to say, if I speak to you of those things which are passing, or which will pass, in heaven, in a totally different state and stage of existence, amongst natures and beings unlike yours? The truth seams to be, that the human understanding, constituted as it is, though fitted for the purposes for which we want it, that is, though capable of receiving the instruction and knowledge which are necessary for our conduct and the discharge of our duty, has a native original incapacity for the reception of any distinct knowledge of our future condition. The reason is, that all our conceptions and ideas are drawn from experience, (not, perhaps, all immediately from experience, but experience lies at the bottom of them all,) and no language, no information, no instruction, can do more for us than teach us the

relation of the ideas which we have. Therefore, so far as we can judge, no words whatever that could have been used, no account or description that could have been written down, would have been able to convey to us a conception of our future state, constituted as our understandings now are. I am far from saying that it was not in the power of God, by immediate inspiration, to have struck light and ideas into our minds, of which naturally we have no conception. I am far from saying that he could not, by an act of his power, have assumed a human being, or the soul of a human being, into heaven, and have shown to him or it the nature and the glories of that kingdom; but it is evident that, unless the whole order of our present world be changed, such revelations as these must be rare, must be limited to very extraordinary persons, and very extraordinary occasions. And even then, with respect to others, it is to be observed, that the ordinary modes of communication by speech or writing are inadequate to the transmitting of any knowledge or information of this sort: and from a cause, which has already been noticed, namely, that language deals only with the ideas which we have; that these ideas are all founded in experience; that probably, most probably indeed, the things of the next world are very remote from any experience which we have in this; the consequence of which is, that, though the inspired person might himself possess this supernatural knowledge, he could not impart it to any other person not in like manner inspired. When, therefore, the nature and constitution of the human understanding is considered, it can excite no surprise, it ought to excite no complaint, it is no fair objection to Christianity, "that it doth not yet appear what we shall be." I do not say that the imperfection of our

understanding forbids it, (for, in strictness of speech, that is not imperfect which answers the purpose designed by it,) but the present constitution of our understanding forbids it.

“It doth not yet appear,” saith the apostle, “what we shall be; but this we know, that, when he shall appear, we shall be like him.” As if he had said, Though we be far from understanding the subject either accurately or clearly, or from having conceptions and notions adequate to the truth and reality of the case, yet we know something: this, for instance, we know, that, “when he shall appear, we shall be like him.” The best commentary upon this last sentence of St. John's text may be drawn from the words of St. Paul. His words state the same proposition more fully, when he tells us, (Phil. iii. 21.) “that Christ shall change our vile body, that it may be like his glorious body.” From the two passages together, we may lay down the following points. First, that we shall have bodies. One apostle informs us that we shall be like him; the other, that our vile body shall be like his glorious body: therefore we shall have bodies. Secondly, that these bodies shall be greatly changed from what they are at present. If we had had nothing but St. John's text to have gone upon, this would have been implied. “When he shall appear, we *shall* be like him.” We are not like him now, we *shall be* like him; we shall hereafter be like him, namely, when he shall appear. St. John's words plainly regard this similitude as a future thing, as what we shall acquire, as belonging to what we shall become, in contradistinction to what we are. Therefore they imply a change which must take place in our bodily constitution. But what St. John's words imply, St. Paul's declare. “He shall change our vile

bodies." That point, therefore, may be considered as placed out of question.

That such a change is necessary, that such a change is to be expected, is agreeable even to the established order of nature. Throughout the universe this rule holds, viz. that the body of every animal is suited to its state. Nay, more; when an animal changes its state it changes its body. When animals which lived under water, afterward live in air, their bodies are changed almost entirely, so as hardly to be known by any one mark of resemblance to their former figure; as, for example, from worms and caterpillars to flies and moths. These are common transformations; and the like happens when an animal changes its element from the water to the earth, or an insect from living underground to flying abroad in the air. And these changes take place in consequence of that unalterable rule, that the body be fitted to the state; which rule obtains throughout every region of nature with which we are acquainted. Now our present bodies are by no means fitted for heaven. So saith St. Paul expressly, "Flesh and blood *cannot* inherit the kingdom of God; corruption doth not inherit incorruption." Between our bodies as they are now constituted, and the state into which we shall come then, there is a physical, necessary, and invincible incongruity. Therefore they must undergo a change, and that change will, first, be universal, at least as to those who shall be saved; secondly, it will be sudden; thirdly, it will be very great. First, it will be universal. St. Paul's words, in the fifteenth chapter of his first Epistle to the Corinthians, are, "We shall all be changed." I do however admit that this whole chapter of St. Paul's relates only to those who shall be saved; of no others did he intend to speak. This, I think, has

been satisfactorily made out; but the argument is too long to enter upon at present. If so, the expression of the apostle, "We shall all be changed," proves only that we who are saved, who are admissible into his kingdom, shall be changed. Secondly, the change will be instantaneous. So St. Paul describes it: "In a moment, in the twinkling of an eye, the dead shall be raised incorruptible;" and therefore their nature must have undergone the change. Thirdly, it will be very great. No change, which we experience or see, can bear any assignable proportion to it in degree or importance. It is this corruptible putting on incorruption; it is this mortal putting on immortality. Now it has often been made a question, whether, after so great a change, the bodies, with which we shall be clothed, are to be deemed new bodies, or the same bodies under a new form. This is a question which has often been agitated, but the truth is, it is of no moment or importance. We continue the same, to all intents and purposes, so long as we are sensible and conscious that we are so. In this life our bodies are continually changing. Much, no doubt, and greatly is the body of every human being changed from his birth to his maturity: yet, because we are nevertheless sensible of what we are, sensible to ourselves that we are the same, we are in reality the same. Alterations, in the size or form of our visible persons, make no change in that respect. Nor would they, if they were much greater, as in some animals they are; or even if they were total. Vast, therefore, as that change must be, or rather, as the difference must be between our present and our future bodies, as to their substance, their nature, or their form, it will not hinder us from remaining the same, any more than the alterations which our bodies

undergo in this life hinder us from remaining the same. We know within ourselves that we are the same; and that is sufficient: and this knowledge or consciousness we shall rise with from the grave, whatever be the bodies with which we be clothed.

The two apostles go one step farther when they tell us that we shall be like Christ himself; and that this likeness will consist in a resemblance to his glorified body. Now of the glorified body of Christ all that we know is this. At the transfiguration upon the mount, the three apostles saw the person of our Lord in a very different state from its ordinary state. “He was transfigured before them, and his face did shine as the sun, and his raiment was white as the light.” St. Luke describes it thus: “The fashion of his countenance was altered, and his raiment was white and glistering: and, behold, there talked with him two men, who appeared in glory.” Then he adds, “that the apostles, when they awaked, saw his glory.” Now I consider this transaction as a specimen of the change of which a glorified body is susceptible. St. Stephen, at his martyrdom, saw the glory of God, and Jesus standing at the right hand of God. St. Paul, at his conversion, saw a light from heaven, above the brightness of the sun, shining round about him; and in this light Christ then was. These instances, like the former, only show the changes and the appearances of which a glorified body is susceptible, not the form or condition in which it must necessarily be found, or must always continue. You will observe, that it was necessary that the body of our Lord at his transfiguration, at his appearance after his resurrection, at his ascension into heaven, at his appearance to Stephen, should preserve a resemblance to his human person upon earth, because it was by that

resemblance alone he could be known to his disciples, at least by any means of knowledge naturally belonging to them in that human state. But this was not always necessary, nor continues to be necessary. Nor is there any sufficient reason to suppose, that this resemblance to our present bodies will be retained in our future bodies, or be at all wanted. Upon the whole, the conclusions, which we seem authorized to draw from these intimations of Scripture, are,

First, that we shall have bodies.

Secondly, that they will be so far different from our present bodies, as to be suited, by that difference, to the state and life into which they are to enter, agreeably to that rule which prevails throughout universal nature; that the body of every being is suited to its state, and that, when it changes its state, it changes its body.

Thirdly, that it is a question by which we need not at all be disturbed, whether the bodies with which we shall arise be new bodies, or the same bodies under a new form; for,

Fourthly, no alteration will hinder us from remaining the same, provided we are sensible and conscious that we are so; any more than the changes which our visible person undergoes even in this life, and which from infancy to manhood are undoubtedly very great, hinder us from being the same, to ourselves and in ourselves, and to all intents and purposes whatsoever.

Lastly, that though, from the imperfection of our faculties, we neither are, nor, without a constant miracle upon our minds, could be made able to conceive or comprehend the nature of our future bodies; yet we are assured, that the change will be infinitely beneficial; that our new bodies will be infinitely superior to those

which we carry about with us in our present state; in a word, that, whereas our bodies are now comparatively vile, (and are so denominated,) they will so far rise in glory as to be made like unto his glorious body; that whereas, through our pilgrimage here, we *have* borne that which we inherited, the image of the earthly, of our parent the first Adam, created for a life upon this earth; we shall, in our future state, bear another image, a new resemblance, that of the heavenly inhabitant, the second man, the second nature, even that of the Lord from heaven.

## ON PURITY OF THE HEART AND AFFECTIONS.

1 JOHN iii. 2, 3.

*Beloved, now are we the sons of God; and it doth not yet appear what we shall be: but we know that, when he shall appear, we shall be like him; for we shall see him as he is. And every man that hath this hope in him purifieth himself, even as he is pure.*

WHEN the text tells us, “that every man that hath this hope in him purifieth himself,” it must be understood as intending to describe the natural, proper, and genuine effects of this hope, rather, perhaps, than the actual effects, or at least as effects which, in point of experience, universally follow from it. As hath already been observed, the whole text relates to sincere Christians, and to these alone: the word *we*, in the preceding part of it, comprises sincere Christians, and no others. Therefore the word *every man* must be limited to the same sort of men, of whom he was speaking before. It is not probable, that in the same sentence he would change the persons and characters concerning whom he discoursed. So that if it had been objected to St. John, that, in point of fact, every man did not purify himself who had this hope in him, he would have replied, I believe, that these were not the kind of persons he had in his view; that, throughout the whole of the text, he had in contemplation the religious condition and character of sincere Christians, and no other. When, in the former part of the text, he talked of *we* being the sons of God, of *we* being like Christ, he undoubtedly meant sincere Christians alone: and it would be strange if he meant any other in this latter part of the text,

which is in fact a continuation of the same discourse, of the same subject, nay, a portion of the same sentence.

I have said thus much in order to obviate the contrariety which there seems to be between St. John's assertion and experience. Experience, I acknowledge, proves the inefficacy, in numerous cases, of religious hope and religious motives: and it must be so; for if religious motives operated certainly and necessarily, if they produced their effect by an infallible power over the mind, we should only be machines necessarily actuated; and that certainly is not the thing which a moral agent, a religious agent, was intended to be. It was intended that we should have the power of doing right, and, consequently, of doing wrong: for he who cannot do wrong cannot do right by choice; he is a mere tool and instrument, or rather a machine, whichever he does. Therefore all moral motives, and all religious motives, unless they went to deprive man of his liberty entirely, which they most certainly were not meant to do, must depend for their influence and success upon the man himself.

The success, therefore, is various; but when it fails, it is owing to some vice and corruption in the mind itself. Some men are very little affected by religious exhortation of any kind, either by hearing or reading. That is a vice and corruption in the mind itself. Some men, though affected, are not affected sufficiently to influence their lives. That is a vice and corruption in the mind, or rather in the heart: and so it will always be found. But I do not so much wonder at persons being unaffected by what others tell them, be those others who they may, preachers, or teachers, or friends, or parents, as I wonder at seeing men not affected by their own thoughts, their own meditations: yet it is so; and

when it is so, it argues a deep corruption of mind indeed. We can think upon the most serious, the most solemn subjects, without any sort of consequence upon our lives. Shall we call this seared insensibility? shall we call it a fatal inefficiency of the rational principle within us? shall we confess that the mind has lost its government over the man?

These are observations upon the state of morals and religion, as we see them in the world: but whatever these observations be, it is still true; and this is St. John's assertion, that the proper, natural, and genuine effect of religious hope is to cause us to strive "to purify ourselves, even *as he is pure.*" St. John strongly fixes our attention, I mean, as he means, such of us as are sincere Christians, upon what we are to be hereafter. This, as to particulars, is veiled from us, as we have observed, by our present nature, but as to generals, as to what is of real importance and concern for us to know, (I do not mean but that it might be highly gratifying and satisfactory to know more, but as to what is of the first importance and concern for us to know,) we have a glorious assurance, we have an assurance that we shall undergo a change in our nature infinitely for the better; that when he shall appear glorified as he is, we shall be like him. Then the point is, what we are to do, how we are to act, under this expectation, having this hope, with this prospect, placed before our eyes. St. John tells us, "we are to purify ourselves, even *as he is pure.*"

Now what is the scriptural meaning of purifying ourselves can be made out thus. The contrary of purity is defilement, that is evident: but our Saviour himself hath told us what the things which defile a man are; and this is the enumeration: evil thoughts,

adulteries, fornications, murders, thefts, covetousness, wickedness, deceit, lasciviousness, an evil eye, blasphemy, pride, foolishness; and the reason given why these are the real proper defilements of our nature is, that they proceed from within, out of the heart: these evil things come from within, and defile the man. The seat, therefore, of moral defilement, according to our Saviour, is the heart; by which we know, that he always meant the affections and the disposition. The seat, therefore, of moral purity must necessarily be the same; for purity is the reverse of defilement: consequently, to purify ourselves is to cleanse our hearts from the presence and pollution of sin; of those sins particularly, which reside in, and continue in the heart. This is the purgation intended in our text. This is the task of purgation enjoined upon us.

It is to be noticed, that it goes beyond the mere control of our actions. It adds a farther duty, the purifying of our thoughts and affections. Nothing can be more certain than that it was the design of our Saviour, in the passage here referred to, to direct the attention of his disciples to the heart, to that which is within a man, in contradistinction to that which is external. Now he who only strives to control his outward actions, but lets his thoughts and passions indulge themselves without check or restraint, does not attend to that which is within him, in contradistinction to that which is external. Secondly, the instances which our Saviour has given, though, like all instances in Scripture, and to say the truth, in all ancient writings, they be specimens and illustrations of his meaning, as to the kind and nature of the duties or the vices which he had in view, rather than complete catalogues, including all such duties or vices by name, so that no other but what

are thus named and specified were intended: though this qualified way of understanding the enumerations be right, yet even this enumeration itself shows, that our Saviour's lesson went beyond the mere external action. Not only are adulteries and fornications mentioned, but evil thoughts and lasciviousness; not only murders, but an evil eye; not only thefts, but covetousness, or covetings. Thus, by laying the axe to the root—not by lopping off the branches, but by laying the axe to the root—our Saviour fixed the only rule which can ever produce good morals.

Merely controlling the actions, without governing the thoughts and affections, will not do. In point of fact, it is never successful. It is certainly not a compliance with our Saviour's command, nor is it what St. John meant in the text by purifying ourselves.

“Every man that hath this hope in him purifieth himself, even as he,” namely, Christ himself, “is pure.” It is a doctrine and lesson of the New Testament, not once, but repeatedly inculcated, that if we hope to resemble Christ in his glorified state, we must resemble him in his human state. And it is a part, and a most significant part, of this doctrine, that the resemblance must consist in purity from sin, especially from those sins which cleave and attach to the heart. It is by St. Paul usually put thus: “If we be dead with Christ, we believe that we shall also live with him.” “Dead with Christ;” what can that mean? for the apostle speaks to those who had not yet undergone natural death. He explains: “Reckon yourselves to be dead unto sin;” that, you hear, is the death he means. “He that is dead is freed from sin;” that is St. Paul's own exposition of his own words; and then, keeping the sense of the words in his thoughts, he adds, “If we

be dead with Christ, we believe that we shall also live with him.” Again, still keeping the same sense in view, and no other sense, “If we have been planted together in the likeness of his death, we shall be also in the likeness of his resurrection.” Once more, but still observe in the same sense, “We are buried with him by baptism unto death; our old man is crucified with him.” The burden of the whole passage is, that if we hope to resemble what Christ is in heaven, we must resemble what he was upon earth; and that this resemblance must consist specifically in the radical casting off of our sins. The expressions of the apostle are very strong; “that the body of sin may be destroyed. Let not sin reign in your mortal body; obey it not in the lusts thereof;” not only in its practices, but in its desires. “Sin shall not have dominion over you.”

In another epistle, that to the Colossians, St. Paul speaks of an emancipation from sin, as a virtual rising from the dead, like as Christ rose from the dead. “If ye then be risen with Christ, seek those things that are above, where Christ sitteth at the right hand of God: set your affections on things above, not on things of the earth; for ye are dead, and your life is hid with Christ in God. When Christ, who is our life, shall appear, then shall ye also appear with him in glory.” In this way is the comparison carried on. And what is the practical exhortation which it suggests? “Mortify, therefore, your members which are upon the earth; fornication, uncleanness, evil concupiscence, and covetousness;” which is an equivalent exhortation, and drawn from the same premises as that of the text; “Purify yourselves, even as he is pure.”

The Scriptures, then, teach that we are to make

ourselves like Christ upon earth, that we may become like him in heaven, and this likeness is to consist in purity.

Now there is a class of Christians, and, I am ready to allow, real Christians, to whom this admonition of the text is peculiarly necessary.

They are not those who set aside religion; they are not those who disregard the will of their Maker, but they are those who endeavour to obey him partially, and in this way: finding it an easier thing to do good than to expel their sins, especially those which cleave to their hearts, their affections, or their imaginations, they set their endeavours more towards beneficence than purity. You say, we ought not to speak disparagingly of doing good: by no means; but we affirm, that it is not the whole of our duty, nor the most difficult part of it; in particular, it is not that part of it which is insisted upon in the text, and in those other scriptures that have been mentioned. The text, enjoining the imitation of Christ upon earth, in order that we may become like him in heaven, does not say, Do good, even as he went about doing good; but it says, "Purify yourselves, even as he is pure:" so saith St. John. "Mortify the deeds of the body, let not sin reign in you; die with Christ unto sin; be baptized unto Jesus Christ, that is, unto his death; be buried with him by baptism unto death; be planted together in the likeness of his death; crucify the old man, and destroy the body of sin; as death hath no more dominion over him, so let sin no more reign in your mortal bodies:" so St. Paul. All these strong and significant metaphors are for the purpose of impressing more forcibly upon us this great lesson; that to participate with Christ in his glory, we must participate with him

in his humiliation; and that this participation consists in divesting ourselves of those sins, of the heart especially, and affections, whether they break out into action or not, which are inconsistent with that purity of which he left us an example; and to the attainment and preservation of which purity we are most solemnly enjoined to direct our first, strongest, and our most sincere endeavours.

## OF THE DOCTRINE OF CONVERSION.

MATTHEW ix. 13.

*I am not come to call the righteous, but sinners to repentance.*

IT appears from these words, that our Saviour in his preaching held in view the character and spiritual situation of the persons whom he addressed, and the differences which existed amongst men in these respects; and that he had a regard to these considerations, more especially in the preaching of repentance and conversion. Now I think that these considerations have been too much omitted by preachers of the gospel since, particularly in this very article; and that the doctrine itself has suffered by such omission.

It has been usual to divide all mankind into two classes, the converted and the unconverted; and, by so dividing them, to infer the necessity of conversion to every person whatever. In proposing the subject under this form, we state the distinction, in my opinion, too absolutely, and draw from it a conclusion too universal: because there is a class and description of Christians, who, having been piously educated, and having persevered in those pious courses into which they were first brought, are not conscious to themselves of ever having been without the influence of religion, of ever having lost sight of its sanctions, of ever having renounced them; of ever, in the general course of their conduct, having gone against them. These cannot properly be reckoned either converted or unconverted. They are not converted, for they are not sensible of any such religious alteration having taking place with them, at any particular time, as can properly be called

a conversion. They are not unconverted, because that implies a state of reprobation, and because, if we call upon them to be converted, (which if they be unconverted we ought to do,) they will not well understand what it is we mean them to do; and, instead of being edified, they may be both much and unnecessarily disturbed, by being so called upon.

There is, in the nature of things, a great variety of religious condition. It arises from hence, that exhortations and calls and admonitions, which are of great use and importance in themselves, and very necessary to be insisted upon, are, nevertheless, not wanted by all, are not equally applicable to all, and to some are altogether inapplicable. This holds true of most of the topics of persuasion or warning, which a Christian teacher can adopt. When we preach against presumption, for instance, it is not because we suppose that all are presumptuous; or that it is necessary for all, or every one, to become more humble or diffident or apprehensive than he now is: on the contrary, there may amongst our hearers be low and timorous and dejected spirits, who, if they take to themselves what we say, may increase a disposition which is already too much; or be at a loss to know what it is herein that he would enjoin upon them. Yet the discourse and the doctrine may, nevertheless, be very good; and, for a great portion of our congregation, very necessary. The like, I think, is the case with the doctrine of conversion. If we were to omit the doctrine of conversion, we should omit a doctrine which, to many, must be the salvation of their souls. To them, all calls without this call, all preaching without this doctrine, would be in vain; and it may be true, that a great part of our hearers are of this description. On the other hand, if we press and

insist upon conversion, as indispensable to all for the purpose of being saved, we should mislead some, who would not apprehend how they could be required to turn, or be converted, to religion, who were never, that they knew, either indifferent to it, or alienated from it. In opposition, however, to what is here said, there are who contend, that it is necessary for every man living to be converted, before he can be saved. This opinion undoubtedly deserves serious consideration, because it founds itself upon Scripture, whether rightly or erroneously interpreted is the question. The portion of Scripture upon which they who maintain the opinion chiefly rely, is our Saviour's conversation with Nicodemus, recorded in the third chapter of St. John's Gospel. Our Saviour is there stated to have said to Nicodemus, "Except a man be born again, he cannot see the kingdom of God;" and afterward, as a confirmation, and, in some sort, an exposition of his assertion, to have added, "Except a man be born of water and of the Spirit, he cannot enter into the kingdom of God." It is inferred from this passage, that *all persons whatever* must undergo a conversion, before they be capable of salvation: and it cannot be said that this is a forced or strained inference; but the question before us at present is, is it a necessary inference? I am not unwilling to admit, that this short but very remarkable conversation is fairly interpreted of the gift of the Spirit, and that, when this Spirit is given, there is a new birth, a regeneration; but I say, that it is no where determined at what time of life, or under what circumstances, this gift is imparted; nay, the contrary is intimated by comparing it to the blowing of the wind, which, in its mode of action, is out of the reach of our rules and calculations: "the wind bloweth where it listeth, and

them hearest the sound thereof, but canst not tell whence it cometh and whither it goeth; so is every one that is born of the Spirit." The effect of this uncertainty is, that we are left at liberty to pray for spiritual assistance; and we do pray for it, in all stages, and under all circumstances of our existence. We pray for it in baptism, for those who are baptized; we teach those who are catechised to pray for it in their catechism: parents pray for its aid and efficacy to give effect to their parental instructions, to preserve the objects of their love and care from sin and wickedness, and from every spiritual enemy: we pray for it, particularly in the office of confirmation, for young persons just entering into the temptations of life. Therefore spiritual assistance may be imparted at any time, from the earliest to the latest period of our existence; and whenever it is imparted, there is that being born of the Spirit to which our Saviour's words refer. And, considering the subject as a matter of experience, if we cannot ordinarily distinguish the operations of the Spirit from those of our minds, it seems to follow, that neither can we distinguish when they commence: so that spiritual assistance may be imparted, and the thing designated by our Lord's discourse satisfied, without such a sensible conversion, that a person can fix his memory upon some great and general change wrought in him at an assignable time.

The consciousness of a great and general change may be the fact with many. It may be essentially necessary to many: I only allege, that it is not so to all, so that every person, who is not conscious of such a change, must set himself down as devoted to perdition.

This, I repeat, is all I contend for; for I by no means intend to say that any one is without sin, and in that sense not to stand in need of conversion; still

less, that any sin is to be allowed, and not, on the contrary, strenuously and sincerely resisted and forsaken. I only maintain, that there may be Christians who are and have been in such a religious state, that no such thorough and radical change as is usually meant by conversion, is or was necessary for them; and that they need not be made miserable by the want of consciousness of such a change.

I do not, in the smallest degree, mean to undervalue or speak lightly of such changes, whenever or in whomsoever they take place: nor to deny that they may be sudden, yet lasting, (nay, I am rather inclined to think that it is in this manner that they frequently do take place); nor to dispute what is upon good testimony alleged concerning conversion brought about by affecting incidents of life; by striking passages of Scripture; by impressive discourses from the pulpit; by what we meet with in books; or even by single touching sentences or expressions in such discourses or books. I am not disposed to question these relations unnecessarily, but rather to bless God for such instances, when I hear of them, and to regard them as merciful ordinations of his providence.

But it will be said, that conversion implies a revolution of opinion. Admitting this to be so, such a change or revolution cannot be necessary to all, because there is no system of religious opinions in which some have not been brought up from the beginning. To change from error to truth, in any great and important article of religious belief, deserves, I allow, the name of conversion; but all cannot be educated in error, on whatever side truth be supposed to lie.

To me, then, it appears, that, although it cannot be stated with safety, or without leading to consequences

which may confound and alarm many good men, that conversion is necessary to all, and under all circumstances; yet, I think, that there are two topics of exhortation, which together comprise the whole Christian life, and one or other of which belongs to every man living, and these two topics are conversion and improvement; when conversion is not wanted, improvement is.

Now this respective preaching of conversion or improvement, according to the respective spiritual condition of those who hear us or read what we write, is authorized by the example of Scripture preaching, as set forth in the New Testament. It is remarkable, that, in the four Gospels and the Acts of the Apostles, we read incessantly of the preaching of repentance, which I admit to mean conversion. St. John the Baptist's preaching set out with it; our Lord's own preaching set out with it. It was the subject which he charged upon his twelve apostles to preach. It was the subject which he sent forth his seventy disciples to preach. It was the subject which the first missionaries of Christianity pronounced and preached in every place which they came to, in the course of their progress through different countries. Whereas, in the epistles written by the same persons, we hear proportionably much less of repentance, and much more of advance, proficiency, progress, and improvement in holiness of life; and of rules and maxims for the leading of a holy and godly life. These exhortations to continual improvement, to sincere, strenuous, and continual endeavours after improvement, are delivered under a variety of expressions, but with a strength and earnestness sufficient to show what the apostles thought of the importance of what they were teaching.

Now the reason of the difference is, that the preaching of Christ, and his apostles, as recorded in the Gospels and in the Acts of the Apostles, was addressed to Jews and Gentiles, whom they called upon to become disciples of the new religion. This call evidently implied repentance and conversion. But the epistles, which the apostles, and some of which the same apostles, wrote afterward, were addressed to persons already become Christians; and to some who, like Timothy, had been such from their earliest youth. Speaking to these, you find they dwell upon improvement, proficiency, continued endeavours after higher and greater degrees of holiness and purity, instead of saying so much about repentance and conversion. This conduct was highly rational, and was an adaptation of their instruction to the circumstances of the persons whom they addressed, and may be an example to us, in modelling our exhortations to the different spiritual conditions of our hearers.

Seeing, then, that two great topics of our preaching must always be conversion and improvement; it remains to be considered, who they are to whom we must preach conversion, and who they are to whom we must preach improvement.

First; Now of the persons in our congregations to whom we not only may, but must, preach the doctrine of conversion plainly and directly, are those who, with the name indeed of Christians, have hitherto passed their lives without any internal religion whatever; who have not at all thought upon the subject; who, a few easy and customary forms excepted, (and which with them are mere forms,) cannot truly say of themselves, that they have done one action which they would not have done equally, if there had been no such thing as a God

in the world; or that they have ever sacrificed any passion, any present enjoyment, or even any inclination of their minds, to the restraints and prohibitions of religion; with whom indeed religious motives have not weighed a feather in the scale against interest or pleasure. To these it is utterly necessary that we preach conversion. At this day we have not Jews and Gentiles to preach to; but these persons are really in as unconverted a state as any Jew or Gentile could be in our Saviour's time. They are no more Christians, as to any actual benefit of Christianity to their souls, than the most hardened Jew or the most profligate Gentile was in the age of the Gospel. As to any difference in the two cases, the difference is all against them. These must be converted before they can be saved. The course of their thoughts must be changed, the very principles upon which they act must be changed. Considerations, which never, or which hardly ever entered into their minds, must deeply and perpetually engage them. Views and motives which did not influence them at all, either as checks from doing evil or as inducements to do good, must become the views and motives which they regularly consult, and by which they are guided; that is to say, there must be a revolution of principle: the visible conduct will follow the change; but there must be a revolution within. A change so entire, so deep, so important, as this, I do allow to be a conversion; and no one, who is in the situation above described, can be saved without undergoing it; and he must necessarily both be sensible of it at the time, and remember it all his life afterward. It is too momentous an event ever to be forgot. A man might as easily forget his escape from a shipwreck. Whether it was sudden, or whether it was gradual, if it

was effected, (and the fruits will prove that,) it was a true conversion: and every such person may justly both believe and say of himself, that he was converted at a particular assignable time. It may not be necessary to speak of his conversion, but he will always think of it with unbounded thankfulness to the Giver of all grace, the Author of all mercies, spiritual as well as temporal. Secondly; The next description of persons to whom we must preach conversion, properly so called, are those who *allow themselves* in the course and habit of some particular sin. With more or less regularity in other articles of behaviour, there is some particular sin which they practise constantly and habitually, and allow themselves in that practice. Other sins they strive against; but in this they allow themselves. Now no man can go on in this course consistently with the hope of salvation. Therefore it must be broken off. The essential and precise difference between a child of God and another is, not so much in the number of sins into which he may fall, (though that undoubtedly be a great difference, yet it is not a precise difference; that is to say, a difference in which an exact line of separation can be drawn,) but the precise difference is, that the true child of God *allows himself* in no sin whatever. Cost what it may, he contends against, he combats all sin; which he certainly cannot be said to do who is still in the course and habit of some particular sin; for as to that sin, he reserves it, he compromises it. Against other sins, and other sorts of sin, he may strive; in this he allows himself. If the child of God sin, he does not allow himself in the sin; on the contrary, he grieves, he repents, he rises again: which is a different thing from proceeding in a settled self-allowed course of sinning. Sins which are compatible with sincerity are much more likely to

be objects of God's forgiveness than sins that are not so; which is the case with allowed sins. Are there then some sins in which we live continually? some duties which we continually neglect?—we are not children of God; we are not sincere disciples of Christ. The allowed prevalence of any one known sin is sufficient to exclude us from the character of God's children. And we must be converted from that sin, in order to become such. Here then we must preach conversion. The habitual drunkard, the habitual fornicator, the habitual cheat must be converted. Now such a change of principle, of opinion, and of sentiment, as no longer to allow ourselves in that in which we did allow ourselves, and the actual sacrifice of a habit, the breaking off a course of sinful indulgence or of unfair gain, in pursuance of the new and serious views which we have formed of these subjects, is a conversion. The breaking off of a habit, especially when we had placed much of our gratification in it, is alone so great a thing, and such a step in our Christian life, as to merit the name of conversion. Then as to the time of our conversion, there can be little question about that. The drunkard was converted when he left off drinking; the fornicator, when he gave up his criminal indulgences, haunts, and connexions; the cheat, when he quitted dishonest practices, however gainful and successful: provided, in these several cases, that religious views and motives influenced the determination, and a religious character accompanied and followed these sacrifices.

In these two cases, therefore, men must be converted, and live; or remain unconverted, and die. And the time of conversion can be ascertained. There must that pass within them, at some particular assignable

time, which is properly a conversion; and will, all their lives, be remembered as such. This description, without all doubt, comprehends great numbers; and it is each person's business to settle with himself, whether he be not of the number; if he be, he sees what is to be done.

But I am willing to believe, that there are very many Christians, who neither have in any part of their lives been without influencing principles, nor have at any time been involved in the habit and course of a particular known sin, or have allowed themselves in such course and practice. Sins, without doubt, they have committed, more than sufficient to humble them to the dust; but they have not, to repeat the same words again, lived in a course of any particular known sin, whether of commission or neglect; and by deliberation, and of aforethought, allowed themselves in such course. The *conversion*, therefore, above described, cannot apply to, or be required of, such Christians. To these we must preach, not conversion, but *improvement*. Improvement, continual improvement, must be our text, and our topic; improvement in grace, in piety, in disposition, in virtue. Now, I put the doctrine of *improvement*, not merely upon the consideration, which yet is founded upon express Scripture authority, that, whatever improvement we make in ourselves, we are thereby sure to meliorate our future condition, receiving at the hand of God a proportionable reward for our efforts, our sacrifices, our perseverance, so that our labour is never lost, is never, as St. Paul expressly assures us, in vain in the Lord; though this, I say, be a firm and established ground to go upon, yet it is not the ground upon which I, at present, place the necessity of a constant progressive improvement in virtue. I rather

wish to lay down upon the subject this proposition; namely, that continual improvement is essential in the Christian character, as an evidence of its sincerity; that, if what we have hitherto done in religion has been done from truly religious motives, we shall necessarily *go on*; that, if our religion be real, it cannot stop. There is no standing still: it is not compatible with the nature of the subject: if the principles which actuated us be principles of godliness, they must continue to actuate us; and, under this continued stimulus and influence, we must necessarily grow better and better. If this effect do not take place, the conclusion is, that our principles are weak or hollow or unsound. Unless we find ourselves grow better, we are not right. For example, if our transgressions do not become fewer and fewer, it is to be feared that we have left off striving against sin; and then we are not sincere.

I apprehend, moreover, that with no man living can there be a ground for stopping, as though there was nothing more left for him to be done. If any man had this reason for stopping, it was the apostle Paul. Yet did he stop? or did he so judge? Hear his own account: “This I do, forgetting those things that are behind, (those things whereto I have already attained,) and looking forward to those things that are before, (to still farther improvement,) I press towards the mark for the prize of the high calling of God in Christ Jesus.” This was not stopping: it was pressing on. The truth is, in the way of Christian improvement, there is business for the best: there is enough to be done for all.

First; in this stage of the Christian life it is fit to suppose, that there are no enormous crimes, such as mankind universally condemn and cry out against, at present committed by us; yet less faults, still clearly

faults, are not unfrequent with us, are too easily excused, too soon repeated. This must be altered.

Secondly; we may not avowedly be engaged in any course or habit of known sin, being at the time conscious of such sin; but we may continue in some practices which our consciences cannot, and would not, upon examination, approve, and in which we have allowed the wrongness of the practice to be screened from our sight by general usage, or by the example of persons of whom we think well. This is not a course to be proceeded in longer. Conscience, our own conscience, is to be our guide in all things.

Thirdly; we may not absolutely *omit* any duty to our families, our station, our neighbourhood, or the public, with which we are acquainted; but might not these duties be more effectively performed, if they were gone about with more diligence than we have hitherto used? and might not farther means and opportunities of doing good be found out, if we took sufficient pains to inquire and to consider?

Fourthly, again; even where less is to be blamed in our lives, much may remain to be set right in our hearts, our tempers, and dispositions. Let our affections grow more and more pure and holy, our hearts more and more lifted up to God, and loosened from this present world; not from its duties, but from its passions, its temptations, its over anxieties, and great selfishness; our souls cleansed from the dross and corruption which they have contracted in their passage through it.

Fifthly; it is no slight work to bring our *tempers* to what they should be; gentle, patient, placable, compassionate; slow to be offended, soon to be appeased; free from envy, which, though a necessary,

is a difficult attainment; free from bursts of anger; from aversions to particular persons, which is hatred; able heartily to rejoice with them that do rejoice; and, from true tenderness of mind, weeping, even when we fan do no more, with them that weep; in a word, to put on charity with all those qualities with which St. Paul hath clothed it, 1 Cor. xiii; which read for this purpose.

Sixthly; whilst any good can be done by us, we shall not fail to do it; but even when our powers of active usefulness fail, which not seldom happens, there still remains that last, that highest, that most difficult, and, perhaps, most acceptable duty to our Creator, resignation to his blessed will in the privations and pains and afflictions with which we are visited; thankfulness to him for all that is spared to us, amidst much that is gone; for any mitigation of our sufferings, any degree of ease and comfort and support and assistance which we experience. Every advanced life, every life of sickness or misfortune, affords materials for virtuous feelings. In a word, I am persuaded that there is no state whatever of Christian trial, varied and various as it is, in which there will not be found both matter and room for *improvement*; in which a true Christian will not be incessantly striving, month by month, and year by year, to grow sensibly better and better; and in which his endeavours, if sincere, and assisted, as, if sincere, they may hope to be assisted, by God's grace, will not be rewarded with success.

## PRAYER IN IMITATION OF CHRIST.

LUKE v. 16.

*And he withdrew himself into the wilderness, and prayed.*

THE imitation of our Saviour is justly held out to us as a rule of life; but then there are many things in which we cannot imitate him. What depends upon his miraculous character must necessarily surpass our endeavours, and be placed out of the reach of our imitation. This reason makes those particulars, in which we *are* able to follow his example, of great importance to be observed by us; because it is to these that our hopes of taking him for our pattern, of treading in his footsteps, are necessarily confined.

Now, our Lord's piety is one of these particulars. We *can*, if we be so minded, pray to God, as he did. We can aim at the spirit and warmth and earnestness of his devotions; we can use, at least, those occasions, and that mode of devotion, which his example points out to us.

It is to be remarked, that a fulness of *mental devotion* was the spring and source of our Lord's visible piety. And this state of mind we must acquire. It consists in this; in a habit of turning our thoughts towards God, whenever they are not taken up with some particular engagement. Every man has some subject or other, to which his thoughts turn, when they are not particularly occupied. In a good Christian this subject is God, or what appertains to him. A good Christian, walking in his fields, sitting in his chamber, lying upon his bed, is thinking of God. His meditations draw, of their own accord, to that object, and then his thoughts kindle up his devotions; and devotion

never burns so bright or so warm as when it is lighted up from within. The immensity, the stupendous nature of the adorable Being who made and who supports every thing about us, his grace, his love, his condescension towards his reasonable and moral creatures, that is, towards men; the good things which he has placed within our reach, the heavenly happiness which he has put it in our power to obtain; the infinite moment of our acting well and right, so as not to miss of the great reward, and not only to miss of our reward, but to sink into perdition; such reflections will not fail of generating devotion, of moving within us either prayer or thanksgiving, or both. This is mental devotion. Perhaps the difference between a religious and an irreligious character depends more upon this mental devotion than upon any other thing. The difference will show itself in men's lives and conversation, in their dealings with mankind, and in the various duties and offices of their station: but it originates and proceeds from a difference in their internal habits of mind, with respect to God; in the habit of thinking of him in private, and of what relates to him; in cultivating these thoughts, or neglecting them; inviting them, or driving them from us; in forming, or in having formed, a habit and custom, as to this point, unobserved and unobservable by others, (because it passes in the mind, which no one can see,) but of the most decisive consequence to our spiritual character and immortal interests. This mind was in Christ: a deep, fixed, and constant piety. The expressions of it we have seen in all the forms which could bespeak earnestness and sincerity; but the principle itself lay deep in his divine soul; the expressions likewise were occasional, more or fewer, as occasions called or opportunities.

offered, but the principle fixed and constant, uninterrupted, unremitted.

But again; Our Lord, whose mental piety was so unquestionable, so ardent, and so unceasing, did not, nevertheless, content himself with that. He thought fit, we find, at sundry times, and, I doubt not, also very frequently, to draw it forth in actual prayer, to clothe it with words, to betake himself to visible devotion, to retire to a mountain for this express purpose, to withdraw himself a short distance from his companions, to kneel down, to pass the whole of the night in prayer, or in a place devoted to prayer. Let all, who feel their hearts impregnated with religious fervor, remember this example; remember that this disposition of the heart ought to vent itself in actual prayer; let them not either be afraid nor ashamed, nor suffer any person nor any thing to keep them from the holy exercise. They will find the devout dispositions of their souls strengthened, gratified, confirmed. This exhortation may not be necessary to the generality of pious tempers; they will naturally follow their propensity, and it will naturally carry them to prayer. But some, even good men, are too abstracted in their way of thinking upon this subject; they think, that since God seeth and regardeth the heart, if their devotion be *there*, if it be within, all outward signs and expressions of it are superfluous. It is enough to answer, that our blessed Lord did not so think. He had all the fulness of devotion in his soul, nevertheless he thought it not superfluous to utter and pronounce audible prayer to God; and not only so, but to retire and withdraw himself from other engagements; nay, even from his most intimate and favoured companions, expressly for this purpose.

Again; Our Lord's retirement to prayer appears commonly to have followed some signal act and display of his divine powers. He did every thing to the glory of God; he referred his divine powers to his Father's gift; lie made them the subject of his thankfulness, inasmuch as they advanced his great work. He followed them by his devotions. Now every good gift cometh down from the Father of lights. Whether they be natural, or whether they be supernatural, the faculties which we possess are by God's donation; wherefore any successful exercise of these faculties, any instance in which we have been capable of doing something good, properly and truly so, either for the community, which is best of all, for our neighbourhood, for our families, nay, even for ourselves, ought to stir and awaken our gratitude to God, and to call forth that gratitude into actual devotion: at least, this is to imitate our blessed Lord, so far as we can imitate him at all; it is adopting into our lives the principle which regulated him.

Again; It appears, on one occasion at least, that our Lord's retirement to prayer was preparatory to an important work, which he was about to execute. The manner in which St. Luke states this instance, is thus:—"And it came to pass in those days, that he went out into a mountain to pray, and continued all night in prayer to God; and when it was day, he called unto him his disciples, and of them he chose twelve, whom also he named apostles." From this statement I infer, that the night passed by our Lord in prayer, was preparatory to the office which he was about to execute: and surely an important office it was; important to him, important to his religion, important to the whole world. Nor let it be said, that our Lord, after all, in one instance at least, was unfortunate

in his choice: of the twelve one was a traitor. That choice was not error; a remarkable prophecy was to be fulfilled, and other purposes were to be answered, of which we cannot now speak particularly. "I know," says our Lord, "whom I have chosen." But let us confine ourselves to our observation. It was a momentous choice: it was a decision of great consequence: and it was accordingly, on our Lord's part, preceded by prayer: not only so, but by a night spent in prayer. "He continued all night in prayer to God;" or, if you would rather so render it, in a house set apart for prayer to God. Here, therefore, we have an example given us, which we both *can* imitate and ought to imitate. Nothing of singular importance, nothing of extraordinary moment, either to ourselves or others, ought to be resolved upon or undertaken, without prayer to God, without previous devotion. It is a natural operation of piety to carry the mind to God, whenever any thing presses and weighs upon it: they, who feel not this tendency, have reason to excuse and suspect themselves of want of piety. Moreover, we have, first, the direct example of our Lord himself; I believe also, I may add, that we have the example and practice of good men in all ages of the world.

Again; We find our Lord resorting to prayer in his last extremity, and with an earnestness, I had almost said a vehemence of devotion, proportioned to the occasion. The terms in which the evangelists describe our Lord's devotion in the garden of Gethsemane, the evening preceding his death, are the strongest terms that could be used. As soon as he came to the place, he bid his disciples pray. When he was at the place, he said unto them, "Pray that ye enter not into temptation." This did not content him: this was not enough

for the state and sufferings of his mind. He parted even from them. He withdrew about a stone's cast, and kneeled down. Hear how his struggle in prayer is described. Three times he came to his disciples, and returned again to prayer; thrice he kneeled down at a distance from them, repeating the same words. Being in an agony, he prayed more earnestly: drops of sweat fell from his body, as if it had been great drops of blood; yet in all this, throughout the whole scene, the constant conclusion of his prayer was, "Not my will, but thine be done." It was the greatest occasion that ever was: and the earnestness of our Lord's prayer, the devotion of his soul, corresponded with it. Scenes of deep distress await us all. It is in vain to expect to pass through the world without falling into them. We have, in our Lord's example, a model for our behaviour, in the most severe and most trying of these occasions: afflicted, yet resigned; grieved and wounded, yet submissive; not insensible of our sufferings, but increasing the ardour and fervency of our prayer, in proportion to the pain and acuteness of our feelings.

But whatever may be the fortune of our lives, one great extremity, at least, the hour of approaching death, is certainly to be passed through. What ought then to occupy us? what can then support us? Prayer. Prayer, with our blessed Lord himself, was a refuge from the storm; almost every word he uttered, during that tremendous scene, was prayer: prayer the most earnest, the most urgent; repeated, continued, proceeding from the recesses of his soul; private, solitary: prayer for deliverance; prayer for strength; above every thing, prayer for resignation.

## ON FILIAL PIETY.

GENESIS xlvii. 12.

*And Joseph nourished his father, and his brethren, and all his father's household, with bread, according to their families.*

WHOEVER reads the Bible at all, has read the history of Joseph. It has universally attracted attention: and, without doubt, there is not one, but many points in it, which deserve to be noticed. It is a strong and plain example of the circuitous providence of God; that is to say, of his bringing about the ends and purposes of his providence, by seemingly casual and unsuspected means. That is a high doctrine, both of natural and revealed religion; and is clearly exemplified in this history. It is a useful example, at the same time, of the protection and final reward of virtue, though for a season oppressed and calumniated, or carried through a long series of distresses and misfortunes. I say, it is a useful example, if duly understood, and not urged too far. It shows the protection of Providence to be *with* virtue under all its difficulties: and this being believed upon good grounds, it is enough; for the virtuous man will be assured, that this protection will keep with him *in* and *through* all stages of his existence—living and dying he is in its hands; and for the same reason that it accompanies him, like an invisible guardian, through his trials, it will finally recompense him. This is the true application of that doctrine of a directing Providence, which is illustrated by the history of Joseph, as it relates to ourselves; I mean, as it relates to those who are looking forward to a future state. If we draw from it an opinion, or an expectation, that, because Joseph was at length rewarded

with riches and honours, therefore we shall be the same, we carry the example farther than it will bear. It proves that virtue is under the protection of God, and will ultimately be taken care of and rewarded: but in what manner, and in what stage of our existence, whether in the present or the future, or in both, is left *open* by the example: and both may, and must depend upon reasons, in a great measure, unknown to and incalculable by us.

Again; The history of Joseph is a domestic example. It is an example of the ruinous consequences of partiality in a parent, and of the quarrels and contentions in a family, which naturally spring from such partiality.

Again; It is a lesson to all schemers and confederates in guilt, to teach them this truth; that, when their scheme does not succeed, they are sure to quarrel amongst themselves, and to go into the utmost bitterness of mutual accusation and reproach; as the brethren of Joseph, you find, did.

Again; It is a natural example of the effect of adversity, in bringing men to themselves, to reflections upon their own conduct, to a sense and perception of many things which had gone on, and might have gone on, unthought of and unperceived, if it had not been for some stroke of misfortune, which roused their attention. It was after the brethren of Joseph had been shut up by him in prison, and were alarmed, as they well might be, for their lives, that their consciences, so far as appears, for the first time smote them: “We are verily guilty concerning our brother, in that we saw the anguish of his soul, when he besought us, and would not hear.” This is the natural and true effect of judgments in this world, to bring us to a knowledge of ourselves; that is to say, of those bad things in our lives, which have deserved the calamities we are made to suffer.

These are all *points* in the history: but there is another point in Joseph's character, which I make choice of, as the subject of my present discourse; and that is, his dutifulness and affection to his father. Never was this virtue more strongly displayed. It runs, like a thread, through the whole narrative; and whether we regard it as a quality to be admired, or, which would be a great deal better, as a quality to be imitated by us, so far as a great disparity of circumstances will allow of imitation, (which in principle it always will do,) it deserves to be considered with a separate and distinct attention.

When a surprising course of events had given to Joseph, after a long series of years, a most unexpected opportunity of seeing his brethren in Egypt, the first question which he asked them was, "Is your father yet alive?" This appears from the account, which Reuben gave to Jacob, of the conference which they had held with the great man of the country, whilst neither of them, as yet, suspected who he was. Joseph, you remember, had concealed himself, during their first journey, from the knowledge of his brethren; and it was not consistent with his disguise, to be more full and particular than he was in his inquiries.

On account of the continuance of the famine in the land, it became necessary for the brethren of Joseph to go a second time into Egypt to seek corn, and a second time to produce themselves before the lord of the country. What had been Joseph's first question on the former visit was his first question in this: "Is your father well, the old man of whom ye spake? Is *he* yet alive? And they answered, Thy servant our father is in good health, he is yet alive. And they bowed down their heads, and made obeisance."

Hitherto, you observe, all had passed in disguise. The brethren of Joseph knew nothing who they were speaking to; and Joseph was careful to preserve the secret. You will now take notice how this affected disguise was broken, and how Joseph found himself forced, as it were, from the resolution he had taken, of keeping his brethren in ignorance of his person. He had proposed, you read, to detain Benjamin; the rest being perplexed beyond measure, and distressed by this proposal, Judah, approaching Joseph, presented a most earnest supplication for the deliverance of the child; offers *himself* to remain Joseph's prisoner, or slave, in his brother's place; and, in the conclusion, touches, unknowingly, upon a string which vibrates with all the affections of the person whom he was addressing: "How shall I go up to my father, and the lad be not with me? lest peradventure I see the evil that shall come upon my father." The mention of this circumstance and this person subdued immediately the heart of Joseph: and produced a sudden, and, as it should seem, an undesigned premature discovery of himself to his astonished family. Then, that is, upon this circumstance being mentioned, Joseph could not refrain himself: and, after a little preparation, Joseph said unto his brethren, "I am Joseph."

The great secret being now disclosed, what was the conversation which immediately followed? The next word from Joseph's mouth was, "Doth my father yet live?" and his brethren could not answer him; surprise had overcome their faculty of utterance. After comforting, however, and encouraging his brethren, who seemed to sink under the intelligence, Joseph proceeds: "Haste ye, and go up to my father, and say unto him, Thus saith thy son Joseph, God hath made me lord of

all Egypt: come down unto me, tarry not, and them shalt dwell in the land of Goshen, and thou shalt be near unto me, and there will I nourish thee, (for yet there are five years of famine,) lest thou, and thy household, and all that thou hast, come to poverty. And ye shall tell my father of all my glory in Egypt, and all that ye have seen: and ye shall haste, and bring down my father hither."

It is well known that Jacob yielded to this invitation, and passed over with his family into Egypt.

The next thing to be attended to is the reception which he met with from his recovered son. "And Joseph made ready his chariot, and went up to meet Israel his father, in Goshen; and presented himself unto him, and he fell on his neck, and wept on his neck a good while. And Israel said unto Joseph, Now let me die, since I have seen thy face; because thou art yet alive." Not content with these strong expressions of personal duty and respect, Joseph now availed himself of his power and station to fix his father's family in the enjoyment of those comforts and advantages, which the land of Egypt afforded in the universal dearth, which then oppressed that region of the world. For this purpose, as well as to give another public token to his family, and to the country, of the deep reverence with which he regarded his parent, he introduced the aged patriarch to Pharaoh himself. "And Joseph brought in Jacob his father, and set him before Pharaoh; and Jacob blessed Pharaoh." And the sovereign of Egypt received a benediction from this venerable stranger.—"And Joseph (the account proceeds) nourished his father, and his brethren, and all his father's household, with bread, according to their families."

It remains to be seen, how Joseph conducted himself towards his father, on the two occasions in which alone it was left for him to discharge the office, and testify the affection of a son: in his sickness, and upon his death. “And it came to pass,” we read, “after these things, that one told Joseph, Behold, thy father is sick: and he took with him his two sons, Manasseh and Ephraim.” Joseph delayed not, you find, to leave the court of Pharaoh, the cares and greatness of his station in it, in order to pay the last visit to his dying parent; and to place before him the hopes of his house and family, in the persons of his two sons.—“And Israel beheld Joseph's sons, and said, Who are these? And Joseph said unto his father, They are my sons, whom God hath given me in this place. And he said, Bring them, I pray thee, unto me, and I will bless them. (Now the eyes of Israel were dim, so that he could not see.) And he brought them near unto him; and he kissed them and embraced them: and Israel said unto Joseph, I had not thought to see thy face: and lo! God hath showed me also thy seed. And Joseph brought them out from between his knees, and he bowed himself with his face to the earth.” Nothing can well be more solemn or interesting than this interview; more honourable or consoling to old age; or more expressive of the dignified piety of the best of sons, and the greatest of men.

We now approach the last scene of this eventful history, and the best testimony which it was possible for Joseph to give of the love and reverence with which he had never ceased to treat his father, and that was upon the occasion of his death, and the honours which he paid to his memory; honours, vain no doubt to the dead, but, so far as they are significations of gratitude

or affection, justly deserving of commendation and esteem. “And when Jacob had made an end of commanding his sons, he gathered up his feet into the bed, and yielded up the ghost, and was gathered unto his people. And Joseph fell upon his father's face, and wept upon him, and kissed him. And Joseph commanded his servants the physicians to embalm his father; and the physicians embalmed Israel. And the Egyptians mourned for him three-score and ten days. And Joseph went up to bury his father: and with him went up all the servants of Pharaoh, the elders of his house, and all the elders of the land of Egypt. And all the house of Joseph, and his brethren, and his father's house: and there went up with him both chariots and horsemen: and it was a very great company. And they came to the threshing-floor of Atad, which is beyond Jordan; and there they mourned with a great and a very sore lamentation; and he made a mourning for his father seven days.”

Thus died, and thus was honoured in his death, the preserver of the Jewish nation; who, amidst many mercies and many visitations, sudden and surprising vicissitudes of afflictions and joy, found it the greatest blessing of his varied and eventful life, that he had been the father of a dutiful and affectionate son.

It has been said, and, as I believe, truly, that there is no virtuous quality belonging to the human character, of which there is not some distinct and eminent example to be found in the Bible; no relation in which we can be placed, no duty which we have to discharge, but that we may observe a pattern for it in the sacred history. Of the duty of children to parents, of a son to his father, maintained under great singularities and variations of fortune, undiminished, nay, rather increased

by absence, by distance, by unexampled success, by remote and foreign connexions, you have seen, in this most interesting and conspicuous of all histories, as amiable an instance as can be met with in the records of the world, in the purest, best ages of its existence.

## PART I.

**TO THINK LESS OF OUR VIRTUES AND  
MORE OF OUR SINS.**

PSALM li. 3.

*My sin is ever before me.*

THERE is a propensity in the human mind, very general and very natural, yet, at the same time, unfavourable in a high degree to the Christian character; which is that, when we look back upon our lives, our recollection dwells too much upon our virtues; our sins are not, as they ought to be, before us; we think too much of our good qualities or good actions, too little of our crimes, our corruptions, our fallings off and declension from God's laws, our defects and weaknesses. These we sink and overlook, in meditating upon our good properties. This, I allow, is natural; because, undoubtedly, it is more agreeable to have our minds occupied with the cheering retrospect of virtuous deeds, than with the bitter, humiliating remembrance of sins and follies. But, . because it is natural, it does not follow that it is good. It may be the bias and inclination of our minds; and yet neither right nor safe. When I say that it is wrong, I mean, that it is not the true Christian disposition; and when I say that it is dangerous, I have a view to its effects upon our salvation.

I say, that it is not the true Christian disposition; for, first, how does it accord with what we read in the Christian Scriptures, whether we consider the precepts which are found there applicable to the subject, or the conduct and example of Christian characters?

Now, one precept, and that of Christ himself, you find to be this: “Ye, when ye shall have done all those things which are commanded you, say, We are unprofitable servants: we have done that which was our duty to do.” (Luke xvii. 10.) It is evident, that this strong admonition was intended, by our Saviour, to check in his disciples an overweening opinion of their own merit. It is a very remarkable passage. I think none throughout the New Testament more so. And the intention with which the words were spoken, was evidently to check and repel that opinion of merit, which is sure to arise from the habit of fixing our contemplation so much upon our good qualities, and so little upon our bad ones. Yet this habit is natural, and was never prohibited by any teacher, except by our Saviour. With him it was a great fault, by reason of its inconsistency with the favourite principle of his religion, humility. I call humility not only a duty, but a principle. Humble mindedness is a Christian principle, if there be one; above all, humble mindedness towards God. The servants, to whom our Lord's expression refers, were to be humble minded, we may presume, towards one another; but towards their Lord, the only answer, the only thought, the only sentiment was to be, “We are unprofitable servants.” And who were they, that were instructed by our Lord to bear constantly this reflection about with them? Were they sinners, distinctively so called? were they grievous or notorious sinners? nay, the very contrary; they were persons “who had done *ill* those things that were commanded them!” This is precisely the description which our Lord gives of the persons to whom his lesson was directed. Therefore, you see that an opinion of merit is discouraged, even in those who had the best pretensions to entertain it, if

any pretensions were good. But an opinion of merit, an overweening opinion of merit, is sure to grow up in the heart, whenever we accustom ourselves to think much of our virtues and little of our vices. It is generated, fostered, and cherished, by this train of meditation we have been describing. It cannot be otherwise. And if we would repress it; if we would correct ourselves in this respect; if we would bring ourselves into a capacity of complying with our Saviour's rule, we must alter our turn of thinking; we must reflect more upon our sins, and less upon our virtues. Depend upon it, that we shall view our characters more truly, we shall view them much more safely, when we view them in their defects and faults and infirmities, than when we view them only, or principally, on the side of their good qualities, even when these good qualities are real. I suppose, and I have all along supposed, that the good parts of our characters, which, as I contend, too much attract our attention, are nevertheless real; and I suppose this, because our Saviour's parable supposes the same.

Another great Christian rule is, "Work out your own salvation with fear and trembling." (Philip, ii. 12.) These significant words, "fear and trembling," do not accord with the state of a mind which is all contentment, satisfaction, and self-complacency; and which is brought into that state by the habit of viewing and regarding those good qualities which a person believes to belong to himself, or those good actions which he remembers to have performed. The precept much better accords with a mind, anxious, fearful, and apprehensive, and made so by a sense of sin. But a sense of sin exists not, as it ought to do, in that breast, which is in the habit of meditating chiefly upon its virtues. I can very

well believe, that two persons of the same character in truth may, nevertheless, view themselves in very different lights, according as one is accustomed to look chiefly at his good qualities, the other chiefly at his transgressions and imperfections; and I say, that this latter is the disposition for working out our salvation agreeably to St. Paul's rule and method, that is, "with fear and trembling;" the other is not.

But farther; there is upon this subject a great deal to be learned from the examples which the New Testament sets before us. Precepts are short, necessarily must be so, take up but little room, and for that reason do not always strike with the force, or leave the impression which they ought to do; but *examples* of character, when the question is concerning character, and what is the proper character, have more weight and body in the consideration, and take up more room in our minds than precepts. Now, from one end of the New Testament to the other, you will find the evangelical character to be *contrition*. You hear little of virtue or righteousness; but you hear perpetually of the forgiveness of sins. With the first Christian teachers, "Repent, repent," was the burden of their exhortations; the almost constant sound of their voice. Does not this strain of preaching show that the preachers wished all who heard them to think much more of offences than of merits? Nay farther, with respect to themselves, whenever this contemplation of righteousness came in their way, it came in their way only to be renounced, as natural, perhaps, and also grateful to human feelings, but as inconsistent and irreconcilable with the Christian condition. It might do for a heathen, but it was the reverse of every thing that is Christian.

The turn of thought which I am recommending, or,

rather, which I find it necessary to insist upon, as an essential part of the Christian character, is strongly seen in one particular passage of St. Paul's writings; namely, in the third chapter to the Philippians: "If any other man thinketh whereof he might trust in the flesh, I more; circumcised the eighth day, of the stock of Israel, of the tribe of Benjamin, a Hebrew of the Hebrews; as touching the law, a Pharisee; concerning zeal, persecuting the church; touching the righteousness which is in the law, blameless." These were points which, at that time of day, were thought to be grounds of confidence and exultation. But this train of thought no sooner rises in his mind than the apostle *checks* it, and turns from it to an anxious view of his own deficiencies. "If by any means I might attain unto the resurrection of the dead." These are the words of an anxious man. "Not," then he proceeds, "not as though I had already attained, either were already perfect: but I follow after, if that I may apprehend that for which also I am apprehended of Christ Jesus. Brethren, I count not myself to have apprehended; but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press towards the mark, for the prize of the high calling of God in Christ Jesus." In this passage, you see, that withdrawing his mind from all notions of perfection, attainment, accomplishment, security, he fixes it upon his deficiencies. Then he tells you, that *forgetting*, that is, expressly putting out of his mind and his thought the progress and advance which he had already made, he casts his eyes and attention upon those qualities in which he was short and deficient, upon what remained for him yet to do: and this I take to be the true Christian way of proceeding. "Forget those things that are behind;" put out of

your thoughts the attainments and progress you have already made, in order to see fully your defects and imperfections.

In another passage, found in a chapter with which all are acquainted, the fifteenth of the Corinthians, our Apostle, having occasion to compare his situation with that of the other apostles, is led to say, “I laboured more abundantly than they all.” St. Paul's labours in the gospel, labours which consumed his whole life, were surely what he might reflect upon with complacency and satisfaction. If such reflections were proper in any case, they were proper in his. Yet observe how they are checked and qualified. The moment he had said, “I laboured more abundantly than they all,” he added, as it were correcting himself for the expression, “Yet not I, but the grace of God, which was with me.” He magnifies not himself, but the grace of God, which was with him. In the next place you will observe, that, though the consciousness of his labours, painful, indefatigable labours, and meritorious labours, if ever man's were so; I say, that though the consciousness of these was present to his mind at the time, yet it did not hinder him from feeling, with the deepest abasement and self-degradation, his former offences against Christ, though they were offences which sprang from error. “I am the least of the apostles, that am not meet to be called an apostle, because I persecuted the church of God: but, by the grace of God, I am what I am.” The faults of his life were uppermost in his mind. No mention, no recollection of his services, even when he did happen to recollect them, shut out, even for a single moment, the deep memory of his offences, or covered or concealed it from his view.

In another place, the same apostle, looking back upon

the history of his singular and eventful life, exhibits himself to his converts, as how? not as bringing forward his merit, pleading his services, or claiming his reward: but as nothing other, nothing more, than a monument and example of God Almighty's mercy. Sinners need not despair of mercy, when so great a sinner as himself obtained it. Hear his own words. "For this cause I obtained mercy, that in me first Jesus Christ might show forth all long-suffering, for a pattern to them which should hereafter believe on him to life everlasting." (1 Timothy i. 16.) What could be more humble or self-depressing than this acknowledgment? yet this was St. Paul's.

The eleventh chapter of the second Epistle to the Corinthians, and also the twelfth, ought to be read by you on this occasion. They are very remarkable chapters, and very much to our present purpose. It had so happened, that some hostile, and, *as it should seem*, some false teachers, had acquired a considerable influence and ascendancy in the church which St. Paul had planted. To counteract which influence it became necessary for him to assert his character, to state his pretensions to credit and authority, amongst them at least, and in comparison with those who were leading them astray. He complies with the occasion; and he does, accordingly, set forth and enumerate his pretensions. But I entreat you to observe, with how many apologies, with what reluctance, and under what strong protestations, he does it; showing, most manifestly, how contrary it was to his habit, his judgment, and to the inclination of his mind, to do so. His expressions are such as these: "Would to God ye could bear with me a little in *my folly*; and, indeed, bear with me." What was his folly? the recital he was about to give of his services and pre-

tensions. Though compelled, by the reason you have heard, to give it, yet he calls it folly to do so. He is interrupted, as he proceeds, by the same sentiment: "That which I speak, I speak it not after the Lord, but, as it were, foolishly in this confidence of boasting." And again, referring to the necessity which drew from him this sort of language: "I am become," says he, "*a fool* in glorying; ye have compelled me."

But what forms perhaps the strongest part of the example is, that the apostle considers this tendency to boast and glory, though it was in his gifts, rather than his services, as one of his dangers, one of his temptations, one of the propensities which he had both to guard and struggle against, and lastly, an inclination, for which he found an antidote and remedy in the dispensation of Providence towards him.—Of his gifts, he says, considering himself as nothing, as entirely passive in the hands of God, "of such a one," of a person to whom such gifts and revelations as these have been imparted, I will glory; yet of myself I will not glory, "but in mine infirmities." Then he goes on: "lest I should be exalted above measure through the abundance of the revelations, there was given to me a thorn in the flesh, the messenger of Satan to buffet me, lest I should be exalted above measure."

After what you have heard, you will not wonder, that this same St. Paul should pronounce himself to be "the chief of sinners." "Jesus Christ came into the world to save sinners, of whom I am the chief." (1 Timothy i. 15.) His sins were uppermost in his thoughts. Other thoughts occasionally visited his mind: but the impression which these had made, was constant, deep, fixed, and indelible.

If, therefore, you would imitate St. Paul in his turn

and train of religious thought; if you would adopt his disposition, his frame, his habit of mind, in this important exercise, you must meditate more upon your sins, and less upon your virtues.

Again, and which is another strong scriptural reason for the advice I am giving, the habit of viewing and contemplating our own virtues has a tendency in opposition to a fundamental duty of our religion, the entertaining of a due and grateful sense of the mercy of God in the redemption of the world by Jesus Christ. The custom of thought, which we dissuade, is sure to generate in us notions of merit; and that, not only in comparison with other men, which is by no means good, or likely to produce any good effect upon our disposition, but also in relation to God himself; whereas the whole of that sentiment which springs up in the mind, when we regard our characters in comparison with those of other men, if tolerated at all, ought to sink into the lowest self-abasement, when we advance our thoughts to God, and the relation in which we stand to him. Then is all boasting, either in spirit or by words, to be done away. The highest act of faith and obedience recorded in Scripture, was Abraham's consent to sacrifice his son, when he believed that God required it. It was the severest trial that human nature could be put upon; and, therefore, if any man, who ever lived, were authorized to boast of his obedience, it was Abraham after this experiment. Yet what says St. Paul? "If Abraham were justified by works, he hath whereof to glory; *but not before God.*" No man's pretensions to glory were greater, yet, before God, they were nothing. "By grace ye are saved through faith, and that not of yourselves, lest any man should boast." (Eph. ii. 8, 9.) Here you perceive distinctly, that, speaking of salva-

tion, with reference to its cause, it is by grace; it is *an* act of pure favour; it is not of yourselves; it is the gift of God; it is not of works. And that this representation was given, lest any man should boast; that is, expressly for the purpose of beating down and humbling all sentiments of merit or desert in what we do, lest they induce us, as they will induce us, to think less gratefully, or less piously, of God's exceeding love and kindness towards us. There is no proportion between even our best services, and that reward which God hath in reserve for them that love him. Why then are such services to be so rewarded? It is the grace of God; it is the riches of his grace; in other words, his abounding kindness and favour; it is his love; it is his mercy. In this manner the subject is constantly represented in Scripture; and it is an article of the Christian religion. And to possess our minds with a sense, an adequate sense, so far as it is possible to be so, of this truth, is a duty of the religion. But to be ruminating and meditating upon our virtues is not the way to acquire that sense. Such meditations breed opinions of merit and desert; of presumption, of pride, of superciliousness, of self-complacency, of tempers of mind, in a word, not only incompatible with humility, but also incompatible with that sense of divine love and mercy towards us, which lies at the root of all true religion, is the source and fountain of all true piety.

You have probably heard of the term self-righteousness: you find it much in the writings and discourses of a particular class of Christians; and always accompanied with strong and severe expressions of censure and reprobation. If the term mean the habit of contemplating our virtues, and not our vices; or a strong leaning and inclination thereto, I agree with those

Christians in thinking, that it is a disposition, a turn of mind, to be strongly resisted and restrained and repressed. If the term mean any other way of viewing our own character, so as to diminish or lower our sense of God Almighty's goodness and mercy towards us, in making us the tender of a heavenly reward, then also I agree with them in condemning it both as erroneous in its principle, and highly dangerous in its effects. If the term mean something more than, or different from, what is here stated, and what has been enlarged upon in this discourse, then I profess myself not to understand its meaning.

## PART II.

**TO THINK LESS OF OUR VIRTUES AND  
MORE OF OUR SINS.**

PSALM li. 3.

*My sin is ever before me.*

To think well is the way to act rightly; because thought is the source and spring of action. When the course and habit of thinking is wrong, the root is corrupt; “and a corrupt tree bringeth not forth good fruit;” do what you will, if the root be corrupt, the fruit will be corrupt also. It is not only true, that different actions will proceed from different trains of thought; but it is also true, that the same actions, the same external conduct, may be very different in the sight of God, according as it proceeds from a right or a wrong, a more or less proper principle and motive, a more or less proper disposition; such importance is attached to the disposition: of such great consequence is it, that our disposition in religious matters be what it should be. By disposition is meant, the bent or tendency of our inclinations; and by disposition is also meant, the train and habit of our thoughts: two things which are always nearly connected. It is the better sense, however, in which I use the word; and the particular lesson which I am inculcating for the conduct of our thoughts, is to think more of our sins and less of our virtues. In a former discourse I showed, that there are strong and positive Scripture precepts, a due regard to which accords with the state of mind of him who fixes his attention upon his sins and defects, and by no

means with his state of mind who hath fixed his attention chiefly upon his virtues. Secondly, that Scripture examples, that of St. Paul most particularly, teach us to *renounce* the thoughts of our virtues, and to entertain deeply and constantly the thoughts of our sins. Thirdly, that the habit here reproved is inconsistent with a due sense of the love of God in the redemption of the world. I am now to offer such farther reasons as appear to support the rule I have laid down.

And, first, there is no occasion whatever to meditate upon our virtues and good qualities. We may leave them to themselves. We need not fear, that they will either be forgotten or undervalued. “God is not unrighteous to forget your works and labour of love.” (Hebrews vi. 10.) He will remember them, we need not: they are set down in his book; not a particle will be lost. Blessed are they who have much there, but we need not count them up in our recollection: for, whatever our virtues are or were, we cannot make them better by thinking of them afterward. We may make them better in future, by thinking of their imperfections, and by endeavouring to encounter, to lessen, or remove those imperfections hereafter; but then this is to think, not upon our virtues, but upon our imperfections. Thinking upon our virtues, as such, has no tendency to make them better, be they what they will. But it is not the same with our sins. Thinking upon these afterward may make a very great alteration in them, because it may lead to an effectual repentance. As to the act itself, what is past cannot be recalled; what is done cannot be undone; the mischief may possibly be irrevocable and irreparable. But as to the sin, it is different. Deep, true, sincere penitence, may, through the mercies of God in Christ Jesus, do away that. And much

penitence may be the fruit of meditation upon our sins—cannot possibly come without it. Nay, the act itself may be altered. It is not always that an injury is irreparable. Wrong indeed has been received at our hands: but restitution or compensation may be in our power. When they are so, they are the surest proofs of penitence. No penitence is sincere without them, if they be practicable. This benefit, to those whom we have injured, and an infinitely greater benefit to ourselves than to them, may be the effect of seeing our sins in their true light, which that man never does, who thinks only, or chiefly, or habitually, upon his virtues. Can a better reason be given for meditating more upon our sins, and less upon our virtues, than this; that one train of thought may be profitable to salvation, the other is profitable for nothing?

It is an exceedingly good observation, that we may safely leave our virtues and good qualities to themselves. And besides the use we have made of it in showing the superfluity, as well as the danger of giving in to the contemplation of our virtues, it is also a quieting and consoling reflection for a different, and in some degree an opposite, description of character, that is to say, for tender and timorous consciences. Such are sometimes troubled with doubts and scruples about even their good actions. Virtue was too easy for them, or too difficult: too easy and pleasant to have any merit in it; or difficult by reason of fleshly, selfish, or depraved propensities, still existing unsubdued, still struggling in their unregenerated hearts. These are natural, and, as I have sometimes known them, very distressing scruples. I think that observations might be offered to remove the ground of them altogether; but what I have at present to suggest is,

that the very act of reflection which leads to them is unnecessary, provided you will proceed by our rule, viz. to leave your virtues, such as they are, to themselves; and to bend the whole force of your thought towards your sins, towards the conquest of these.

But, it will be said, are we not to taste the comforts of religion? Are we not to be permitted, or rather ought we not to be encouraged, to relish, to indulge, to enjoy these comforts? And can this be done without meditating upon our good actions?

I answer, that this can be done without meditating upon our good actions. We need not seek the comforts of religion in this way. Much we need not *seek* them at all; they will visit us of their own accord, if we be serious and hearty in our religion. A well spent life will impart its support to the spirits, without any endeavour, on our part, to call up our merits to our view, or even allowing the idea of merit to take possession of our minds. There will in this respect always be as much difference as there ought to be, between the righteous man and the sinner, (or, to speak more properly, between sinners of different degrees,) without taking pains to draw forth in our recollection instances of our virtue, or to institute a comparison between ourselves and others, or certain others of our acquaintance. These are habits, which I hold to be unchristian and wrong; and that the true way of finding and feeling the consolations of religion is by progressively conquering our sins. Think of these; contend with these: and, if you contend with sincerity and with effect, which is the proof indeed of sincerity, *I* will answer for the comforts of religion being your portion. What is it that disturbs our religious tranquillity? What is it that imbibers or impairs our religious comfort, damps and

checks our religious hopes, hinders us from relishing and entertaining these ideas, from turning to them, as a supply of consolation under all circumstances? What is it but our sins? Depend upon it, that it is sin, and nothing else, which spoils our religious comfort. Cleanse your heart from sin, and religion will enter in, with all her train of hopes and consolation. For proof of this, we may, as before, refer to the examples of Scripture Christians. They rejoiced in the Lord continually. "The joy of faith." Phil. i. 25. "Joy in the Holy Ghost," Rom. xiv. 17, was the word in their mouths, the sentiment of their hearts. They spake of their religion, as of a strong consolation, as of the refuge to which they had fled, as of the hope of which they had laid hold, of an anchor of the soul sure and steadfast." Heb. vi. 18, 19. The promise from the Lord Jesus Christ was, "your heart shall rejoice, and your joy no man taketh from you." John xvii. 22. Was this promise fulfilled to them? Read Acts xii. 52. "They were filled with joy and the Holy Ghost." "The kingdom of God," saith St. Paul, "is joy in the Holy Ghost." Rom. xvi. 17. So that St. Paul, you hear, takes his very description and definition of Christianity from the joy which is diffused over the heart: and St. Paul, I am very confident, described nothing but what he felt. Yet St. Paul did not meditate upon his virtues: nay, expressly renounced that sort of meditation. His meditations, on the contrary, were fixed upon his own unworthiness, and upon the exceeding, stupendous mercy of God towards him, through Jesus Christ his Saviour: at least, we have his own authority for saying, that, in his Christian progress, he never looked back; he forgot that which was behind, whatever it might be which he had already attained;

he refused to remember it, he put it out of his thoughts. Yet, upon this topic of religious joy, hear him again: "We joy in God through our Lord Jesus Christ," Rom. v. 11; and once more, "The fruit of the Spirit is love, joy, peace." Gal. v. 22. These last are three memorable words, and they describe, not the effects of ruminating upon a man's own virtues, but the fruit of the Spirit.

But it is not in one apostle in whom we find this temper of mind, it is in them all. Speaking of the Lord Jesus Christ, St. Peter thus addresses his converts, "Whom, having not seen, ye love; in whom, though now ye see him not, yet believing, ye rejoice with joy unspeakable and full of glory." 1 Peter i. 8. This joy covered even their persecutions and sufferings: "Wherein ye greatly rejoice, though now, for a season, if need be, ye are in heaviness through manifold temptations," 1 Peter i. 6, meaning persecutions. In like manner St. James saith, "Count it all joy when ye fall into divers temptations," that is, persecutions; and why? "knowing this, that the trying of your faith worketh patience." James i. 3. Let no one, after these quotations, say, that it is necessary to fix our attention upon the virtues of our character, in order to taste the comforts of religion. No persons enjoyed these comforts in so great perfection as the Christians whom we read of in Scripture, yet no persons thought so little of their own virtues. What they continually thought upon was, the abounding love of Christ towards them, "in that, whilst they were yet sinners, he died for them;" and the tender and exceeding mercies of God in the pardon of their sins through Christ. From this they drew their consolation; but the ground and origin of this train of thought was, not the contemplation of virtue, but the conviction of sin.

But again, the custom of viewing our virtues has a strong tendency to fill us with fallacious notions of our own state and condition. One, almost constant, deception is this, viz. that in whatever quality we have pretensions, or believe that we have pretensions, to excel, that quality we place at the head of all other virtues. If we be charitable, then “charity covereth a multitude of sins.” If we be strictly honest, then strict honesty is no less than the bond which keeps society together; and, consequently, is that, without which other virtues would have no worth, or rather no existence. If we be temperate and chaste, then self-government, being the hardest of all duties, is the surest test of obedience. Now every one of these propositions is true; but the misfortune is, that only one of them is thought of at the time, and that the one which favours our own particular case and character. The comparison of different virtues, as to their price and value, may give occasion to many nice questions; and some rules might be laid down upon the subject; but I contend, that the practice itself is useless, and not only useless, but delusive. Let us leave, as I have already said, our virtues to themselves, not engaging our minds in appreciating either their intrinsic or comparative value; being assured that they will be weighed in unerring scales. Our business is with our sins.

Again; the habit of contemplating our spiritual acquirements, our religious or moral excellences has, very usually, and, I think, almost unavoidably, an unfavourable effect upon our disposition towards other men. A man who is continually computing his riches, almost in spite of himself, grows proud of his wealth. A man who accustoms himself to read and inquire and think a great deal about his family, becomes vain of his

extraction. He can hardly help becoming so. A man who has his titles sounding in his ears, or his state much before his eyes, is lifted up by his rank. These are effects which every one observes; and no inconsiderable degree of the same effect springs from the habit of meditating upon our virtues. Now humble mindedness is a Christian duty, if there be one. It is more than a duty; it is a principle of the religion; and its influence is exceedingly great, not only upon our religious, but our social character. They who are truly humble minded, have no quarrels, give no offence, contend with no one in wrath and bitterness: still more impossible is it for them to *insult* any man, under any circumstances. But the way to be humble minded is the way I am pointing out, viz. to think less of our virtues and more of our sins. In reading the parable of the Pharisee and the Publican, if we could suppose them to be real characters, I should say of them, that the one had just come from ruminating upon his virtues, the other from meditating upon his sins. And mark the difference: first, in their behaviour; next, in their acceptance with God. The Pharisee, all loftiness and contemptuousness and recital and comparison, full of ideas of merit, views the poor Publican, although withdrawn to a distance from him, with eyes of scorn. The Publican, on the contrary, enters not into competition with the Pharisee, or with any one. So far from looking round, he durst not so much as *lift up* his eyes; but casts himself, hardly indeed presumes to cast himself, not upon the justice, but wholly and solely upon the mercies of his Maker; “God be merciful to me a sinner.” We know the judgment which our Lord himself pronounced upon the case: “I tell you, this man went down to his house justified rather than the other.” Luke xviii. 14. The more, therefore,

we are like the Publican, and the less we are like the Pharisee, the more we come up to the genuine temper of Christ's religion.

Think, then, less of your virtues, more of your sins. Do I hear any one answer, I have no sins to think upon; I have no crimes which lie upon my conscience? I reply, that this may be true with respect to some, nay, with respect to many persons, according to the idea we commonly annex to the words *sins* and *crimes*; meaning thereby, acts of gross and external wickedness. But think farther: enlarge your views. Is your obedience to the law of God what it ought to be, or what it might be? The first commandment of that law is, "Thou shalt love the Lord thy God with all thy heart, with all thy mind, and with all thy strength." Is there, upon the subject of this commandment, no matter for thought, no room for amendment? The second commandment is, "Thou shalt love thy neighbour as thyself." Is all with us as it should be, here? Again, there is a spirituality in the commands of Christ's religion, which will cause the man who obeys them truly, not only to govern his actions, but his words; not only his words, but his inclinations and his dispositions, his internal habits, as well as external life. "Ye have heard that it hath been said of old time, Thou shalt not commit adultery: but I say unto you, He that looketh on a woman to lust after her," that is, he who voluntarily indulges and entertains in his mind an unlawful desire, "hath committed adultery with her already in his heart," is, by the very entertainment of such ideas, instead of striving honestly and resolutely to banish them from his mind, or to take his mind off from them, a sinner in the sight of God. Much the same kind of exposition belongs to the other commandments: not

only is murder forbidden, but all unreasonable, intemperate anger and passion; not only stealing, but all hard and unfair conduct, either in transacting business with those who are upon a level with us, or, when it is more to be feared, towards those who are in our power. And do not these points open to us a field of inquiry, how far we are concerned in them? There may not be what, strictly speaking, can be called an act or deed which is scandalously bad; yet the current of our imaginations, the bent of our tempers, the stream of our affections, may all, or any of them, be wrong, and may be requiring, even at the peril of our salvation, stronger control, a better direction.

Again, there may not be any action, which singly and separately taken, amounts to what would be reckoned a crime; yet there may be actions, which we give in to, which even our own consciences cannot approve; and these may be so frequent with us, as to form a part of the course and fashion of our lives.

Again; it is possible, that some of the miscarriages in conduct, of which we have to accuse ourselves, maybe imputable to inadvertency or surprise. But could these miscarriages happen as often as they do, if we exercised that vigilance in our Christian course, which not only forms a part of the Christian character, but is a sure effect of a sincere faith in religion, and a corresponding solicitude and concern about it? Lastly, unprofitableness itself is a sin. We need not do mischief in order to commit sin; uselessness, when we might be useful, is enough to make us sinners before God. The fig tree in the Gospel was cut down, not because it bore sour fruit, but because it bore none. The parable of the talents (Matt. xxv. 14.) is pointed expressly against the simple neglect of faculties and opportunities

of doing good, as contradistinguished from the perpetration of positive crimes. Are not all these topics fit matters of meditation, in the review of our lives? Upon the whole, when I hear a person say, he has no sins to think upon, I conclude, that he has not thought seriously concerning religion at all.

Let our sins, then, be ever before us; if not our crimes, of which it is possible, that according to the common acceptation of that word, we may not have many to remember; let our omissions, deficiencies, failures, our irregularities of heart and affection, our vices of temper and disposition, our course and habit of giving in to smaller offences, meaning, as I do mean, by offences, all those things which our consciences cannot really approve; our slips and inadvertencies and surprises, much too frequent for a man in earnest about salvation. Let these things occupy our attention; let this be the bent and direction of our thoughts; for they are the thoughts which will bring us to God evangelically; because they are the thoughts which will not only increase our vigilance, but which must inspire us with that humility, as to ourselves, with that deep and abiding and operating sense of God Almighty's love and kindness and mercy towards us, in and through Jesus Christ, our Saviour, which is ever one great aim and end of the Gospel, and of those who preached it, to inculcate upon all who came to take hold of the offer of grace.

## SALVATION FOR PENITENT SINNERS.

LUKE vii. 47.

*Wherefore I say unto thee, Her sins, which are many, are forgiven; for she loved much.*

IT has been thought an extravagant doctrine, that the greatest sinners were sometimes nearer to the kingdom of heaven than they whose offences were less exorbitant and less conspicuous: yet I apprehend the doctrine wants only to be rationally explained, to show that it has both a great deal of truth and a great deal of use in it; that it may be an awakening religious proposition to some, whilst it cannot, without being wilfully misconstrued, delude or deceive any.

Of all conditions in the world, the most to be despaired of is the condition of those who are altogether insensible and unconcerned about religion; and yet they may be, in the mean time, tolerably regular in their outward behaviour; there may be nothing in it to give great offence; their character may be fair; they may pass with the common stream, or they may even be well spoken of; nevertheless, I say, that, whilst this insensibility remains upon their minds, their condition is more to be despaired of than that of any other person. The religion of Christ does not in any way apply to them; they do not belong to it: for are they to be saved by performing God's will? God is not in their thoughts; his will is not before their eyes. They may do good things; but it is not from a principle of obedience to God that they do them. There may be many crimes which they are not guilty of: but it is not out of regard to the will of God

that they do not commit them. It does not, therefore, appear, what just hopes they can entertain of heaven, upon the score of an obedience which they not only do not perform, but do not attempt to perform. Then, secondly, if they are to hope in Christ for a forgiveness of their imperfections, for acceptance through *him* of broken and deficient services, the truth is, they have recourse to no such hope; beside, it is not imperfection with which they are charged, but a total absence of principle. A man who never strives to obey, never indeed bears that thought about him, must not talk of the imperfection of his obedience; neither the word nor the idea pertains to him: nor can *he* speak of broken and deficient services, who, in no true sense of the term, hath ever served God at all. I own, therefore, I do not perceive what rational hopes religion can hold out to insensibility and unconcernedness, to those who neither obey its rules nor seek its aid; neither follow after its rewards, nor sue, I mean in spirit and sincerity sue, for its pardon. But how, it will be asked, can a man be of regular and reputable morals, with this religious insensibility: in other words, with the want of vital religion in his heart? I answer, that it can be. A general regard to character, knowing that it is an advantageous thing to possess a good character; or a regard generated by natural and early habit; a disposition to follow the usages of life, which are practiced around us, and which constitute decency; calm passions, easy circumstances, orderly companions, may, in a multitude of instances, keep men within rules and bounds, without the operation of any religious principle whatever.

There is likewise another cause, which has a tendency to shut out religion from the mind, and yet hath, at the same time, a tendency to make men orderly and decent

in their conduct: and that cause is business. A close attention to business is very apt to exclude all other attentions; especially those of a spiritual nature, which appear to men of business shadowy and unsubstantial, and to want that present reality and advantage, which they have been accustomed to look for, and to find in their temporal concerns: and yet it is undoubtedly true, that attention to business frequently and naturally produces regular manners. Here, therefore, is a case, in which decency of behaviour shall subsist along with religious insensibility, forasmuch as one cause produces both—an intent application to business.

Decency, order, regularity, industry, application to our calling, are all good things; but then they are accompanied with this great danger, viz. that they may subsist without any religious influence whatever; and that, when they do so, their tendency is to settle and confirm men in religious insensibility.—For finding things go on very smoothly, finding themselves received and respected without any religious principle, they are kept asleep, as to their spiritual concerns, by the very quietness and prosperity of things around them. “There is a way that seemeth right unto a man, but the end thereof are the ways of death.” It is possible to slumber in a fancied security, or rather in an unconsciousness of danger, a blindness to our true situation, a thoughtlessness or stupefaction concerning it, even, at the time when we are in the utmost peril of salvation; when we are descending fast towards a state of perdition. It is not the judgment of an erroneous conscience: that is not the case I mean. It is rather a want of conscience, or a conscience which is never exerted; in a word, it is an indifference and insensibility concerning religion, oven in the midst of seeming and external decency of

behaviour, and soothed and lulled by this very circumstance. Now it is not only within the compass of possibility, but it frequently, nay, I hope, it very frequently comes to pass, that open, confessed, acknowledged sins sting the sinner's conscience: that the upbraiding of mankind, the cry, the clamour, the indignation which his wickedness has excited, may at length come home to his own soul; may compel him to reflect; may bring him, though by force and violence, to a sense of his guilt, and a knowledge of his situation. Now, I say, that this sense of sin, by whatever cause it be produced, is better than religious insensibility. The sinner's penitence is more to be trusted to than the seemingly righteous man's security. The one is roused; is roused from the deep forgetfulness of religion, in which he had hitherto lived. Good fruit, even fruit unto life everlasting, may spring from the motion which is stirred in his heart. The other remains, as to religion, in a state of torpor. The thing wanted as the quickening principle, as the seed and germ of religion in the heart, is compunction, conviction of sin, of danger, of the necessity of flying to the Redeemer, and to his religion in good earnest. "They were pricked in their heart, and said to Peter and to the rest of the apostles, Men and brethren, what shall we do?" This was the state of mind of those who first heard the Gospel; and this is the state of mind still to be brought about, before the Gospel be heard with effect: and sin will sometimes do it, when outward righteousness will not; I mean by outward righteousness, external decency of manners without any inward principle of religion whatever. The sinner may return and fly to God, even because the world is against him: the visibly righteous man is in friendship with the

world; and the “friendship of the world is enmity with God,” whosoever, as I have before expressed it, it soothes and lulls men in religious insensibility. But how, it will be said, is this? Is it not to encourage sin? Is it not to put the sinner in a more hopeful condition than the righteous? Is it not, in some measure, giving the greatest sinner the greatest chance of being saved? This may be objected: and the objection brings me to support the assertion in the beginning of my discourse, that the doctrine proposed cannot, without being wilfully misconstrued, deceive or delude any. First, you ask, is not this to encourage sin? I answer, it is to encourage the sinner who repents; and, if the sinner repent, why should he not be encouraged? But some, you say, will take occasion, from this encouragement, to plunge into sin. I answer, that then they wilfully misapply it: for if they enter upon sin intending to repent afterward, I take upon me to tell them that no true repentance can come of such intention. The very intention is a fraud: instead of being the parent of true repentance, is itself to be repented of bitterly. Whether such a man ever repent or not, is another question; but no sincere repentance can issue or proceed from this intention. It must come altogether from another quarter. It will look back, when it does come, upon that previous intention with hatred and horror, as upon a plan and scheme and design to impose upon and abuse the mercy of God. The moment a plan is formed of sinning, with an intention afterward to repent, at that moment the whole doctrine of grace, of repentance, and of course this part of it amongst the rest, is wilfully misconstrued. The grace of God is turned into lasciviousness. At the time this design is formed, the person forming it is in the bond of iniquity, as St. Peter told Simon he

was; in a state of imminent perdition, and this design will not help him out of it. We say, that repentance is sometimes more likely to be brought about in a confessed, nay, in a notorious and convicted sinner, than in a seemingly regular life: but it is of true repentance that we speak, and no true repentance can proceed from a previous intention to repent, I mean an intention previous to the sin. Therefore no advantage can be taken of this doctrine to the encouragement of sin, without wilfully misconstruing it.

But then, you say, we place the sinner in a more hopeful condition than the righteous. But who, let us inquire, are the righteous we speak of? Not they who are endeavouring, however imperfectly, to perform the will of God; not they who are actuated by a principle of obedience to him; but men who are orderly and regular in their visible behaviour, without any internal religion. To the eye of man they appear righteous. But if they do good, it is not from the love or fear of God, or out of regard to religion, that they do it, but from other considerations. If they abstain from sin, they abstain from it out of different motives from what religion offers: and so long as they have the acquiescence and approbation of the world, they are kept in a state of sleep; in a state, as to religion, of total negligence and unconcern. Of these righteous men there are many: and, when we compare their condition with that of the open sinner, it is to rouse them, if possible, to a sense of religion. A wounded conscience is better than a conscience which is torpid. When conscience begins to do its office, they will feel things changed within them mightily. It will no longer be their concern to keep fair with the world, to preserve appearances, to maintain a character, to uphold decency, order, and

regularity in their behaviour; but it will be their concern to obey God, to think of him, to love him, to fear him: nay, to love him with all their heart, with all their mind, with all their soul, with all their strength; that is, to direct their cares and endeavours to one single point—his will: yet their visible conduct may not be much altered; but their internal motives and principle will be altered altogether.

This alteration must take place in the heart, even of the seemingly righteous. It may take place also in the heart of the sinner: and we say, (and this is, in truth, the whole which we say,) that a conscience pricked by sin is sometimes, nay oftentimes, more susceptible of the impressions of religion, of true and deep impressions, than a mind which has been accustomed to look only to the laws and customs of the world, to conform itself to those laws, and to find rest and satisfaction in that peace, which not God, but the world gives.

## SINS OF THE FATHERS UPON THE CHILDREN.

EXODUS XX. 5.

*Thou shall not bow down thyself to them, nor serve them; for I the Lord thy God am a jealous God, visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate me.*

THESE words form part of the second commandment. It need not be denied that there is an apparent harshness in this declaration, with which the minds even of good and pious men have been sometimes sensibly affected. To visit the sins of the fathers upon the children, even to the third and fourth generation, is not, at first sight at least, so reconcilable to our apprehensions of justice and equity, as that we should expect to find it in a solemn publication of the will of God.

I think, however, that a fair and candid interpretation of the words before us will remove a great deal of the difficulty, and of the objection which lies against them. My exposition of the passage is contained in these four articles:—First, that the denunciation and sentence relate to the sin of idolatry in particular, if not to that alone. Secondly, that it relates to temporal, or, more properly speaking, to family prosperity and adversity. Thirdly, that it relates to the Jewish economy, in that particular administration of a visible providence under which they lived. Fourthly, that at no rate does it affect, or was ever meant to affect, the acceptance or salvation of individuals in a future life.

First, I say, that the denunciation and sentence relate to the sin of idolatry in particular, if not to that alone. The prohibition of the commandment is pointed

against that particular offence and no other. The first and second commandment may be considered as one, inasmuch as they relate to one subject, or nearly so: for many ages, and by many churches, they were put together and considered as one commandment. The subject to which they both relate, is false worship, or the worship of false gods. This is the single subject to which the prohibition of both commandments relates; the single class of sins which is guarded against. Although, therefore, the expression be, "the sins of the fathers," without specifying in that clause what sins, yet in fair construction, and indeed in common construction, we may well suppose it to be that kind and class of sins, for the restraint of which the command was given, and against which its force was directed. The punishment threatened by any law must naturally be applied to the offence particularly forbidden by that law, and not to offences in general.

One reason why you may not probably perceive the full weight of what I am saying is, that we do not at this day understand or think much concerning the sin of idolatry, or the necessity or importance of God's delivering a specific, a solemn, a terrifying sentence against it. The sin itself hath in a manner ceased from among us: other sins, God knows, have come in its place; but this, in a great measure, is withdrawn from our observation: whereas in the age of the world, and among those people, when and to whom the ten commandments were promulgated, false worship, or the worship of false gods, was the sin which lay at the root and foundation of every other. The worship of the one true God, in opposition to the vain and false and wicked religions which had then obtained amongst mankind, was the grand point to be inculcated. It

was the contest then carried on: and the then world, as well as future ages, were deeply interested in it. History testifies, experience testifies, that there cannot be true morality or true virtue, where there is false religion, false worship, false gods; for which reason you find that this great article (for such it then was) was not only made the subject of a command, but placed at the head of all the rest. Nay, more; from the whole strain and tenour of the Old Testament, there is good reason to believe that the maintaining in the world the knowledge and worship of the one true God, holy, just, and good, in contradiction to the idolatrous worship which prevailed, was the great and principal scheme and end of the Jewish polity and most singular constitution. As the Jewish nation, therefore, was to be the depositary of, and the means of preserving in the world, the knowledge and worship of the one true God, when it was lost and darkened in other countries, it became of the last importance to the execution of this purpose that this nation should be warned and deterred, by every moral means, from sliding themselves into those practices, those errors, and that crime against which it was the very design of their institution that they should strive and contend.

The form of expression used in the second commandment, and in this very part of it much favours the interpretation for which I argue, namely, that the sentence or threatening was aimed against the sin of idolatry alone. The words are, “For I the Lord thy God am a *jealous* God, and visit the sins of the fathers upon the children.” These two things, of being jealous, and of visiting the sins of the fathers upon the children, are spoken of God in conjunction; and in such a manner as to show that they refer to one subject. Now jealousy

implies a rival. God's being jealous, means that he would not allow any other god to share with himself in the worship of his creatures: that is what is imported in the word jealous; and, therefore, that is the subject to which the threat of visiting the sins of the fathers upon the children is applied. According to this interpretation, the following expressions of the commandment, "them that, hate me, and them that love me," signify them that forsake and desert my worship and religion for the worship and religion of other gods, and them who adhere firmly and faithfully to my worship, in opposition to every other worship.

My second proposition is, that the threat relates to temporal, or, more properly speaking, to family prosperity and adversity. In the history of the Jews, most particularly of their kings, of whom, as was to be expected, we read and know the most, we meet with repeated instances of this, some threat being both pronounced and executed against their family prosperity; and for this very same cause, their desertion of the true God, and going over, after the example of the nations around them, to the worship of false gods. Amongst various other instances, one is very memorable and very direct to our present argument; and that is the instance of Ahab, who of all the idolatrous kings of Israel was the worst. The punishment threatened and denounced against his crime was this: "Behold, I will bring evil upon thee, and will take away thy posterity, and will make thine house like the house of Jeroboam, the son of Nebat, and like the house of Baasha, the son of Ahijah, for the provocation wherewith thou hast provoked me to anger, and made Israel to sin." The provocation, you will observe, was the introduction of false gods into his kingdom; and the prophet here not

only threatens Ahab with the ruin and destruction of his family, as the punishment of his sin, but points out to him two instances of great families having been destroyed for the very same reason. You afterward read the full accomplishment of this sentence by the hand of Jehu. Now, I consider these instances as, in fact, the execution of the second commandment, and as showing what sense that commandment bore. But if it were so, if the force of the threat was, that in the distribution and assignment of temporal prosperity and adversity, to families and to a man's race, respect would be had to his fidelity to God, or his rebellion against him in this article of false and idolatrous worship, then is the punishment, as to the nature and justice of it, agreeable to what we see in the constant and ordinary course of God's providence. The wealth and grandeur of families are commonly owing, not to the present generation, but to the industry, wisdom, or good conduct of a former ancestor. The poverty and depression of a family are not imputable to the present representatives of the family, but to the fault, the extravagance, or mismanagement of those who went before them; of which, nevertheless, they feel the effects. All this we see every day; and we see it without surprise or complaint. What, therefore, accords with the state of things under the ordinary dispensations of Providence, as to temporal prosperity and adversity, was, by a special providence and by a particular sentence, ordained to be the mode, and probably a most efficacious mode of restraining and correcting an offence, from which it was of the utmost importance to deter the Jewish nation.

My third proposition is, that this commandment related particularly to the Jewish economy. In the 28th

chapter of Deuteronomy, you find Moses, with prodigious solemnity, pronouncing the blessings and cursings which awaited the children of Israel under the dispensation to which they were called: and you will observe that these blessings consisted altogether of worldly benefits, and these curses of worldly punishments. Moses in effect declared, that, with respect to this peculiar people, when they came into their own land, there should be amongst them such a signal and extraordinary and visible interposition of Providence, as to shower down blessings and happiness and prosperity upon those who adhered faithfully to the God of their fathers, and to punish with exemplary misfortunes those who disobeyed and deserted him. Such, Moses told them, would be the order of God's government over them. This dispensation dealt in temporal rewards and punishments. And the second commandment, which made the temporal prosperity and adversity of families depend, in many instances, upon the religious behaviour of the ancestor of such families, was a branch and consistent part of that dispensation.

But, lastly and principally, my fourth proposition is, that at no rate does it affect, or was ever meant to affect the acceptance or salvation of individuals in a future life. My proof of this proposition I draw from the 18th chapter of Ezekiel. It should seem, from this chapter, that some of the Jews, at that time, had put too large an interpretation upon the second commandment; for the prophet puts this question into the mouth of his countrymen: he supposes them to be thus, as it were, expostulating with God: "Ye say, Why? Doth not the son bear the iniquity of the father?" that is the question he makes them ask. Now take notice of the answer; the answer, which the prophet delivers in the

name of God, is this: “When the son hath done that which is lawful and right, and hath kept all my statutes, and hath done them, he shall surely live. The soul that sinneth, *it* shall die. The son shall *not* bear the iniquity of the father, neither shall the father bear the iniquity of the son: the righteousness of the righteous shall be upon him, and the wickedness of the wicked shall be upon *him*.” Verse 19, 20.

In the preceding part of the chapter, the prophet has dilated a good deal, and very expressly indeed, upon the same subject, all to confirm the great truth which he lays down: “Behold, all souls are mine; as the soul of the father, so also the soul of the son is mine: the soul that sinneth, *it* shall die.” Now apply this to the second commandment; and the only way of reconciling them together is by supposing, that the second commandment related solely to temporal or rather family adversity and prosperity, and Ezekiel's chapter to the rewards and punishments of a future state. When to this is added what hath been observed, that the threat in the second commandment belongs to the crime forbidden in that commandment, namely, the going over to false gods, and deserting the one true God; and that it also formed a part or branch of the Mosaic system, which dealt throughout in temporal rewards and punishments, at that time dispensed by a particular providence; when these considerations are laid together, much of the difficulty and much of the objection, which our own minds may have raised against this commandment, will, I hope, be removed.

## HOW VIRTUE PRODUCES BELIEF, AND VICE UNBELIEF.

JOHN vii. 17.

*If any man will do his will, he shall know of the doctrine, whether it be of God.*

IT does not, I think, at first sight appear, why our behaviour should influence our belief, or how any particular course of action, good or bad, should affect our assent to any particular propositions which are offered to us; for truth and probability can never depend upon our conduct; the credibility or incredibility of religion is the same, whether we act well or ill, whether we obey its laws or disobey them. Nor is it very manifest, how even our perception of evidence or credibility should be affected by our virtues or vices; because conduct is immediately voluntary, belief is not: one is an act of the will, under the power of motives; the other is an act of the understanding, upon which motives do not, primarily at least, operate, nor ought to operate at all. Yet our Lord, in the text, affirms this to be the case, namely, that our behaviour does influence our belief, and to have been the case from the beginning, that is, even during his own ministry upon earth. “If any man will do his will, he shall know of the doctrine, whether it be of God.” It becomes, therefore, a subject of serious and religious inquiry, how, why, and to what extent the declaration of the text may be maintained.

Now the first and most striking observation is, that it corresponds with experience. The fact, so far as can be observed, is as the text represents it to be. I speak of the general course of human conduct, which is the thing to be considered. Good men are generally be-

lievers; bad men are generally unbelievers. This is the general state of the case; not without exceptions: for, on the one hand, there may be men of regular external morals, who are yet unbelievers, because, though immorality be one cause of unbelief, it is not the only cause; and, on the other hand, there are undoubtedly many, who, although they believe and tremble, yet go on in their sins, because their faith doth not regulate their practice. But, having respect to the ordinary course and state of human conduct, what our Saviour hath declared is verified by experience. He that doeth the will of God cometh to believe that Jesus Christ is of God, namely, a messenger from God. A process, somehow or other, takes place in the understanding, which brings the mind of him who acts rightly to this conclusion. A conviction is formed, and every day made stronger and stronger. No man ever comprehended the value of Christian precepts but by conducting his life according to them. When by so doing he is brought to know their excellency, their perfection, I had almost said their divinity, he is necessarily also brought to think well of the religion itself. Hear St. Paul: “The night is far spent, the day is at hand: let us therefore cast off the works of darkness, and let us put on the armour of light. Let us walk honestly, as in the day; not in rioting and drunkenness, not in chambering and wantonness, not in strife and envying. But put ye on the Lord Jesus Christ, and make not provision for the flesh, to fulfil the lusts thereof.” (Rom. xiii. 12.) It is recorded of this text, that it was the means of conversion of a very eminent father of the church, St. Austin; for which reason I quote it as an instance to my present purpose, since I apprehend it must have wrought with him in the manner here represented. I have no doubt but that

others have been affected in like manner by this or other particular portions of Scripture; and that still greater numbers have been drawn to Christianity by the general impression which our Lord's discourses, and the speeches and letters of his apostles, have left upon their minds. This is sometimes called the internal evidence of our religion; and it is very strong. But, inasmuch as it is a species of evidence which applies itself to the knowledge, love, and practice of virtue, it will operate most powerfully where it finds these qualities, or even these tendencies and dispositions subsisting. If this be the effect of virtuous conduct, and, in some proportion, the effect also of each separate act of virtue, the contrary effect must necessarily follow from a contrary course of behaviour. And perhaps it may assist us in unfolding the subject, to take up the inquiry in this order; because, if it can be shown why, and in what manner, vice tends to obstruct, impair, and at length destroy our faith, it will not be difficult to allow, that virtue must facilitate, support, and confirm it: that at least it will deliver us, or keep us free from that weight of prejudice and resistance which is produced in the mind by vice, and which acts against the reception of religious truth.

Now the case appears to me to be no other than this. A great many persons, before they proceed upon an act of known transgression, do expressly state to themselves the question, whether religion be true or not; and, in order to get at the object of their desire, (for the real matter to be determined is whether they shall have their desire gratified or not,) in order, I say, to get at the pleasure in some cases; or in other cases, the point of interest, upon which they have set their hearts, they choose to decide, and they do in fact decide

with themselves, that these things are not so certain as to be a reason for them to give up the pleasure which lies before them, or the advantage which is now, and which may never be again, in their power to compass. This conclusion does actually take place, and, at various times, must almost necessarily take place, in the minds of men of bad morals. And now remark the effect which it has upon their thoughts afterward. When they come at another future time to reflect upon religion, they reflect upon it, as upon what they had before adjudged to be unfounded, and too uncertain to be acted upon, or to be depended upon: and reflections accompanied with this adverse and unfavourable impression, naturally lead to infidelity. Herein, therefore, is seen the fallacious operation of sin; first, in the circumstances under which men form their opinion and their conclusions concerning religion; and, secondly, in the effect, which conclusions, which doubts so formed, have upon their judgment afterward. First, what is the situation of mind in which they decide concerning religion? and what can be expected from such a situation? Some magnified and alluring pleasure has stirred their desires and passions. It cannot be enjoyed without sin. Here is religion denouncing and forbidding it on one side: there is opportunity drawing and pulling on the other. With this drag and bias upon their thoughts, they pronounce and decide concerning the most important of all subjects and of all questions. If they should determine for the truth and reality of religion, they must sit down disappointed of a gratification upon which they had set their hearts, and of using an opportunity which may never come again. Nevertheless they must determine one way or other. And this process, viz. a similar deliberation and a similar

conclusion is renewed and repeated as often as occasions of sin offer. The effect, at length, is a settled persuasion against religion; for what is it, in persons who proceed in this manner, which rests and dwells upon their memories? What is it which gives to their judgment its turn and bias? It is these occasional decisions often repeated; which decisions have the same power and influence over the man's after opinion, as if they had been made ever so impartially, or ever so correctly; whereas, in fact, they are made under circumstances which exclude almost the possibility of their being made with fairness, and with sufficient inquiry. Men decide under the power and influence of sinful temptation; but, having decided, the decision is afterward remembered by them, and grows into a settled and habitual opinion, as much as if they had proceeded in it without any bias or prejudice whatever.

The extent to which this cause acts, that is, the numbers who are included in its influence, will be farther known by the following observation. I have said, that sinners oftentimes *expressly* state to themselves the question, whether religion be true or not; and that they state to themselves this question at the time when they are about to enter upon some act of sin which religion condemns; and I believe the case so to be. I believe that this statement is often expressly made, and in the manner which I have represented. But there is also a tacit rejection of religion, which has nearly the same effect. Whenever a man deliberately ventures upon an action which he knows that religion prohibits, he tacitly rejects religion. There may not pass in his thoughts every step which we have described, nor may he come expressly to the conclusion, but he acts upon the conclusion, he practically

adopts it. And the doing so will alienate his mind from religion, as surely almost as if he had formally argued himself into an opinion of its untruth. The effect of sin is necessarily, and highly, and in all cases, adverse to the production and existence of religious faith. Real difficulties are doubled and trebled, when they fall in with vicious propensities; imaginary difficulties are readily started. Vice is wonderfully acute in discovering reasons on its own side. This may be said of all kinds of vice; but, I think, it more particularly holds good of what are called licentious vices, that is, of vices of debauchery; for sins of debauchery have a tendency, which other species of sin have not so directly, to unsettle and weaken the powers of the understanding, as well as, in a greater degree, I think, than other vices, to render the heart thoroughly corrupt. In a mind so wholly depraved, the impression of any argument, relating to a moral or religious subject, is faint and slight and transitory. To a vitiated palate no meat has its right taste; with a debauched mind no reasoning has its proper influence.

But secondly; have we not also, from Scripture, reason to believe, that God's Holy Spirit will be assisting to those who earnestly pray for it, and who sincerely prepare themselves for its reception; and that it will be assisting to them in this matter of faith in religion. The language of Scripture is, that God gives his Holy Spirit to them that ask it; and, moreover, that to them who use and improve it as they ought, it is given in more and more abundance. "He that hath, to him shall be given more. He that hath not, from him shall be taken away even that which he hath." (Matt. xiii. 12.) He who is studious to improve his measure of grace, shall find that measure

increased upon him. He who neglects or stifles, neglects through irreligion, carelessness, and heedlessness; buries in sensuality, or stifles by the opposition of sin, the portion of grace and assistance which is vouchsafed to him; he, the Scripture says, will find that portion withdrawn from him. Now, this being the general nature and economy of God's assisting grace, there is no reason why it should not extend to our faith as well as to our practice; our perceiving the truth, as well as our obeying the truth, may be helped and succoured by it. God's Spirit can have access to our understandings as well as our affections. He can render the mind sensible to the impressions of evidence, and the power of truth. If creatures, like us, might take upon themselves to judge what is a proper object of divine help, it should seem to be a serious, devout, humble, apprehensive mind, anxiously desiring to learn and know the truth; and, in order to know it, keeping the heart and understanding pure and prepared for that purpose; that is to say, carefully abstaining from the indulgence of passions, and from practices which harden and indispose the mind against religion. I say, a mind, so guarding and qualifying itself, and imploring with devout earnestness and solicitude the aid of God's Holy Spirit in its meditations and inquiries, seems, so far as we can presume to judge, as meet an object of divine help and favour, as any of which we can form an idea; and it is not for us to narrow the promises of God concerning his assisting grace, so as, without authority, to exclude such an object from it.

From the doctrine which has been thus concisely proposed, various important rules and reflections arise.

First; Let not men, involved in sinful courses, wonder at the difficulties which they meet with in

religion. It is an effect of sin which is almost sure to follow. Sin never fails, both to magnify real difficulties, and to suggest imaginary ones. It rests and dwells upon objections, because they help the sinner, in some measure, to excuse his conduct to himself. They cause him to come to a conclusion, which permits the gratification of his passions, or the compassing of his purpose. Deep and various is the deceitfulness of sin, of licentious sins most particularly: for they cloud the understanding; they disqualify men for serious meditation of any kind; above all, for the meditation of religion.

Secondly; Let them who ask for more light first take care to act up to the light which they have. Scripture and experience join their testimony to this point, namely, that they who faithfully practise what they do know, and live agreeably to the belief which they have, and to the just and rational consequences of that belief, seldom fail to proceed farther, and to acquire more and more confidence in the truth of religion; whereas, if they live in opposition to the degree of belief which they have, be it what it may, even *it* will gradually grow weaker and weaker, and, at length, die away in the soul.

Thirdly; Let them who are anxious to arrive at just sentiments of religion keep their minds in a capable state, that is, free from the bias of former decisions made, or of former doubts conceived, at a time when the power and influence of sinful temptation was upon them, suggested, in fact, lest they should find themselves obliged to give up some gratifications upon which they had set their hearts; and which decisions, nevertheless, and doubts have the same operation upon their judgments, as if they had been the result of the most pure and impartial reasoning. It is not peculiar to religion:

it is true of all subjects, that the mind is sure almost to be misled, which lies under a load of prejudice contracted from circumstances, in which it is next to impossible to weigh arguments justly, or to see clearly.

Fourthly; Let them, let all, especially those who find themselves in a dissatisfied state of mind, fly to prayer. Let them pray earnestly and incessantly for God's assisting grace and influence; assisting, if it be his good pleasure, as well our minds and understandings in searching after truth, as our hearts and affections in obeying it. I say again, let us pray unceasingly for grace and help from the Spirit of God. When we pray for any worldly object, we may pray mistakenly. We may be ignorant of our own good; we may err egregiously concerning it. But when we pray for spiritual aid and grace, we are sure that we pray for what we want; for what, if granted, will be the greatest of all blessings. And we pray with hope, because we have this gracious assurance given us by the Lord himself of grace and mercy: "If ye, being evil, know how to give good gifts unto your children, how much more shall your heavenly Father give the Holy Spirit to them that ask him?" Matt. vii. 11.

## JOHN'S MESSAGE TO JESUS.

MATTHEW xi. 2, 3.

*Now when John had heard in prison the works of Christ, he sent two of his disciples, and said unto him, Art thou he that should come, or do we look for another?*

THESE words state a transaction, to say the least of it, of a singular kind, and well entitled to observation. Some time before our Lord's appearance, John the Baptist had produced himself to the country, as a messenger of God, and as a public preacher. The principal thing which he taught was, that a greater and more extraordinary person than himself, that is to say, no other than the long-foretold and long-expected Messiah, was about shortly to appear in the world; that for the appearance of this person, which would be the setting up of the kingdom of God upon earth, all men were to prepare themselves by repentance and reformation. Thus did John preach, before it was known or declared, and before he (John himself) knew or declared who this extraordinary person was. It was, as it should seem, upon our Lord's offering himself to John to be baptized of him in Jordan, that John, for the first time, knew and published him to be that person. This testimony and record John afterward repeated concerning him in this manner, and it is remarkable: "The next day John seeth Jesus coming unto him, and saith, Behold the Lamb of God, which taketh away the sin of the world. This is he of whom I said, After me cometh a man which is preferred before me: for he was before me. And I knew him not: but that he should be made manifest to

Israel, therefore am I come baptizing with water. And John bare record, saying, I saw the Spirit descending from heaven like a dove, and it abode upon him. And I knew him not: but he that sent me to baptize with water, the same said unto me, Upon whom thou shalt see the Spirit descending, and remaining on him, the same is he which baptizeth with the Holy Ghost. And I saw, and bare record that this is the Son of God."

It came to pass, that, soon after our Lord's public appearance, John was cast into prison, and *there* remained, till, by a barbarous order from Herod, in wicked compliance with a wicked vow, this good and courageous servant of God was beheaded. It does not seem quite certain, whether he was not imprisoned twice. In prison, however, his disciples, as was natural, came to him, and related to him the great things which Jesus had lately been doing; and it appears, from the accounts of the different evangelists, and by laying these accounts together in order of time, that Jesus, a little before this, amongst other miracles, had cured the centurion's servant without coming near him; and had also raised the young man at Nain to life, when they were carrying him out to his funeral: miracles which, it may be supposed, were much noised abroad in the country. What then did John the Baptist do, upon receiving this intelligence? He *sent* to Jesus two of his disciples, saying, "Art thou he that should come, or look we for another?"

It will appear odd, that John should entertain any doubt, or require any satisfaction, about this matter. He who had himself publicly announced Jesus to be the Messiah looked for, and that also upon the most undeniable grounds, because he saw the Spirit descending

and remaining upon him; the token which had been given him whereby this person was to be distinguished by him.

This was a difficulty which interpreters of Scripture, in very early times, saw: and the answer which they gave to it, I believe to be the true one; namely, that John sent this message, not from any doubt which he himself entertained of the matter, but in order that the doubts which his disciples had conceived about it might receive an answer and satisfaction at the fountain head; from Jesus himself, who was best able to give it.

You will, therefore, now observe what this answer was, and how, and under what circumstances, it was given. If you turn to St. Luke's statement of the transaction, (chap. vii. verse 20th,) you will there find it expressly asserted, what is only implied and tacitly referred to by St. Matthew; (and this is one instance amongst many, of the advantage of bringing the accounts of the different evangelists together;) you will find, I say, that it so happened, I ought to have said that it was so ordered by Providence, that at the time, the precise hour, when these messengers from John arrived, our Lord was in the very act of working miracles. In that same hour, says Luke, he cured many of infirmities and plagues, and of evil spirits, and unto many that were blind he gave sight: so that the messengers themselves were eye-witnesses of his powers, and his gifts, and of his mighty works; and to this evidence he refers them: and a more decisive or dignified answer could not possibly have been given. He neither says he was nor he was not the person they inquired after, but bids them take notice and tell John of what they *saw*, and make their own conclusion from it. "Go your way, and tell John what things ye have seen and heard, how that the

blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached.” It does not, I think, appear, nor is it necessary to suppose, that *all* these species of miracles were performed then, or before their eyes. It is specifically mentioned, that he then cured many of plagues and infirmities, cast out evil spirits, and restored sight to the blind; but it is not mentioned, for instance, that he then raised the dead, though that miracle he referred to in his answer. After having wrought, whilst they were present, many and various species of decisive miracles, he was well entitled to demand their credit and assent to others upon his own testimony and assertion.

Now from this answer of our Lord's, we are entitled to infer, (and this, I think, is the useful inference to be drawn from it,) that the faith which he required, the assent which he demanded, was a rational assent and faith founded upon proof and evidence. His exhortation was, “Believe me for the very works' sake.” He did not bid Philip, upon that occasion, or the disciples of John upon this, believe him, because he was the Son of God, because he came down from heaven, because he was in the Father and the Father in him, because he was with God and from God, because the Father had given unto him the Spirit without measure, because he was inspired in the fullest and largest sense of the word; for all these characters and pretensions, though the highest that could belong to any being whatsoever, to a prophet, or to more than a prophet, were nevertheless to be ascertained by facts; when ascertained, they were grounds of the most absolute confidence in his word, of the most implicit and unlimited reliance upon his authority; but they were to be ascertained by facts.

To facts, therefore, our Lord appeals; to facts he refers them, and to the demonstration which they afforded of his power and truth: for shutting their eyes against faith, or, more properly speaking, for shutting their hearts and understandings against the proof and conclusion which facts afforded, he pronounces them liable to condemnation. They were to believe his word, because of his works: that was exactly what he required. “The works which the Father hath given me to finish, the same works that I do bear witness of me, that the Father hath sent me; and the Father himself, who hath sent me, beareth witness of me.” (John v. 36.) It is remarkable that John the Baptist wrought no miracle; therefore the authority and confirming proof of *his* mission rested very much upon the evidences which were exhibited, not by himself, but by the person whose appearance he professed to foretell; and undoubtedly the miracles of our Lord did, by a reflected operation, establish the preaching of John. For if a person in these days should appear, not working any miracle himself, but declaring that another and greater person was soon to follow, and if that other and greater person did accordingly soon follow, and show forth mighty deeds, the authority of the first person's mission would be ratified by the second person's works. They who might doubt, nay reasonably doubt, concerning the first person's truth and pretensions *before*, would be fully satisfied of them afterward; and this was exactly the turn which some rational and considerate Jews gave to the matter. “And many resorted to him, and said, John did no miracle: but all things that John spake of this man were true:” the effect of this observation was, what it ought to be, “many believed on him there.” John x. 41, 42.

This distinction between our Lord and his forerunner, in one working miracles, and the other not, furnishes an account for two things which we meet with in the Gospels: one is, John's declaring that when the person of whom he spoke should appear, his own ministry, which was then much followed and attended, would sink in importance and esteem: "He must increase, I must decrease—He that cometh after me is preferred before me—He that was with thee beyond Jordan, to whom thou bearest witness; behold, the same baptizeth, and all men come to *him*." The other is our Lord's own reflection upon John's testimony in his favour, which was exactly agreeable to the truth of the case: "Ye sent unto John, and he bare witness unto the truth: but I receive not testimony from man. He was a burning and a shining light; and ye were willing for a season to rejoice in his light. But *I* have greater witness than that of John—the *works* which the Father hath given me to finish, the same works that *I do* bear witness of me." As if he had said: My own performance of miracles is a higher and surer proof of my mission, than any testimony which could be given to me by another, who did not perform miracles, however great or praiseworthy or excellent his character and his preaching were in all respects, or however much his followers confided in him: the one was the testimony of men, the other of God. "I receive not testimony of man;" the proofs which I myself exhibit before your eyes of divine power, supersede human testimony.

Again; our Lord put the truth of his pretensions, precisely and specifically, upon the evidence of his miracles. (John x. 37.) "If I do not the works of my Father, believe me not. But if I do, though ye believe

not me, believe the works.” What fairer appeal could be made? Could more be done to challenge inquiry, or place the question upon the right ground?

Lastly; In the fifteenth chapter and 24th verse, our Lord fixes the guilt of the unbelieving Jews upon this article, that they rejected miraculous proof, which ought to have convinced them: and that, if they had not had such proof, they might have been excusable, or, comparatively speaking, they would not have had sin. His words are very memorable: “If I had not done among them the works which none other man did, they had not had sin.”

It appears, therefore, that as well in the answer to John's messengers, as in the other passages of his history and discourses which resemble this, our Lord acted a part the most consistent with his professed character. He referred the messengers who came to him, to miraculous works performed before their eyes, to things done upon the spot; to the testimony of their own senses, “Show John those things which ye do see and hear.” Would, could any other than a prophet come from God do this? In like manner, was it for any other than a divine messenger to bid his very disciples not believe in him, if he did not these works; or to tell unbelievers, that if he had not done among them works which none other man did, their unbelief might have been excusable? In all this we discern conviction and sincerity, fairness, truth, and evidence.

## ON INSENSIBILITY TO OFFENCES.

PSALM xix. 12, 13.

*Who can tell how oft he offendeth? O cleanse thou me from my secret faults. Keep thy servant also from presumptuous sins, lest they get the dominion over me.*

THESE words express a rational and affecting prayer, according to the sense which they carry with them at first sight, and without entering into any interpretation of them whatsoever. Who is there that will not join heartily in this prayer? for who is there that has not occasion to pray against his sins? We are *laden* with the weight of our sins. “The remembrance of them is grievous to us; the burden of them is intolerable.” But beyond this, these same words, when they come to be fully understood, have a still stronger meaning, and still more applicable to the state and condition of our souls; which I will endeavour to set before you.

You will observe the expression, “my secret faults:” “O cleanse thou me from my *secret* faults.” Now the question is, to whom are these faults a secret? to myself, or to others? whether the prayer relates to faults which are concealed from mankind, and are in that sense secret; or to faults which are concealed from the offender himself, and are therefore secret, in the most full and strict sense of which the term is capable? Now, I say, that the context, or whole passage taken together, *obliges* us to understand the word “*secret*” in this latter sense: for observe two particulars. The first verse of the text runs thus: “Who can tell how oft he offendeth? O cleanse thou me from my secret faults.” Now, to give a connexion to the two parts

of this verse, it is necessary to suppose, that one reason, for which it was so difficult for any man to know how oft he offended, was, that many of his faults were *secret*; but in what way, and to whom secret? to himself undoubtedly: otherwise the secrecy could have been no reason or cause of that difficulty. The merely being concealed from others would be nothing to the present purpose: because the most concealed sins, in that sense, are as well known to the sinner himself, as those which are detected or most open; and therefore such concealment would not account for the sinner's difficulty in understanding the state of his soul and of his conscience. To me it appears very plain, that the train of the Psalmist's thoughts went thus. He is led to cast back his recollection upon the sins of his life: he finds himself, as many of us must do, lost and bewildered in their number and frequency; because, beside all other reasons of confusion, there were many which were unnoticed, unreckoned, and unobserved. Against this class of sins, which for this reason he calls his secret faults, he raises up his voice to God in prayer. This is evidently, as I think, the train and connexion of thought; and this requires that the secret faults here spoken of be explained of such faults as were secret to the person himself. It makes no connexion, it carries with it no consistent meaning, to interpret them of those faults which were concealed from others. This is one argument for the exposition contended for; another is the following. You will observe in the text, that two kinds of sins are distinctly spoken of, under the name of secret faults and presumptuous sins. The words are, "O cleanse thou me from my secret faults; keep thy servant also from presumptuous sins." Now it will not do to consider these secret faults as merely concealed

faults, because they are not necessarily distinguished from, nor can be placed in opposition to, presumptuous sins. The Psalmist is here addressing God: he is deeply affected with the state of his soul, and with his sins, considered in relation to God. Now, with respect to God, there may be, and there often is, as much presumption, as much daring, in committing a concealed sin, as in committing a sin which is open to the world. The circumstance of concealment or detection makes no difference at all in this respect; and therefore they could not properly be placed in different classes; nor would it be natural so to place them: but offences which escape the sinner's own notice at the time, may certainly be distinguished from those which are committed with a high hand, with a full knowledge of the guilt and defiance of the consequences; and that is, as I believe, the distinction here intended: and the one the Psalmist called his secret faults, the other his presumptuous sins. Upon the whole, therefore, I conclude, that the secret sins against which the Psalmist prayed, were sins secret to himself.

But here, therefore, comes the principal question—How there *can* be any sins of this sort? how that can be a sin, which is neither observed nor known to be so by the person who commits it? And then there comes also a second consideration, which is, if there be such, what ought to be done with respect to them? Now, as well upon the authority of the text, as upon what is the real case with human nature, when that case is rightly understood, I contend, first, that there are many violations of God's laws, which the men who are guilty of them are not sensible of at the time; and yet, secondly, such as that their want of being sensible of them does not excuse or make them cease to be sins.

All this, in truth, is no other than the regular effect of sinful habits. Such is the power of custom over our consciences, that there is, perhaps, hardly any bad action which a man is capable of committing, that he may not commit so often as to become unconscious of its guilt, as much as of the most indifferent thing which he does. If some very great and atrocious crimes may be thought exceptions to this observation, and that no habit or custom can by any possibility reconcile them to the human conscience, it is only because they are such as cannot, from their very nature, be repeated so often by the same person, as to become familiar and habitual: if they could, the consequence would be the same; they would be no more thought of by the sinner himself, than other habitual sins are. But great outrageous crimes against life, for instance, and property, and public safety, may be laid out of the question, as not falling, I trust and believe, within the case of any one who hears me, and as in no case whatever capable of being so common as to be fair experiments of the strength of our observation. These are not what compose our account with God. A man may be (as indeed most men are) quite free from the crimes of murder, robbery, and the like, and yet *be far* from the kingdom of God. I fear it may be said of most of us, that the class of sins which compose our account with God, are habitual sins; habitual *omissions* and habitual *commissions*. Now it is true of both these, that we may have continued in them so long, they may have become so familiar to us by repetition, that we think nothing at all of them. We may neglect any duty till we forget that it is one: we may neglect our prayers, we may neglect our devotion, we may neglect every duty towards God, till we become so unaccustomed

and unused to them, as to be insensible that we are incurring any omission, or contracting, from that omission, any guilt which can hurt; and yet we may be, in truth, all the while “treasuring up wrath against the day of wrath.” How many thousands, for instance, by omitting to attend the sacrament of the Lord's Supper, have come not to know that it forms any part of Christian obligation? And long disuse and discontinuance would have the same effect upon any other duty, however plain might be the proof of it when the matter came to be considered.

It is not less so with sins of commission. Serious minds are shocked with observing with what complete unconcern and indifference many forbidden things are practised. The persons who are guilty of them do not, by any mark or symptom whatever, appear to feel the smallest rebuke of conscience, or to have the least sense of either guilt or danger or shame in what they do; and it not only appears to be so, but it, is so. They are, in fact, without any notice, consciousness, or compunction upon the subject. These sins, therefore, if they be such, are secret sins to them. But are they not therefore sins? That becomes the next great question. We must allow, because fact proves it, that habit and custom can destroy the sense and perception of sin. Does the act, then, in that person, cease to be any longer a sin? This must be asserted by those who argue, that nothing can be a sin but what is known and understood, and also felt and perceived to be so, by the sinner himself at the time; and who, consequently, deny that there are any secret sins, in our sense of that expression. Now mark the consequences which would follow from such an opinion. It is then the timorous *beginner* in wicked courses who alone is to be brought

to account. Can such a doctrine be maintained? Sinners are called upon by preachers of the Gospel, and over and over again called upon, to compare themselves with themselves; themselves at one time with themselves at another; their former selves when they first entered upon sinful allowances, and their present selves since they have been confirmed in them. With what fear and scruple and reluctance, what sense and acknowledgment of wrong, what apprehension of danger, against what remonstrance of reason, and with what opposition and violence to their religious principle, they first gave way to temptation! With what ease, if ease it may be called, at least with what hardness and unconcern, they now continue in practices which they once dreaded! In a word, what a change, as to the particular article in question at least, has taken place in their moral sentiments! Yet, notwithstanding this change in *them*, the reason, which made what they are doing a sin, remains the same that it was at first: at first they saw great force and strength in that reason; at present they see none; but, in truth, it is all the while the same. Unless, therefore, we will choose to say, that a man has only to harden himself in his sins, (which thing perseverance will always do for him,) and that with the sense he takes away the guilt of them, and that the only sinner is the conscious, trembling, affrightened, reluctant sinner; that the confirmed sinner is not a sinner at all; unless we will advance this, which affronts all principles of justice and sense, we must confess, that secret sins are both possible and frequent things; that with the habitual sinner, and with every man, in so far as he is, and in that article in which he is, an habitual sinner, this is almost sure to be the case.

What then are the reflections suitable to such a case? First, to join most sincerely with the Psalmist in his prayer to God: “O cleanse thou me from my secret faults.” Secondly, to see, in this consideration, the exceedingly great danger of evil habits of all kinds. It is a dreadful thing to commit sins without knowing it, and yet to have those sins to answer for. That is dreadful; and yet it is no other than the just consequence and effect of sinful habits. They destroy in us the perception of guilt: that experience proves. They do not destroy the guilt itself: that no man can argue, because it leads to injustice and absurdity.

How well does the Scripture express the state of an habitual sinner, when he calls him “*dead* in trespasses and sins!” His conscience is dead: that, which ought to be the living, actuating, governing principle of the whole man, is dead within him; is extinguished by the power of sin reigning in his heart. He is incapable of perceiving his sins, whilst he commits them with greediness. It is evident that a vast alteration must take place in such a man, before he be brought into the way of salvation. It is a great change from innocence to guilt, when a man falls from a life of virtue to a life of sin: but the recovery from it is much greater; because the very secrecy of our sins to ourselves, the unconsciousness of them, which practice and custom and repetition and habit have produced in us, is an almost insurmountable hindrance to an effectual reformation.

## SERIOUSNESS OF HEART AS TO RELIGION.

LUKE viii. 15.

*But that on the good ground are they, which in an honest and good heart, having heard the word, keep it, and bring forth fruit with patience.*

IT may be true, that a right religious principle produces corresponding external actions; and yet it may not be true, that external actions are what we should always or entirely or principally look to for the purpose of estimating our religious character, or from whence alone we should draw our assurance and evidence of being in the right way.

External actions must depend upon ability, and must wait for opportunity. From a change in the heart, a visible outward change will ensue; from an amendment of disposition an amended conduct will follow: but it may neither be so soon, nor so evident, nor to such a degree, as we may at first sight expect, inasmuch as it will be regulated by occasions and by ability. I do not mean to say, (for I do not believe it to be so,) that there is any person so forlorn and destitute as to have no good in his power: expensive kindnesses may not; but there is much kindness which is not expensive; a kindness of temper, a readiness to oblige, a willingness to assist, a constant inclination to promote the comfort and satisfaction of all who are about us, of all with whom we have concern or connexion, of all with whom we associate or converse.

There is also a concern for the virtue of those over whom, or with whom, we can have any sort of influence,

which is a natural concomitant of a radical concern for virtue in ourselves.

But, above all, it is undoubtedly in every person's power, whether poor or rich, weak or strong, ill or well, endowed by nature or education, it is, I say, in every person's power to avoid sin: if he can do little good, to take care that he do no ill.

Although, therefore, there be no person in the world so circumstanced, but who both can and will testify his inward principle by his outward behaviour, in one shape or other; yet, on account of the very great difference of those circumstances in which men are placed, and to which their outward exertions are subjected, outward behaviour is not always a just measure of inward principle.

But there is a second case, and that but too common, in which outward behaviour is no measure of religious principle at all; and that is, when it springs from other and different motives and reasons from those which religion presents. A very bad man may be externally good: a man completely irreligious at the heart may, for the sake of character, for the advantage of having a good character, for the sake of decency, for the sake of being trusted and respected and well spoken of, from a love of praise and commendation, from a view of carrying his schemes and designs in the world, or of raising himself by strength of character, or at least from a fear, lest a tainted character should be an obstacle to his advancement. From these, and a thousand such sort of considerations which might be reckoned up, and with which it is evident that religion hath no concern or connexion whatever, men may be both active and forward and liberal in doing good, and exceedingly cautious of giving offence by doing evil; and this may be, either wholly or in part, the case with ourselves.

In judging, therefore, and examining ourselves, with a view of knowing the real condition of our souls, the real state and the truth of our spiritual situation in respect to God, and in respect to salvation, it is neither enough, nor is it safe, to look only to our external conduct.

I do not speak in any manner of judging of other men; if that were necessary at all, which, with a view to religion, it never is, different rules must be laid down for it. I now only speak of that which is necessary, and most absolutely so, in judging rightly of ourselves. To our hearts, therefore, we must look for the marks and tokens of salvation, for the evidence of being in the right way. "That on the good ground are they, which in an honest and good heart bring forth fruit with patience."

One of these marks, and that no slight one, is seriousness of the heart. I can have no hope at all of a man who does not find himself serious in religious matters, serious at the heart. If the judgment of Almighty God at the last day; if the difference between being saved and being lost; being accepted in the beloved, and being cast forth into outer darkness; being bid by a tremendous word either to enter into the joy of our Father, or to go into the fire prepared for the devil and his angels, for all who have served him and not God; if these things do not make us serious, then it is most certain, either that we do not believe them, or that we have not yet thought of them at all, or that we have positively broken off thinking of them, have turned away from the subject, have refused to let it enter, have shut our minds against it; or, lastly, that such a levity of mind is our character, as nothing whatever can make any serious impression upon. In any of

these cases our condition is deplorable; we cannot look for salvation from Christ's religion under any of them. Do we want seriousness concerning religion, because we do not believe in it? we cannot expect salvation from a religion which we reject. What the root of unbelief in us may be, how far voluntary and avoidable, how far involuntary and unavoidable, God knows, and God only knows; and, therefore, he will in his mercy treat us as he thinketh fit: but we have not the religion to rely upon, to found our hopes upon; we cannot, as I say again, expect salvation from a religion which we reject.

If the second case be ours, namely, that we have not yet thought of these things, and *therefore* it is that we are not serious about them, it is high time with every one that he do think of them. These great events are not at a distance from us; they approach to every one of us with the end of our lives; they are the same to all intents and purposes, as if they took place at our deaths: it is ordained for men once to die, and after that, judgment. Wherefore it is folly in any man or woman whatever, in any thing above a child, to say they have not thought of religion; how know they that they will be permitted to think of it at all? It is worse than folly, it is high presumption. It is an answer one sometimes receives, but it is a foolish answer. Religion can do no good till it sinks into the thoughts. Commune with thyself and be still. Can any health or strength or youth, any vivacity of spirits, any crowd or hurry of business, much less any course of pleasures, be an excuse for not thinking about religion? Is it of importance only to the old and infirm and dying to be saved? Is it of the same importance to the young and strong? Can they be

saved without religion? Or can religion save them without thinking about it?

If, thirdly, such a levity of mind be our character as nothing can make an impression upon, this levity must be cured, before ever we can draw near unto God. Surely human life wants not materials and occasions for the remedying of this great infirmity. Have we met with no troubles to bring us to ourselves? no disasters in our affairs? no losses in our families? no strokes of misfortune and affliction? no visitations in our health? no warnings in our constitution? If none of these things have befallen us, and it is for that reason that we continue to want seriousness and solidity of character, then it shows how necessary these things are for our real interest and for our real happiness; we are examples how little mankind can do without them; and that a state of unclouded pleasure and prosperity is of all others the most unfit for man. It generates the precise evil we complain of—a giddiness and levity of temper, upon which religion cannot act. It indisposes a man for weighty and momentous concerns of any kind; but it most fatally disqualifies him for the concerns of religion. That is its worst consequence, though others may be bad. I believe, therefore, first, that there is such a thing as a levity of thought and character, upon which religion has no effect. I believe, secondly, that this is greatly cherished by health and pleasures and prosperity and gay society. I believe, thirdly, that whenever this is the case, these things, which are accounted such blessings, which men covet and envy, are, in truth, deep and heavy calamities. For, lastly, I believe, that this levity must be changed into seriousness, before the mind infected with it can come unto

God; and most assuredly true it is, that we cannot come to happiness in the next world, unless we come to God in this.

I repeat again, therefore, that we must look to our hearts for our character; not simply or solely to our actions, which may be and will be of a mixed nature, but to the internal state of our disposition. That is the place in which religion dwells: in that it consists. And, I also repeat, that one of these internal marks of a right disposition of an honest and good heart, as relative to religion, is seriousness. There can be no true religion without it; and farther, a mark and test of a growing religion is a growing seriousness; so that when, instead of seeing these things at a distance, we begin to look *near* upon them; when, from faint, they become distinct; when, instead of now and then perceiving a slight sense of these matters, a hasty passage of them, as it were, through the thoughts, they begin to rest and settle there: in a word, when we become *serious* about religion, then, and not till then, may we hope that things are going on right within us; that the soil is prepared; the seed sown. Its future growth and maturity and fruit may not yet be known, but the seed is sown in the heart: and in a serious heart it will not be sown in vain; in a heart not yet become serious, it may.

Religious seriousness is not churlishness, is not severity, is not gloominess, is not melancholy: but it is nevertheless a *disposition* of mind, and, like every disposition, it will show itself one way or other. It will, in the first place, neither invite nor entertain nor encourage any thing which has a tendency to turn religion into ridicule. It is not in the nature of things, that a serious mind should find delight or amusement

in so doing; it is not in the nature of things, that it should not feel an inward pain and reluctance whenever it is done. Therefore, if we are capable of being pleased with hearing religion treated or talked of with levity; made, in any manner whatever, an object of sport and jesting; if we are capable of making it so ourselves, or joining with others, as in a diversion, in so doing; nay, if we do not feel ourselves at the heart grieved and offended, whenever it is our lot to be present at such sort of conversation and discourse; then is the inference, as to ourselves, infallible, that we are not yet serious in our religion; and then it will be for us to remember, that seriousness is one of those marks by which we may fairly judge of the state of our mind and disposition, as to religion; and that the state of our mind and disposition is the very thing to be consulted, to be known, to be examined and searched into, for the purpose of ascertaining whether we are in a right and safe way, or not. Words and actions are to be judged of with a reference to that disposition which they indicate. There may be language, there may be expressions, there may be behaviour of no very great consequence in itself, and considered in itself, but of very great consequence indeed, when considered as indicating a disposition and state of mind. If it show, with respect to religion, *that* to be wanting within which ought to be there, namely, a deep and fixed sense of our personal and individual concern in religion, of its importance above all other important things; then it shows, that there is yet a deficiency in our hearts, which, without delay, must be supplied by closer meditation upon the subject than we have hitherto used; and, above all, by earnest and unceasing prayer for such a portion and measure of

spiritual influence shed upon our hearts, as may cure and remedy that heedlessness and coldness an deadness and unconcern which are fatal and under which we have so much reason to know that we as yet unhappily labour.

PART I.

## THE EFFICACY OF THE DEATH OF CHRIST.

HEBREWS ix. 26.

*Now once in the end of the world hath he appeared to put away sin by the sacrifice of himself.*

THE salvation of mankind, and most particularly in so far as the death and passion of our Lord Jesus Christ are concerned in it, and whereby he comes to be called our Saviour and our Redeemer, ever has been, and ever must be, a most interesting subject to all serious minds.

Now there is one thing in which there is no division or difference of opinion at all, which is, that the death of Jesus Christ is spoken of, in reference to human salvation, in terms and in a manner which the death of no person whatever is spoken of besides. Others have died martyrs, as well as our Lord; others have suffered in a righteous cause, as well as he; but that is said of him, and of his death and sufferings, which is not said of any one else; an efficacy and a concern are ascribed to them, in the business of human salvation, which are not ascribed to any other.

What may be called the first gospel declaration upon this subject, is the exclamation of John the Baptist, when he saw Jesus coming unto him: “Behold the Lamb of God, which taketh away the sin of the world.” I think it plain, that, when John called our Lord the Lamb of God, he spoke with a relation to his being sacrificed, and to the effect of that sacrifice upon the pardon of human sin: and this, you will observe, was

said of him even before he entered upon his office. If any doubt could be made of the meaning of the Baptist's expression, it is settled by other places, in which the like allusion to a lamb is adopted; and where the allusion is specifically applied to his death, considered as a sacrifice. In the Acts of the Apostles, the following words of Isaiah are, by Philip the evangelist, distinctly applied to our Lord, and to our Lord's death: "He was led as a sheep to the slaughter; and like a lamb dumb before his shearer, so opened he not his mouth: in his humiliation his judgment was taken away: and who shall declare his generation? for his life is taken from the earth:" therefore it was to his death, you see, that the description relates. Now, I say, that this is applied to Christ most distinctly; for the pious eunuch, who was reading the passage in his chariot, was at a loss to know to whom it should be applied. "I pray thee," saith he to Philip, "of whom speaketh the prophet this? of himself or of some other man?" And Philip, you read, taught him that it was spoken of Christ. And, I say, secondly, that this particular part and expression of the prophecy being applied to Christ's death, carries the whole prophecy to the same subject: for it is undoubtedly one entire prophecy; therefore the other expressions, which are still stronger, are applicable as well as this: "He was wounded for our transgressions, he was bruised for our iniquities: the chastisement of our peace was upon him; and with his stripes we are healed. The Lord hath laid on him the iniquity of us all." There is a strong and very apposite text of St. Peter's, in which the application of the term Lamb to our Lord, and the sense in which it is applied, can admit of no question at all. It is in the first chapter of the first epistle, the

eighteenth and nineteenth verses: “Forasmuch as ye know that ye were not redeemed with corruptible things, but with the precious blood of Christ, as of a lamb without blemish and without spot.” All the use I make of these passages is to show, that the prophet Isaiah, six hundred years before his birth; St. John the Baptist, upon the commencement of his ministry; St. Peter, his friend, companion, and apostle, after the transaction was over, speak of Christ's death, under the figure of a lamb being sacrificed: that is, in having the effect of a sacrifice, the effect in kind, though infinitely higher in degree, upon the pardon of sins, and the procurement of salvation; and that this is spoken of the death of no other person whatever.

Other plain and distinct passages, declaring the efficacy of Christ's death, are the following: Hebrews ix. 26. “Now once in the end of the world hath he appeared to put away sin by the sacrifice of himself. Christ was once offered to bear the sins of many; and unto them that look for him shall he appear the second time without sin unto salvation.” And in chap. x. ver. 12. “This man, after he had offered one sacrifice for sin, for ever sat down on the right hand of God; for by one offering he hath perfected for ever them that are sanctified.” I observe again, that nothing of this sort is said of the death of any other person: no such efficacy is imputed to any other martyrdom. So likewise in the following text from the Epistle to the Romans: “While we were yet sinners, Christ died for us; much more then being now justified by his blood we shall be saved from wrath through him: for if when we were enemies, we were reconciled to God by the death of his Son, much more being reconciled we shall be saved by his life:” “reconciled to God

by the death of his Son;" therefore that death had an efficacy in our reconciliation; but reconciliation is preparatory to salvation. The same thing is said by the same apostle in his Epistle to the Colossians: "He has reconciled us to his Father in his cross, and in the body of his flesh through death." What is said of reconciliation in these texts, is said in other texts of sanctification, which also is preparatory to salvation. Thus, Hebrews x. 10, "we are sanctified:" How? namely, "by the offering of the body of Christ once for all:" so again, in the same epistle, "The blood of Jesus is called the blood of the covenant by which we are sanctified."

In these and many more passages, that lie spread in different parts of the New Testament, it appears to be asserted, that the death of Christ had an efficacy in the procurement of human salvation. Now these expressions mean something; mean something substantial: they are used concerning no other person, nor the death of any other person whatever. Therefore Christ's death was something more than a confirmation of his preaching; something more than a pattern of a holy and patient, and perhaps voluntary martyrdom: something more than necessarily antecedent to his resurrection, by which he gave a grand and clear proof of human resurrection. Christ's death was all these, but it was something more; because none of these ends, nor all of them, satisfy the text you have heard; come up to the assertions and declarations which are delivered concerning it.

Now allowing the subject to stop here; allowing that we know nothing, nor can know any thing concerning it, but what is written; and that nothing more is written than that the death of Christ had a real and

essential effect upon human salvation, we have certainly before us a doctrine of a very peculiar, perhaps, I may say, of a very unexpected kind, in some measure hidden in the councils of the divine nature, but still so far revealed to us, as to excite two great religious sentiments—admiration and gratitude.

That a person of a nature different from all other men; nay, superior, for so he is distinctly described to be to all created beings, whether men or angels; united with the Deity as no other person is united; that such a person should come down from heaven, and suffer upon earth the pains of an excruciating death, and that these his submissions and sufferings should avail, and produce a great effect in the procurement of the future salvation of mankind, cannot but excite wonder. But it is by no means improbable on that account: on the contrary, it might be reasonably supposed beforehand, that if any thing was disclosed to us touching a future life, and touching the dispensations of God to men, it would be something of a nature to excite admiration. In the world in which we live, we may be said to have some knowledge of its laws and constitution and nature: we have long experienced them: as also of the beings with whom we converse, or amongst whom we are conversant, we may be said to understand something; at least they are familiar to us; we are not surprised with appearances which every day occur. But of the world, and the life to which we are destined, and of the beings amongst whom we may be brought, the case is altogether different. Here is no experience to explain things: no use or familiarity to take off surprise, to reconcile us to difficulties, to assist our apprehension. In the new order of things, according to the

new laws of nature, every thing will be suitable; suitable to the beings who are to occupy the future world: but that suitableness cannot, as it seems to me, be possibly perceived by us, until we are acquainted with that order and with those beings: so that it arises, as it were, from the necessity of things, that what is told us by a divine messenger of heavenly affairs, of affairs purely spiritual, that is, relating purely to another world, must be so comprehended by us as to excite admiration.

But, secondly, partially as we may, or perhaps must, comprehend this subject, in common with all subjects which relate strictly and solely to the nature of our future life, we may comprehend it quite sufficiently for one purpose; and that is gratitude. It was only for a moral purpose that the thing was revealed at all: and that purpose is a sense of gratitude and obligation. This was the use which the apostles of our Lord, who knew the most, made of their knowledge. This was the turn they gave to their meditations upon the subject; the impression it left upon their hearts. That a great and happy Being should voluntarily enter the world in a mean and low condition, and humble himself to a death upon the cross, that is, to be executed as a malefactor, in order, by whatever means it was done, to promote the attainment of salvation to mankind, and to each and every one of themselves, was a theme they dwelt upon with feelings of the warmest thankfulness; because they were feelings proportioned to the magnitude of the benefits. Earthly benefits are nothing compared with those which are heavenly. That *they* felt from the bottom of their souls. That, in my opinion, we do not feel as we ought; but feeling this, they never

ceased to testify, to acknowledge, to express, the deepest obligation, the most devout consciousness of that obligation to their Lord and Master, to him whom, for what he had done and suffered, they regarded as the finisher of their faith, and the author of their salvation.

## PART II.

**ALL STAND IN NEED OF A REDEEMER.**

HEBREWS ix. 26.

*Now once in the end of the world hath he appeared to put away sin by the sacrifice of himself.*

IN a former discourse upon this text, I have shown, first, that the Scriptures expressly state the death of Jesus Christ as having an efficacy in the procurement of human salvation, which is not attributed to the death or sufferings of any other person, however patiently undergone or undeservedly inflicted: and farther it appears, that this efficacy is quite consistent with our obligation to obedience; that good works still remain the condition of salvation, though not the cause; the cause being the mercy of Almighty God through Jesus Christ. There is no man living, perhaps, who has considered seriously the state of his soul, to whom this is not a consoling doctrine, and a grateful truth. But there are some situations of mind which dispose us to feel the weight and importance of this doctrine more than others. These situations I will endeavour to describe; and, in doing so, to point out, how much more satisfactory it is to have a Saviour and Redeemer, and the mercies of our Creator, excited towards us, and communicated to us by and through that Saviour and Redeemer, to confide in and rely upon, than any grounds of merit in ourselves.

First, then, souls which are really labouring and endeavouring after salvation, and with sincerity; such souls are every hour made sensible, deeply sensible, of

the deficiency and imperfection of their endeavours. Had they no ground, therefore, for hope, but *merit*, that is to say, could they look for nothing more than what they should strictly *deserve*, their prospect would be very uncomfortable. I see not how they could look for *heaven* at all. They may form a conception of a virtue and obedience, which might seem to be entitled to a high reward: but when they come to review their own performances, and to compare them with that conception; when they see how short they have proved of what they ought to have been, and of what they might have been, how weak and broken were their best offices; they will be the first to confess, that it is infinitely for their comfort, that they have some other resource than their own righteousness. One infallible effect of sincerity in our endeavours is to beget in us a knowledge of our imperfections. The careless, the heedless, the thoughtless, the nominal Christian, feels no want of a Saviour, an intercessor, a mediator, because he feels not his own defects. Try in earnest to perform the duties of religion, and you will soon learn how incomplete your best performances are. I can hardly mention a branch of our duty which is not liable to be both impure in the motive and imperfect in the execution; or a branch of our duty in which our endeavours can find their hopes of acceptance upon any thing but extended mercy, and the efficacy of those means and causes which have procured it to be so extended.

In the first place, is not this the case with our acts of piety and devotion? We may admit, that pure and perfect piety has a natural title to reward at the hand of God. But is ours ever such? To be pure in its motive, it ought to proceed from a sense of God Almighty's goodness towards us, and from no other

source or cause or motive whatsoever. Whereas even pious, comparatively pious men, will acknowledge, that authority, custom, decency, imitation, have a share in most of their religious exercises, and that they cannot warrant any of their devotions to be entirely independent of these causes. I would not speak disparagingly of the considerations here recited. They are oftentimes necessary inducements, and they may be the means of bringing us to better; but still it is true, that devotion is not pure in its origin, unless it flow from a sense of God Almighty's goodness, unmixed with any other reason. But if our worship of God be defective in its principle, and often debased by the mixture of impure motives, it is still more deficient, when we come to regard it in its performances; our devotions are broken and interrupted, or they are cold and languid. Worldly thoughts intrude themselves upon them. Our worldly heart is tied down to the earth. Our devotions are unworthy of God. We lift not up our hearts unto him. Our treasure is upon earth, and our hearts are with our treasure. That heavenly mindedness, which ought to be inseparable from religious exercises, does not accompany ours, at least not constantly. I speak not now of the hypocrite in religion, of him who only makes a show of it. His case comes not within our present consideration. I speak of those who are sincere men. These feel the imperfection of their services, and will acknowledge that I have not stated it more strongly than what is true. Imperfection cleaves to every part of it. Our thankfulness is never what it ought to be, or any thing like it; and it is only when we have some particular reason for being pleased, that we are thankful at all. Formality is apt continually to steal upon us

in our worship; more especially in our public worship; and formality takes away the immediate consciousness of what we are doing: which consciousness is the very life of devotion; all that we do without it being a dead ceremony. No man reviews his services towards God, his religious services, but he perceives in them much to be forgiven, much to be excused: great unworthiness as respecting the object of all worship; much deficiency and imperfection to be passed over, before our service can be deemed in its nature an acceptable service. That such services, therefore, should, in fact, be allowed and accepted, and that to no less an end and purpose than the attainment of heaven, is an act of abounding grace and goodness in Him who accepts them; and we are taught in Scripture, that this so much wanted grace and goodness abounds towards us through Jesus Christ, and particularly through his sufferings and his death.

But to pass from our acts of worship, which form a particular part only of our duty to God; to pass from these to our general duty, what, let us ask, is that duty? What is our duty towards God? No other, our Saviour himself tells us, than “to love him with all our heart, with all our soul, with all our strength, and with all our mind.” (Luke x. 27.) Are we conscious of such love, to such a degree? If we are not, then, in a most fundamental duty, we fail of being what we ought to be. Here, then, as before, is a call for pardoning mercy on the part of God; which mercy is extended to us by the intervention of Jesus Christ: at least, so the Scriptures represent it.

In our duties towards one another, it may be said, that our performances are more adequate to our obligation than in our duties to God; that the subjects of

them lie more level with our capacity; and there may be truth in this observation. But still I am afraid, that both in principle and execution our performances are not only defective, but defective in a degree which we are not sufficiently aware of. The rule laid down for us is this, “to love our neighbour *as ourselves.*” Which rule, in fact, enjoins, that our benevolence be as strong as our self-interest; that we be as anxious to do good, as quick to discover, as eager to embrace every opportunity of doing it, and as active and resolute and persevering in our endeavours to do it, as we are anxious for ourselves, and active in the pursuit of our own interest. Now is this the case with us? Wherein it is not, we fall below our rule. In the apostles of Jesus Christ, to whom this rule was given from his own mouth, you may read how it operated: and their example proves, what some deny, the possibility of the thing; namely, of benevolence being as strong a motive as self-interest. They firmly believed, that to bring men to the knowledge of Christ's religion was the greatest possible good that could be done unto them; was the highest act of benevolence they could exercise. And, accordingly, they set about this work, and carried it on with as much energy, as much order, as much perseverance, through as great toils and labours, as many sufferings and difficulties, as any person ever pursued a scheme for their own interest, or for the making of a fortune. They could not possibly have done more for their own sakes than what they did for the sake of others: they literally loved their neighbours as themselves. Some have followed their example in this; and some have, in zeal and energy, followed their example in other methods of doing good. For I do not mean to say,

that the particular method of usefulness, which the office of the apostles cast upon them, is the only method, or that it is a method even competent to many. Doing good, without any selfish worldly motive for doing it, is the grand thing: the mode must be regulated by opportunity and occasion; to which may be added, that in those whose power of doing good, according to any mode, is small, the principle of benevolence will at least restrain them from doing harm. If the principle be subsisting in their hearts, it will have this operation at least. I ask therefore again, as I asked before, are we as solicitous to seize opportunities, to look out for and embrace occasions of doing good, as we are certainly solicitous to lay hold of opportunities of making advantage to ourselves, and to embrace all occasions of profit and self-interest? Nay, is benevolence strong enough to hold our hand, when stretched out for mischief? Is it always sufficient to make us consider what misery we are producing, whilst we are compassing a selfish end, or gratifying a lawless passion of our own? Do the two principles of benevolence and self-interest possess any degree of parallelism and equality in our hearts, and in our conduct? If they do, then, so far we come up to our rule. Wherein they do not, as I said before, we fall below it. When not only the generality of mankind, but even those who are endeavouring to do their duty, apply this standard to themselves, they are made to learn the humiliating lesson of their own deficiency. That such our deficiency should be overlooked, so as not to become the loss to us of happiness after death; that our poor, weak, humble endeavours to comply with our Saviour's rule should be received and not rejected: I say, if we hope for this, we must hope for it, not on

the ground of congruity or desert, which it will not hear; but from the extreme benignity of a merciful God, and the availing mediation of a Redeemer. You will observe, that I am still, and have been all along, speaking of sincere men, of those who are in earnest in their duty and in religion: and I say, upon the strength of what has been alleged, that even these persons, when they read in Scripture of the riches of the goodness of God, of the powerful efficacy of the death of Christ, of his mediation and continual intercession, know and feel in their hearts that they stand in need of them all.

In that remaining class of duties, which are called duties to ourselves, the observation we have made upon the deficiency of our endeavours, applies with equal or with greater force. More is here wanted than the mere command of our actions. The heart itself is to be regulated; the hardest thing in this world to manage. The affections and passions are to be kept in order; constant evil propensities are to be constantly opposed. I apprehend, that every sincere man is conscious how unable he is to fulfil this part of his duty, even to his own satisfaction: and if our conscience accuse us, “God is greater than our conscience, and knoweth all things.” If we see our sad failings, He must. God forbid, that any thing I say, either upon this, or the other branches of our duty, should damp our endeavours. Let them be as vigorous and as steadfast as they can. They will be so, if we are sincere; and, without sincerity, there is no hope: none whatever. But there will always be left enough, infinitely more than enough, to humble self-sufficiency.

Contemplate, then, what is placed before us—heaven. Understand what heaven is: a state of happiness after death, exceeding what, without experience, it is possible

for us to conceive, and unlimited in duration. This is a reward infinitely beyond any thing we can pretend to, as of right, as merited, as due. Some distinction between us and others, between the comparatively good and the bad, might be expected: but, on these grounds, not such a reward as this, even were our services, I mean the services of sincere men, perfect. But such services as ours in truth are, such services as, in fact, we perform—so poor, so deficient, so broken, so mixed with alloy, so imperfect both in principle and execution—what have they to look for upon their own foundation? When, therefore, the Scriptures speak to us of a redeemer, a mediator, an intercessor for us; when they display and magnify the exceeding great mercies of God, as set forth in the salvation of man, according to any mode whatever which he may be pleased to appoint, and therefore in that mode which the Gospel holds forth; they teach us no other doctrine than that to which the actual deficiencies of our duty, and a just consciousness and acknowledgment of these deficiencies, must naturally carry our own minds. What we feel in ourselves corresponds with what we read in Scripture.

## THE EFFICACY OF THE DEATH OF CHRIST CONSISTENT WITH THE NECESSITY OF A GOOD LIFE: THE ONE BEING THE CAUSE, THE OTHER THE CONDITION OF SALVATION.

ROMANS vi. 1.

*What shall we say then? Shall we continue in sin, that grace may abound? God forbid.*

THE same Scriptures which represent the death of Christ as having that which belongs to the death of no other person, namely, an efficacy in procuring the salvation of man, are also constant and uniform in representing the necessity of our own endeavours, of our own good works, for the same purpose. They go farther. They foresaw that in stating, and still more when they went about to extol and magnify, the death of Christ as instrumental to salvation, they were laying a foundation for the opinion, that men's own works, their own virtue, their personal endeavours, were superseded and dispensed with. In proportion as the sacrifice of the death of Christ was effectual, in the same proportion were these less necessary: if the death of Christ was sufficient, if redemption was complete, then were these not necessary at all. They foresaw that some would draw this consequence from their doctrine, and they provided against it. It is observable, that the same consequence might be deduced from the goodness of God in any way of representing it; not only in the particular and peculiar way in which it is represented in the redemption of the world by Jesus Christ, but in any other way. St. Paul, for one, was sensible of this; and, therefore, when he speaks of the goodness of God, even in general terms, he takes care to point out the only true turn which ought to be given to it in our

thoughts—"Despisest thou the riches of his goodness and forbearance and long-suffering; not knowing that the goodness of God leadeth thee to repentance?" As if he had said—With thee, I perceive, that the consideration of the goodness of God leads to the allowing of thyself in sin: this is not to know what that consideration ought in truth to lead to: it ought to lead thee to repentance, and to no other conclusion.

Again; When the apostle had been speaking of the righteousness of God displayed by the wickedness of man; he was not unaware of the misconstruction to which this representation was liable, and which it had, in fact, experienced: which misconception he states thus: "We be slanderously reported, and some affirm that we say, Let us do evil that good may come." This insinuation, however, he regards as nothing less than an unfair and wilful perversion of his words, and of the words of other Christian teachers; therefore he says, concerning those who did thus pervert them, "their condemnation is just:" they will be justly condemned for thus abusing the doctrine which we teach. The passage, however, clearly shows that the application of their expressions to the encouragement of licentiousness of life was an application contrary to their intention, and, in fact, a perversion of their words.

In like manner, in the same chapter, our apostle had no sooner laid down the doctrine, that "a man is justified by faith without the deeds of the law," than he checks himself, as it were, by subjoining this proviso: "Do we then make void the law through faith? God forbid: yea, we establish the law." Whatever he meant by his assertion concerning faith, he takes care to let them know he did not mean this, "to make void the law," or to dispense with obedience.

But the clearest text to our purpose is that, undoubtedly, which I have prefixed to this discourse. St. Paul, after expatiating largely upon the “grace,” that is, the favour, kindness, and mercy of God, the extent, the greatness, the comprehensiveness of that mercy, as manifested in the Christian dispensation, puts this question to his reader—“What shall we say then? shall we continue in sin, that grace may abound?” which he answers by a strong negative—“God forbid.” What the apostle designed in this passage is sufficiently evident. He knew in what manner some might be apt to construe his expressions, and he anticipates their mistake. He is beforehand with them, by protesting against any such use being made of his doctrine; which, yet he was aware, might by possibility be made.

By way of showing Scripturally the obligation and the necessity of personal endeavours after virtue, all the numerous texts which exhort to virtue, and admonish us against vice, might be quoted, for they are all directly to the purpose; that is, we might quote every page of the New Testament. “Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven.” “If ye know these things, happy are ye if ye do them.” In both these texts the reward attends the *doing*: the promise is annexed to works. Again; “To them, who by patient continuance and well-doing seek for glory and immortality, eternal life: but unto them that are contentious, and obey not the truth, but obey unrighteousness, tribulation and anguish upon every soul of man *that doeth evil*” Again; “Of the which,” namely, certain enumerated vices, “I tell you before, as I have also told you in time past, that they, which do such things, shall not inherit the kingdom of God.”

These are a few amongst many texts of the same effect, and they are such as can never be got over. Stronger terms cannot be devised than what are here used. Were the purpose, therefore, simply to prove from Scripture the necessity of virtue and the danger of vice, so far as salvation is concerned, these texts are decisive. But when an answer is to be given to those, who so interpret certain passages of the apostolic writings, especially the passages which speak of the efficacy of the death of Christ, or draw such inferences from these passages, as amount to a dispensing with the obligations of virtue; then the best method of proving that theirs cannot be a right interpretation, nor theirs just inferences, is by showing, which fortunately we are able to do, that it is the very interpretation, and these the very inferences, which the apostles were themselves aware of, which they provided against, and which they protested against. The four texts, quoted from the apostolic writings in this discourse, were quoted with this view; and they may be considered, I think, as showing the minds of the authors upon the point in question more determinately than any general exhortation to good works, or any general denunciation against sin could do. I assume, therefore, as a proved point, that whatever was said by the apostles concerning the efficacy of the death of Christ, was said by them under an apprehension, that they did not thereby in any manner relax the motives, the obligation, or the necessity of good works. But still there is another important question behind; namely, whether, notwithstanding what the apostles have said, or may have meant to say, there be not, in the nature of things, an invincible inconsistency between the efficacy of the death of Christ and the necessity of a good life; whether those two propositions can, in fair

reasoning, stand together; or whether it does not necessarily follow, that if the death of Christ be efficacious, then good works are no longer necessary: and, on the other hand, that if good works be still necessary, then is the death of Christ not efficacious.

Now to give an account of this question, and of the difficulty which it seems to present, we must bear in mind, that in the business of salvation there are naturally and properly two things, viz. the cause and the condition; and that these two things are different. We should see better the propriety of this distinction, if we would allow ourselves to consider well *what salvation is*; what the being saved means. It is nothing less than, after this life is ended, being placed in a state of happiness exceedingly great, both in degree and duration; in a state, concerning which the following things are said: "The sufferings of this present world are not worthy to be compared with the glory that shall be revealed." "God hath in store for us such things as pass man's understanding." So that, you see, it is not simply escaping punishment, simply being excused or forgiven, simply being compensated or repaid for the little good we do, but it is infinitely more, heaven is infinitely greater than mere compensation, which natural religion itself might lead us to expect. What do the Scriptures call it? "Glory, honour, immortality, eternal life." "To them that seek for glory and honour and immortality, eternal life." Will any one then contend, that salvation, in this sense and to this extent; that heaven, eternal life, glory, honour, immortality; that a happiness such as that there is no way of describing it, but by saying that it surpasses human comprehension, that it casts the sufferings of this life at such a distance, as not to bear any comparison with it;

will any one contend, that this is no more than what virtue deserves, what, in its own proper nature, and by its own merit, it is entitled to look forward to, and to receive? The greatest virtue that man ever attained has no such pretensions. The best good action that man ever performed has no claim to this extent, or any thing like it. It is out of all calculation and comparison and proportion above, and more than, any human works can possibly deserve. To what then are we to ascribe it, that endeavours after virtue should procure, and that they will, in fact, procure, to those who sincerely exert them, such immense blessings? To what, but to the voluntary bounty of Almighty God, who, in his inexpressible good pleasure, hath appointed it so to be? The benignity of God towards man hath made him this inconceivably advantageous offer. But a most kind offer may still be a conditional offer. And this, though an infinitely gracious and beneficial offer, is still a conditional offer, and the performance of the conditions is as necessary as if it had been an offer of mere retribution. The kindness, the bounty, the generosity of the offer, do not make it the less necessary to perform the conditions, but more so. A conditional offer may be infinitely kind on the part of the benefactor who makes it, may be infinitely beneficial to those to whom it is made; if it be from a prince or governor, may be infinitely gracious and merciful on his part; and yet being conditional, the condition is as necessary as if the offer had been no more than that of scanty wages by a hard taskmaster. In considering this matter *in general*, the whole of it appears to be very plain; yet, when we apply the consideration to religion, there are two mistakes into which we are very liable to fall. The first is, that when we hear so much of the exceedingly

great kindness of the offer, we are apt to infer that the conditions, upon which it is made, will not be exacted. Does that at all follow? Because the offer, even with these conditions, is represented to be the fruit of love and mercy and kindness, and is in truth so, and is most justly so to be accounted, does it follow that the conditions of the offer are not necessary to be performed? This is one error into which we slide, against which we ought to guard ourselves most diligently; for it is not simply false in its principle, but most pernicious in its application; its application always being to countenance us in some sin which we will not relinquish. The second mistake is, that, when we have performed the conditions, or think that we have performed the conditions, or when we endeavour to perform the conditions, upon which the reward is offered, we forthwith attribute our obtaining the reward to this our performance or endeavour, and not to that which is the beginning and foundation and cause of the whole, the true and proper cause, namely, the kindness and bounty of the original offer. This turn of thought likewise, as well as the former, it is necessary to warn you against. For it has these consequences: it damps our gratitude to God, it takes off our attention from Him. Some, who allow the *necessity* of good works to salvation, are not willing that they should be called *conditions* of salvation. But this, I think, is a distinction too refined for common Christian apprehension. If they be necessary to salvation, they are conditions of salvation, so far as I can see. It is a question, however, not now before us.

But to return to the immediate subject of our discourse. Our observations have carried us thus far, that in the business of human salvation there are two most

momentous considerations, the *cause* and the *conditions*, and that these considerations are distinct. I now proceed to say, that there is no inconsistency between the efficacy of the death of Christ and the necessity of a holy life, (by which I mean sincere endeavours after holiness); because the first, the death of Christ, relates to the cause of salvation; the second, namely, good works, respects the conditions of salvation; and that the cause of salvation is one thing, the conditions another.

The cause of salvation is the free will, the free gift, the love and mercy of God. That alone is the source and fountain and cause of salvation, the origin from which it springs, from which all our hopes of attaining to it are derived, This cause is not in ourselves, nor in any thing we do, or can do, but in God, in his good will and pleasure. It is, as we have before shown, in the graciousness of the original offer. Therefore, whatever shall have moved and excited and conciliated that good will and pleasure, so as to have procured that offer to be made, or shall have formed any part or portion of the motive from which it was made, may most truly and properly be said to be efficacious in human salvation.

This efficacy is in Scripture attributed to the death of Christ. It is attributed in a variety of ways of expression, but this is the substance of them all. He is “a sacrifice, an offering to God; a propitiation; the precious sacrifice foreordained; the Lamb slain from the foundation of the world; the Lamb which taketh away the sin of the world. We are washed in his blood; we are justified by his blood; we are saved from wrath through him; he hath once suffered for sins, the just for the unjust, that he might bring us to God.” All these terms, and many more that are used,

assert in substance the same thing, namely, the efficacy of the death of Christ in the procuring of human salvation. To give to these expressions their proper moment and import, it is necessary to reflect over and over again, and by reflection to impress our minds with a just idea, what and how great a thing salvation is; for it is by means of that idea alone, that we can ever come to be sensible how unspeakably important, how inestimable in value, any efficacy, which operates upon that event, must be to us all. The highest terms in which the Scriptures speak of that efficacy, are not too great; cannot be too great: because it respects an interest and an event so vast, so momentous, as to make all other interests and all other events, in comparison, contemptible.

The sum of our argument is briefly this. There may appear, and to many there has appeared, to be an inconsistency or incompatibility between the efficacy of the death of Christ and the necessity of sincere endeavours after obedience. When the subject is properly examined, there turns out to be no such incompatibility. The graciousness of an offer does not diminish the necessity of the condition. Suppose a prince to promise to one of his subjects, upon compliance with certain terms and the performance of certain duties, a reward, in magnitude and value, out of all competition beyond the merit of the compliance, the desert of the performance; to what shall such a subject ascribe the happiness held out to him? He is an ungrateful man, if he attribute it to any cause whatever, but to the bounty and goodness of his prince in making him the offer; or if he suffer any consideration, be it what it will, to interfere with or diminish his sense of that bounty and goodness. Still it is true that

he will not obtain what is offered unless he comply with the terms; *so far* his compliance is a condition of his happiness. But the grand thing is the offer being made at all. That is the ground and origin of the whole. That is the *cause*; and is ascribable to favour, grace, and goodness on the part of the prince, and to nothing else. It would, therefore, be the last degree of ingratitude in such a subject, to forget his prince, whilst he thought of himself; to forget the *cause*, whilst he thought of the condition; to regard every thing promised as merited. The generosity, the kindness, the voluntariness, the bounty of the original offer, come by this means to be neglected in his mind entirely. This, in my opinion, describes our situation with respect to God. The love, goodness, and grace of God in making us a tender of salvation, and the effects of the death of Christ, do not diminish the necessity or the obligation of the condition of the tender, which is sincere endeavours after holiness; nor are in any wise inconsistent with such obligation.

## PURE RELIGION.

JAMES i. 27.

*Pure religion and undefiled before God and the Father is this, To visit the fatherless and widows in their affliction, and to keep himself unspotted from the world.*

NOTHING can be more useful than summary views of our duty, if they be well drawn and rightly understood. It is a great advantage to have our business laid before us altogether; to see at one comprehensive glance, as it were, what we are to do, and what we are not to do. It would be a great ease and satisfaction to both, if it were possible, for a master to give his servant directions for his conduct in a single sentence, which he, the servant, had only to apply and draw out into practice, as occasions offered themselves, in order to discharge every thing which was required or expected from him. This, which is not practicable in civil life, is in a good degree so in a religious life; because a religious life proceeds more upon principle, leaving the exercise and manifestation of that principle more to the judgment of the individual, than it can be left where, from the nature of the case, one man is to act precisely according to another man's direction.

But then, as I have said, it is essentially necessary, that these summaries be well drawn up and rightly understood; because if they profess to state the whole of men's duties, yet, in fact, state it partially and imperfectly, all who read them are misled, and dangerously misled. In religion, as in other things, we are too apt of ourselves to substitute a part for the whole. Substituting a part for the whole is the grand tendency

of human corruption, in matters both of morality and religion: which propensity, therefore, will be encouraged, when that, which professes to exhibit the whole of religion, does not, in truth, exhibit the whole. What is *there* omitted we shall omit, glad of the occasion and excuse; what is not set down as our duty, we shall not think ourselves obliged to perform, not caring to increase the weight of our own burden. This is the case whenever we use summaries of religion, which, in truth, are imperfect or ill drawn. But there is another case more common, and productive of the same effect, and that is, when we misconstrue these summary accounts of our duty; principally when we conceive of them as intending to express more than they were really intended to express: for then it comes to pass, that, although they be right and perfect as to what they were intended for, yet they are wrong and imperfect as to what we construe and conceive them for. This observation is particularly applicable to the text. St. James is here describing religion, not in its principle, but in its effects; and these *effects* are truly and justly and fully displayed. They are by the apostle made to . consist in two large articles, in succouring the distress of others, and maintaining our own innocency: and these two articles do comprehend the whole of the effects of true religion: which were exactly what the apostle meant to describe. Had St. James intended to have set forth the motives and principles of religion, as they ought to subsist in the heart of a Christian, I doubt not but he would have mentioned love to God and faith in Jesus Christ; for from these must spring every thing good and acceptable in our actions. In natural objects, it is one thing to describe the root of

a plant, and another its fruits and flowers; and if we think a writer is describing the roots and fibres, when, in truth, he is describing the fruit or flowers, we shall mistake his meaning, and our mistake must produce great confusion. So in spiritual affairs, it is one thing to set before us the principle of religion, and another the effects of it. These are not to be confounded. And if we apply a description to one which was intended for the other, we deal unfairly by the writer of the description, and erroneously by ourselves. Therefore, first, let no one suppose the love of God, the thinking of him, the being grateful to him, the fearing to disobey him, not to be necessary parts of true religion, because they are not mentioned in St. James's account of true religion. The answer is, that these compose the principles of true religion; St. James's account relates to the effects. In like manner concerning faith in Jesus Christ. St. James has recorded his opinion upon that subject. His doctrine is, that the tree which bears no fruit cannot be sound at the root; that the faith which is unproductive is not the right faith: but then this is allowing, (and not denying,) that a right faith is the source and spring of true virtue: and had our apostle been asked to state the principle of religion, I am persuaded he would have referred us to a true faith. But that was not the inquiry; on the contrary, having marked strongly the futility of a faith which produced no good effects upon life and action, he proceeds in the text to tell us what the effects are which it ought to produce; and these he disposes into two comprehensive classes, (but still meaning to describe the effects of religion, and not its root or principle,) positive virtue and personal innocence.

Now, I say, that, for the purpose for which it was intended, the account given by St. James is full and complete: and it carries with it this peculiar advantage, that it very specially guards against an error, natural, I believe, and common in all ages of the world; which is, the making beneficence an apology for licentiousness; the thinking that doing good occasionally may excuse us from strictness in regulating our passions and desires. The text expressly cuts up this excuse, because it expressly asserts both things to be necessary to compose true religion. Where two things are necessary, one cannot excuse the want of the other. Now, what does the text teach? It teaches us what pure and undefiled religion is in its effects and in its practice. And what is it? “To visit the fatherless and widows in their affliction, and to keep himself unspotted from the world.” Not simply to visit the fatherless and widows in their affliction: that is not all; that is not sufficient: but likewise “to keep himself unspotted from the world.”

To visit the fatherless and widows in their affliction, is describing a class or species or kind of virtue, by singling out one eminent example of it. I consider the apostle as meaning to represent the value, and to enforce the obligation, of active charity, of positive beneficence, and that he has done it by mentioning a particular instance. A stronger or properer instance could not have been selected: but still it is to be regarded as an instance, not as exclusive of other and similar instances, but as a specimen of these exertions. The case before us, as an instance, is heightened by every circumstance which could give to it weight and priority. The apostle exhibits the most forlorn and destitute of the human species, suffering under the

severest of human losses: helpless children deprived of a parent; a wife bereaved of her husband; both sunk in affliction, under the sharpest anguish of their misfortunes. To visit, by which is meant to console, to comfort, to succour, to relieve, to assist, such as these, is undoubtedly a high exercise of religion and benevolence, and well selected: but still it is to be regarded as an example, and the whole class of beneficent virtues as intended to be included. This is not only a just and fair, but a necessary construction: because, although the exercise of beneficence be a duty upon every man, yet the kind, the examples of it, must be guided in a great degree by each man's faculties, opportunities, and by the occasions which present themselves. If such an occasion, as that which the text describes, present itself, it cannot be overlooked without an abandonment of religion: but if other and different occasions of doing good present themselves, they also, according to the spirit of our apostle's declaration, must be attended to, or we are wanting in the fruit of the same faith. The second principal expression of the text, "to keep himself unspotted from the world," signifies the being clean and clear from the licentious practices to which the world is addicted. So that "pure religion and undefiled before God and the Father" consists in two things—beneficence and purity; doing good and keeping clear from sin; not in one thing but in two things; not in one without the other, but in both: and this, in my opinion, is a great lesson and a most important doctrine.

I shall not, at present, consider the case of those who are anxious, and effectually so, to maintain their personal innocency without endeavouring to do good

to others; because I really believe it is not a common case. I think that the religious principle which is able to make men confine their passions and desires within the bounds of virtue, with very few exceptions, strong enough at the same time to prompt and put them upon active exertions.

Therefore, I would rather apply myself to that part of the case which is more common—active exertions of benevolence, accompanied with looseness of private morals. It is a very common character: but I say, in the first place, it is an inconsistent character; it is doing and undoing; killing and curing; doing good by our charity and mischief by our licentiousness; voluntarily relieving misery with one hand, and voluntarily producing and spreading it with the other. No real advance is made in human happiness by this contradiction; no real betterness or improvement promoted.

But then, may not the harm a man does by his personal vices be much less than the good he does by his active virtues? This is a point in which there is large room for delusion and mistake. Positive charity and acts of humanity are often of a conspicuous nature, naturally and deservedly engaging the praises of mankind, which are followed by our own. No one does, no one ought to speak against them, or attempt to disparage them: but the effect of vice and licentiousness, not only in their immediate consequences, but in their remote and ultimate tendencies, which ought all to be included in the account, the mischief which is done by the example as well as by the act, is seldom honestly computed by the sinner himself. But I do not dwell farther upon this comparison, because I insist, that no man has a right to make it; no man has a right, whilst

he is doing occasional good, and yet indulging his vices and his passions, to strike a balance, as it were, between the good and the harm. This is not Christianity; this is not pure and undefiled religion before God and the Father, let the balance lie on which side it will; for our text declares, (and our text declares no more than what the Scriptures testify from one end to the other,) that religion demands both. It demands active virtue, and it demands innocency of life. I mean, it demands sincere and vigorous endeavours in the pursuit of active virtue, and endeavours equally sincere and firm in the preservation of personal innocence. It makes no calculation which is better, but it requires both.

Shall it be extraordinary, that there should be men forward in active charity and in positive beneficence, who yet put little or no constraint upon their personal vices? I have said that the character is common, and I will tell you why it is common. The reason is, (and there is no other reason,) that it is usually an easier thing to perform acts of beneficence, even of expensive and troublesome beneficence, than it is to command and control our passions; to give up and discard our vices; to burst the bonds of the habits which enslave us. This is the very truth of the case: so that the matter comes precisely to this point. Men of active benevolence, but of loose morals, are men who are for performing the duties which are easy to them, and omitting those which are hard. They only place their own character to themselves in what view they please: but this is the truth of the case, and let any one say, whether this be religion; whether this be sufficient. The truly religious man, when he has once decided a thing to be a duty, has no farther question to ask; whether it be easy to be done, or whether it be hard to be done, it is equally a

duty; it then becomes a question of fortitude, of resolution, of firmness, of self-command, and self-government; but not of duty or obligation; these are already decided upon.

But least of all, (and this *is* the inference from the text which I wish most to press upon your attention,) least of all does he conceive the hope of reaching heaven by that sort of compromise, which would make easy, nay perhaps pleasant duties, an excuse for duties which are irksome and severe. To recur, for the last time, to the instance mentioned in our text, I can very well believe, that a man of humane temper shall have pleasure in visiting, when by visiting he can succour the fatherless and the widow in their affliction: but if he believes St. James, he will find that this must be joined to and accompanied with another thing, which is neither easy nor pleasant—nay, must always almost be effected with pain and struggle and mortification and difficulty—the “keeping himself unspotted from the world.”

## THE AGENCY OF JESUS CHRIST SINCE HIS ASCENSION.

HEBREWS xiii. 8.

*Jesus Christ, the same yesterday, to-day, and for ever.*

THE assertion of the text might be supported by the consideration, that the mission and preaching of Christ have lost nothing of their truth and importance by the lapse of ages which has taken place since his appearance in the world. If they seem of less magnitude, reality, and concern to us at this present day, than they did to those who lived in the days in which they were carried on, it is only in the same manner as a mountain or a tower appears to be less when seen at a distance. It is a delusion in both cases. In natural objects we have commonly strength enough of judgment to prevent our being imposed upon by these false appearances; and it is not so much a want or defect of, as it is a neglecting to exert and use our judgment, if we suffer ourselves to be deceived by them in religion. Distance of space in one case, and distance of time in the other, make no difference in the real nature of the object; and it is a great weakness to allow them to make any difference in our estimate and apprehension. The death of Jesus Christ is, in truth, as interesting to *us* as it was to those who stood by his cross: his resurrection from the grave is a pledge and assurance of *our* future resurrection, no less than it was of theirs who conversed, who ate and drank with him, after his return to life.

But there is another sense, in which it is still more materially true, that “Jesus Christ is the same yesterday, to-day, and for ever.” He is personally living

and acting in the same manner; has been so all along, and will be so to the end of the world. He is the same in his person, in his power, in his office.

First, I say, that he is the same individual person, and is at this present time existing, living, acting. He is gone up on high. The clouds at his ascension received him out of human sight. But whither did he go? To sit for ever at the right hand of God. This is expressly declared concerning him. It is also declared of him, that death hath no more dominion over him, that he is no more to return to corruption. So that, since his ascension, he hath continued in heaven to live and act. His human body, we are likewise given to believe, was changed upon his ascension, that is, was glorified, whereby it became fitted for heaven and fitted for immortality; no longer liable to decay or age, but thenceforward remaining literally and strictly the same, yesterday, to-day, and for ever. This change in the human person of Christ is in effect asserted, or rather is referred to, as a thing already known, in that text of St. Paul's Epistle to the Philippians, wherein we are assured, that hereafter Christ shall change our vile body, that it may be like his glorious body. Now the natural body of Christ, before his resurrection at least, was like the natural body of other men, was not a glorious body. At this time, therefore, when St. Paul calls it his glorious body, (for it was after his ascension that St. Paul wrote these words,) it must have undergone a great change. In this exalted and glorified state our Lord was seen by St. Stephen, in the moment of his martyrdom. "Being full," you read, "of the Holy Ghost, Stephen looked up steadfastly unto heaven, and saw the glory of God,\* and Jesus standing on the right

---

The "glory of God," in Scripture, when spoken of as an object of

hand of God." At that seemingly dreadful moment, even when the martyr was surrounded by a band of assassins, with stones ready in their hands to stone him to death, the spectacle, nevertheless, filled his soul with rapture. He cried out in ecstasy, "Behold, I see the heavens opened, and the Son of man standing on the right hand of God." The same glorious vision was vouchsafed to St. Paul at his conversion, and to St. John at the delivery of the Revelations. This change of our Lord's body was a change, we have reason to believe, of nature and substance, so as to be thenceforward incapable of decay or dissolution. It might be susceptible of any external form which the particular purpose of his appearance should require. So when he appeared to Stephen and Paul, or to any of his saints, it was necessary he should assume the form which he had borne in the flesh, that he might be known to them. But it is not necessary to suppose that he was confined to that form. The contrary rather appears in the Revelation of St. John, in which, after once showing himself to the apostle, our Lord was afterward represented to his eyes under different forms. All, however, that is of importance to us to know, all that belongs to our present subject to observe, is, that Christ's glorified person was incapable of dying any more; that it continues at this day; that it hath all along continued the same real identical being as that which went up into heaven in the sight of his apostles; the same essential nature, the same glorified substance, the same proper person.

But, secondly, he is the same also in power. The Scripture doctrine concerning our Lord seems to be

---

vision, always, I think, means aluminous appearance, bright and resplendent, beyond the splendour of any natural object whatever.

this, that, when his appointed commission and his sufferings were closed upon earth, he was advanced in heaven to a still higher state than what he possessed before he came into the world.\* This point, as well as the glory of his nature, both before and after his appearance in the flesh, is attested by St. Paul, in the second chapter of his Epistle to the Philippians: “Being in the form of God, he thought it not robbery to be equal with God.” He did not affect to be equal with God, or to appear with divine honours, (for such is the sense which the words in the original will bear,) “but made himself of no reputation, and took upon him the form of a servant, and was made in the likeness of man, and became obedient unto death, even the death of the cross. Wherefore,” i. e. for this his obedience even to the last extremity, even unto death, “God also hath highly exalted him;” or, as it is distinctly and perspicuously expressed in the original, “God also hath *more* highly exalted him,” that is, to a higher state than what he even before possessed; insomuch that he hath “given him a name which is above every name,” that *at*, or more properly *in*, the “name of Jesus every knee should bow, of things in heaven, and things in earth, and things under the earth; and that every tongue should confess, that Jesus Christ is Lord, to the glory of God the Father;” exactly agreeable to what our Lord himself declared to his disciples after his resurrection—“All power is given unto me in heaven and in earth.” (Matt. xxviii. 18.) You will observe, in this passage of St. Paul, not only the magnificent terms in which Christ's exaltation is described, viz. “that every knee should thenceforward bow in his name,

---

\* See Sherlock's Sermon on Phil. ii. 9.

and that every tongue should confess him to be Lord;" but you will observe also, the comprehension and extent of his dominion—"of things in heaven, of things on earth, of things under the earth." And that we are specifically comprised under this authority and this agency, either of the two following texts may be brought as a sufficient proof. "Where two or three are gathered together, there am I in the midst of you," (Matt. xviii. 20): which words of our Lord imply a knowledge of, an observation of, an attention to, and an interference with what passes amongst his disciples upon earth. Or to take his final words to his followers, as recorded by St. Matthew, "Lo, I am with you always, to the end of the world;" and they carry the same implication. And, lastly, that in the most awful scene and event of our existence, the day of judgment, we shall not only become the objects, but the immediate objects, of Christ's power and agency, is set forth in two clear and positive texts. "The hour is coming, and now is, when the dead shall hear the voice of the Son of God," (John v. 25); not the voice of God, but the voice of the Son of God. And then, pursuing the description of what will afterward take place, our Lord adds in the next verse but one—"that the Father hath given him authority to execute judgment also, because he is the Son of man:" which is in perfect conformity with what St. Paul announced to the Athenians, as a great and new doctrine, namely, "that God hath appointed a day in which he will judge the world in righteousness by that man whom he hath ordained, whereof he hath given assurance unto all men, in that he hath raised him from the dead."

Having shown that the power of Jesus Christ is a

subsisting power at this time, the next question is, as to its duration. Now, so far as it respects mankind in this present world, we are assured that it shall continue until the end of the world. The same texts which have been adduced prove this point as well as that for which they were quoted; and they are confirmed by St. Paul's declaration, 1 Cor. xv. 24: "Then cometh the end, when he shall have delivered up the kingdom to God, even the Father:" therefore he shall retain and exercise it until *then*. But farther, this power is not only perpetual but progressive, advancing and proceeding by different steps and degrees, until it shall become supreme and complete, and shall prevail against every enemy and every opposition. That our Lord's dominion will not only remain unto the end of the world, but that its effects in the world will be greatly enlarged and increased, is signified very expressly in the second chapter of the Epistle to the Hebrews. The apostle in this passage applies to our Lord a quotation from the Psalms—"Thou hast put all things in subjection under his feet;" and then draws from it a strict inference—"for in that he put all things in subjection under him, he left nothing that he did not put under him:" and then he remarks as a fact—"but now we see *not yet* all things put under him." That complete entire subjection which is here promised hath not yet taken place. The promise must therefore refer to a still future order of things. I his doctrine, of the progressive increase and final completeness of our Lord's kingdom, is also virtually laid down in the passage from the Corinthians already cited—"He must reign till he hath put all enemies under his feet;" for that this subjugation of his several enemies will be successive, one after another, is strongly

intimated by the expression, “the *last* enemy that shall be destroyed is death.” Now, to apprehend the probability of those things coming to pass, or rather to remove any opinion of their improbability, we ought constantly to bear in our mind this momentous truth, that in the hands of the Deity time is nothing, that he has eternity to act in. The Christian dispensation, nay the world itself, may be in its infancy. A more perfect display of the power of Christ, and of his religion, may be in reserve: and the ages which it may endure, after the obstacles and impediments to its reception are removed, may be beyond comparison longer than those which we have seen, in which it has been struggling with great difficulties, most especially with ignorance and prejudice. We ought not to be moved, any more than the apostles were moved with the reflection which was cast upon their mission, that since the “fathers fell asleep, all things continue as they were.” We ought to return the answer which one of them returned, that what we call tardiness in the Deity is not so; that our so thinking it, arises from not allowing for the different importance, nay, probably, for the different apprehension of time, in the divine mind and in ours; that with him a thousand years are as one day: words which confound and astonish human understanding, yet strictly and metaphysically true.

Again, we should remember, that the apostles—the very persons who asserted that God *would* put all things under him—themselves, as we have seen, acknowledged that it was *not yet* done. In the mean time, from the whole of their declarations and of this discussion, we collect, that Jesus Christ ascended into the heavens, is at this day a great efficient Being in the universe, invested by his Father with a high

authority, which he exercises, and will continue to exercise, until the end of the world.

Thirdly, he is the same in his office. The principal offices assigned by the Scriptures to our Lord in his glorified state, that is, since his ascension into heaven, are those of a mediator and intercessor. Of the mediation of our Lord the Scripture speaks in this wise: "There is one God, and one mediator between God and men, the man Christ Jesus." (1 Tim. ii. 5.) It was after our Lord's ascension that this was spoken of him; and it is plain, from the form and turn of the expression, that his mediatorial character and office was meant to be represented as a perpetual character and office, because it is described in conjunction with the existence of God and men, so long as men exist: "There is one mediator between God and men, the man Jesus Christ." "Hitherto ye have asked nothing in my name." "At that day ye shall ask in my name." (John xvi. 24—26.) These words form part of our Lord's memorable conversation with his select disciples, not many hours before his death; and clearly intimate the mediatorial office which he was to discharge after his ascension.

Concerning his *intercession*, not that which he occasionally exercised upon earth when he prayed, as he did most fervently for his disciples, but that which he now, at this present time, exercises, we have the following text, explicit, satisfactory, and full: "But this man, because he continueth ever, hath an unchangeable priesthood:" by priesthood is here meant the office of praying for others. "Wherefore he is able to save them to the uttermost that come unto God by him, seeing he ever liveth to make intercession for us." No words can more plainly declare than these words do, the perpetuity

of our Lord's agency: that it did not cease with his presence upon earth, but continues. "He continueth ever: he ever liveth: he hath an unchangeable priesthood." Surely this justifies what our text saith of him, "that he is the same yesterday, to-day, and for ever;" and that not in a figurative or metaphorical sense, but literally, effectually, and really. Moreover, in this same passage, not only the constancy and perpetuity, but the power and efficacy of our Lord's intercession are asserted: "He is able to save them to the uttermost that come unto God by him." They must come unto God: they must come *by* him: and then he is able to save them completely.

These three heads of observation, namely, upon his person, his power, and his office, comprise the relation in which our Lord Jesus Christ stands to us whilst we remain in this mortal life. There is another consideration of great solemnity and interest, namely, the relation which we shall bear to him in our future state. Now the economy which appears to be destined for the human creation, I mean for that part of it which shall be received to future happiness, is, that they shall live in a state of local society with one another, and under Jesus Christ as their head, experiencing a sensible connexion amongst themselves; as well as the operation of his authority as their Lord and governor. I think it likely that our Saviour had this state of things in view, when in his final discourse with his apostles he tells them, "I go to prepare a place for you. And if I go and prepare a place for you, I will come again, and receive you unto myself; that where I am, there ye may be also." (John xiv. 2, 3.) And again, in the same discourse, and referring to the same economy, "Father," says he, "I will that they also, whom thou hast given me, be

with me where I am; that they may behold my glory which thou hast given me:" for that this was spoken, not merely of the twelve who were then sitting with Jesus, and to whom his discourse was addressed, but of his disciples in future ages of the world, is fairly collected from his words, (xvii. 20,) "Neither pray I for these alone, but for them also which shall believe on me through their word." Since the prayer here stated was part of the discourse, it is reasonable to infer, that the discourse, in its object, extended as far as the prayer; which we have seen to include believers, as well of succeeding ages as of that then present.

Now concerning this future dispensation, supposing it to consist, as here represented, of accepted spirits, participating of happiness in a state of sensible society with one another, and with Jesus Christ himself at their head, one train of reflection naturally arises; namely, first, that it is highly probable there should be many expressions of Scripture which have relation to it; secondly, that such expressions must by their nature appear to us, at present, under a considerable degree of obscurity, which we may be apt to call a defect; thirdly, that the credit due to such expressions must depend upon their authority as portions of the written word of God, and not upon the probability, much less upon the clearness, of what they contain; so that our comprehension of what they mean must stop at very general notions; and our belief in them rest in the deference to which they are entitled as Scripture declarations. Of this kind are many, if not all, of those expressions which speak so strongly of the value and benefit and efficacy of the death of Christ; of its sacrificial, expiatory, and atoning nature. We may be assured, that these expressions mean something real;

refer to something real; though it be something which is to take place in that future dispensation of which we have been speaking. It is reasonable to expect, that, when we come to experience what that state is, the same experience will open to us the distinct propriety of these expressions, their truth, and the substantial truth which they contain; and likewise show us that, however strong and exalted the terms are which we see made use of, they are not stronger nor higher than the subject called for. But for the present we must be, what I own it is difficult to be, content to take up with very general notions, humbly hoping, that a disposition to receive and to acquiesce in what appears to us to be revealed, be it more or be it less, will be regarded as the duty which belongs to our subsisting condition, and the measure of information with which it is favoured; and will stand in the place of what, from our deep interest in the matter we are sometimes tempted to desire, but which, nevertheless, might be unfit for us—a knowledge, which not only was, but which we perceived to be, fully adequate to the subject.

There is another class of expressions, which, since they professedly refer to circumstances that are to take place in this new state, and not before, will, it is likely, be rendered quite intelligible by our experience in that state; but must necessarily convey very imperfect information until they be so explained. Of this kind are many of the passages of Scripture, which we have already noticed, as referring to the changes which will be wrought in our mortal nature, and the agency of our Lord Jesus Christ, and the intervention of his power in producing those changes, and the nearer similitude which our changed natures, and the bodies with which we shall then be clothed, will bear to his. We read

“that he shall change our vile body, that it may be like his glorious body.” A momentous assurance, no doubt; yet, in its particular signification, waiting to be cleared up by our experience of the event. So likewise are some other particular expressions relating to the same event, such as being “unclothed,” “clothed upon,” “the dead in Christ rising first;” “meeting the Lord in the air;” “they that are alive not preventing those that are asleep,” and the like. These are all most interesting intimations; yet to a certain degree obscure. They answer the purpose of ministering to our hopes and comfort and admonition, which they do without conveying any clear ideas: and this, and not the satisfaction of our curiosity, may be the grand purpose, for the sake of which intimations of these things were given at all. But then, in so far as they describe a change in the order of nature, of which change we are to be the objects, it seems to follow, that we shall be furnished with experience, which will discover to us the full sense of this language. The same remark may be repeated concerning the first and second death, which are expressly spoken of in the Revelations, and, as I think, alluded to and supposed in other passages of Scripture in which they are not named.

*The lesson inculcated by the observation here pointed out is this, that, in the difficulties which we meet with in interpreting Scripture, instead of being too uneasy under them, by reason of the obscurity of certain passages, or the degree of darkness which hangs over certain subjects, we ought first to take to ourselves this safe and consoling rule, namely, to make up for the deficiency of our knowledge by the sincerity of our practice; in other words, to act up to what we do know, or, at least, earnestly to strive so to do. So far as a man holds fast to this rule, he has*

a strong ground of comfort under every degree of ignorance, or even of errors. And it is a rule applicable to the rich and to the poor, to the educated and the uneducated, to every state and station of life, and to all the differences which arise from different opportunities of acquiring knowledge. Different obligations may result from different means of obtaining information; but this rule comprises all differences.

The next reflection is, that in meeting with difficulties, nay, very great difficulties, we meet with nothing strange, nothing but what in truth might reasonably have been expected beforehand. It was to be expected, that a revelation, which was to have its completion in another state of existence, would contain many expressions which referred to that state; and which, on account of such reference, would be made clear and perfectly intelligible only to those who had experience of that state, and to us after we had attained to that experience; whilst, however, in the mean time, they may convey to us enough of information, to admonish us in our conduct, to support our hopes, and to incite our endeavours. Therefore the meeting with difficulties, owing to this cause, ought not to surprise us, nor to trouble us overmuch. Seriousness, nay even anxiety, touching every thing which concerns our salvation, no thoughtful man can help; but it is possible we may be distressed by doubts and difficulties more than there is any occasion to be distressed.

Lastly, under all our perplexities, under all the misgivings of mind to which even good men (such is the infirmity of human nature) are subject, there is this important assurance to resort to, that we have a protection over our heads which is constant and abiding: that God, blessed be his name, is for evermore: that Jesus

Christ our Lord is the same yesterday, to-day, and for ever: that, like as a traveler by land or sea, go where he will, always sees, when he looks up, the same sun; so in our journey through a varied existence, whether it be in our present state, or in our next state, or in the awful passage from one to the other; in the world in which we live, or in the country which we seek; in the hour of death, no less than in the midst of health, we are in the same upholding hands, under the same sufficient and unfailing support.

PART I.  
OF SPIRITUAL INFLUENCE IN GENERAL.

I CORINTHIANS iii. 16.

*Know ye not that ye are the temple of God, and that the Spirit of God dwelleth in you?*

THERE are ways of considering the subject of spiritual influence, as well as a want of considering it, which lay it open to difficulties and to misconceptions. But if the being liable to misapprehension and to misrepresentation be thought an objection to any doctrine, I know of no doctrine which is not liable to the same; nor any which has not, in fact, been loaded at various times with great mistakes.

One difficulty, which has struck the minds of some, is, that the doctrine of an influencing Spirit, and of the importance of this influence to human salvation, is an *arbitrary* system, making every thing to depend, not upon ourselves, nor upon any exertion of our own, but upon the gift of the Spirit. It is not for us, we allow, to canvass the gifts of God; because we do not, and it seems impossible that we should, sufficiently understand the motive of the Giver. In more ordinary cases, and in cases more level to our comprehension, we seem to acknowledge the difference between a debt and a gift. A debt is bound, as it were, by known rules of justice: a gift depends upon the motive of the giver, which often can be known only to himself. To judge of the propriety either of granting or withholding that to which there is no claim, (which is, in the strictest sense, a favour, which, as such, rests with the donor to bestow

as to him seemeth good,) we must have the several motives which presented themselves to the mind of the donor before us. This, with respect to the Divine Being, is impossible. Therefore we allow that, either in this, or in any other matter, to canvass the gifts of God is a presumption not fit to be indulged. We are to receive our portion of them with thankfulness. We are to be thankful, for instance, for the share of health and strength which is given us, without inquiring why others are healthier and stronger than ourselves. This is the right disposition of mind with respect to all the benefactions of God Almighty towards us.

But unsearchable does not mean arbitrary. Our necessary ignorance of the motives which rest and dwell in the Divine Mind, in the bestowing of his grace, is no proof that it is not bestowed by the justest reason. And with regard to the case at present before us, viz. the gifts and graces of the Spirit, the charge against it of its being an arbitrary system, or, in other words, independent of our own endeavours, is not founded in any doctrine or declaration of Scripture. It is not arbitrary in its origin, in its degree, or in its final success.

First, it is not arbitrary in its origin; for you read that it is given to prayer. "If ye, being evil, know how to give good gifts unto your children, how much more shall your heavenly Father give the Holy Spirit to them that ask it?" But whether we will ask it or not depends upon ourselves. It is proposed, you find, as a subject for our prayers; for prayer, not formal, cold, heartless, transitory, but prayer from the soul, prayer earnest and persevering; for this last alone is what the Scripture means by prayer. In this, therefore, it cannot be said to be arbitrary, or independent of our endeavours. On

the contrary, the Scripture exhorts us to a striving in prayer for this best of all gifts.

But it will be asked, is not the very first touch of true religion upon the soul, sometimes, at least, itself the action of the Holy Spirit—this, therefore, must be prior to our praying for it? And so it may be, and not yet be arbitrarily given. The religious state of the human soul is exceedingly various. Amongst others, there is a state in which there may be good latent dispositions, suitable faculties for religion, yet no religion. In such a state the spark alone is wanting. To such a state the elementary principle of religion may be communicated, though not prayed for. Nor can this be said to be arbitrary. The Spirit of God is given where it is wanted; where, when given, it would produce its effect; but that state of heart and mind, upon which the effect was to be produced, might still be the result of moral qualification, improvement, and voluntary endeavour. It is not, I think, difficult to conceive such a case as this.

Nevertheless it may be more ordinarily true, that the gift of the Spirit is holden out to the struggling, the endeavouring, the approaching Christian. When the penitent prodigal was yet a great way off, his father saw him. This parable was delivered by our Lord expressly to typify God's dealing with such sinners as are touched with a sense of their condition. And this is one circumstance in it to be particularly noticed. God sees the returning mind—sees every step and every advance towards him, “though we be yet a great way off”—yet at a great distance; though much remains to be done, and to be attained, and to be accomplished. And what he sees, he helps. His aid and influence are assisting to the willing Christian, truly and sincerely

willing, though yet in a low and imperfect state of proficiency; nay, though in the outset, as it were, of his religious progress. “The Lord is nigh unto them that are of a contrite heart,” (Psalm xxxiv. 19.) But in all this there is nothing arbitrary.

Nor, secondly, is the operation of the Spirit arbitrary in its degree. It has a rule, and its rule is this: “Whosoever hath, to him shall be given, and he shall have more abundance; and whosoever hath not, from him shall be taken away even that which he hath.” Now of this rule, which is expressed under some, but under no great difference of phrase, in all the three first Gospels, I have first to observe, that, though it carry the appearance of harshness and injustice, it is neither the one nor the other, but is correctly and fundamentally just. The meaning is, that whosoever uses, exercises, and improves the gifts which he has received, shall continue to receive still larger portions of these gifts; nay, he who has already received the largest portion, provided he adequately and proportionably uses his gifts, shall also in future receive the largest portion. More and more will be added to him that has the most: whilst he who neglects the little which he has shall be deprived even of that. That this is the sound exposition of these texts is proved from hence, that one of them is used as the application of the parable of the talents, concerning the meaning of which parable there can be no doubt at all: for there he who had received, and having received had duly improved, ten talents, was placed over ten cities; and of him the expression in question is used, “whosoever hath, to him shall be given, and he shall have more abundance.” On the contrary, he who had received one talent, and had neglected what he had received, had it taken from him:

and of him the other part of the expression is used, “whosoever hath not, from him shall be taken away even that which he hath.” But there is a point still remaining, viz. whether this Scripture rule be applicable to spiritual gifts. I answer, that it is so applied, more especially to spiritual knowledge, and the use which we make thereof. “Take heed how ye hear: unto you that hear shall more be given; for he that hath, to him shall be given, and he that hath not, from him shall be taken even that which he hath.” So stands the passage in Mark; and substantially the same, that is, with a view to the same application, the passage stands in Matthew and Luke. I consider it, therefore, to be distinctly asserted, that this is the rule with regard to spiritual knowledge. And I think the analogy conclusive with regard to other spiritual gifts. In all which there is nothing arbitrary.

Nor, thirdly, is it arbitrary in its final success. “Grieve not the Spirit of God:” therefore he may be grieved. “And hath done despite unto the Spirit of grace,” (Heb. x. 29): therefore he may be despised. Both these are leading texts upon the subject. And so is the following—“And his grace, which was bestowed upon me, was not in vain,” (1 Cor. xv. 10): therefore it might have been in vain. The influence, therefore, of the Spirit may not prevail, even as the admonitions of a friend, the warnings of a parent, may not prevail, may not be successful, may not be attended to, may be rejected, may be resisted, may be despised, may be lost; so that both in its gift, in its degree, operation, and progress, and, above all, in its final effect, it is connected with our own endeavours, it is not arbitrary. Throughout the whole, it does not supersede, but cooperates with ourselves.

But another objection is advanced, and from an opposite quarter. It is said, that if the influence of the Spirit depend, after all, upon our endeavours, the doctrine is nugatory; it comes to the same thing as if salvation was put upon ourselves and our own endeavours alone, exclusive of every farther consideration, and without referring us to any influence or assistance whatever. I answer, that this is by no means true; that it is not the same thing either in reality, or in opinion, or in the consequences of that opinion.

Assuredly it is not the same thing in reality. Is it the same thing, whether we perform a work by our own strength, or by obtaining the assistance and cooperation of another? Or does it make it the same thing, that this assistance is to be obtained by means which it is in our own choice to use or not? Or because, when the assistance is obtained, we may or may not avail ourselves of it; or because we may, by neglecting, lose it? After all, they are two different things—performing a work by ourselves, and performing it by means of help.

Again: it is not the same thing in the opinions and sentiments and dispositions which accompany it. A person who knows or believes himself to be beholden to another for the progress and success of an undertaking, though still carried on by his own endeavours, acknowledges his friend and his benefactor; feels his dependency and his obligation; turns to him for help and aid in his difficulties; is humble under the want and need, which he finds he has, of assistance; and, above all things, is solicitous not to lose the benefit of that assistance. This is a different turn of mind, and a different way of thinking, from his, who is sensible of no such want, who relies entirely upon his own strength; who, of course, can hardly avoid being proud of his success, or feeling the

confidence, the presumption, the self-commendation, and the pretensions, which however they might suit with a being who achieves his work by his own powers, by no means, and in no wise, suit with a frail constitution, which must ask and obtain the friendly aid and help of a kind and gracious benefactor, before he can proceed in the business set out for him, and which it is of unspeakable consequence to him to execute somehow or other.

It is thus in religion. A sense of spiritual weakness and of spiritual wants, a belief that divine aid and help are to be had, are principles which carry the soul to God; make us think of him, and think of him in earnest; convert, in a word, morality into religion; bring us round to holiness of life, by the road of piety and devotion; render us humble in ourselves and grateful towards God. There are two dispositions which compose the true Christian character—humility as to ourselves, affection and gratitude as to God; and both these are natural fruits and effects of the persuasion we speak of: and what is of the most importance of all, this persuasion will be accompanied with a corresponding fear lest we should neglect, and by neglecting lose, this invaluable assistance. On the one hand, therefore, it is not true, that the doctrine of an influencing Spirit is an arbitrary system, setting aside our own endeavours. Nor, on the other hand, is it true, that the connecting it with our own endeavours, as obtained through them, as assisting them, as cooperating with them, renders the doctrine unimportant, or all one as putting the whole upon our endeavours without any such doctrine. If it be true, in fact, that the feebleness of our nature requires the succouring influence of God's Spirit in carrying on the grand business of salvation, and in every state and

## SERMONS

stage of its progress—in conversion, in regeneration, in constancy, in perseverance, in sanctification—it is of the utmost importance that this truth be declared, and understood, and confessed, and felt; because the perception and sincere acknowledgment of it will be accompanied by a train of sentiments, by a turn of thought, by a degree and species of devotion, by humility, by prayer, by piety, by a recourse to God in our religious warfare, differing from what will, or perhaps can, be found in a mind unacquainted with this doctrine, or in a mind rejecting it, or in a mind unconcerned about these things one way or other.

PART II.  
ON THE INFLUENCE OF THE SPIRIT.

1 CORINTHIANS iii. 16.

*Know ye not that ye are the temple of God, and that the Spirit of God dwelleth in you?*

IT is undoubtedly a difficulty in the doctrine of spiritual influence, that we do not so perceive the action of the Spirit as to distinguish it from the suggestions of our own minds. Many good men acknowledge, that they are not conscious of any such immediate perceptions. They who lay claim to them, cannot advance, like the apostles, such proofs of their claim as must necessarily satisfy others, or perhaps secure themselves from delusion. And this is made a ground of objection to the doctrine itself. Now, I think, the objection proceeds upon an erroneous principle, namely, our expecting more than is promised. The agency and influence of the Divine Spirit are spoken of in Scripture, and are promised: but it is nowhere promised, that its operations shall be always *sensible*, viz. distinguishable at the time from the impulses, dictates, and thoughts, of our minds. I do not take upon me to say, that they are never so: I only say, that it is not necessary, in the nature of things, that they should be so; nor is it asserted in the Scripture that they are so; nor is it promised that they will be so.

The nature of the thing does not imply or require it: by which I mean, that according to the constitution of the human mind, as far as we are acquainted with that constitution, a foreign influence or impulse may act upon

it, without being distinguished in our perception from its natural operations, that is, without being perceived at the *time*. The case appears to me to be this. The order in which ideas and motives rise up in our minds is utterly unknown to us, consequently it will be unknown when that order is disturbed or altered or affected: therefore it may be altered, it may be affected by the interposition of a foreign influence, without that interposition being perceived. Again, and in like manner, not only the *order* in which thoughts and motives rise up in our minds is unknown to ourselves, but the causes also are unknown, and are incalculable, upon which the vividness of the ideas, the force and strength and impression of the motives which enter into our minds, depend. Therefore, that vividness may be made more or less, that force may be increased or diminished, and both by the influence of a spiritual agent, without any distinct sensation of such agency being felt at the time. Was the case otherwise—was the order according to which thoughts and motives rise up in our minds fixed, and being fixed, known—then I do admit the order could not be altered or violated, nor a foreign agent interfere to alter or violate it, without our being immediately sensible of what was passing. As also, if the causes, upon which the power and strength of either good or bad motives depend, were ascertained, then it would likewise be ascertained when this force was ever increased or diminished by external influence and operation: then it might be true, that external influence could not act upon us without being perceived. But in the ignorance under which we are concerning the thoughts and motives of our minds, when left to themselves, we must, naturally speaking, be, at the time, both ignorant and insensible of the presence of an interfering power; one

ignorance will correspond with the other: whilst, nevertheless, the assistance and benefit derived from that power may, in reality, be exceedingly great. In this instance, philosophy, in my opinion, comes in aid of religion. In the ordinary state of mind, both the presence and the power of the motives which act upon it proceed from causes of which we know nothing. This philosophy confesses, and indeed teaches. From whence it follows, that when these causes are interrupted or influenced, that interruption and that influence will be equally unknown to us. Just reasoning shows this proposition to be a consequence of the former. From whence it follows again, that immediately and at the time perceiving the operation of the Holy Spirit, is not only not necessary to the reality of these operations, but that it is not consonant to the frame of the human mind that it should be so. I repeat again, that we take not upon us to assert that it is never so. Undoubtedly God can, if he please, give that tact and quality to his communications, that they shall be perceived to be divine communications at the time. And this probably was very frequently the case with the prophets, with the apostles, and with inspired men of old. But it is not the case naturally; by which I mean, that it is not the case according to the constitution of the human soul. It does not appear, by experience, to be the case usually. What would be the effect of the influence of the Divine Spirit being always or generally accompanied with a distinct notice, it is difficult even to conjecture. One thing may be said of it, that it would be putting us under a quite different dispensation. It would be putting us under a miraculous dispensation; for the agency of the Spirit in our souls distinctly perceived is, properly speaking, a miracle. Now miracles are instruments in the hand

of God of signal and extraordinary effects, produced upon signal and extraordinary occasions. Neither internally nor externally do they form the ordinary course of his proceeding with his reasonable creatures.

And in this there is a close analogy with the course of nature, as carried on under the divine government. We have every reason which Scripture can give us for believing, that God frequently interposes to turn and guide the order of events in the world, so as to make them execute his purpose: yet we do not so perceive these interpositions, as either always or generally to distinguish them from the natural progress of things. His providence is real, but unseen. We distinguish not between the acts of God and the course of nature. It is so with the Spirit. When, therefore, we teach that good men may be led, or bad men converted, by the Spirit of God, and yet they themselves not distinguish his holy influence; we teach no more than what is conformable, as, I think, has been shown, to the frame of the human mind, or rather to our degree of acquaintance with that frame; and also analogous to the exercise of divine power in other things; and also necessary to be *so*; unless it should have pleased God to put us under a quite different dispensation, that is, under a dispensation of constant miracles. I do not apprehend that the doctrine of spiritual influence carries the agency of the Deity much farther than the doctrine of providence carries it; or, however, than the doctrine of prayer carries it. For all prayer supposes the Deity to be intimate with our minds.

But if we do not know the influence of the Spirit by a distinguishing perception at the time, by what means do we know any thing of it at all? I answer, by its *effects*, and by those alone. And this I conceive to be that

which our Saviour said to Nicodemus: "The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh and whither it goeth: so is every one that is born of the Spirit:" that is, thou perceivest an effect, but the cause which produces that effect operates in its own way, without thy knowing its rule or manner of operation. With regard to the cause, "thou canst not tell whence it cometh or whither it goeth." A change or improvement in thy religious state is necessary. The agency and help of the Spirit, in working that change or promoting that improvement, are likewise necessary. "Except a man be born of the Spirit, he cannot enter into the kingdom of God." But according to what particular manner, or according to what rule, the Spirit acts, is as unknown to us as the causes are which regulate the blowing of the wind, the most incalculable and unknown thing in the world. Its origin is unknown; its mode is unknown; but still it is known in its effects: and so it is with the Spirit. If the change have taken place; if the improvement be produced and be proceeding; if our religious affairs go on well; then have we ground for trust, that the enabling, assisting Spirit of God is with us; though we have no other knowledge or perception of the matter than what this affords.

Perhaps there is no subject whatever, in which we ought to be so careful not to go before our guide, as in this of spiritual influence. We ought neither to expect more than what is promised, nor to take upon ourselves to determine what the Scriptures have not determined. This safe rule will produce both caution in judging of ourselves, and moderation in judging, or rather a backwardness in taking upon us to judge, of others. The modes of operation of God's Spirit are probably ex-

tremely various and numerous. This variety is intimated by our Saviour's comparing it with the blowing of the wind. We have no right to limit it to any particular mode, forasmuch as the Scriptures have not limited it; nor does observation enable us to do it with any degree of certainty.

The conversion of a sinner, for instance, may be sudden, nay, may be instantaneous, yet be both sincere and permanent. We have no authority whatever to deny the possibility of this. On the contrary, we ought to rejoice, when we observe in any one even the appearance of such a change. And this change may not only by possibility be sudden, but sudden changes may be more frequent than our observations would lead us to expect. For we can observe only effects, and these must have time to show themselves; whilst the change of heart may be already wrought. It is a change of heart which is attributable to the Spirit of God, and this may be sudden. The fruits, the corresponding effects, the external reformation, and external good actions, will follow in due time. "I will take the stony heart out of their flesh, and will give them an heart of flesh." (Ezekiel xi. 19.) These words may well describe God's dealings with his moral creatures, and the operations of his grace: then follows a description of the effects of these dealings, of these operations, of that grace, viz. "that they may walk in my statutes, and keep my ordinances, and do them;" which represents a permanent habit and course of life, (a thing of continuance,) resulting from an inward change, (which might be a thing produced at once.)

In the mean time it may be true, that the more ordinary course of God's grace is gradual and successive; helping from time to time our endeavours,

succouring our infirmities, strengthening our resolutions; “making with the temptation a way to escape;” promoting our improvement, assisting our progress; warning, rebuking, encouraging, comforting, attending us, as it were, through the different stages of our laborious advance in the road of salvation.

And as the operations of the Spirit are indefinite, so far as we know, in respect of time, so are they likewise in respect of mode. They may act, and observation affords reason to believe that they do sometimes act, by adding force and efficacy to instruction, advice, or admonition. A passage of Scripture sometimes strikes the heart with wonderful power; adheres, as it were, and cleaves to the memory till it has wrought its work. An impressive sermon is often known to sink very deep. It is not, perhaps, too much to hope that the Spirit of God should accompany his ordinances, provided a person bring to them seriousness, humility, and devotion. For example, the devout receiving of the holy sacrament may draw down upon us the gift and benefit of divine grace, or increase our measure of it. This, as being the most solemn act of our religion, and also an appointment of the religion itself, may be properly placed first: but every species of prayer, provided it be earnest; every act of worship, provided it be sincere, may participate in the same effect; may be to us the occasion, the time, and the instrument of this greatest of all gifts.

In all these instances, and in all, indeed, that relate to the operations of the Spirit, we are to judge, if we will take upon us to judge at all, (which I do not see that we are obliged to do,) not only with great candour and moderation, but also with great reserve and caution. As to the modes of divine grace, or of its proceedings

in the hearts of men, we are to think as of things undetermined in Scripture, and indeterminable by us. In our own case, which it is of infinitely more importance to each of us to manage rightly, than it is to judge even truly of other men's, we are to use perseveringly every appointed, every reasonable, every probable, every virtuous endeavour to render ourselves objects of that merciful assistance, which undoubtedly and confessedly we much want, and which, in one way or other, God, we are assured, is willing to afford.

PART III.  
ON THE INFLUENCE OF THE SPIRIT.

1 CORINTHIANS iii. 16.

*Know ye not that ye are the temple of God, and that the Spirit of God dwelleth in you?*

As all doctrine ought to end in practice, and all sound instruction lead to right conduct, it comes, in the last place, to be considered, what obligations follow from the tenet of an assisting grace and spiritual influence; what is to be done on our part in consequence of holding such a persuasion; what is the behaviour corresponding and consistent with such an opinion: for we must always bear in mind, that the grace and Spirit of God no more takes away our freedom of action, our personal and moral liberty, than the advice, the admonitions, the suggestions, the reproofs, the expostulations, the counsels of a friend or parent would take them away. We may act either right or wrong, notwithstanding these interferences. It still depends upon ourselves which of the two we will do. We are not machines under these impressions: nor are we under the impression of the Holy Spirit. Therefore there is a class of duties relating to this subject, as much as any other, and more perhaps than any other, important.

And, first, I would apply myself to an objection which belongs to this, namely, the practical part of the subject: which objection is, that the doctrine of spiritual influence, and the preaching of this doctrine, causes men to attend chiefly to the feelings within them, to place religion in feelings and sensations, and

to be content with such feelings and sensations, without coming to active duties and real usefulness; that it tends to produce a contemplative religion, accompanied with a sort of abstraction from the interests of this world, as respecting either ourselves or others; a sort of quietism and indifference which contributes nothing to the good of mankind, or to make a man serviceable in his generation; that men of this description sit brooding over what passes in their hearts, without performing any good actions, or well discharging their social or domestic obligations, or indeed guarding their outward conduct with sufficient care. Now, if there be any foundation in fact for this charge, it arises from some persons holding this doctrine defectively; I mean, from their not attending to one main point in the doctrine, which is, that the promise is not to those who have the Spirit, but to those who are *led* by the Spirit; not to those who are favoured with its suggestions, but to those who give themselves up to *follow*, and do actually *follow*, these suggestions. Now, though a person by attending to his feelings and consciousnesses, may persuade himself that he has the Spirit of God, yet if he stop and rest in these sensations without consequential practical exertions, it can by no possibility be said of him, nor, one would think, could he possibly bring himself to believe, that he is *led* by the Spirit, that he *follows* the Spirit; for these terms necessarily imply something *done* under that influence, necessarily carry the thoughts to a course of conduct entered into, and pursued in obedience to and by virtue of that influence. Whether the objection here noticed has any foundation in the conduct of those who hold the doctrine of which we treat, I am uncertain; accounts are different: but at any rate the objection lies, not against

the doctrine, but against a defective apprehension of it. For, in confirmation of all which we have said, we may produce the example of St. Paul. No one carried the doctrine of spiritual influence higher than he did, or spoke of it so much; yet no character in the world could be farther than his was from resting in feelings and sensations. On the contrary, it was all activity and usefulness. His whole history confirms what he said of himself, that in labours, in positive exertions both of mind and body, he was above measure. It will be said, perhaps, that these exertions were in a particular way, viz. in making converts to his opinions; but it was the way in which, as he believed, he was promoting the interest of his fellow-creatures in the greatest degree possible for him to promote them; and it was the way also which he believed to be enjoined upon him by the express and particular command of God. Had there been any other method, any other course and line of beneficent endeavours, in which he thought he could have been more useful, and had the choice been left to himself, (which it was not,) the same principle, the same eager desire of doing good, would have manifested itself with equal vigour in that other line. His sentiments and precepts corresponded with his example. "Do good unto all men, especially unto them that are of the household of Christ." Here doing is enjoined. Nothing less than doing can satisfy this precept. Feelings and sensations will not, though of the best kind. "Let him that stole steal no more, but rather let him labour with his hands, that he may have to give to him that needeth." This is carrying active beneficence as far *as* it can go. Men are commanded to relieve the necessities of their poor brethren out of the earnings of their manual labour; nay, to labour for

that very purpose: and their doing so is stated as the best expiation for former dishonesties, and the best proof how much and how truly they are changed from what they were. "Let him that ruleth, do it with diligence." This is a precept which cannot be complied with without activity. These instructions could not come from a man who placed religion in feelings and sensations. Having noticed this objection, (for it well deserved notice,) I proceed to state the particular duties which relate to the doctrine of spiritual assistance. And the first of these duties is, to *pray for it*. It is by prayer that it is to be sought; by prayer that it is to be obtained. This the Scriptures expressly teach. "How much more will your heavenly Father give the Holy Spirit to them that ask him?" The foundation of prayer, in all cases, is a sense of want. No man prays in earnest, or to any purpose, for what he does not feel that he wants. Know then and feel the weakness of your nature. Know the infinite importance of holding on, nevertheless, in a course of virtue. Know these two points thoroughly, and you can stand in need of no additional motive, (indeed none can be added,) to excite in you strong unwearied supplications for divine help; not a cold asking for it in any prescribed form of prayer, but cryings and supplications for it, strong and unwearied. The description, in the Epistle to the Hebrews, of our Lord's own devotion, may serve to describe the devotion of a Christian, praying as he ought, for the Spirit; that is, praying from a deep understanding of his own condition, a conviction of his wants and necessities. "He offered up prayers and supplications, with strong crying and tears, unto him that was able to save him from death; and was heard in that he feared." This is devotion in reality.

There are occasions also which ought to call forth these prayers with extraordinary and peculiar force.

Is it superstition? Is it not, on the contrary, a just and reasonable piety, to implore of God the guidance of his Holy Spirit, when we have any thing of great importance to decide upon, or to undertake; especially any thing by which the happiness of others, as well as our own, is likely to be affected?

It would be difficult to enumerate the passages and occasions of a man's life, in which he is particularly bound to apply to God for the aid and direction of his Spirit. In general, in every *turn*, as it may be called, of life; whenever any thing critical, any thing momentous, any thing which is to fix our situation and course of life; most especially any thing which is likely to have an influence upon our moral conduct and disposition, and thereby affect our condition as candidates for heaven, and as the religious servants of God, is to be resolved upon; *there* and *then* ought we to say our prayers; most ardently supplicating from our Creator and Preserver the grace and guidance of his Holy Spirit.

Is it not, again, a time for calling earnestly for the Spirit of God, and for a greater measure of that Spirit, if he be pleased to grant it to us, when we are recovering from some sin into which we have been betrayed? This case is always critical. The question now is, whether we shall fall into a settled course of sinning, or whether we shall be restored to our former, and to better than our former, endeavours to maintain the line of duty. That, under the sting and present alarm of our conscience, we have formed resolutions of virtue for the future, is supposed: but whether these resolutions will stand is the point now at issue. And in this peril of

our souls we cannot be too earnest or importunate in our supplications for divine succour. It can never come to our aid at a time when we more want it. Our fall proves our weakness. Our desire of recovery proves that, though fallen, we may not be lost. This is a condition which flies to aid and help, if aid and help can be had; and it is a condition to which the promised support of the Spirit most peculiarly applies. On such an occasion, therefore, it will be sought with struggles and strong contention of mind, if we be serious in these matters: so sought, it will be obtained.

Again; Is it not always a fit subject of prayer, that the Holy Spirit would inform, animate, warm, and support our *devotions*? St. Paul speaks of the cooperation of the Spirit with us in this very article. “Likewise the Spirit also helpeth our infirmities; for *we* know not what we should pray for as we ought: but the Spirit maketh intercession for us with groanings that cannot be uttered.” The specific help here described is to supply our ignorance. But the words speak also generally of helping our infirmities; meaning, as the passage leads us to suppose, the infirmities which attend our devotion. Now these infirmities are not only ignorance, but coldness, wanderings, absence; for all which a remedy is to be sought in the aid and help of the Spirit.

Next in order of time to praying for the Spirit of God, but still superior to its importance, is *listening* and *yielding ourselves* to his suggestions. This is the thing in which we fail. Now, it being confessed, that we cannot ordinarily distinguish at the time the suggestions of the Spirit from the operations of our minds, it may be asked, how are we to listen to them? The answer is, by attending *universally* to the admonitions within us. Men do not listen to their consciences. It is through

the whisperings of conscience that the Spirit speaks. If men then are wilfully deaf to their consciences, they cannot hear the Spirit. If hearing, if being compelled to hear, the remonstrances of conscience, they nevertheless decide and resolve and determine to go against them; then they grieve, then they defy, then they do despite to the Spirit of God. In both cases—that is, both of neglecting to consult, and of defying when they cannot help feeling the admonitions which rise up within them—they have this judgment hanging over their heads: “He that hath not, from him shall be taken even that which he hath.” He that misuses or abuses the portion and measure of spiritual assistance which is afforded him, shall lose even that.

The efficacy of the Spirit is to be judged of by its fruits. Its immediate effects are upon the disposition. A visible outward conduct will ensue; but the true seat of grace and of spiritual energy is in the heart and inward disposition. Whenever, therefore, we find religious carelessness succeeded within us by religious seriousness; conscience, which was silent or unheard, now powerfully speaking and obeyed; sensuality and selfishness, the two grand enemies of salvation, the two great powers of darkness which rule the natural man—when we find even these giving way to the inward accusing voice of conscience; when we find the thoughts of the mind drawing or drawn more and more towards heavenly things; the value and interest of these expectations plainer to our view, a great deal more frequent than heretofore in our meditations, and more fully discerned; the care and safety of our souls rising gradually above concerns and anxieties about worldly affairs; when we find the force of temptation and of evil propensities not extinct, but retreating before a sense

of duty; self-government maintained; the interruptions of it immediately perceived, bitterly deplored, and soon recovered; sin rejected and repelled; and this not so much with an increase of confidence in our strength, as of reliance upon the assisting grace of God; when we find ourselves touched with the love of our Maker, taking satisfaction in his worship and service; when we feel a growing taste and relish for religious subjects and religious exercises; above all, when we begin to rejoice in the comfort of the Holy Ghost; in the prospect of reaching heaven; in the powerful aids and helps which are given us in accomplishing this great end, and the strength and firmness and resolution which, so helped and aided, we experience in our progress;—when we feel these things, then may we, without either enthusiasm or superstition, humbly believe, that the Spirit of God hath been at work within us. External virtues, good actions will follow, as occasions may draw them forth; but it is *within* that we must look for the change which the inspiration of God's Spirit produces.

With respect to positive external good actions, we have said, that they must depend in some measure upon occasions and abilities and opportunities, and that they must wait for opportunities; but, observe, it is not so with the breaking off of our sins, be they what they will. That work must wait for nothing. Until that be effected, no change is made. No man, going on in a known sin, has any right to say, that the Spirit of God has done its office within him. Either it has not been given to him, or, being given, it has been resisted, despised, or, at least, neglected. Such a person has either yet to obtain it by prayer, or, when obtained, to avail himself duly of its assistance. Let him understand this to be his condition.

The next duty, or rather disposition, which flows from the doctrine of spiritual influence, is *humility*. There never was a truer saying, than that pride is the adversary of religion; lowliness and humility the tempers for it. Now religious humility consists in the habit of referring every thing to God. From one end of the New Testament to the other, God is set forth and magnified in his agency and his operations.

In the greatest of all businesses, the business of salvation, he is operating, and we cooperating with him. “Work out your own salvation with fear and trembling;” and why? “for it is God that worketh in us to will and to do according to his good pleasure.” He is not superseding our endeavours, (the very contrary is implied by commanding us to exert them), but still nothing is done without him. If we have moral strength, we are strong in the inward might of the Holy Ghost: consequently all boasting, all vanity, all self-sufficiency, all despising of others on the score of moral and religious inferiority, are excluded. Without the grace of God, we might have been as the worst of them. There is, in the nature of things, one train of sentiment belonging to him, who has achieved a work by his own might and power and prowess; and another to him, who has been fain to beg for succour and assistance, and by that assistance alone has been carried through difficulties which were too great for his own strength and faculties. This last is the true sentiment for us. It is not for a man whose life has been saved in a shipwreck by the compassionate help of others; it is not for a man so saved to boast of his own alertness and vigour; though it be true, that unless he had exerted what power and strength he was possessed of, he would not have been saved at all. Lastly, this doctrine shuts the door against a most

general, a most specious, and a most deceiving excuse for our sins; which excuse is, that we have striven against them, but are overpowered by our evil nature, by that nature which the Scriptures themselves represent as evil; in a word, that we have done what we could. Now until, by supplication and prayer, we have called for the promised assistance of God's Spirit, and with an earnestness, devotion, perseverance, and importunity, proportioned to the magnitude of the concern; until we have rendered ourselves objects of that influence, and yielded ourselves to it, it is not true "that we have done all that we can." We must not rely upon that excuse; for it is not true in fact. If, experiencing the depravity and imbecility of our nature, we see in this corruption and weakness an excuse for our sins, and taking up with this excuse, we surrender ourselves to them; if we give up, or relax in, our opposition to them and struggles against them, at last consenting to our sins, and falling down with the stream, which we have found so hard to resist; if things take this turn with us, then are we in a state to be utterly, finally, and fatally undone. We have it in our power to shut our eyes against the danger; we naturally shall endeavour to make ourselves as easy and contented in our situation as we can: but the truth, nevertheless, is, that we are hastening to certain perdition. If, on the contrary, perceiving the feebleness of our nature, we be driven by the perception, as St. Paul was driven, to fly for deliverance from our sins to the aid and influence and power of God's Spirit, to seek for divine help and succour, as a sinking mariner calls out for help and succour, not formally, we may be sure, or coldly, but with cries and tears and supplications, as for life itself; if we be prepared to cooperate with this help,

with the holy working of God's grace within us; then may we trust, both that it will be given to us, (yet in such manner as to God shall seem fit, and which cannot be limited by us,) and also that the portion of help which is given; being duly used and improved, (not despised, neglected, put away,) more and more will be continually added, for the ultimate accomplishment of our great end and object, the deliverance of our souls from the captivity and the consequences of sin.

## PART I.

## SIN ENCOUNTERED BY SPIRITUAL AID.

ROMANS vii. 21.

*O wretched man that I am! who shall deliver me from the body of this death?*

BEFORE we can explain what is the precise subject of this heavy lamentation, and what the precise meaning of the solemn question here asked, we must endeavour to understand what is intended by the expression, “the body of this death,” or as some render it, “this body of death.”

Now let it be remembered, that death, in St. Paul's epistles, hardly ever signifies a natural death, to which all men of all kinds are equally subjected; but it means a spiritual death, or that perdition and destruction to which sin brings men in a future state. “The wages of sin is death;” not the death which we must all undergo in this world, for that is the fate of righteousness as well as sin, but the state, whatever it be, to which sin and sinners will be consigned in the world to come. Not many verses after our text, St. Paul says, carnal mindedness is death:—“to be carnally minded is death;” leads, that is, inevitably, to that future destruction which awaits the sinful indulgence of carnal propensities, and which destruction is, as it were, death to the soul. The book of Revelation, alluding to this distinction, speaks expressly of a *second death*, in terms very fit to be called to mind in the consideration of our present text. “I saw the dead, small and great, stand before God; and the books were opened; and another

book was opened, which is the book of life; and the dead were judged out of those things which were written, according to their works: and the sea gave up the dead which were in it, and death and hell (which last word denotes here simply the place of the dead, not the place of punishment) delivered up the dead that were in them: and they were judged every man according to their works: and death and hell were cast into the lake of fire;" (that is, natural death, and the receptacle of those who died, were thenceforth superseded.) "*This is the second death.* And whosoever was not found written in the book of life was cast into the lake of fire." This description, which is exceedingly awful, is given in the three last verses of the twentieth chapter. In reference to the same event, this book of Revelation had before told us, viz. in the second chapter and eleventh verse, that "he who overcometh shall not be hurt of the second death;" and in like manner in the above-quoted twentieth chapter; "Blessed and holy is he that hath part in this resurrection: on such the second death hath no power." Our Lord himself refers to this death in those never to be forgotten words which he uttered, "He that liveth, and believeth in me, shall not die eternally." Die he must, but not eternally; die the first death, but not the second. It is undoubtedly, therefore, the second death, which St. Paul meant by the word death, when he wrote down the sentence, "the body of this death:" and the second death is the punishment, perdition, and destruction which the souls of sinners will suffer in a future state. It is well worthy of observation, that this was indeed the only death which those who wrote the New Testament, and probably all sincere Christians of that age, regarded as important; as the subject of their awe

and dread and solicitude. The first death, the natural and universal decease of the body, they looked to simply as *a change*, a going out of one room into another; a putting off one kind of clothing, and putting on a different kind. They esteemed it, compared with the other, of little moment or account. In this respect there is a wide difference between the Scripture apprehension of the subject and ours. We think entirely of the first death; they thought entirely of the second. We speak and talk of the death which we see; they spoke and taught and wrote of a death which is future to that. We look to the first with terror; they to the second alone. The second alone they represent as formidable. Such is the view which Christianity gives us of these things, so different from what we naturally entertain.

You see then what death is, in the Scripture sense, in St. Paul's sense. "The body of this death." The phrase and expression of the text cannot, however, mean this death itself, because he prays to be delivered from it; whereas from that death, or that perdition understood by it, when it once overtakes the sinner, there is no deliverance that we know of. "The body," then, "of this death," is not the death itself, but a state leading to and ending in the second death; namely, misery and punishment, instead of happiness and rest, after our departure out of this world. And this state it is, from which St. Paul, with such vehemence and concern upon his spirit, seeks to be delivered.

Having seen the signification of the principal phrase employed in the text, the next and the most important question is, to what condition of the soul, in its moral and religious concerns, the apostle applies it. Now in the verses preceding the text, indeed in the whole of this remarkable chapter, St. Paul has been describing a

state of struggle and contention with sinful propensities; which propensities, in the present condition of our nature, we all feel, and which are never wholly abolished. But our apostle goes farther: he describes also that state of *unsuccessful* struggle and *unsuccessful* contention, by which many so unhappily fall. His words are these: "That which I do I allow not: for what I would, that do I not; but what I hate, that do I. For I know that in me (that is, in my flesh) dwelleth no good thing: for to will is present with me; but how to perform that which is good I find not. For the good that I would I do not: but the evil which I would not, that I do. I find then a law, that, when I would do good, evil is present with me. For I delight in the law of God after the inward man: but I see another law in my members, warring against the law of my mind, and bringing me into captivity to the law of sin which is in my members."

This account, though the style and manner of expression in which it is delivered be very peculiar, is in its substance no other than what is strictly applicable to the case of thousands. "The good that I would I do not: the evil which I would not, that I do." How many who read this discourse may say the same of themselves! as also, "What I would, that do I not; but what I hate, that I do." This then is the case which St. Paul had in view. It is a case, first, which supposes an informed and enlightened conscience: "I delight in the law of God." "I had not known sin but by the law." "I consent unto the law that it is good." These sentiments could only be uttered by a man who was, in a considerable degree at least, acquainted with his duty, and who also approved of the rule of duty which he found laid down.

Secondly, the case before us also supposes an inclination of mind and judgment to perform our duty. “When I *would* do good, evil is present with me: to *will* is present with me, but how to perform that which is good I find not.”

Thirdly, it supposes this inclination of mind and judgment to be continually overpowered. “I see another law in my members, warring against the law of my mind, and bringing me into captivity to the law of sin which is in my members:” that is, the evil principle not only opposes the judgment of the mind, and the conduct which that judgment dictates, (which may be the case with all,) but in the present case subdues and gets the better of it. “Not only wars against the law of my mind, but brings me into captivity.”

Fourthly, the case supposes a sense and thorough consciousness of all this; of the rule of duty; of the nature of sin; of the struggle; of the defeat. It is a prisoner sensible of his chains. It is a soul tied and bound by the fetters of its sins, and knowing itself to be so. It is by no means the case of the ignorant sinner: it is not the case of a seared and hardened conscience. None of these could make the reflection or the complaint which is here described. “The commandment which was ordained unto life, *I found to be unto death. I am carnal, sold under sin. In me dwelleth no good thing. The law is holy; and the commandment holy, just, and good: but sin, that it might appear sin, (that it might be more conspicuous, aggravated, and inexcusable,) works death in me by that which is good.*” This language by no means belongs to the stupified, insensible sinner.

Nor, fifthly, as it cannot belong to an original insensibility of conscience, (that is, an insensibility of

which the person himself does not remember the beginning,) so neither can it belong to the sinner who has got over the rebukes, distrusts, and uneasiness which sin once occasioned. True it is, that this uneasiness *may* be got over almost entirely; so that, whilst the danger remains the same, whilst the final event will be the same, whilst the coming destruction is not less sure or dreadful, the uneasiness and the apprehension are gone. This is a case, too common, too deplorable, too desperate; but it is not the case of which we are now treating, or of which St. Paul treated. Here we are presented throughout with complaint and uneasiness; with a soul exceedingly dissatisfied, exceedingly indeed disquieted and disturbed and alarmed with the view of its condition.

Upon the whole, St. Paul's account is the account of a man in some sort struggling with his vices; at least, deeply conscious of what they are, whither they are leading him, where they will end; acknowledging the law of God, not only in words and speeches, but in his mind; acknowledging its excellency, its authority; wishing, also, and willing, to act up to it, but in fact doing no such thing; feeling, in practice, a lamentable inability of doing his duty, yet perceiving that it must be done. All he has hitherto attained is a state of successive resolutions and relapses. Much is willed, nothing is effected. No furtherance, no advance, no progress is made in the way of salvation. He feels, indeed, his double nature; but he finds, that the law in his members, the law of the flesh, brings the whole man into captivity. He may have some better strivings, but they are unsuccessful. The result is, that he obeys the law of sin.

This is the picture which our apostle contemplated,

and he saw in it nothing but misery: “O wretched man that I am!” Another might have seen it in a more comfortable light. He might have hoped that the will would be taken for the deed; that since he felt in his mind a strong approbation of the law of God; nay, since he felt a delight in contemplating it, and openly professed to do so; since he was neither ignorant of it, nor forgetful of it, nor insensible of its obligation, nor ever set himself to dispute its authority; nay, since he had occasionally likewise endeavoured to bring himself to an obedience to this law, however unsuccessful his endeavours had been: above all, since he has sincerely deplored and bewailed his fallings off from it; he might hope, I say, that his was a case for favourable acceptance.

St. Paul saw it not in this light. He saw in it no ground of confidence or satisfaction. It was a state to which he gives no better name than “the body of death.” It was a state, not in which he hoped to be saved, *but from* which he sought to be delivered. It was a state, in a word, of bitterness and terror; drawing from him expressions of the deepest anguish and distress: “O wretched man that I am! who shall deliver me from the body of this death?”

## PART II.

**EVIL PROPENSITIES ENCOUNTERED BY  
THE AID OF THE SPIRIT.**

ROMANS vii. 24.

*O wretched man that I am! who shall deliver me from the body of this death.*

HE who has not felt the weakness of his nature, it is probable, has reflected little upon the subject of religion. I should conjecture this to be the case.

But then, when men do feel the weakness of their nature, it is not always that this consciousness carries them into a right course, but sometimes into a course the very contrary of what is right. They may see in it, as hath been observed, and many do see in it, nothing but an excuse and apology for their sins: since it is acknowledged, that we carry about with us a frail, not to call it a depraved, corrupted nature, surely, they say, we shall not be amenable to any severities or extremities of judgments, for delinquencies, to which such a nature must ever be liable; or, which is indeed all the difference there is between one man and another, for greater degrees or less, for more or fewer, of these delinquencies. The natural man takes courage from this consideration. He finds ease in it. It is an opiate to his fears. It lulls him into a forgetfulness of danger, and of the dreadful end, if the danger be real. Then the practical consequence is, that he begins to relax even of those endeavours to obey God which he has hitherto exerted. Imperfect and inconstant as these endeavours were at best, they become gradually more

languid and more unfrequent and more insincere than they were before: his sins increase upon him in the same proportion: he proceeds rapidly to the condition of a confirmed sinner; either secret or open, it makes no difference as to his salvation. And this descent into the depths of moral vileness and depravity began, in some measure, with perceiving and confessing the weakness of his nature; and giving to this perception that most erroneous, that most fatal turn, the regarding it as an excuse for every thing; and as dispensing even with the self-denials, and with the exertions of self-government, which a man had formerly thought it necessary to exercise, and in some sort, though in no sufficient sort, had exercised.

Now, I ask, was this *St. Paul's* way of considering the subject? Was this the turn which *he* gave to it? Altogether the contrary. It was impossible for any Christian, of any age, to be more deeply impressed with a sense of the weakness of human nature than he was; or to express it more strongly than he has done in the chapter before us. But observe; feeling most sensibly, and painting most forcibly, the sad condition of his nature, he never alleges it as an excuse for sin: he does not console himself with any such excuse. He does not make it a reason for setting himself at rest upon the subject. He finds no relief to his fears in any such consideration. It is not with him a ground for expecting salvation: on the contrary, he sees it to be a state not leading to salvation; otherwise, why did he seek so earnestly to be delivered from it?

And how to be delivered? That becomes the next question. In order to arrive at St. Paul's meaning in this matter, we must attend, with some degree of care, not only to the text, but to the words which follow it.

The twenty-fourth verse contains the question, “Who shall deliver me from the body of this death?” and then the twenty-fifth verse goes on, “I thank God through Jesus Christ our Lord.” Now there is good reason to believe, that this twenty-fifth verse does not appear in our copies, as it ought to be read. It is most probable that the passage stood thus. The twenty-fourth verse asks, “Who shall deliver me from the body of this death?” Then the twenty-fifth verse answers, “The grace of God, through Jesus Christ our Lord.” Instead of the words “I thank God,” put the words “The grace of God,” and you will find the sense cleared up by the change very much. I say, it is highly probable, that this change exhibits what St. Paul really wrote. In English there is no resemblance either in sound or writing between the two sentences, “I thank God,” and “The grace of God;” but in the language in which the epistle was written there is a very great resemblance. And, as I have said, there is reason to believe, that in the transcribing, one has been confounded with the other. Perhaps the substantial meaning may be the same, whichever way you read the passage: but what is implied only in one way, is clearly expressed in the other way.

The question, then, which St. Paul so earnestly and devoutly asks, is, “Who shall deliver me from this body of death?” from the state of soul which I feel, and which can only lead to final perdition? And the answer to the question is, “The grace of God, through Jesus Christ our Lord.” Can a more weighty question be asked? Can an answer be given which better deserves to be thoroughly considered?

The question is, Who shall deliver us? The answer, “The grace of God, through Jesus Christ our Lord.”

The “grace of God” means the favour of God: at present, therefore, the answer stands in general terms. We are only informed, that we are rescued from this state of moral difficulty, of deep religious distress, by the favour of God, through Jesus Christ. It remains to be gathered, from what follows, in what particularly this grace or favour consists. St. Paul, having asked the question, and given the answer in general terms, proceeds to enlarge upon the answer in these words: “There is, therefore, now no condemnation to them who are in Christ Jesus, who walk not after the flesh, but after the Spirit.” There is now no condemnation: but of whom, and to whom, is this spoken? It is to them who, first, are in Christ Jesus; who, secondly, walk not after the flesh; who, thirdly, walk after the Spirit. And whence arises this alteration and improvement in our condition and our hopes; this exemption, or rather deliverance, from the ordinary state of man? St. Paul refers us to the cause. “The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death:” which words can hardly bear any other signification than this, viz. “that the aid and operation of God's Spirit, given through Jesus Christ, hath subdued the power which sin had obtained and once exercised over me.” With this interpretation the whole sequel of St. Paul's reasoning agrees. Every sentence almost that follows illustrates the interpretation, and proves it to be the true one. With what, but with the operation and the cooperation of the Spirit of God, as of a real, efficient, powerful, active Being, can such expressions as the following be made to suit? “If so be that the Spirit of God dwell in you.” “If any man have not the Spirit of Christ, he is none of his.” .” If the Spirit of him that raised up Jesus from the

dead dwell in you." "By his Spirit that dwelleth in you." "Ye have received the Spirit of adoption." "The Spirit itself beareth witness with our spirit." All which expressions are found in the eighth chapter, namely, the chapter following the text, and all indeed within the compass of a few verses. These passages either assert or assume the fact, namely, the existence and agency of such a Spirit; its agency, I mean, in and upon the human soul. It is by the aid, therefore, of this Spirit, that the deliverance so earnestly sought for is effected: a deliverance represented as absolutely necessary to be effected in some way or other. And it is also represented as one of the grand benefits of the Christian dispensation. "What the law could not do, in that it was weak through the flesh, God sending his own Son in the likeness of sinful flesh, and for sin, condemned sin in the flesh: that the righteousness of the

law might be fulfilled in us, who walk not after the flesh, but after the Spirit." Which passage I expound thus: A mere law, that is, a rule merely telling us what we ought to do, without enabling us or affording us any help or aid in doing it, is not calculated for such a nature as ours: "it is weak through the flesh:" it is ineffectual by reason of our natural infirmities. Then what the law, or a mere rule of rectitude, (for that is what any law, as such, is,) could not do, was done under the Christian dispensation. And how done? The righteousness of the law—that is, the 'righteousness which the law dictated, and which it aimed, as far as it could, to procure and produce—is fulfilled in us, who walk not after the flesh, but after the Spirit; is actually produced and procured in us, who live under the influence and direction of the Holy Spirit. By this Holy Spirit we have that assistance which the law could not impart,

and without which, as a mere rule, though ever so good and right a rule, it was weak and insufficient, forasmuch as it had not force or strength sufficient to produce obedience in those who acknowledged its authority.

To communicate this so much wanted assistance was one end and effect of Christ's coming. So it is intimated by St. Paul, "what the law could not do, in that it was weak through the flesh, God did:" that is, God sending his own Son in the likeness of sinful flesh, and for sin, namely, sending him by reason or on account of sin, condemned sin in the flesh; vouchsafed, that is, spiritual aid and ability, by which aid and ability sin and the power of sin might be effectually opposed, encountered, and repelled.

## PART III.

**THE AID OF THE SPIRIT TO BE SOUGHT  
AND PRESERVED BY PRAYER.**

ROMANS vii. 24.

*O wretched man that I am .' who shall deliver me from the body of this death.*

IF it be doctrinally true, that man in his ordinary state, in that state at least in which great numbers find themselves, is in a deplorable condition, a condition which ought to be a subject to him of great and bitter lamentation, viz. that his moral powers are ineffectual for his duty; able, perhaps, on most occasions, to perceive and to approve of the rule of right; able, perhaps, to will it; able, perhaps, to set on foot unsuccessful, frustrated, and defeated endeavours after that will, but by no means able to pursue or execute it:—if it be also true, that strength and assistance may and can be communicated to this feeble nature, and that it is by the action of the Holy Spirit upon the soul, that it is so communicated; that with this aid and assistance sin may be successfully encountered, and such a course of duty maintained as may render us accepted in Christ; and farther, that to impart the above described assistance is one of the ends of Christ's coming, and one of the operations of his love towards mankind:—if, I say, these propositions be doctrinally true, then follow from them these three practical rules: first, that we are to pray sincerely, earnestly, and incessantly, for this assistance; secondly,"that by so doing we are to obtain it; thirdly, that being obtained, we are to yield ourselves to its agency, to be obedient to its dictates.

First: We are to pray sincerely, earnestly, and incessantly, for this assistance. A fundamental, and, as it seems to me, an insurmountable text, upon this head, is our Saviour's declaration, (Luke xi. 13.) "If ye, being evil, know how to give good gifts unto your children, how much more shall your heavenly Father give the Holy Spirit to them that ask him?" This declaration, beside expressing (which was its primary object) God's benignant, prompt, and merciful disposition towards us; which here, as in other places, our Saviour compares with the disposition of a parent towards his children; beside this, the text undoubtedly assumes the fact of there being a Holy Spirit, of its being the gift of God, of its being given to them that ask him; that these things are all realities; a real spiritual assistance, really given, and given to prayer. But let it be well observed, that whosoever the Scripture speaks of prayer, whosoever it uses that term, or other terms equivalent to it, it means prayer, sincere and earnest, in the full and proper sense of these words; prayer proceeding from the heart and soul. It does not mean any particular form of words whatever; it does not mean any service of the lips, any utterance or pronunciation of prayer, merely as such; but supplication actually and truly proceeding from the heart. Prayer may be solemn without being sincere. Every decency, every propriety, every visible mark and token of prayer, may be present, yet the heart not engaged. This is the requisite which must make prayer avail: this is the requisite indeed which must make it that which the Scripture means whenever it speaks of prayer. Every outward act of worship, without this participation of the heart, fails, not because men do not pray sincerely, but because, in Scripture sense, they do not pray at all.

If these qualities of internal seriousness and impression belong to prayer, whenever prayer is mentioned in Scripture, they seem more peculiarly essential in a case, and for a blessing, purely and strictly spiritual. We must pray with the Spirit, at least when we pray for spiritual succour.

Furthermore, there is good authority in Scripture, which it would carry us too widely from our subject to state at present, for persevering in prayer, even when long unsuccessful. *Perseverance* in unsuccessful prayer is one of the doctrines and of the lessons of the New Testament.

But again; we must pray for the Spirit earnestly: I mean, with a degree of earnestness proportioned to the magnitude of the request. The earnestness with which we pray will always be in proportion to our sense, knowledge, and consciousness of the importance of the thing which we ask. This consciousness is the source and principle of earnestness in prayer; and in this, I fear, we are greatly deficient. We do not possess or feel it in the manner in which we ought: and we are deficient upon the subject of spiritual assistance most particularly. I fear that many understand and reflect little upon the importance of what they are about, upon the exceedingly great consequence of what they are asking, when they pray to God, as we do in our liturgy, "to cleanse the thoughts of our hearts by the inspiration of his Holy Spirit;" "to make clean our hearts within us;" "not to take his Holy Spirit from us;" "to give us increase of grace;" "to grant that his Holy Spirit may in all things direct and rule our hearts."

These are momentous petitions, little as we may perceive, or think, or account of them, at the time. It has been truly said, that we are hardly ever certain of

praying aright, except when we pray for the Spirit of God. When we pray for temporal blessings, we do not know, though God does, whether we ask what is really for our good: when we ask for the assistance and sanctification of God's Spirit in the work and warfare of religion, we ask for that, which by its very nature is good, and which, without our great fault, will be good to us.

But, secondly, we must obtain it. God is propitious. You hear that he has promised it to prayer; to prayer really and truly such; to prayer, viz. issuing from the heart and soul; for no other is ever meant. We are suppliants to our Maker for various and continual blessings; for health, for ease; it may be, for prosperity and success. There is, as hath already been observed, some degree of uncertainty in all these cases, whether we ask what is fit and proper to be granted; or even what, if granted, would do us good. There is this, likewise, farther to be observed, that they are what, if such be the pleasure of God, we can do without. But how incapable we are of doing without God's Spirit, of proceeding in our spiritual course upon our own strength and our own resources, of finally accomplishing the work of salvation without it, the strong description which is given by St. Paul may convince us, if our own experience had not convinced us before. Many of us, a large majority of us, either require or have required a great change, a moral regeneration. This is to be effectuated by the help of God's Spirit. Vitiated hearts will not change themselves; not easily, not frequently, not naturally, perhaps not possibly. Yet, "without holiness no man shall see God." How then are the unholy to become holy? *Holiness* is a thing of the heart and soul. It is not a few forced, constrained

actions, though good as actions, which constitute holiness. It must reside within us; it is a disposition of soul. To acquire, therefore, that which is not yet acquired—to change that which is not yet changed—to go to the root of the malady—to cleanse and purify the *inside* of the cup, the foulness of our mind—is a work for the Spirit of God within us. Nay, more; many, as the Scripture most significantly expresses it, are *dead* in sins and trespasses; not only committing sins and trespasses, but dead in them; that is, as insensible of their condition under them as a dead man is insensible of his condition. Where this is the case, the sinner must, in the first instance, be roused and quickened to a sense of his condition, of his danger, his fate; in a word, he must, by some means or other, be brought to feel a strong compunction. This is also an office for the Spirit of God. “You hath he quickened, who were dead in trespasses and sins.” (Eph. ii. 1.) “Awake, thou that sleepest, and arise from the dead, and Christ shall give thee light.” (Eph. v. 14.) Whether, therefore, we be amongst the dead in sin; or whether we be of the number of those with whom, according to St. Paul’s description, to *will* is present, but how to perform that which is good they find not; who, though they approve the law of God, nay delight in it after the inward man, that is, in the answers of their conscience, are nevertheless *brought into captivity* to the law of sin which is in their members; carnal, sold under sin; doing what they allow not, what they hate; doing not the good which they would, but the evil which they would not: whichever of these be our wretched estate, (for such the apostle pronounces it to be,) the grace and influence of God’s Spirit must be obtained, in order to rescue and deliver us from it: and the sense of this want

and of this necessity lies at the root of our devotions, when directed to this object.

To those who are in a better state than what has been here described, little need be said, because the very supposition of their being in a better state includes that earnest and devout application by prayer for the continual aid, presence, and indwelling of God's Holy Spirit, which we state to be a duty of the Christian religion.

But, thirdly, the assistance of God's Spirit being obtained, we are to yield ourselves to its direction; to consult, attend, and listen to its dictates, suggested to us through the admonitions of our conscience. The terms of Scripture represent the Spirit of God as an assisting, not a forcing power; as not suspending our own powers, but animating them; as imparting strength and faculty for our religious work, if we will use them; but making it still depend upon ourselves whether we will use them or not. Agreeably hereunto, St. Paul, you have heard, asserts, that there is no condemnation to them who walk not after the flesh, but after the Spirit. The promise is not to them who have the Spirit, but to them who walk after the Spirit. To walk after the flesh is to follow wherever the impulses of sensuality and selfishness lead us; which is a voluntary act. To walk after the Spirit, is steadily and resolutely to obey good motions within us, whatever they cost us; which also is a voluntary act. All the language of this remarkable chapter, (Rom. vii.) proceeds in the same strain; namely, that after the Spirit of God is given, it remains and rests with ourselves whether we avail ourselves of it or not. "If ye through the Spirit do mortify the deeds of the flesh, ye shall live." It is through the Spirit that we are enabled to mortify the

deeds of the flesh. But still, whether we mortify them or not, is our act, because it is made a subject of precept and exhortation so to do. Health is God's gift: but what use we will make of it is our choice. Bodily strength is God's gift: but of what advantage it shall be to us depends upon ourselves. Even so, the higher gift of the Spirit remains a gift, the value of which will be exceedingly great, will be little, will be none, will be even an increase of guilt and condemnation, according as it *is* applied and obeyed, or neglected and withheld. The fourth chapter of Ephesians, (verse 30,) is a warning voice upon this subject: "Grieve not the Spirit of God;" therefore he may be grieved: being given, he may be rejected; rejected, he may be withdrawn.

St. Paul (Rom. viii.) represents the gift and possession of the Spirit in these words: "Ye are not in the flesh, but in the Spirit, if so be that the Spirit of God dwell in you:" and its efficacy, where it is efficacious, in the following magnificent terms: "If the Spirit of him that raised Christ from the dead dwell in you, he that raised up Christ from the dead shall also quicken your mortal bodies, by his Spirit that dwelleth in you." What, nevertheless, is the practical inference therefrom stated in the very next words? "Therefore, brethren, we are debtors, not to the flesh, to live after the flesh; for if ye live after the flesh, ye shall die:" consequently it is still possible, and plainly conceived and supposed and stated to be so, even after this communication of the Spirit, to live notwithstanding according to the flesh: and still true, that, if ye live after the flesh, ye shall die. "We are debtors;" our obligation, our duty, imposed upon us by this gift of the Spirit, is no longer to live after the flesh; but, on the contrary, through

the Spirit so given, to do that which without it we could not have done—to “mortify the deeds of the body.” Thus following the suggestions of the Spirit, ye shall live: for “as many as are led by the Spirit of God,” as many as yield themselves to its guidance and direction, “they are the sons of God,”

To conclude the subject. The difference between those who succeed and those who fail in their Christian course, between those who obtain and those who do not obtain salvation, is this:—they may both feel equally the weakness of their nature, the existence and the power of evil propensities within them: but the former, by praying with their whole heart and soul, and that perseveringly, for spiritual assistance, obtain it; and, by the aid so obtained, are enabled to withstand, and do, in fact, withstand, their evil propensities: the latter sink under them. I will not say that all are comprised under this description; for neither are all included in St. Paul's account of the matter, from which our discourse set out: but I think that it represents the general condition of Christians, as to their spiritual state, and that the greatest part of those who read this discourse will find, that they belong to one side or other of the alternative here stated.

## THE DESTRUCTION OF THE CANAANITES.

JOSHUA x. 40.

*So Joshua smote all the country of the hills, and of the south, and of the vale, and of the springs, and all their kings: he left none remaining, but utterly destroyed all that breathed, as the Lord God of Israel commanded.*

I HAVE known serious and well-disposed Christians much affected with the accounts which are delivered in the Old Testament of the Jewish wars and dealings with the inhabitants of Canaan. From the Israelites first setting foot in that country, to their complete establishment in it, which takes up the whole book of Joshua and part of the book of Judges, we read, it must be confessed, of massacres and desolations unlike what are practised now-a-days between nations at war; of cities and districts laid waste, of the inhabitants being totally destroyed; and this, as it is alleged in the history, by the authority and command of Almighty God. Some have been induced to think such accounts incredible, inasmuch as such conduct could never, they say, be authorized by the good and merciful Governor of the universe.

I intend in the following discourse to consider this matter, so far as to show that these transactions were calculated for a beneficial purpose, and for the general advantage of mankind; and, being so calculated, were not inconsistent either with the justice of God, or with the usual proceedings of divine Providence.

Now the first and chief thing to be observed is, that the nations of Canaan were destroyed for their wickedness. In proof of this point, I produce the eighteenth

chapter of Leviticus, the twenty-fourth and the following verses. Moses, in this chapter, after laying down prohibitions against brutal and abominable vices, proceeds in the twenty-fourth verse thus—"Defile not ye yourselves in any of these things: for in all these the nations are denied which I cast out before you: and the land is defiled: therefore I do visit the iniquity thereof upon it, and the land itself vomiteth out her inhabitants. Ye shall therefore keep my statutes and my judgments, and shall not commit any of these abominations; neither any of your own nation, nor any stranger that sojourneth among you: (for all these abominations have the men of the land done, which were before you, and the land is defiled;) that the land spue not you out also, when ye defile it, as it spued out the nations that were before you. For whosoever shall commit any of these abominations, even the souls that commit them shall be cut off from among their people. Therefore shall ye keep mine ordinances, that ye commit not any one of these abominable customs, which were committed before you, and that ye defile not yourselves therein." Now the facts disclosed in this passage, are for our present purpose extremely material, and extremely satisfactory. First, the passage testifies the principal point, namely, that the Canaanites were the wicked people we represent them to be; and that this point does not rest upon supposition, but upon proof: in particular, the following words contain an express assertion of the guilt of that people: "In all these the nations are defiled which I cast out before you;" "for all these abominations have the men of the land done." Secondly, the form and turn of expression seems to show, that these detestable practices were general amongst them, and habitual: they are said to be abominable

*customs* which were committed. Now the word custom is not applicable to a few single, or extraordinary instances, but to usage and to national character, which argues, that not only the practice, but the sense and notion of morality was corrupted amongst them, or lost; and it is observable, that these practices, so far from being checked by their religion, formed a part of it. They are described not only under the name of abominations, but of abominations which they have done unto their gods. What a state of national morals must that have been! Thirdly, the passage before us positively and directly asserts, that it was for these sins that the nations of Canaan were destroyed. This, in my judgment, is the important part of the inquiry. And what do the words under consideration declare? “In all these, namely, the odious and brutal vices which had been spoken of, the nations are defiled which I cast out before you: and the land is defiled: *therefore* I do visit the iniquity thereof upon it.” This is the reason and cause of the calamities which I bring on it. The land itself vomiteth out her inhabitants. The very land is sick of its inhabitants; of their odious and brutal practices; of their corruption and wickedness. This, and no other, was the reason for destroying them. This, and no other, is the reason here alleged. It was not, as hath been imagined, to make way for the Israelites; nor was it simply for their idolatry. It appears to me extremely probable, that idolatry in those times led, in all countries, to the vices here described: and also that the detestation, threats, and severities expressed against idolatry in the Old Testament, were not against idolatry simply, or considered as an erroneous religion, but against the abominable crimes which usually accompanied it. I think it quite certain, that the case

was so in the nations of Canaan. Fourthly, it appears from the passage before *us*, and what is surely of great consequence to the question, that God's abhorrence and God's treatment of these crimes were impartial, without distinction, and without respect of nations or persons. The words which point out the divine impartiality are those in which Moses warns the Israelites against falling into any of the like wicked courses; "that the land," says he, "cast not you out also, when you defile it, as it cast out the nations that were before you; for whoever shall commit any of these abominations, even the souls that commit them shall be cut off from among their people." The Jews are sometimes called the chosen and favoured people of God, and, in a certain sense, and for some purposes, they were so; yet is this very people, both in this place and in other places, over and over again reminded, that if they followed the same practices, they must expect the same fate. "Ye shall not walk in the way of the nations which I cast out before you; for they committed all those things, and therefore I abhorred them: as the nations which the Lord destroyed before your face, so shall ye perish; because ye were not obedient unto the voice of the Lord your God."

What farther proves, not only the justice, but the clemency of God, his long-suffering, and that it was the incorrigible wickedness of those nations which at last drew down upon them their destruction, is, that he suspended, as we may so say, the stroke, till their wickedness was come to such a pitch that they were no longer to be endured. In the fifteenth chapter of Genesis, God tells Abraham that his descendants of the fourth generation should return into that country, and not before: "for the iniquity," saith he, "of the

Amorites is not yet full." It should seem from hence, that so long as their crimes were confined within any bounds, they were permitted to remain in their country. We conclude, therefore, and we are well warranted in concluding, that the Canaanites were destroyed on account of their wickedness. And that wickedness was perhaps aggravated by their having had amongst them Abraham, Isaac, and Jacob—examples of a purer religion and a better conduct; still more by the judgments of God so remarkably set before them in the history of Abraham's family; particularly by the destruction of Sodom and Gomorrah: at least, these things prove that they were not without warning, and that God did not leave himself without witness among them.

Now when God, for the wickedness of a people, sends an earthquake or a fire or a plague amongst them, there is no complaint of injustice, especially when the calamity is known, or expressly declared beforehand, to be inflicted for the wickedness of such people. It is rather regarded as an act of exemplary penal justice, and, as such, consistent with the character of the moral Governor of the universe. The objection, therefore, is not to the Canaanitish nations being destroyed; (for when their national wickedness is considered, and when that is expressly stated, as the cause of their destruction, the dispensation, however severe, will not be questioned;) but the objection is solely to the manner of destroying them. I mean, there is nothing but the manner left to be objected to: their wickedness accounts for the thing itself. \_ To which objection it may be replied, that if the thing itself be just, the manner is of little signification: of little signification even to the sufferers themselves. For where is the great difference, even to them, whether they were destroyed by an

earthquake, a pestilence, a famine, or by the hands of an enemy? Where is the difference, even to our imperfect apprehensions of divine justice, provided it be, and is known to be, for their wickedness that they are destroyed? But this destruction, you say, confounded the innocent with the guilty. The sword of Joshua and of the Jews spared neither women nor children. Is it not the same with all other national visitations? Would not an earthquake or a fire or a plague or a famine amongst them have done the same? Even in an ordinary and natural death the same thing happens. God takes away the life he lends, without regard, that we can perceive, to age or sex or character. But, after all, promiscuous massacres, the burning of cities, the laying waste of countries, are things dreadful to reflect upon. Who doubts it? so are all the judgments of Almighty God. The effect, in whatever way it shows itself, must necessarily be tremendous, when the Lord, as the Psalmist expresses it, “moveth out of his place to punish the wicked.” But it ought to satisfy us—at least this is the point upon which we ought to rest and fix our attention—that it was for excessive, wilful, and forewarned wickedness, that all this befell them, and that it is expressly so declared in the history which recites it.

But farther; if punishing them by the hands of the Israelites rather than by a pestilence, an earthquake, a fire, or any such calamity, be still an objection, we may perceive, I think, some reasons for this method of punishment in preference to any other whatever: always, however, bearing in our mind, that the question is not concerning the justice of the punishment, but the mode of it. It is well known, that the people of those ages were affected by no proof of the power of the gods

which they worshipped so deeply, as by their giving them victory in war. It was by this species of evidence that the superiority of their own gods above the gods of the nations which they conquered was, in their opinion, evinced. This being the actual persuasion which then prevailed in the world, no matter whether well or ill founded, how were the neighbouring nations, for whose admonition this dreadful example was intended, how were they to be convinced of the supreme power of the God of Israel above the pretended gods of other nations, and of the righteous character of Jehovah, that is, of his abhorrence of the vices which prevailed in the land of Canaan; how, I say, were they to be convinced so well, or at all indeed, as by enabling the Israelites, whose God he was known and acknowledged to be, to conquer under his banner, and drive out before them those who resisted the execution of that commission, with which the Israelites declared themselves to be invested, viz. the expulsion and extermination of the Canaanitish nations? This convinced surrounding countries, and all who were observers or spectators of what passed, first, that the God of Israel was a real God; secondly, that the gods which other nations worshipped were either no gods, or had no power against the God of Israel; and, thirdly, that it was he, and he alone, who possessed both the power and the will to punish, to destroy, and to exterminate from before his face, both nations and individuals, who gave themselves up to the crimes and wickedness for which the Canaanites were notorious. Nothing of this sort would have appeared, or with the same evidence however, from an earthquake or a plague or any natural calamity. These might not have been attributed to divine agency at all, or not to the interposition of the God of Israel.

Another reason, which made this destruction both more necessary and more general than it would have otherwise been, was the consideration, that if any of the old inhabitants were left, they would prove a snare to those who succeeded them in the country; would draw and seduce them by degrees into the vices and corruptions which prevailed amongst themselves. Vices of all kinds, but vices most particularly of the licentious kind, are astonishingly infectious. “A little leaven leaveneth the whole lump.” A small number of persons, addicted to them, and allowed to practise them with impunity or encouragement, will spread them through the whole mass. This reason is formally and expressly assigned, not simply for the punishment, but for the extent to which it was carried, namely, extermination. “Thou shalt *utterly* destroy them, that they teach you not to do after all their abominations which they have done unto their gods.”

To conclude. In reading the Old Testament account of the Jewish wars and conquests in Canaan, and the terrible destruction brought upon the inhabitants thereof, we are constantly to bear in our minds, that we are reading the execution of a dreadful but just sentence pronounced by God against the intolerable and incorrigible crimes of these nations—that they were intended to be made an example to the whole world of God's avenging wrath against sins of this magnitude and of this kind: sins which, if they had been suffered to continue, might have polluted the whole ancient world, and which could only be checked by the signal and public overthrow of nations notoriously addicted to them, and so addicted as to have incorporated them even into their religion and their public institutions; that the miseries inflicted upon the nations by the invasion of the Jews,

were expressly declared to be inflicted on account of their abominable sins; that God had borne with them long; that God did not proceed to execute his judgments till their wickedness was full; that the Israelites were mere instruments in the hands of a righteous Providence for the effectuating the extermination of a people, whom it was necessary to make a public example to the rest of mankind ; that this extermination, which might have been accomplished by a pestilence, by fire, by earthquakes, was appointed to be done by the hands of the Israelites, as being the clearest and most intelligible method of displaying the power and righteousness of the God of Israel—his power over the pretended gods of other nations, and his righteous hatred of the crimes into which they were fallen.

This is the true statement of the case. It is no forced or invented construction, but the idea of the transaction set forth in Scripture; and it is an idea, which, if retained in our thoughts, may fairly, I think, reconcile us to every thing which we read in the Old Testament concerning it.

## NEGLECT OF WARNINGS.

DEUTERONOMY xxxii. 29.

*Oh that they were wise, that they understood this, that they would consider their latter end!*

THERE is one great sin, which, nevertheless, may not be amongst the number of those of which we are sensible, and of which our consciences accuse us; and that sin is the neglect of warnings.

It is our duty to consider this life throughout as a probationary state: nor do we ever think truly, or act rightly, but so long as we have this consideration fully before our eyes. Now one character of a state, suited to qualify and prepare rational and improvable creatures for a better state, consists in the warnings which it is constantly giving them; and the providence of God, by placing *us* in such a state, becomes the author of these warnings. It is his paternal care which admonishes us by and through the events of life and death that pass before us. Therefore it is a sin against Providence to neglect them. It is hardness and determination in sin; or it is blindness, which in whole or in part is wilful; or it is giddiness and levity and contemptuousness in a subject which admits not of these dispositions towards it, without great offence to God.

A serious man hardly ever passes a day, never a week, without meeting with some warning to his conscience; without something to call to his mind his situation with respect to his future life. And these warnings, as perhaps was proper, come the thicker upon us, the farther we advance in life. The dropping into the grave of our acquaintance, and friends, and relations, what can

be better calculated, not to prove, (for we do not want the point to be proved,) but to possess our hearts with a complete sense and perception of the extreme peril and hourly precariousness of our condition, viz. to teach this momentous lesson, that when we preach to you concerning heaven and hell, we are not preaching concerning things at a distance, things remote, things long before they come to pass; but concerning things near, soon to be decided, in a very short time to be fixed one way or the other! This is a truth of which we are warned by the course of mortality; yet, with this truth confessed, with these warnings before us, we venture upon sin. But it will be said, that the events which ought to warn us are out of our mind at the time. But this is not so. Were it that these things came to pass in the wide world only at large, it might be that we should seldom hear of them, or soon forget them. But the events take place when we ourselves are within our own doors; in our own families; amongst those with whom we have the most constant correspondence, the closest intimacy, the strictest connexion. It is impossible to say that such events can be out of our mind; nor is it the fact. The fact is, that, knowing them, we act in defiance of them: which is neglecting warnings in the worst sense possible. It aggravates the daringness; it aggravates the desperateness of sin: but it is so nevertheless. Supposing these warnings to be sent by Providence, or that we believe, and have reason to believe, and ought to believe, that they are so sent, then the aggravation is very great.

We have warnings of every kind. Even youth itself is continually warned, that there is no reliance to be placed either on strength or constitution or early age: that, if they count upon life as a thing to be reckoned

secure for a considerable number of years, they calculate most falsely; and if they act upon this calculation, by allowing themselves in the vices which are incidental to their years, under a notion that it will be long before they shall have to answer for them, and before that time come they shall have abundant season for repenting and amending; if they suffer such arguments to enter into their minds, and act upon them, then are they guilty of neglecting God in his warnings. They not only err in point of just reasoning, but they neglect the warnings which God has expressly set before them. Or, if they take upon themselves to consider religion as a thing not made or calculated for them; as much too serious for their years; as made and intended for the old and the dying; at least as what is unnecessary to be entered upon at present, as what may be postponed to a more suitable time of life: whenever they think thus, they think very presumptuously. They are justly chargeable with neglecting warnings. And what is the event? These postponers never enter upon religion at all, in earnest or effectually. That is the end and event of the matter. To account for this, shall we say, that they have so offended God by neglecting his warnings, as to have forfeited his grace? Certainly we may say, that this is not the method of obtaining his grace; and that his grace is necessary to our conversion. Neglecting warnings is not the way to obtain God's grace; and God's grace is necessary to conversion. The young, I repeat again, want not warnings. Is it new? is it unheard of? is it not, on the contrary, the intelligence of every week, the experience of every neighbourhood, that young men and young women are cut off? Man is, in every sense, a flower of the field. The flower is liable to be cut down in its bloom and perfection, as

well as in its withering and its decays. So is man: and one probable cause of this ordination of Providence is, that no one of any age may be so confident of life, as to allow himself to transgress God's laws; that all of every age may live in constant awe of their Maker.

I do admit that warnings come the thicker upon us as we grow old. We have more admonitions both in our remembrances and in our observations, and of more kinds. A man who has passed a long life has to remember preservations from danger, which ought to inspire him both with thankfulness and caution. Yet, I fear, we are very deficient in both these qualities. We call our preservations escapes, not preservations; and so we feel no thankfulness for them: nor do we turn them into religious cautions. When God preserved us, he meant to warn us. When such instances, therefore, have no effect upon our minds, we are guilty before God of neglecting his warnings. Most especially if we have occasion to add to all other reasons for gratitude this momentous question, What would have become of us, what would have been our condition, if we had perished in the danger by which our lives were threatened? The parable of the fig-tree (Luke xiii. 6.) is a most apt scripture for persons under the circumstances we have described. When the Lord had said, "Cut it down: why cumbereth it the ground?" he was entreated to try it one year longer; and then, if it proved not fruitful, to cut it down. Christ himself there makes the application twice over, (verses third and fifth,) "Except ye repent, ye shall all likewise perish." If the present, or if the then, state of our conscience and of our souls call up this reflection, then are we very guilty indeed, if such preservations leave no religious impression upon us: or if we suffer the

temporary impression to pass off without producing in us a change for the better.

Infirmities, whether they be of health, or of age, decay, and weakness, are warnings. And it has been asked, with some degree of wonder, why they make so little impression as they do? One chief reason is this. They who have waited for warnings of this kind, before they would be converted, have generally waited until they are become hardened in sin. Their habits are fixed. Their character has taken its shape and form. Their disposition is thoroughly infected and invested with sin. When it is come to this case, it is difficult for any call to be heard; for any warning to operate. It is difficult; but "with God all things are possible." If there be the will and the sincere endeavour to reform, the grace of God can give the power. Although, therefore, they who wait for the advances of age, the perception of decay, the probable approach of death, before they turn themselves seriously to religion, have waited much too long, have neglected and despised and defied many solemn warnings in the course of their lives; have waited indeed till it be next to impossible that they turn at all from their former ways: yet this is not a reason why they should continue in neglect of the warnings which now press upon them, and which at length they begin to perceive; but just the contrary. The effort is great, but the necessity is greater. It is their last hope and their last trial. I put the case of a man grown old in sin. If the warnings of old age bring him round to religion, happy is that man in his old age, above any thing he was in any other part of his life. But if these warnings do not affect him, there is nothing left in this world which will. We are not to set limits to God's grace, operating according to his

good pleasure; but we say, there is nothing *in this world*, there is nothing in the course of nature and the order of human affairs, which will affect him, if the feelings of age do not. I put the case of a man grown old in sin, and, though old, continuing the practice of sin: that, it is said, in the full latitude of the expression, describes a worse case than is commonly met with. Would to God the case was more rare than it is! But allowing it to be unusual in the utmost extent of the terms; in a certain considerable degree the description applies to many old persons. Many feel in their hearts, that the words “grown old in sin” belong to them in some sense which is very formidable. They feel some dross and defilement to be yet purged away; some deep corruption to be yet eradicated; some virtue or other to be yet even learnt, yet acquired, or yet however to be brought nearer to what it ought to be, than it has hitherto been brought. Now if the warnings of age taught us nothing else, they might teach us this: that if these things are to be done, they must be done soon; they must be set about forthwith in good earnest, and with strong resolution. The work is most momentous; the time is short. The day is far spent: the evening is come on: the night is at hand.

Lastly, I conceive that this discourse points out the true and only way of making old age comfortable; and that is, by making it the means of religious improvement. Let a man be beset by ever so many bodily complaints, bowed down by ever so many infirmities; if he find his soul grown and growing better, his seriousness increased, his obedience more regular and more exact, his inward principles and dispositions improved from what they were formerly, and continuing to improve; that man hath a fountain of comfort and con-

solation springing up within him. Infirmities which have this effect are infinitely better than strength and health themselves: though these, considered independently of their consequences, be justly esteemed the greatest of all blessings and of all gifts. The old age of a virtuous man admits of a different and of a most consoling description.

It is this property of old age, namely, that its proper and most rational comfort consists in the consciousness of spiritual amendment. A very pious writer gives the following representation of this stage of human life, when employed and occupied as it ought to be, and when life has been drawn to its close by a course of virtue and religion. “To the intelligent and virtuous,” says our author, “old age presents a scene of tranquil enjoyment, of obedient appetites, of well regulated affections, of maturity in knowledge, and of calm preparation for immortality. In this serene and dignified state, placed as it were on the confines of two worlds, the mind of a good man reviews what is past with the complacency of an approving conscience, and looks forward with humble confidence in the mercy of God, and with devout aspirations towards his eternal and ever increasing favour.”

## THE TERRORS OF THE LORD.

MATTHEW xvi. 26.

*What is a man profited, if he shall gain the whole world, and lose his own soul? or what shall a man give in exchange for his soul?*

THESE words ask a question, the most home to every man's concern of any that can possibly enter into his thoughts. What our Saviour meant to assert, though proposed to his hearers in the form of a question, (which indeed was only a stronger and more affecting way of asserting it,) is, that a man's soul, by which term is here meant his state after death, is so infinitely more important to him, so beyond and above any thing he can get, or any thing he can lose, any thing he can enjoy, or any thing he can suffer, on this side the grave, that nothing which the world offers can make up for the loss of it, or be a compensation when that is at stake. You say that this is very evident; I reply, that evident as it is, it is not thought of, it is not considered, it is not believed. The subject therefore is very proper to be set forth in those strong and plain terms which such a subject requires, for the purpose of obtaining for it some degree of that attention which each man's own deep interest in the event demands of him to give it.

There are two momentous ideas which are included in the expression—the loss of a man's soul; and these are the positive pain and sufferings which he will incur after his death; and the happiness and reward which he will forfeit. Upon both of these points we must go for information to the Scriptures. Nowhere else can

we receive any. Now, as to the first point, which is, in other words, *the punishment of hell*, I do admit, that it is very difficult to handle this dreadful subject properly; and one cause, amongst others, of the difficulty is, that it is not for one poor sinner to denounce such appalling terrors, such tremendous consequences, against another. Damnation is a word which lies not in the mouth of man, who is a worm, towards any of his fellow creatures whatsoever: yet it is absolutely necessary that the threatenings of Almighty God be known and published. Therefore we begin by observing, that the accounts which the Scriptures contain of the punishment of hell are, for the most part, delivered in figurative or metaphorical terms; that is to say, in terms which represent things of which we have no notion, by a comparison with things of which we have a notion. Therefore take notice what those figures and metaphors are. They are of the most dreadful kind which words can express: and, be they understood how they may, ever so figuratively, it is plain that they convey, and were intended to convey, ideas of horrible torment. They are such as these—"being cast into hell, where the worm dieth not, and where the fire is not quenched." It is "burning the chaff with unquenchable fire." It is "going into fire everlasting, which is prepared for the devil and his angels." It is "being cast with all his members into hell, where the worm dieth not, and the fire is not quenched." These are heart-appalling expressions; and were undoubtedly intended by the person who used them (who was no other than our Lord Jesus Christ himself) to describe terrible endurings; positive, actual pains of the most horrible kinds. I have said, that the punishment of hell is thus represented to us in figurative speech. I now say, that,

from the nature of things, it could hardly have been represented to us in any other. It is of the very nature of pain, that it cannot be known without being felt. It is impossible to give to any one an exact conception of it without his actually tasting it. Experience alone teaches its acuteness and intensity. For which reason, when it was necessary that the punishment of hell should be set forth in Scripture for our warning, and set forth to terrify us from our sins, it could only be done, as it has been done, by comparing it with sufferings of which we can form a conception, and making use of terms drawn from these sufferings. When words less figurative and more direct, but at the same time more general, are adopted, they are not less strong, otherwise than as they are more general. "Indignation and wrath, tribulation and anguish upon every soul of man that doeth evil." These are St. Paul's words. It is a short sentence, but enough to make the stoutest heart tremble: for, though it unfold no particulars, it clearly designates positive torment. The day of judgment itself, so far as it respects the wicked, is expressly called "*a day of wrath.*" The Lord Jesus, as to them, shall be revealed in flaming fire. How terrible a fate it must be, to find ourselves at that day the objects of God's wrath, the objects upon whom his threats and judgments against sin are now to be executed, the revelation of his righteous judgment and of his unerring truth to be displayed, may be conceived, in some sort, by considering what stores of inexhaustible misery are always in his power. With our present constitutions, if he do but touch the smallest, part of our bodies, if a nerve in many places goes wrong, what torture we endure! Let any man, who has felt, or rather whilst he is feeling, the agony of some bodily torment, only

reflect, what a condition that must be, which had to suffer this *continually*, which night and day was to undergo the same, without prospect of cessation or relief, and thus to go on: and then ask, for what he would knowingly bring himself into this situation; what pleasure, what gain, would be an inducement? Let him reflect, also, how bitter, how grinding an aggravation of his sufferings, as well as of his guilt, it must be, that he has wilfully and forewarned brought all this upon himself. May it not be necessary, that God should manifest his truth by executing his threats? May it not be necessary, that he should at least testify his justice, by placing a wide difference between the good and the bad? between virtue, which he loves, and vice, which he abhors? Which difference must consist in the different state of happiness and of misery in which the good and bad are finally placed. And may we not be made deserved sacrifices to this dispensation?

Now if any one feel his heart struck with the terrors of the Lord, with the consideration of this dreadful subject, and with the declarations of Scripture relating thereto, which will all have their accomplishment; let him be entreated, let him be admonished, to hold the idea, tremendous as it is, fully in his view, till it has wrought its effect, that is, till it has prevailed with him to part with his sins: and then we assure him, that to alarm, fright, and horror, will succeed peace, and hope, and comfort, and joy in the Holy Ghost. There is another way of treating the matter, and that is, to shake off the idea if we can; to drown it in intemperance; to overpower it with worldly business; to fly from it in all directions; but mostly in that which carries us to hurrying tumultuous diversions, to criminal indulgences, or into gross sensuality. Now of this course of

proceeding it is certain, that, if it lay the mind in any degree at ease in this life, it is at the expense of the inevitable destruction of our souls in the next; which is enough to say against it; but in truth it answers even its present purpose very imperfectly. It is a way of getting rid of the matter, with which even we ourselves are not satisfied. We are sensible that it is a false, treacherous, hollow way of acting towards our own souls. We have no trust in what we are doing. It leaves no peace, no hope, no comfort, no joy.

But to return to the direct subject of our discourse. The Scriptures uniformly represent the wicked, as not only suffering positive misery, but also as having lost, by their wickedness, the happiness of heaven, and as being sensible of their loss. They are repeatedly described as *cast out*, or as *shut out*, into outer darkness; whilst the good are entering into the joy of their Lord. This imports a knowledge of their own exclusion. In the parable of the rich man and Lazarus, the rich man being in torments is made to see Lazarus at rest. This teaches us, that the wicked will be so far informed of the state of the good, as to perceive and bewail, with unutterable anguish and regret, their own sad fate in being refused and rejected, when, had they acted differently, they would have been admitted to it. This is, strictly speaking, losing a man's soul: it is losing that happiness which his soul might have obtained, and for which it was made. And here comes the bitter addition of their calamity, that being lost it cannot be recovered. The heaven we hear of in Scripture, and the hell we hear of in Scripture, are a heaven and hell depending upon our behaviour in this life. So they are all along spoken of. "Indignation, wrath, tribulation, and anguish, upon every soul of man that *doeth evil*."

meaning evidently the evil done by him in this life; no other evil was in the apostle's thoughts. Or again, more expressly, "we must all appear before the judgment-seat of Christ, that every one may receive the things done in his body, according to that he hath done, whether it be good or bad." "The things done in the body" are the things taken into the account.

Now, by the side of this immense consequence of saving or of losing our immortal souls, place any difference that the things of this life can make to us; place riches and poverty, grandeur and humility, success or misfortune; place, more especially, the difference between possessing and sacrificing an unlawful gratification; between compassing and renouncing an unjust purpose; making or giving up an unfair gain; in a word, between the pleasures and temptations of vice, and the self-denials of virtue; and what do they amount to? The objects themselves are nothing, when put in competition with heaven and hell. Were it true, which it is not, that real, solid, inward happiness was proportioned either to outward circumstances, or to the indulgences of our appetites and passions; that the good things, as they are called, and pleasures of life were as satisfactory to the possessor, as they are, for the most part, deceitful and disappointing, still their duration is nothing. The oldest men, when they cast back their eyes to their past life, see it in a very narrow compass. It appears no more than a small interval cut out of eternal duration, both before and after it; when compared with that duration, as nothing. But we must add to this two other questions. Can life be counted upon to last to what is called old age? No man, who observes the deaths that take place in his neighbour. . hood, or amongst his acquaintance, will so compute,

Or, secondly, do the pleasures of sin last as long as our lives? We may answer, *never*: with the single dreadful exception of the sinner being cut off in his prime. Whoever looks for permanent happiness from the pleasures of sin will find himself miserably mistaken. They are short, even compared with our short lives; subject to casualties and disasters without number; transitory, not only as the things of this world are transitory, but in a much greater degree. It will be said, however, that though this observation may be true of the pleasures of sin, yet an advantage gained by sin, that is, by unrighteous, unconscientious means, may, nevertheless, remain an advantage as long as we live. This may sometimes be the case; and such advantage may be so long enjoyed, if that can be enjoyed, which has a fearful expectation and looking-for of judgment annexed to it. But what is the term of that enjoyment compared with the sequel? It is a moment, the twinkling of an eye, compared with a day; an hour compared with a year; a single day with a long life. It is less than these: for all these comparisons are short of the truth. Well, therefore, doth our Saviour ask, “What doth a man profit, if he gain the whole world, and lose his own soul?” That world, when gained, he could not keep: nor, if he could, would it make him happy.

But our Saviour delivered his powerful admonition, not so much for his disciples to reason upon, as to carry into practice: that is, that his words might strike into their souls upon these occasions, (which are but too many,) when the business, the bustle, or the allurements of the world are in danger of shutting out futurity from their thoughts. These are the times for calling to mind our Saviour's question. Whenever, therefore, we

are driving on in the career of worldly prosperity; meeting with success after success; fortunate, rich, and flourishing; when every thing appears to thrive and smile around us; but conscience, in the mean time, little heeded and attended to; the justice, the integrity, the uprightness of our ways and of our dealings, seldom weighed and scrutinized by us; religion very much, or entirely perhaps, out of the question with us; soothed and buoyed up with that self-applause which success naturally begets: in this no very uncommon state of soul, it will be well if we hear our Saviour's voice asking us, What does all this prosperity signify? If it do not lead to heaven, what is it worth? When the scene is shifted, if nothing but death and darkness remain behind; much more, if God Almighty be all this while offended by our forgetfulness both of his mercies and his laws, our neglect of his service, our indevotion, our thoughtlessness, our disobedience, our love of the world to the exclusion of all consideration of Him; if we be assured, and if, in reality, it be the case, that his displeasure shall infallibly overtake us at our death, what, in truth, under all this appearance of advantage, are we getting or gaining? The world may amuse us with names and terms of felicitation, with their praises or their envy, but wherein are we the better in the amount and result of substantial happiness? We have got our aim, and what is the end of it? Death is preparing to level us with the poorest of mankind; and after that, a fearful looking-for and expectation of judgment; no well-founded hopes of happiness beyond the grave; and we drawing sensibly nearer to that grave every year. This is the sum of the account. Or, which is another case no less apposite to our present argument, is it some sensual pleasure that tempts us, some wicked enjoyment

that has taken such hold of our passions, that we are ready to rush upon it, whatever be the consequence? If we gain our object, if we possess our wishes, we are happy: but what if we lose our own souls? What if we find ourselves condemned men, for hardly venturing upon crimes, which will, and which we were forewarned that they would, render us the objects of God's final indignation and displeasure? Will any gratifications which sin affords be a recompense or a consolation? Are they so even for the diseases, shame, and ruin, which they often bring upon men in this world? Ask those who are so ruined or so diseased. How much less, then, for the gnawings of that worm which dieth not; the burnings of that fire which will not be quenched! In hopeless torment, will it assuage our sufferings, or mitigate the bitterness of our self-accusation, to know that we have brought ourselves into this state for some transient pleasure, which is gone, lost, and perished for ever? Oh that we had thought of these things before, as we think of them now! That we had not been infidels, as touching our Lord's declaration! That we had believed in him; and that, believing that he had a perfect knowledge of the future fate of mankind, and of the truth of what he taught, we had listened in time to his admonition!

Universally the true occasion for remembering and applying the passage of Scripture before us is, when we are deliberating concerning the conduct we are to pursue, in the contests which arise between temptation and duty, between the flesh and the world, or between both united and our own souls. Be the temptation what it will, either in kind or' strength, this is the thought to be for ever set against it, that if we give way, we give way in exchange for our own souls; that

the perdition of the soul is set forth in Scripture in terms most tremendous, but not more tremendous than true; that the sinner, the man involved in unrepented, unforsaken sins, can never know how soon he may be reduced to this state.

## PRESERVATION AND RECOVERY FROM SIN.

TITUS ii. 11,12.

*For the grace of God that bringeth salvation hath appeared to all men, teaching us that, denying ungodliness and worldly lusts, we should live soberly, righteously, and godly, in this present world.*

THERE are certain particular texts of Scripture which are of inestimable use; for that in a few, short, clear words, they show us the sum of our duty. Such texts ought to be deeply infix'd and imprinted upon our memories; to be written indeed upon our hearts. The text which I have read to you is entitled to this distinction. No single sentence, that ever was written down for the direction of mankind, comprises more important truth in less room. The text gives us a rule of life and conduct: and tells us, that to lay down for mankind this rule, and enforce it by the promise of salvation, was a great object of the Gospel being published in the world. The Gospel might include other objects, and answer other purposes; but, as far as related to the regulation of life and conduct, this was its object and its purpose. The rule, you hear, is, that, "denying ungodliness and worldly lusts," we should live soberly, righteously, and godly, in this present world." We must begin "by *denying* ungodliness and worldly lusts:" which means, that we must resist or break off all sins of licentiousness, debauchery, and intemperance; for these are what are specifically meant by worldly lusts. And these must be *denied*; that is, they must either be withheld in the first instance, or the evil courses into which they have drawn us must be broken off.

When a rule of morals is plain and positive, it is seldom that there is any advantage in enlarging upon the rule itself. We only weaken it by dilating it. I shall employ, therefore, my present discourse in offering such heads of advice as may be likely, by God's blessing, to assist us in rendering obedience to the rule laid down for us; an obedience upon which salvation depends.

First, then, I observe concerning licentious practices, that it is most practicable to be entirely innocent; that it is a more easy thing to withstand them altogether than it is to set bounds to their indulgence. This is a point not sufficiently understood: though true, it is not believed. Men know not what they are doing when they enter upon vicious courses; what a struggle, what a contest, what misery, what torment, they are preparing for themselves. I trust that there is hardly a man or woman living, who enters into a course of sin with the design of remaining in it to the end; who can brave the punishment of hell; who intends to die in that state of sure perdition, to which a course of unrepented sin must bring him or her. No: that is not the plan even of the worst, much less of the generality of mankind. Their plan is to allow themselves to a certain length, and there stop; for a certain time, and then reform; in such and such opportunities and temptations, but in no more. Now to such persons and to such plans, I say this, that it would not have cost them one-tenth of the mortification, pain, and self-denial, to have kept themselves at a distance from sin, that it must and will cost them to break it off; adding the farther consideration, that, so long as men preserve their innocence, the consciousness of doing what is right is both the strongest possible support of their resolution, and the most constant source of

satisfaction to their thoughts: but that when men once begin to give way to vicious indulgences, another state of things takes place in their breasts. Disturbance at the heart, struggles and defeats, resolutions and relapses, self-reproach and self-condemnation, drive out all quietness and tranquillity of conscience. Peace within is at an end. All is unsettled. Did the young and inexperienced know the truth of this matter; how much easier it is to keep innocency than to return to it; how great and terrible is the danger that they do not return to it at all; surely they would see, and see in a light strong enough to influence their determination, that to adhere inviolably to the rules of temperance, soberness, and chastity, was their safety, their wisdom, their happiness. How many bitter thoughts does the innocent man avoid! Serenity and cheerfulness are his portion. Hope is continually pouring its balm into his soul. His heart is at rest, whilst others are goaded and tortured by the stings of a wounded conscience, the remonstrances and risings up of principles which they cannot forget; perpetually teased by returning temptations, perpetually lamenting defeated resolutions. “There is no peace unto the wicked, saith my God.” There is no comfort in such a life as this, let a man's outward circumstances be what they will. Genuine satisfaction of mind is not attainable under the recurring consciousness of being immersed in a course of sin, and the still remaining prevalence of religious principles. Yet either this must be the state of a sinner, till he recover again his virtuous courses, or it must be a state infinitely worse: that is, it must be a state of entire surrender of himself to a life of sin, which will be followed by a death of despair—by ruin, final and eternal—by the wrath of God—by the pains of hell,

But, secondly, in what manner, and by what methods, are sins to be broken off? For although the maxim which we have delivered be perfectly and certainly true, viz. that it is ease and happiness to preserve innocence entirely, compared with what it is to recover our innocence, or even to set bounds to guilt, yet it is a truth which all cannot receive. I do not mean that all will not acknowledge it, for I believe that those will be most ready to give their assent to it, who feel themselves bound and entangled by the chain of their sin. But it is not applicable to every man's case; because many, having already fallen into vicious courses, have no longer to consider how much better, how much happier, it would have been for them to have adhered closely to the laws of virtue and religion at first, but how to extricate themselves from the bad condition in which they are placed at present. Now to expect to break off sin, in any manner, without pain and difficulty, is a vain expectation. It is to expect a moral impossibility. Such expectations ought not to be held out, because they are sure to deceive; and because they who act under such encouragement, finding themselves deceived, will never persist in their endeavours to any purpose of actual reformation. All mankind feel a reluctance to part with their sins. It must be so. It arises from the very nature of temptation, by which they are drawn into sin. Feeling then this strong reluctance, it is very natural for men to do, what great numbers do, namely, propose to themselves to part with their sins by *degrees*; thinking that they can more easily do it in this way than in any other. It presents to their view a kind of compromise; a temporary hope of enjoying, for the present at least, the criminal pleasures to which they have addicted themselves, or the

criminal advantages they are making, together with the expectation of a final reform. I believe, as I have already said, that this is a course into which great numbers fall; and therefore it becomes a question of very great importance, whether it be a safe and successful course, or not. What I am speaking of is the trying to break off our sins by degrees. Now, in the first place, it is contrary to principle. A man is supposed to feel the guilt and danger of the practices which he follows. He must be supposed to perceive this, because he is supposed to resolve to quit them. His resolution is founded upon, springs from, this perception. Wherefore, I say, that it is in contradiction to principle to allow ourselves even once more to sin, after we have truly become sensible of the guilt, the danger, and the consequences of it. It is, from that time, known and wilful sin. I own I do not see how the plan of gradually diminishing a sinful habit can be consistent with, or can proceed from, sincere religious principles; for, as to what remains of the habit, it implies an express allowance of ourselves in sin, which is utterly inconsistent with sincerity. Whoever continues in the practice of any one known sin, in defiance of God's commands, cannot, so continuing, hope to find mercy; but, with respect to so much of the habit as is yet allowed by him to remain, he is so continuing, and his continuance is part of his plan. These attempts, therefore, at gradual reformation do not proceed from a true vital religious principle; which principle, succoured by God's grace, is the only thing that can stand against sin strengthened by habit. So L should reason upon the case, looking at it in its own nature. The next question is, How is it in fact? Is it in fact better? Is it in experience more successful than from its nature

we should expect it to be? Now I am much afraid, that all the proof which can be drawn, either from observation or consciousness, is against it. Of other men we must judge by observation; of ourselves by consciousness. What happens then to gradual reformation? Perpetual relapses, perpetually defeated and weakened resolutions. The principle of resistance is weakened by every relapse. Did the mortification of a defeat incite and quicken men to stronger efforts, it would be well. But it has a contrary effect; it renders every succeeding exertion more feeble. The checked indulgences which, in the progress of our fancied amendment, we allow ourselves, are more than sufficient to feed desire, to keep up the force and strength of temptation; nay, perhaps, the temptation acquires more force from the partial curb which we impose upon it. Then, while the temptation remains with unabated or perhaps augmented strength, our resolution is suffering continual relaxation; our endeavours become unsatisfactory even to ourselves. This miserable struggle cannot be maintained long. Although nothing but persevering in it could save us, we do not persevere. Finding not ease, but difficulty, increased and increasing difficulty, men give up the cause; that is, they try to settle themselves into some mode of thinking which may quiet their consciences and their fears. They fall back to their sins: and when they find their consciences easier, they think their guilt less; whereas it is only their conscience that is become more insensible; their reasoning more treacherous and deceitful! The danger is what it was, or greater; the guilt is so too. Would to God we could say, that gradual reforms were frequently successful! They are what men often attempt: they are; alas, what men usually fail in. It is painful to seem

to discourage endeavours of any kind after amendment: but it is necessary to advertise men of their danger. If one method of going about an important work be imposing in expectation, and yet, in truth, likely to end in ruin, can any thing be more necessary than to set forth this danger and this consequence plainly? This is precisely the case with gradual reforms. They do not very much alarm our passions; they soothe our consciences. They do not alarm our passions, because the absolute rupture is not to come yet. We are not yet entirely and totally to bid adieu to our pleasures and indulgences, never to enjoy or return to them any more. We only have in view to wean and withdraw ourselves from them by degrees; and this is not so harsh and formidable a resolution as the other. Yet it soothes our consciences. It presents the semblance and appearance of repenting and reforming. It confesses our sense of sin and danger. It takes up the purpose, it would fain encourage us with the hope of delivering ourselves from this condition. But what is the result? Feeding, in the mean time, and fomenting those passions which are to be controlled and resisted—adding, by every instance of giving way to them, fresh force and strength to habits which are to be broken off—our constancy is subdued before our work is accomplished. We continue yielding to the importunity of temptation. We have gained nothing by our miserable endeavour, but the mortification of defeat. Our sins are still repeated, The state of our salvation is where it was. Oh! it is a laborious, a difficult, a painful work to shake off sin; to change the course of a sinful life; to quit gratifications to which we have been accustomed, because we perceive them to be unlawful gratifications; and to find satisfaction in others, which are innocent and

virtuous. If in one thing more than another we stand in need of God's holy succour and assistance, of the aid and influence of his blessed Spirit upon our souls, it is in this work of reformation. But can we reasonably expect it whilst we are not sincere? And I say again, that the plan of gradual reformation is in contradiction to principle, and so far insincere. Is there not reason to believe that this may in some measure account for the failure of these resolutions?

But it will be asked of us, what better plan have we to offer? We answer, to break off our sins *at once*. This is properly to *deny* ungodliness and worldly lusts. This is truly to do what, according to the apostle, the grace of God teaches us to do. Acting thus, we may pray, we may humbly hope, for the assistance of God's Spirit in the work and struggle through which we have to go. And I take upon me to say, that all experience is in favour of this plan, in preference to that of a gradual reform; in favour of it, both with respect to practicability, and with respect to ease and happiness. We do not pretend but that a conflict with desire must be supported, but that great resolution is necessary; yet we teach, that the pain of the effort is lessened by this method, as far as it can be lessened at all. Passions *denied*, firmly denied and resisted, and not kept up by occasional indulgences, lose their power of tormenting. Habits, absolutely and totally disused, lose their hold. It is the nature of man. They then leave us at liberty to seek and to find happiness elsewhere, in better things; to enjoy, as well as to practise, virtue; to draw comfort from religion; to dwell upon its hopes; to pursue its duties; to acquire a love, a taste, and relish for its exercises and meditations.

One very general cause of entanglement in habits

of sin is the connexion which they have with our way of life, with our business, with the objects that are continually thrown in our way, with the practices and usages which prevail in the company we keep. Every condition of life has its particular temptation. And not only so, but when we have fallen into evil habits, these habits so mix themselves with our method of life, return so upon us at their usual times and places and occurrence of objects, that it becomes very difficult to break the habit without a general change of our whole system. Now I say, whenever this is a man's case, that he cannot shake off his sins without giving up his way of life, he must give up that also, let it cost what it will: for it is in truth no other sacrifice than what our Saviour himself in the strongest terms enjoins, when he bids his disciples to pluck out a right eye or cut off a right hand, (that is, surrender whatever is most dear or valuable to them,) that they be not cast with all their members into hell fire. If a trade or business cannot be followed without giving in to practices which conscience does not approve, we must relinquish the trade or business itself. If it cannot be followed without bringing us into the way of temptation to intemperance, more than we can withstand, or in fact do withstand, we must also relinquish it, and turn ourselves to some safer course. If the company we keep, the conversation we hear, the objects that surround us, tend to draw us, and do in fact draw us, into debauchery and licentiousness, we must fly from the place, the company, and the objects, no matter with what reluctance we do so, or what loss and inconvenience we suffer by doing it. This may appear to be a hard lesson: it is nevertheless what right reason dictates, and what, as hath already been observed, our Saviour

himself enjoins, in terms made as strong and forcible as he could make them.

Sometimes men are led by prudential motives, or by motives of mere inclination, to change their employment, their habitation, or their station of life. These occasions afford excellent and invaluable opportunities for correcting and breaking off any vicious habits which we may have contracted. It is when many associations, which give strength to a sinful habit, are interrupted and dissolved by the change which has taken place, that we can best resolve to conquer the sin, and set out upon a new course and a new life. The man who does not take advantage of such opportunities when they arise, has not the salvation of his soul at heart: nevertheless, they are not to be waited for.

But to those sudden changes which we recommend, will it be objected that they are seldom lasting? Is this the fact? Are they more liable to fail than attempts to change gradually? I think not. And there is always this difference between them. A sudden change is sincere at the time; a gradual change never is such, truly and properly: and this is a momentous distinction. In every view, and in every allowance, and in every plea of human frailty, we must distinguish between what is consistent with sincerity, and what is not. And in these two methods of setting" about a reformation, by reason of their different character in this respect, the first may, though with fear and humility, expect the help of God's aiding Spirit; the other hardly can. For whilst not by surprise and unpremeditately we fall into casual sins, but whilst by plan and upon system we allow ourselves in licences, which, though not so many or so great as before, are still, whenever they are indulged, so many known sins;

whilst, in a word, though we imagine ourselves to be in a progress of amendment, we yet deliberately continue to sin, our endeavours are so corrupted, I will not say by imperfection, but by insincerity, that we can hardly hope to call down upon them the blessing of Almighty God.

Reformation is never impossible; nor, in a strict sense, can it be said to be doubtful. Nothing is, properly speaking, doubtful, which it is in a man's power to accomplish; nothing is doubtful to us, but what is placed out of the reach of our will, or depends upon causes which we cannot influence: and this is not the case with reformation from sin. On the other hand, if we look to experience, we are compelled, though with grief of heart, to confess, that the danger is very great of a man who is engaged in a course of sin never reforming from his sin at all. Oh! let this danger be known. Let it stand, like a flaming sword, to turn us aside from the road to vice. Let it offer itself in its full magnitude. Let it strike, as it ought, the souls of those who are upon the brink, perhaps, of their whole future fate: who are tempted; and who are deliberating about entering upon some course of sin.

Let also the perception and conviction of this danger sink deep into the hearts of all who are in such a situation as that they must either reform or perish. They have it in their power, and it must now be their only hope, by strong and firm exertion, to make themselves an exception to the general lot of habitual sinners. It must be an exception. If they leave things to their course, they will share the fate in which they see others, involved in guilt like themselves, end their lives. It is only by a most strenuous effort they can rescue themselves from it. We apprise them, that their

## SERMONS

best hope is in a sudden and complete change, sincerely begun, faithfully persisted in; broken, it is possible, by human frailty, but never changed into a different plan, never declining into compromised, partial, gradual reform: on the contrary, resumed with the same sincerity as that with which it set out, and with a force of resolution, and an earnestness of prayer, increased in proportion to the clearer view they have acquired of their danger and of their want.

## THIS LIFE A STATE OF PROBATION.

PSALM cix. 71.

*It is good for me that I have been afflicted; that I might learn thy statutes.*

OF the various views under which human life has been considered, no one seems so reasonable as that which regards it as a state of probation; meaning, by a state of probation, a state calculated for trying us, and calculated for improving us. A state of complete enjoyment and happiness it certainly is not. The hopes, the spirits, and the inexperience of young men and young women are apt, and very willing, to see it in this light. To them life is full of entertainment: their relish is high, their expectations unbounded. For a very few years it is possible, and I think barely possible, that they may go on without check or interruption; but they will be cured of this delusion. Pain and sorrow, disease and infirmity, accident and disappointment, losses and distress, will soon meet them in their acquaintance, their families, or their persons. The hard-hearted for their own, the tender for others' woe, will always find and feel, enough at least to convince them, that this world was not made for a scene of perpetual gaiety or uninterrupted enjoyment.

Still less can we believe that it was made for a place of misery: so much otherwise, that misery is in no instance the end or object of contrivance. We are surrounded by contrivance and design. A human body is a cluster of contrivances. So is the body of every animal; so is the structure of every plant; so is even the vilest weed that grows upon the road side.

Contrivances, therefore, infinite in number, infinite also in variety, are all directed to beneficial purposes, and in a vast plurality of instances execute their purpose. In our own bodies, only reflect how many thousand things must go right for us to be an hour at ease. Yet at all times multitudes are so; and are so without being sensible how great a thing it is. Too much or too little of sensibility or of action, in any one of the almost numberless organs, or of any part of the numberless organs, by which life is sustained, may be productive of extreme anguish or of lasting infirmity. A particle, smaller than an atom in a sunbeam, may, in a wrong place, be the occasion of the loss of limbs, of senses, or of life. Yet under all this continual jeopardy, this momentary liability to danger and disorder, we are preserved. It is not possible, therefore, that this state could be designed as a state of misery, because the great tendency of the designs which we see in the universe is to counteract, to prevent, to guard against it. We know enough of nature to be assured, that misery—universal, irremediable, inexhaustible misery—was in the Creator's power, if he had willed it. Forasmuch therefore as the result is so much otherwise, we are certain that no such purpose dwelt in the divine mind.

But since, amidst much happiness, and amidst contrivances *for* happiness, so far as we can judge, (and of many we can judge,) misery, and very considerable portions of it, do exist, it becomes a natural inquiry, to what end this mixture of good and evil is properly adapted. And I think the Scriptures place before us, not only the true, (for, if we believe the Scriptures, we must believe it to be *that*,) but the most rational and satisfactory answer which can be given to the inquiry; namely, that it is intended for a state of trial and

probation. For it appears to me capable of proof, both that no state but one, which contained in it an admixture of good and evil, would be suited to this purpose; and also that our present state, as well in its general plan as in its particular properties, serves this purpose with peculiar propriety.

A state totally incapable of misery could not be a state of probation. It would not be a state in which virtue or vice could even be exercised at all; I mean that large class of virtues and vices which we comprehend under the name of social duties. The existence of these depends upon the existence of misery as well as of happiness in the world, and of different degrees of both: because their very nature and difference consists in promoting or preventing, in augmenting or diminishing, in causing, aggravating, or relieving the wants, sufferings, and distresses of our fellow-creatures. Compassion, charity, humanity, benevolence, nor even justice, could have any place in the world, if there were not human conditions to excite them; objects and sufferings upon which they might operate: misery, as well as happiness, which might be affected by them.

Nor would, in my opinion, the purposes of trial be sufficiently provided for, by a state in which happiness and misery regularly followed virtue and vice: I mean, in which there was no happiness but what was merited by virtue; no misery but what was brought on by vice. Such a state would be a state of retribution, not a state of probation. It may be our state hereafter; it may be a better state, but it is not a state of probation; it is not the state through which it is fitting we should pass before we enter into the other. For when we speak of a state of probation, we speak of a state in which the character may both be put to the proof, and also its

good qualities be confirmed and strengthened, it' not formed and produced, by having occasions presented, in which they may be called forth and required. Now, beside that the social qualities which have been mentioned would be very limited in their exercise, if there was no evil in the world but what was plainly a punishment, (for though we might pity, and even that would be greatly checked, we could not actually succour or relieve without disturbing the execution, or arresting as it were the hand of justice); beside this difficulty, there is another class of most important duties which would be in a great measure excluded. They are the severest, the sublimest, perhaps the most meritorious, of which we are capable: I mean patience and composure under distress, pain, and affliction; a steadfast keeping up of our confidence in God, and our dependance upon his final goodness, even at the time that every thing present is discouraging and adverse; and, what is no less difficult to retain, a cordial desire for the happiness and comfort of others, even then, when we are deprived of our own. I say, that the possession of this temper is almost the perfection of our nature. But it is then only possessed, when it is put to the trial: tried at all it could not have been in a life made up only of pleasure and gratification. Few things are easier than to perceive, to feel, to acknowledge, to extol the goodness of God, the bounty of Providence, the beauties of nature, when all things go well; when our health, our spirits, our circumstances conspire to fill our hearts with gladness, and our tongues with praise. This is easy; this is delightful. None but they who are sunk in sensuality, sottishness, and stupefaction, or whose understandings are dissipated by frivolous pursuits; none but the most giddy and insensible can be destitute of these senti-

merits. But this is not the trial, or the proof. It is in the chambers of sickness; under the stroke of affliction; amidst the pinchings of want, the groans of pain, the pressures of infirmity; in grief, in misfortune; through gloom and horror; that it will be seen, whether we hold fast our hope, our confidence, our trust in God; whether this hope and confidence be able to produce in us resignation, acquiescence, and submission. And as those dispositions, which perhaps form the comparative perfection of our moral nature, could not have been exercised in a world of unmixed gratification, so neither would they have found their proper office or object in a state of strict and evident retribution; that is, in which we had no sufferings to submit to, but what were evidently and manifestly the punishment of our sins. A mere submission to punishment, evidently and plainly such, would not have constituted, at least would very imperfectly have constituted, the disposition which we speak of, the true resignation of a Christian.

It seems therefore to be argued with very great probability, from the general economy of things around us, that our present state was meant for a state of probation; because positively it contains that admixture of good and evil which ought to be found in such a state to make it answer its purpose, the production, exercise, and improvement of virtue: and because negatively it could not be intended either for a state of absolute happiness, or a state of absolute misery, neither of which it is.

We may now also observe in what manner many of the evils of life are adjusted to this particular end, and how also they are contrived to soften and alleviate themselves and one another. It will be enough at present, if I can point out how far this is the case in the two

instances, which of all others the most nearly and seriously affect us, death and disease. The events of life and death are so disposed as to beget in all reflecting minds a constant watchfulness. "What I say unto you, I say unto all, watch." Hold yourselves in a constant state of preparation. "Be ready, for ye know not when your Lord cometh." Had there been assigned to our lives a certain age or period to which all, or almost all, were sure of arriving; in the younger part, that is to say, in nine-tenths of the whole of mankind, there would have been such an absolute security as would have produced, it is much to be feared, the utmost neglect of duty, of religion, of God, of themselves; whilst the remaining part would have been too much overcome with the certainty of their fate, would have too much resembled the condition of those who have before their eyes a fixed and appointed day of execution. The same consequence would have ensued if death had followed any known rule whatever. It would have produced security in one part of the species and despair in another. The first would have been in the highest degree dangerous to the character; the second insupportable to the spirits. The same observation we are entitled to repeat concerning the two cases of sudden death, and of death brought on by long disease. If sudden deaths never occurred, those who found themselves free from disease would be in perfect safety; they would regard themselves as out of the reach of danger. With all apprehensions they would lose all seriousness and all restraint: and those persons who the most want to be checked, and to be awakened to a sense of the consequences of virtue and vice, the strong, the healthy, and the active, would be without the greatest of all checks, that which arises from the constant liability of being

called to judgment. If there were no sudden deaths, the most awful warning which mortals can receive would be lost: that consideration which carries the mind the most forcibly to religion, which convinces us that it is indeed our proper concern, namely, the precariousness of our present condition, would be done away. On the other hand, if sudden deaths were too frequent, human life might become too perilous: there would not be stability and dependence either upon our own lives, or the lives of those with whom we were connected, sufficient to carry on the regular offices of human society. In this respect, therefore, we see much wisdom. Supposing death to be appointed as the mode (and some mode there must be) of passing from one state of existence to another, the manner in which it is made to happen conduces to the purposes of warning and admonition, without overthrowing the conduct of human affairs.

Of sickness, the moral and religious use will be acknowledged, and in fact is acknowledged, by all who have experienced it: and they who have not experienced it, own it to be a fit state for the meditations, the offices of religion. The fault, I fear, is, that we refer ourselves too much to that state. We think of these things too little in health, because we shall necessarily have to think of them when we come to die. This is a great fault: but then it confesses, what is undoubtedly true, that the sick-bed and the death-bed shall inevitably force these reflections upon us. In that it is right, though it be wrong in waiting till the season of actual virtue and actual reformation be past, and when consequently the sick-bed and the death-bed can bring nothing but uncertainty, horror, and despair. But my present subject leads me to consider sickness, not so

much as a preparation for death, as the trial of our virtue: of virtues the most severe, the most arduous, perhaps the best pleasing to Almighty God; namely, trust and confidence in him, under circumstances of discouragement and perplexity. To lift up the feeble hands and the languid eye; to draw and turn with holy hope to our Creator, when every comfort forsakes us, and every help fails; to feel and find in him, in his mercies, his promises, in the works of his providence, and still more in his word, and in the revelation of his designs by Jesus Christ, such rest and consolation to the soul, as to stifle our complaints and pacify our murmurs; to beget in our hearts tranquillity and confidence, in the place of terror and consternation, and this with simplicity and sincerity, without having, or wishing to have, one human witness to observe or know it, is such a test and trial of faith and hope, of patience and devotion, as cannot fail of being in a very high degree well pleasing to the Author of our nature, the guardian, the inspector, and the rewarder of our virtues. It is true in this instance, as it is true in all, that whatever tries our virtue strengthens and improves it. Virtue comes out of the fire purer and brighter than it went into it. Many virtues are not only proved but produced by trials: they have properly no existence without them. "We glory," saith St. Paul, "in tribulation also, knowing that tribulation worketh patience, and patience experience, and experience hope."

But of sickness we may likewise remark, how wonderfully it reconciles us to the thoughts, the expectation, and the approach of death, and how this becomes, in the hand of Providence, an example of one evil being made to correct another. Without question, the difference is wide between the sensations of a person who is

condemned to die by violence, and of one who is brought gradually to his end by the progress of disease; and this difference sickness produces. To the Christian, whose mind is not harrowed up by the memory of unrepented guilt, the calm and gentle approach of his dissolution has nothing in it terrible. In that sacred custody, in which they that sleep in Christ will be preserved, he sees a rest from pain and weariness, from trouble and distress. Gradually withdrawn from the cares and interests of the world; more and more weaned from the pleasures of the body, and feeling the weight and press of its infirmities, he may be brought almost to desire, with St. Paul, to be no longer absent from Christ; knowing, as he did, and as he assures us, that, "if our earthly house of this tabernacle were dissolved, we have a building of God, a house not made with hands, eternal in the heavens."

## THE KNOWLEDGE OF ONE ANOTHER IN A FUTURE STATE.

COLOSSIANS i. 28.

*Whom we preach, warning every man, and teaching every man in all wisdom; that we may present every man perfect in Christ Jesus.*

THESE words have a primary and a secondary use. In their first and most obvious view they express the extreme earnestness and anxiety with which the apostle Paul sought the salvation of his converts. To bring men to Jesus Christ, and, when brought, to turn and save them from their sins, and to keep them steadfast unto the end in the faith and obedience to which they were called, was the whole work of the great apostle's ministry, the desire of his heart, and the labour of his life: it was that in which he spent all his time, and all his thoughts; for the sake of which he traveled from country to country, warning every man, as he speaks in the text, and exhorting every man, enduring every hardship and every injury, ready at all times to sacrifice his life, and at last actually sacrificing it, in order to accomplish the great purpose of his mission, that he might at the last day present his beloved converts perfect in Christ Jesus. This is the direct scope of the text. But it is not for this that I have made choice of it. The last clause of the verse contains within it, indirectly and by implication, a doctrine certainly of great personal importance, and, I trust, also of great comfort, to every man who hears me. The clause is this, "that we may present every man perfect in Christ Jesus:" by which I understand St. Paul to express his hope and prayer, that at the general judgment of the

world he might present to Christ, as the fruits of his ministry, the converts whom he had made to his faith and religion, and might present them perfect in every good work. And if this be rightly interpreted, then it affords a manifest and necessary inference, that the saints in a future life will meet and be known again to one another; for how, without knowing again his converts in their new and glorious state, could St. Paul desire or expect to present them at the last day?

My brethren, this is a doctrine of real consequence. That we shall come again to a new life; that we shall, by some method or other, be made happy or be made miserable in that new state, according to the deeds done in the body, according as we have acted and governed ourselves in this world, is a point affirmed absolutely and positively in all shapes, and under every variety of expression, in almost every page of the New Testament. It is the grand point inculcated from the beginning to the end of that book. But concerning the particular nature of the change we are to undergo, and in what is to consist the employment and happiness of those blessed spirits which are received into heaven, our information, even under the Gospel, is very limited. We own it is so. Even St. Paul, who had extraordinary communications, confessed "that in these things we see through a glass darkly." But at the same time that we acknowledge that we know little, we ought to remember, that without Christ we should have known nothing. It might not be possible, in our present state, to convey to us by words, more clear or explicit conceptions of what will hereafter become of us; if possible, it might, not be fitting. In that celebrated chapter, the fifteenth of the Corinthians, St. Paul makes an inquisitive person ask, "How are the dead raised, and with what body do

they come?" From his answer to this question we are able, I think, to collect thus much clearly and certainly; that at the resurrection we shall have bodies of some sort or other: that they will be totally different from and greatly excelling our present bodies, though possibly in some manner or other proceeding from them, as a plant from its seed: that as there exists in nature a great variety of animal substances; one flesh of man, another of beasts, another of birds, another of fishes; as there exist also great differences in the nature, dignity, and splendour of inanimate substances, one glory of the sun, another of the moon, another of the stars; so there subsist likewise, in the magazines of God Almighty's creation, two very distinct kinds of bodies, (still both bodies,) a natural body and a spiritual body: that the natural body is what human beings bear about with them now; the spiritual body, far surpassing the other, what the blessed will be clothed with hereafter. "Flesh and blood," our apostle teaches, "cannot inherit the kingdom of God;" that is, is by no means suited to that state, is not capable of it. Yet living men are flesh and blood; the dead in the graves are the remains of the same: wherefore to make all, who are Christ's, capable of entering into his eternal kingdom, and at all fitted for it, a great change shall be suddenly wrought. As well all the just who shall be alive at the coming of Christ, (whenever that event takes place,) as those who shall be raised from the dead, shall in the twinkling of an eye be changed. Bodies they shall retain still, but so altered in form and fashion, in nature and substance, that "this corruptible shall put on incorruption;" what is now necessarily mortal and necessarily perishable shall acquire a fixed and permanent existence. And this is agreeable to, or rather the

same thing as what our apostle delivers in another epistle, where he teaches us, that Christ shall change our vile body, that it may be like his glorious body; a change so great, so stupendous, that he justly styles it an act of Omnipotence, “according,” says he, “to the mighty working whereby he is able to subdue all things to himself.” Since then a great alteration will take place in the frame and constitution of the bodies with which we shall be raised, from those which we carry with us to the grave, it requires some authority or passage of Scripture to prove, that after this change, and in this new state, we shall be known again to one another; that those who know each other on earth will know each other in heaven. I do allow that the general strain of Scripture seems to suppose it; that when St. Paul speaks “of the spirits of just men made perfect,” and of their “coming to the general assembly of saints,” it seems to import that we should be known of them, and of one another; that when Christ declares “that the secrets of the heart shall be disclosed,” it imports that they shall be disclosed to those who were before the witnesses of our actions. I do also think, that it is agreeable to the dictates of reason itself to believe that the same great God who brings men to life again, will bring those together whom death has separated. When his power is at work in this great dispensation, it is very probable that this should be a part of his gracious design. But for a specific text, I know none which speaks the thing more positively than this which I have chosen. St. Paul, you see, expected that he should know and be known to those his converts; that their relations should subsist and be retained between them; and with this hope he laboured and endeavoured instantly and incessantly, that he

might be able at last to present them, and to present them perfect in Christ Jesus. Now what St. Paul appeared to look for as to the general continuance, or rather revival, of our knowledge of each other after death, every man who strives, like St. Paul, to attain to the resurrection of the dead, may expect, as well as he. Having discoursed thus far concerning the doctrine itself, I will now proceed to enforce such practical reflections as result from it. Now it is necessary for you to observe, that all which is here produced from Scripture concerning the resurrection of the dead relates solely to the resurrection of the just. It is of them only that St. Paul speaks in the fifteenth chapter of the first Epistle to the Corinthians. It is of the body of him, who is accepted in Christ, that the apostle declares, "that it is sown in dishonour, but raised in glory; sown in weakness, raised in power." Likewise, when he speaks in another place of "Christ changing our vile bodies that they may be like his glorious body," it is of the bodies of Christ's saints alone of whom this is said. This point is, I think, agreed upon amongst learned men, and is indeed very plain. In like manner, in the passage of the text, and I think it will be found true of every other, in which mankind knowing one another in a future life is implied, the implication extends only to those who are received amongst the blessed. Whom was St. Paul to know? even those whom he was to present perfect in Christ Jesus. Concerning the reprobate and rejected, whether they will not be banished from the presence of God, and from all their former relations; whether they will not be lost, as to all happiness of their own, so to the knowledge of those who knew them in this mortal state, we have from Scripture no assurance or intimation whatever. One

thing seems to follow with probability from the nature of the thing, namely, that if the wicked be known to one another in a state of perdition, their knowledge will only serve to aggravate their misery.

What then is the inference from all this? Do we seek, do we covet, earnestly to be restored to the society of those who were once near and dear to us, and who are gone before? It is only by leading godly lives that we can hope to have this wish accomplished. Should we prefer to all delights, to all pleasures in the world, the satisfaction of meeting again, in happiness and peace, those whose presence, whilst they were amongst us, made up the comfort and enjoyment of our lives? It must be, by giving up our sins, by parting with our criminal delights and guilty pursuits, that we can ever expect to attain to this satisfaction. Is there a great difference between the thought of losing those we love for ever, of taking at their deaths or our own an eternal farewell, never to see them more; and the reflection that we are about to be separated, for a few years at the longest, to be united with them in a new and better state of mutual existence; is there, I say, a difference to the heart of man between these two things? And does it not call upon us to strive, with redoubled endeavours, that the case truly may turn out so? The more and more we reflect upon the difference between the consequences of a lewd, unthinking, careless, profane, dishonest life, and a life of religion, sobriety, seriousness, good actions, and good principles, the more we shall see the madness and stupidity of the one, and the true solid wisdom of the other. This is one of the distinctions. If we go on in our sins, we are not to expect to awaken to a joyful meeting with our friends and relatives and dear connexions. If we turn

away from our sins, and take up religion in earnest, we may. My brethren, religion disarms even death. It disarms it of that which is its bitterness and its sting, the power of dividing those who are dear to one another. But this blessing, like every blessing which it promises, is only to the just and good, to the penitent and reformed, to those who are touched at the heart with a sense of its importance; who know thoroughly and experimentally, who feel in their inward mind and consciences, that religion is the only course that can end well; that can bring either them or theirs to the presence of God, blessed for evermore; that can cause them, after the toils of life and struggle of death are over, to meet again in a joyful deliverance from the grave; in a new and never-ceasing happiness, in the presence and society of one another.

## THE GENERAL RESURRECTION.

JOHN v. 28, 29.

*The hour is coming, in the which all that are in the graves shall hear his voice, and shall come forth; they that have done good, unto the resurrection of life; and they that have done evil, unto the resurrection of damnation.*

THESE words are so important, that if Jesus Christ had never delivered any other, if he had come into the world and pronounced only this simple declaration, and proved the *truth* and *certainty* of it by the miracles which he wrought, he would have left enough to have guided his followers to everlasting happiness: he would have done more towards making mankind virtuous and happy than all the teachers and all the wisdom that ever appeared upon earth had done before him. We should each and every one of us have owed more to him, for this single piece of intelligence, than we owe to our parents, our dearest friend, or the best benefactor we have. This text is the poor man's creed. It is his religion: it is to be imprinted upon his memory and upon his heart: it is what the most simple can understand: it is what, when understood and believed, excels all the knowledge and learning in the universe: it is what we are to carry about with us in our thoughts, daily remember, and daily reflect upon; remember not only at church, not only in our devotions, or in our set meditations, but in our business, our pleasures, in whatever we intend, plan, or execute, whatever we think about, or whatever we set about; remember, that “they that have done good shall come unto the resurrection of life: they that have done evil unto the resurrection of damnation.”

Reflect what great things this short sentence contains. It teaches us, beyond contradiction, that all does not end here; that our happiness or misery is not over at our death; that a new state of things will begin with every one of us, and that in a short time. This point, I say, our Saviour proves beyond contradiction: and how does he prove it? By healing the sick, by restoring sight to the blind, by raising the dead, by various astonishing and incontestable miracles; and above all, by coming himself to life again, after being three days dead and buried, he *proved* that God Almighty was with him; that he came from God; that he knew what passed in the other world; that he had God's own authority to say and promise this to mankind. Upon the faith and trust of this promise, we know that we shall rise again: all are equally assured of it, from the highest to the lowest. Wise and learned men thought indeed the same thing before; they concluded it to be so from probable argument and reasonings: but this was not like having it as we have it, from God himself; or, what is just the same thing, from the mouth of a person to whom God gave witness by signs and wonders and mighty deeds. They were far short of our certainty who studied it most deeply. There were but few who could study or comprehend it at all. Blessed be God, we are all informed, we are all, from the most learned to the most ignorant, made sure and certain of it.

Having then this great doctrine secured, that we shall all come again into a new world and a new life, the next great point which every serious mind will turn to, the second grand question to be asked, is, who are to be happy, and who will be miserable in that other state? The text satisfies us completely upon this head. You ask, who shall come to the resurrection of life?

The text replies, they that have done good. Observe well, and never forget this answer. It is not the wise, the learned, the great, the honoured, the professor of this or that doctrine, the member of this church, or the maintainer of that article of faith, but *he* that doeth good; *he*, of whatever quality or condition, who strives honestly to make his life of service to those about him; to be useful in his calling, and to his generation; to his family, to his neighbourhood, and, according to his ability, to his country and to mankind; “*he* that doeth good.” All the rest, without this, goes for nothing, though he understand the things of religion ever so well, or believe ever so rightly; though he cry, Lord, Lord; be he ever so constant and devout in his prayers, or talk ever so much or so well or so earnestly for religion; unless he do good; unless his actions and dealings and behaviour come up to his knowledge and his discourse, correspond with his outward profession and belief, it will avail him nothing; he is not the man to whom Jesus Christ hath promised in the text, that he shall come to the resurrection of life. The issue of life and death is put upon our conduct and behaviour; that is made the *test* we are to be tried by.

Again; when we read in Scripture, when we know from positive and undoubted authority, that misery and destruction, ruin, torment, and damnation are reserved for some, it is surely the most natural, the most interesting of all inquiries to know for whom. The text tells us, “for them that have done evil.”

Here let the timorous conscience take courage. It is not any man's errors or ignorance; his want of understanding, or education, or ability, that will be laid to his charge at the day of judgment, or that will bring him into danger of the damnation which the Gospel

threatens; it is *having done evil*; having wilfully gone about to disobey what he knew to be the will and command of his Creator, by committing mischief, and doing wrong and injury to his fellow-creatures.

Let the bold and presumptuous sinner hear this text with fear and trembling. Let him who cares not what misery he occasions, what evil and harm he does, if he can but compass his purpose, carry his own end, or serve his wicked lusts and pleasures; let him, I say, be given to understand what he has to look for: “He that doeth evil shall come to the resurrection of damnation.” This is absolute, final, and peremptory: here is no exception, no excuse, no respect of person or condition.

They that have done good shall come again unto the resurrection of life. But, alas! I hear you say, What good can I do? my means and my opportunities are too small and straitened to think of doing good. You do not sufficiently reflect, what doing good is. You are apt to confine the notion of it to giving to others, and giving liberally. This, no doubt, is right and meritorious; but it is certainly not in every man's power; comparatively speaking, it is indeed in the power of very few. But doing good is of a much more general nature, and is, in a greater or less degree, practicable by all: for whenever we make one human creature happier or better than he would have been without our help, then we do good; and when we do this from a proper motive, that is, with a sense and a desire of pleasing God by doing it, then we do good in the true sense of the text, and of God's gracious promise. Now let every one in particular reflect, whether in this sense he has not some good in his power; some within his own doors, to his family, his children, his kindred; by his labour, his authority, his example, by bringing

them up, and keeping them in the way of passing their lives honestly, and quietly, and usefully. What good more important, more practicable, than this is? Again, something may be done beyond our own household: by acts of tenderness and kindness, of help and compassion, to our neighbours. Not a particle of this will be lost. It is all set down in the book of life; and happy are they who have much there! And again, if any of us be really sorry that we have not so much in our power as we would desire, let us remember this short rule, that since we can do little good, to take care that we do no harm. Let us show our sincerity by our innocence: that, at least, is always in our power.

Finally, let us reflect that in the habitations of life are many mansions; rewards of various orders and degrees, proportioned to our various degrees of virtue and exertion here. “He that soweth plenteously shall reap plenteously.” We can never do too much; never ‘be too earnest in doing good; because every good action here will, we are certain, be an addition of happiness hereafter; will advance us to a better condition in the life to come, whatever be our lot or success in this. God will not fail of his promise. He hath commissioned his beloved Son to tell us, that they that have done good shall enter into the resurrection of life. Let us humbly and thankfully accept his gracious offer. We have but one business in this world. It is to strive to make us worthy of a better. Whatever this trial may cost us; how long, how earnestly, how patiently soever, through whatever difficulties, by whatever toils, we endeavour to obey and please our Maker, we are supported in them by the solid and never-ceasing consolation, “that our labour is not in vain in the Lord.”

## ON PUBLIC OCCASIONS.

### CAUTION RECOMMENDED IN THE USE AND APPLICATION OF SCRIPTURE LANGUAGE.

[A Sermon preached July 17, 1777, in the Cathedral Church of Carlisle, at the Visitation of the Right Reverend Lord Bishop of Carlisle.]

2 PETER iii. 15, 16.

*Even as our beloved brother Paul also according to the wisdom given unto him hath written unto you; as also in all his epistles, speaking in them of these things; in which are some things hard to be understood, which they that are unlearned and unstable wrest, as they do also the other Scriptures, unto their own destruction.*

IT must not be dissembled that there are many real difficulties in the Christian Scriptures: whilst, at the same time, more, I believe, and greater may justly be imputed to certain maxims of interpretation, which have obtained authority without reason, and are received without inquiry. One of these, as I apprehend, is the expecting to find, in the present circumstances of Christianity, a meaning for, or something answering to, every appellation and expression which occurs in Scripture; or, in other words, the applying to the personal condition of Christians at this day, those titles, phrases, propositions, and arguments, which belong solely to the situation of Christianity at its first institution.

I am aware of an objection which weighs much with

many serious tempers, namely, that to suppose any part of Scripture to be inapplicable to us, is to suppose a part of Scripture to be useless; which seems to detract from the perfection we attribute to these oracles of our salvation. To this I can only answer, that it would have been one of the strangest things in the world, if the writings of the New Testament had not, like all other books, been composed for the apprehension, and consequently adapted to the circumstances, of the persons they were addressed to; and that it would have been equally strange, if the great, and in many respects the inevitable alterations, which have taken place in those circumstances, did not vary the application of Scripture language.

I design in the following discourse to propose some examples of this variation, from which you will judge, as I proceed, of the truth and importance of our general observation.

First; at the time the Scriptures were written, none were baptized but converts, and none were converted but from conviction; and conviction produced, for the most part, corresponding reformation of life and manners. Hence baptism was only another name for conversion, and conversion was supposed to be sincere: in this sense was our Saviour's promise, "He that believeth and is baptized shall be saved," (Mark xvi. 16); and in the same his command to St. Paul, "Arise, and be baptized, and wash away thy sins," (Acts xxii. 16): this was that baptism, "for the remission of sins," to which St. Peter invited the Jews upon the day of Pentecost, (Acts ii. 38); that "washing of regeneration," by which, as St. Paul writes to Titus, "he saved us." (Titus iii. 5.) Now when we come to speak of the baptism which obtains in most Christian churches

at present, where no conversion is supposed, or possible, it is manifest, that if these expressions be applied at all they must be applied with extreme qualification and reserve.

Secondly; the community of Christians were at first a handful of men connected amongst themselves by the strictest union, and divided from the rest of the world by a real difference of principle and persuasion, and, what was more observable, by many outward peculiarities of worship and behaviour. This society, considered collectively and as a body, were set apart from the rest of mankind for a more gracious dispensation, as well as actually distinguished by a superior purity of life and conversation. In this view, and in opposition to the unbelieving world, they were denominated in Scripture by titles of great seeming dignity and import; they were "elect," "called," "saints," (Rom. viii. 33. i. 6, 7); they were "in Christ," (Rom viii. 1); they were "a chosen generation, a royal priesthood, a holy nation, a peculiar people," (1 Pet. ii. 9.) That is, these terms were employed to distinguish the professors of Christianity from the rest of mankind, in the same manner as the names of Greek and Barbarian, Jew and Gentile, distinguished the people of Greece and Israel from other nations. The application of such phrases to the whole body of Christians is become now obscure; partly because it is not easy to conceive of Christians as a body at all, by reason of the extent of their name and numbers, and the little visible union that subsists among them; and partly, because the heathen world with whom they were compared, and to which comparison these phrases relate, is now ceased, or is removed from our observation. Supposing, therefore, these expressions to have a perpetual meaning, and either forgetting

the original use of them, or finding that, at this time, in a great measure exhausted and insignificant, we resort to a sense and an application of them easier, it may be, to our comprehension, but extremely foreign from the design of their authors, namely, to distinguish individuals amongst us, the professors of Christianity, from one another: agreeably to which idea the most flattering of these names, the “elect,” “called,” “saints,” have, by bold and unlearned men, been appropriated to themselves and their own party, with a presumption and conceit injurious to the reputation of our religion amongst “them that are without,” and extremely disgusting to the sober part of its professors; whereas, that such titles were intended in a sense common to all Christian converts is well argued from many places in which they occur, in which places you may plainly substitute the terms *convert*, or *converted*, for the strongest of these phrases, without any alteration of the author's meaning, e. g. “Dare any of you go to law before the unjust and not before the *saints?*” (1 Cor. vi. 1.) “Is any man *called* being circumcised, let him not become uncircumcised:” (I Cor. vii. 18.) “The church that is at Babylon, *elected* together with you, saluteth you:” (1 Pet. v. 13.) “Salute Andronicus and Junia, who were *in Christ* before me.” (Rom. xvi. 7.)

Thirdly; in opposition to the Jews, who were so much offended by the preaching of the Gospel to the Gentiles, St. Paul maintains, with great industry, that it was God Almighty's intention, from the first, to substitute at a fit season into the place of the rejected Israelites a society of men taken indifferently out of all nations under heaven, and admitted to be the people of God upon easier and more comprehensive terms: this is expressed in the Epistle to the Ephesians, as follows—“Having made

known unto us the mystery of his will, according to his good pleasure which he hath purposed in himself, that in the dispensation of the fulness of times he might gather together in one all things in Christ.” (Eph. i. 9, 10; also see iii. 5, 6.) This scheme of collecting such a society was what God foreknew before the foundation of the world; was what he did predestinate; was the eternal purpose which he purposed in Christ Jesus; and, by consequence, this society, in their collective capacity, where the objects of this foreknowledge, predestination, and purpose: that is, in the language of the apostles, they were they “whom he did foreknow,” they “whom he did predestinate,” (Rom, viii. 29); they were “chosen in Christ before the foundation of the world,” (Eph. i. 4); they were “elect according to the foreknowledge of God the Father.” (1 Pet. i. 2.) This doctrine has nothing in it harsh or obscure. But what have we made of it? The rejection of the Jews, and the adopting another community into their place, composed, whilst it was carrying on, an object of great magnitude in the attention of the inspired writers who understood and observed it. This event, which engaged so much the thoughts of the apostle, is now only read of, and hardly that—the reality and the importance of it are little known or attended to. Losing sight, therefore, of the proper occasion of these expressions, yet willing, after our fashion, to adapt them to ourselves, and finding nothing else in our circumstances that suited with them, we have learnt at length to apply them to the final destiny of individuals at the day of judgment; and upon this foundation has been erected a doctrine which lays the axe at once to the root of all religion, that of an absolute appointment to salvation or perdition, independent of ourselves or any thing we can do; and what is extraordinary, those very

arguments and expressions, (Rom. ix—xi.) which the apostle employed to vindicate the impartial mercies of God against the narrow and excluding claims of Jewish prejudice, have been interpreted to establish a dispensation the most arbitrary and partial that could be devised. Fourthly; the conversion of a grown person from Heathenism to Christianity, which is the case of conversion commonly intended in the epistles, was a change of which we have now no just conception: it was a new name, a new language, a new society; a new faith, a new hope; a new object of worship, a new rule of life: a history was disclosed full of discovery and surprise; a prospect of futurity was unfolded, beyond imagination awful and august: the same description applies in a great part, though not entirely, to the conversion of a Jew. This, accompanied as it was with the pardon of every former sin, (Rom. iii. 25.) was such an *sera* in a man's life, so remarkable a period in his recollection, such a revolution of every thing that was most important to him, as might well admit of those strong figures and significant allusions by which it is described in Scripture; it was a “regeneration,” (Tit. iii. 5.) or a new birth; it was to be “born again of God and of the Spirit,” (John i. 13. iii. 5); it was to be “dead to sin,” and “alive from the dead,” (Rom. vi. 2, 13); it was to be “buried with Christ in baptism, and raised together with him,” (Col. ii. 12); it was “a new creature,” (2 Cor. v. 17.) and “a new creation,” (Eph. iv. 24): it was a translation from the condition of “slaves to that of sons,” (Gal. iv. 7); from “strangers and foreigners, to be fellow-citizens with the saints, and of the household of God.” (Eph. ii. 19.) It is manifest that no change equal or similar to the conversion of a Heathen can be experienced by us, “or by any one educated in a

Christian country, and to whom the facts, precepts, and hopes of Christianity have been from his infancy familiar: yet we still retain the same language; and what has been the consequence? One sort of men, observing nothing in the lives of Christians corresponding to the magnificence, if I may so say, of these expressions, have been tempted to conclude, that the expressions themselves had no foundation in truth and nature, or in any thing but the enthusiasm of their authors. Others, again, understand these phrases to signify nothing more than that gradual amendment of life and conversation, which reason and religion sometimes produce in particular Christians: of which interpretation it is truly said, that it degrades too much the proper force of language, to apply expressions of such energy and import to an event so ordinary in its own nature, and which is common to Christianity with every other moral institution. Lastly: a third sort, in order to satisfy these expressions to their full extent, have imagined to themselves certain perceptible impulses of the Holy Ghost, by which, in an instant, and in a manner, no doubt, sufficiently extraordinary, they are “regenerate, and born of the Spirit;” they become “new creatures;” they are made the “sons of God,” who were before the “children of wrath;” they are “freed from sin” and “from death;” they are chosen and sealed, that is, without a possibility of fall, unto final salvation. Whilst the patrons of a more sober exposition have been often challenged, and sometimes confounded with the question—If such expressions of Scripture do not mean this, what do they mean? To which we answer, Nothing: nothing, that is, to us; nothing to be found, or sought for, in the present circumstances of Christianity.

More examples might be produced, in which the unwary use of Scripture language has been the occasion of difficulties and mistakes; but I forbear: the present are sufficient to show, that it behoves every one who undertakes to explain the Scriptures, before he determine to whom or what an expression is now-a-days to be applied, to consider diligently whether it admit of any such application at all; or whether it is not rather to be restrained to the precise circumstances and occasion for which it was originally composed.

I make no apology for addressing this subject to this audience, because whatever relates to the interpretation of Scripture, relates, as I conceive, to us: for if by any light we may cast upon these ancient books, we can enable and invite the people to read the Bible for themselves, we discharge, in my judgment, the first duty of our function; ever bearing in mind, that we are the ministers not of our own fame or fancies, but of the sincere gospel of Jesus Christ.

## ADVICE, ADDRESSED TO THE YOUNG CLERGY OF THE DIOCESE OF CARLISLE.

[In a Sermon, preached at a General Ordination holden at Rose Castle,  
on Sunday, July 29, 1781.]

1 TIMOTHY iv. 12.

*Let no man despise thy youth.*

THE author of this epistle, with many better qualities, possessed in a great degree what we at this day call a *knowledge of the world*. He knew, that although age and honours, authority of station, and splendour of appearance, usually command the veneration of mankind, unless counteracted by some degrading vice or egregious impropriety of behaviour; yet that where these advantages are wanting, where no distinction can be claimed from rank, importance from power, or dignity from years—in such circumstances, and under the inevitable depression of narrow fortunes, to procure and preserve respect requires both care and merit. The apostle also knew, and in the text taught his beloved convert, that to obtain the respect of those amongst whom he exercised his ministry was an object deserving the ambition of a Christian teacher: not indeed for his own sake, but for theirs; there being little reason to hope that any would profit by his instruction who despised his person.

If St. Paul thought an admonition of this sort worthy of a place in his Epistle to Timothy, it cannot surely be deemed either beside or beneath the solemnity of this occasion, to deliver a few practicable rules of life and behaviour, which may recommend you to the esteem of the people, to whose service and salvation you are now about to dedicate your lives and labours.

In the first place, the stations which you are likely, for some time at least, to occupy in the church, although not capable of all the means of rendering service and challenging respect which fall within the power of your superiors, are free from many prejudices that attend upon higher preferments. Interfering interests and disputed rights; or where there is no place for dispute, the very claim and reception of legal dues, so long as what is received by the minister is taken from the parishioner, form oftentimes an almost insuperable obstruction to the best endeavours that can be used to conciliate the good will of a neighbourhood. These difficulties perplex not *you*. In whatever contests with his parishioners the *principal* may be engaged, the *curate* has neither dispute nor demand to stand between him and the affections of his congregation.

Another and a still more favourable circumstance in your situation is this; being upon a level with the greatest part of your parishioners, you gain an access to their conversation and confidence, which is rarely granted to the superior clergy, without extraordinary address and the most insinuating advances on their parts. And this is a valuable privilege: for it enables you to inform yourselves of the moral and religious state of your flocks, of their wants and weaknesses, their habits and opinions, of the vices which prevail, and the principles from which they proceed; in a word, it enables you to study the distemper before you apply the remedy; and not only so, but to apply the remedy in the most commodious form, and with the best effect: by private persuasion and reproof, by gentle and unsuspected conveyances in the intimacy of friendship and opportunities of conversation. To this must be added the many occasions which the living in habits of so

ciety with your parishioners affords of reconciling dissensions, healing animosities, administering advice to the young and inexperienced, and consolation to age and misery. I put you in mind of this advantage, because the right use of it constitutes one of the most respectable employments, not only of our order, but of human nature; and leaves you, believe me, little to envy in the condition of your superiors, or to regret in your own. It is true, that this description supposes you to reside so constantly, and to continue so long, in the same parish, as to have formed some acquaintance with the persons and characters of your parishioners; and what scheme of doing good in your profession, or even of doing your duty, does not suppose this?

But whilst I recommend a just concern for our reputation, and a proper desire of public esteem, I would by no means flatter that passion for praise and popularity which seizes oftentimes the minds of young clergymen, especially when their first appearance in their profession has been received with more than common approbation. Unfortunate success! if it incite them to seek fame by affectation or hypocrisy, or lead, as vanity sometimes does, to enthusiasm and extravagance. This is not the taste or character I am holding out to your imitation. The popular preacher courts fame for its own sake, or for what he can make of it; the sincerely pious minister of Christ modestly invites esteem, only or principally, that it may lend efficacy to his instruction, and weight to his reproofs: the one seeks to be known and proclaimed abroad; the other is content with the silent respect of his neighbourhood, sensible that *that* is the theatre upon which alone his good name can assist him in the discharge of his duty.

It may be necessary likewise to caution you against

some awkward endeavours to lift themselves into importance, which young clergymen not unfrequently fall upon; such as a conceited way of speaking, new airs and gestures, affected manners, a mimicry of the fashions, language, and diversions, or even of the follies and vices of higher life; a hunting after the acquaintance of the great, a cold and distant behaviour towards their former equals, and a contemptuous neglect of their society. Nothing was ever gained by these arts, if they deserve the name of arts, but derision and dislike. Possibly they may not offend against any rule of moral probity; but if they disgust those with whom you are to live, and upon whom the good you do must be done, they defeat not only their own end, but, in a great measure, the very design and use of your vocation.

Having premised these few observations, I proceed to describe the qualities which principally conduce to the end we have at present in view, the possession of a fair and respected character.

And the first virtue (for so I will call it) which appears to me of importance for this purpose, is *frugality*. If there be a situation in the world in which profusion is without excuse, it is in that of a young clergyman who has little besides his profession to depend upon for his support. It is folly—it is ruin. Folly; for whether it aim at luxury or show, it must fall miserably short of its design. In these competitions we are outdone by every rival. The provision which clergymen meet with upon their entrance into the church is adequate in most cases to the wants and decencies of their situation, but to nothing more. To pretend to more, is to set up our poverty not only as the subject of constant observation, but as a laughing-stock to every observer. Profusion is ruin; for it ends, and soon too, in debt, in injustice,

and insolvency. You well know how meanly, in the country more especially, every man is thought of who cannot pay his credit; in what terms he is spoken of—in what light he is viewed—what a deduction this is from his good qualities—what an aggravation of his bad ones—what insults he is exposed to from his creditors, what contempt from all. Nor is this judgment far amiss. Let him not speak of honesty who is daily practising deceit; for every man who is not paid is deceived. Let him not talk of liberality who puts it out of his power to perform one act of it. Let him not boast of spirit, of honour, of independence, who fears the face of his creditors, and who meets a creditor in every street. There is no meanness in frugality: the meanness is in those shifts and expedients to which extravagance is sure to bring men. Profusion is a very equivocal proof of generosity. The proper distinction is not between him who spends and him who saves; for they may be equally selfish; but between him who spends upon himself, and him who spends upon others. When I extol frugality, it is not to praise that minute parsimony which serves for little but to vex ourselves and tease those about us, but to persuade you to *economy upon a plan*, and that plan deliberately adjusted to your circumstances and expectations. Set out with it, and it is easy; to retrieve, out of a small income, is not impossible. Frugality in this sense we preach, not only as an article of prudence, but as a lesson of virtue. Of this frugality it has been truly said, that it is the parent of liberty, of independence, of generosity.

A second essential part of a clergyman's character is *sobriety*. In the scale of human vices there may be some more criminal than drunkenness, but none so humiliating. A clergyman cannot, without infinite confusion, produce

himself in the pulpit before those who have been witnesses to his intemperance. The folly and extravagance, the rage and ribaldry, the boasts and quarrels, the idiotism and brutality of that condition, will rise up in their imaginations in full colours. To discourse of temperance, to touch in the remotest degree upon the subject, is but to revive his own shame. For you will soon have occasion to observe, that those who are the slowest in taking any part of a sermon to themselves, are surprisingly acute in applying it to the preacher.

Another vice, which there is the same, together with many additional reasons for guarding you against, is *dissoluteness*. In my judgment, the crying sin and calamity of this country at present is licentiousness in the intercourse of the sexes. It is a vice which hardly admits of argument or dissuasion. It can only be encountered by the censures of the good, and the discouragement it receives from the most respected orders of the community. What then shall we say, when they who ought to cure the malady propagate the contagion? Upon this subject bear away one observation, that when you suffer yourselves to be engaged in any unchaste connexion, you not only corrupt an individual by your solicitations, but debauch a whole neighbourhood by the profligacy of your example.

The habit I will next recommend, as the foundation of almost all other good ones, is retirement. Were I required to comprise my advice to young clergymen in one sentence, it should be in this, Learn to live alone. Half of your faults originate from the want of this faculty. It is impatience of solitude which carries you continually from your parishes, your home, and your duty; makes you foremost in every party of pleasure and place of diversion; dissipates your thoughts, distracts

your studies, leads you into expense, keeps you in distress, puts you out of humour with your profession, causes you to place yourselves at the head of some low company, or to fasten yourselves as despicable retainers on the houses and society of the rich. Whatever may be the case with those whose fortunes and opportunities can command a constant succession of company, in situations like ours to be able to pass our time with satisfaction alone, and at home, is not only a preservative of character, but the very secret of happiness. Do what we will, we must be much and often by ourselves; if this be irksome, the main portions of life will be unhappy. Besides which, we are not the less qualified for society, because we are able to live without it. Our company will be the more welcome for being never obtruded. It is with this as with many pleasures: he meets with it the oftenest, and enjoys it the best, who can most easily dispense with the want of it.

But what, you say, shall I do alone? reading is my proper occupation and my pleasure, but books are out of my reach, and beyond my purchase. They who make this complaint are such as seek nothing from books but amusement, and find amusement in none but works of narrative or imagination. This taste, I allow, cannot be supplied by any moderate expense or ordinary opportunities: but apply yourselves to study; take in hand any branch of useful science, especially those parts of it which are subsidiary to the knowledge of religion, and a few books will suffice; for instance, a commentary upon the New Testament, read so as to be remembered, will employ a great deal of leisure very profitably. There is likewise another resource which you have forgot, I mean the composition of sermons. I am far from refusing you the benefit of other men's

labours; I only require that they be called in not to flatter laziness, but to assist industry. You find yourself unable to furnish a sermon every week; try to compose one every month: depend upon it you will consult your own satisfaction, as well as the edification of your hearers; and that however inferior your compositions may be to those of others in some respects, they will be better delivered and better received; they will compensate for many defects by a closer application to the ways and manners, the actual thoughts, reasoning, and language, the errors, doubts, prejudices, and vices, the habits, characters, and propensities of your congregation, than can be expected from borrowed discourses—at any rate, you are passing your time virtuously and honourably.

With retirement, I connect reserve: by which I mean, in the first place, some degree of delicacy in the choice of your company, and of refinement in your pleasures. Above all things, keep out of public houses—you have no business there—your being seen to go in and out of them is disgraceful—your presence in these places entitles every man who meets you there to affront you by coarse jests, by indecent or opprobrious topics of conversation—neither be seen at drunken feasts, boisterous sports, late hours, nor barbarous diversions—let your amusements, like every thing about you, be still and quiet and unoffending. Carry the same reserve into your correspondence with your superiors. Pursue preferment, if any prospects of it present themselves, not only by honourable means, but with moderate anxiety. It is not essential to happiness, perhaps not very conducive—were it of greater importance than it is, no more successful rule could be given you than to do your duty quietly and contentedly, and to let things

take their course. You may have been brought up with different notions, but be assured, that for once, that preferment is forfeited by modesty, it is ten times lost by intrusion and importunity. Every one sympathizes with neglected merit; but who shall lament over repulsed impudence?

The last expedient I shall mention, and, in conjunction with the others, a very efficacious one towards engaging respect, is seriousness in your deportment, especially in discharging the offices of your profession. Salvation is so awful a concern, that no human being, one would think, could be pleased with seeing it, or any thing belonging to it, treated with levity. For a moment, in a certain state of the spirits, men may divert themselves, or affect to be diverted, by sporting with their most sacred interests; but no one in his heart derides religion long. What are we—any of us? Religion soon will be our only care and friend. Seriousness, therefore, in a clergyman is agreeable, not only to the serious, but to men of all tempers and descriptions. And seriousness is enough: a prepossessing appearance, a melodious voice, a graceful delivery, are indeed enviable accomplishments; but much, we apprehend, may be done without them. The great point is, to be thought in earnest. Seem not then to be brought to any part of your duty by constraint, to perform it with reluctance, to go through it in haste, or to quit it with symptoms of delight. In reading the services of the church, provided you manifest a consciousness of the meaning and importance of what you are about, and betray no contempt of your duty or of your congregation, your manner cannot be too plain and simple. Your common method of speaking, if it be not too low or too rapid, do not alter, or only so much as to be heard

distinctly. I mention this, because your elocution is more apt to offend by straining and stiffness, than on the side of ease and familiarity. The same plainness and simplicity which I recommend in the delivery, prefer also in the style and composition of your sermons. Ornaments, or even accuracy of language, cost the writer much trouble, and produce small advantage to the hearer. Let the character of your sermons be truth and information, and a *decent particularity*. Propose one point in one discourse, and stick to it: a hearer never carries away more than one impression. Disdain not the old fashion of dividing your sermons into heads—in the hands of a master, this may be dispensed with; in yours, a sermon which rejects these helps to perspicuity, will turn out a bewildered rhapsody, without aim or effect, order or conclusion. In a word, strive to make your discourses useful, and they who profit by your preaching will soon learn, and long continue, to be pleased with it.

I have now finished the enumeration of those qualities which are required in the clerical character, and which, wherever they meet, make even youth venerable, and poverty respected; which will secure esteem under every disadvantage of fortune, person, and situation, and notwithstanding great defects of abilities and attainments. But I must not stop here; a good name, fragrant and precious as it is, is by us only valued in subserviency to our duty, in subordination to a higher reward. If we are more tender of our reputation, if we are more studious of esteem than others, it is from a persuasion, that by first obtaining the respect of our congregation, and next by availing ourselves of that respect to promote amongst them peace and virtue, useful knowledge and benevolent dispositions, we are

purchasing to ourselves a reversion and inheritance valuable above all price, important beyond every other interest or success.

Go, then, into the vineyard of the Gospel, and may the grace of God go with you! The religion you preach is true. Dispense its ordinances with seriousness, its doctrines with sincerity—urge its precepts, display its hopes, produce its terrors—“be sober, be vigilant”—“have a good report”—confirm the faith of others, testify and adorn your own, by the virtues of your life and the sanctity of your reputation—be peaceable, be courteous; condescending to men of the lowest condition—“apt to teach, willing to communicate;” so far as the immutable laws of truth and probity will permit, “be every thing unto all men, that ye may gain some.”

The world will requite you with its esteem. The awakened sinner, the enlightened saint, the young whom you have trained to virtue, the old whom you have visited with the consolations of Christianity, shall pursue you with prevailing blessings and effectual prayers. You will close your lives and ministry with consciences void of offence, and full of hope. To present at the last day even one recovered soul, reflect how grateful an offering it will be to *Him*, whose commission was to save a world. Infinitely, no doubt, but still only in degree, does our office differ from *His*—himself the first-born; it was the business of his life, the merit of his death, the counsel of his Father's love, the exercise and consummation of his own, “to bring many brethren unto glory.”

## A DISTINCTION OF ORDERS IN THE CHURCH DEFENDED UPON PRINCIPLES OF PUBLIC UTILITY.

[In a Sermon, preached in the Castle Chapel, Dublin, at the Consecration of John Law, D. D. Lord Bishop of Clonfert and Kilmacduagh, Sept. 21, 1782.]

EPHESIANS iv. 11, 12.

*And he gave some, apostles; and some, prophets; and some, evangelists; and some, pastors and teachers; for the perfecting of the saints, for the work of the ministry, for the edifying of the body of Christ.*

IN our reasoning and discourses upon the rules and nature of the Christian dispensation, there is no distinction which ought to be preserved with greater care than that which exists between the institution, as it addresses the conscience and regulates the duty of particular Christians, and as it regards the discipline and government of the Christian church. It was our Saviour's design, and the first object of his ministry, to afford to a lost and ignorant world such discoveries of their Creator's will, of their own interest and future destination; such assured principles of faith, and rules of practice; such new motives, terms, and means of obedience; as might enable all, and engage many, to enter upon a course of life which, by rendering the person who pursued it acceptable to God, would conduct him to happiness in another stage of his existence.

It was a second intention of the Founder of Christianity, but subservient to the former, to associate those who consented to take upon them the profession of his faith and service into a separate community, for the purpose of united worship and mutual edification, for the

better transmission and manifestation of the faith that was delivered to them, but principally to promote the exercise of that fraternal disposition which their new relation to each other, which the visible participation of the same name and hope and calling was calculated to excite.

From a view of these distinct parts of the evangelic dispensation, we are led to place a real difference between the religion of particular Christians and the polity of Christ's church. The one is personal and individual—acknowledges no subjection to human authority—is transacted in the heart—is an account between God and our own consciences alone: the other, appertaining to society, (like every thing which relates to the joint interest, and requires the cooperation of many persons,) is visible and external—prescribes rules of common order, for the observation of which we are responsible not only to God, but to the society of which we are members, or, what is the same thing, to those with whom the public authority of the society is deposited.

But the difference which I am principally concerned to establish consists in this, that whilst the precepts of Christian morality and the fundamental articles of the faith are, for the most part, precise and absolute, are of perpetual, universal, and unalterable obligation; the laws which respect the discipline, instruction, and government of the community are delivered in terms so general and indefinite, as to admit of an application adapted to the mutable condition and varying exigencies of the Christian church. "As my Father hath sent me, so send I you." "Let every thing be done decently and in order." "Lay hands suddenly on no man." "Let him that ruleth do it with diligence." "The things which thou hast heard of me, the same commit thou to faithful men, who shall be able to teach others also." "For this

cause left I thee, that them shouldest set in order the things that are wanting, and ordain elders in every city."

These are all general directions, supposing, indeed, the existence of a regular ministry in the church, but describing no specific order of preeminence or distribution of office and authority. If any other instances can be adduced more circumstantial than these, they will be found, like the appointment of the seven deacons, the collections for the saints, the laying by in store upon the first day of the week, to be rules of the society, rather than laws of the religion—recommendations and expedients fitted to the state of the several churches by those who then administered the affairs of them, rather than precepts delivered with a solemn design of fixing a constitution for succeeding ages. The just ends of religious as of civil union are eternally the same; but the means by which these ends may be best promoted and secured will vary with the vicissitudes of time and occasion, will differ according to the local circumstances, the peculiar situation, the improvement, character, or even the prejudices and passions of the several communities upon whose conduct and edification they are intended to operate.

The apostolic directions which are preserved in the writings of the New Testament seem to exclude no ecclesiastical constitution which the experience and more instructed judgment of future ages might find it expedient to adopt. And this reserve, if we may so call it, in the legislature of the Christian church, was wisely suited to its primitive condition, compared with its expected progress and extent. The circumstances of Christianity in the early period of its propagation were necessarily very unlike those which would take place when it became the established religion of great

nations. The rudiments, indeed, of the future plant were involved within the grain of mustard-seed, but still a different treatment was required for its sustentation when the birds of the air lodged amongst its branches. A small select society under the guidance of inspired teachers, without temporal rights and without property, founded in the midst of enemies, and living in subjection to unbelieving rulers, divided from the rest of the world by many singularities of conduct and persuasion, and adverse to the idolatry which public authority every where supported, differed so much from the Christian church after Christianity prevailed as the religion of the state; when its economy became gradually interwoven with the civil government of the country; when the purity and propagation of its faith were *left* to the ordinary expedients of human instruction and an authentic Scripture; when persecution and indigence were to be succeeded by legal security and public provision—clandestine and precarious opportunities of hearing the word and communicating in the rites of Christianity, by stationary pastors and appropriated seasons, as well as places of religious worship and resort: I say, the situation of the Christian community was so different in the infant and adult state of Christianity, that the highest inconvenience would have followed from establishing a precise constitution which was to be obligatory upon both: the same disposition of affairs which was most commodious and conducive to edification in the one, becoming probably impracticable under the circumstances, or altogether inadequate to the wants, of the other.

What farther recommends the forbearance observable in this part of the Christian institution, is the consideration, that as Christianity solicited admission into every

country in the world, it cautiously refrained from interfering with the municipal regulations or civil condition of any. Negligent of every view, but what related to the deliverance of mankind from spiritual perdition, the Saviour of the world advanced no pretensions which, by disturbing the arrangements of human polity, might present an obstacle to the reception of his faith. We may ascribe it to this design, that he left the laws of his church so open and indeterminate, that whilst the ends of religious communion were sufficiently declared, the form of the society might be assimilated to the civil constitution of each country, to which it should always communicate strength and support in return for the protection it received. If there be any truth in these observations, they lead to this temperate and charitable conclusion, "that Christianity may be professed under any form of church government."

But though all things are lawful, all things are not expedient. If we concede to other churches the Christian legality of their constitution, so long as Christian worship and instruction are competently provided for, we may be allowed to maintain the advantage of our own, upon principles which all parties acknowledge—considerations of public utility. We may be allowed to contend, that whilst we imitate, so far as a great disparity of circumstances permits, the example, and what we apprehend to be the order, of the apostolic age, our church and ministry are inferior to none in the great object of their institution, their suitableness to promote and uphold the profession, knowledge, and influence of pure Christianity. The separation of a particular order of men for the work of the ministry—the reserving to these exclusively the conduct of public worship and the preaching of the word—the distribution of the country

into districts, and the assigning of each district to the care and charge of its proper pastor—lastly, the appointment to the clergy of a maintenance independent of the caprice of their congregation, are measures of ecclesiastical policy which have been adopted by every national establishment of Christianity in the world. Concerning these points there exists no controversy. The chief article of regulation upon which the judgment of some Protestant churches dissents from ours is, that whilst they have established a perfect parity among their clergy, we prefer a distinction of orders in the church, not only as recommended by the usage of the purest times, but as better calculated to promote, what all churches must desire, the credit and efficacy of the sacerdotal office.

The force and truth of this last consideration I will endeavour to evince.

First; the body of the clergy, in common with every regular society, must necessarily contain some internal provision for the government and correction of its members. Where a distinction of orders is not acknowledged, this government can only be administered by synods and assemblies, because the supposition of equality forbids the delegation of authority to single persons. Now, although it may be requisite to consult and collect the opinions of a community, in the momentous deliberations which ought to precede the establishment of those public laws by which it is to be bound; yet in every society the execution of these laws, the current and ordinary affairs of its government, are better managed by fewer hands. To commit personal questions to public debate, to refer every case and character which requires animadversion, to the suffrages and examination of a numerous assembly, what is

it, but to feed and to perpetuate contention, to supply materials for endless altercation, and opportunities for the indulgence of concealed enmity and private prejudices? The complaint of ages testifies with how much inflammation, and how little equity, ecclesiastical conventions have conducted their proceedings; how apt intrigue has ever been to pervert inquiry, and clamour to confound discussion. Whatever may be the other benefits of equality, peace is best secured by subordination. And if this be a consideration of moment in every society, it is of peculiar importance to the clergy. Preachers of peace, ministers of charity and of reconciliation to the world, that constitution surely ill befits their office and character which has a tendency to engage them in contests and disputes with one another.

Secondly; the appointment of various orders in the church may be considered as the stationing of ministers of religion in the various ranks of civil life. The distinctions of the clergy ought, in some measure, to correspond with the distinctions of lay society, in order to supply each class of the people with a clergy of their own level and description, with whom they may live and associate upon terms of equality. This reason is not imaginary nor insignificant. The usefulness of a virtuous and well-informed clergy consists neither wholly nor principally in their public preaching, or the stated functions of their order. It is from the example and in the society of such persons that the requisites which prepare the mind for the reception of virtue and knowledge, a taste for serious reflection and discourse, habits of thought and reasoning, a veneration for the laws and awful truths of Christianity, a disposition to inquire and a solicitude to learn, are best gained; at least, the decency of deportment, the sobriety of manners and

conversation, the learning, the gravity, which usually accompany the clerical character, insensibly diffuse their influence over every company into which they are admitted. Is it of no importance to provide friends and companions of this character for the superior as well as for the middle order of the community? Is it flattery to say, that the manners and society of higher life would suffer some deprivation from the loss of so many men of liberal habits and education, who at present, by occupying elevated stations in the church, are entitled to be received into its number? This intercourse would cease if the clergy were reduced to a level with one another, and, of consequence, with the inferior part of the community. These distinctions, whilst they prevail, must be complied with. How much soever the moralist may despise, or the divine overlook, the discriminations of rank, which the rules or prejudices of modern life have introduced into society; when we have the world to instruct and to deal with, we must take and treat it as it is, not as the wishes or the speculations of philosophy would represent it to our view. When we describe the public as peculiarly interested in every thing which affects, though but remotely, the character of the great and powerful, it is not that the soul of the rich man is more precious than the salvation of the poor, but because his virtues and his vices have a more considerable and extensive effect.

Thirdly; they who behold the privileges and emoluments of the superior clergy with the most unfriendly inclination, profess nevertheless to wish that the order itself should be respected; but how is this respect to be procured? It is equally impossible to invest every clergyman with the decorations of affluence and rank, and to maintain the credit and reputation of an order

which is altogether destitute of these distinctions. Individuals, by the singularity of their virtue or their talents, may surmount all disadvantages; but the order will be contemned. At present, every member of our ecclesiastical establishment communicates in the dignity which is conferred upon a few—every clergyman shares in the respect which is paid to his superiors—the ministry is honoured in the persons of prelates. Nor is this economy peculiar to our order. The profession of arms and of the law derive their lustre and esteem, not merely from their utility, (which is a reason only to the few,) but from the exalted place in the scale of civil life which hath been wisely assigned to those who fill stations of power and eminence in these great departments. And if this disposition of honours be approved in other kinds of public employment, why should not the credit and liberality of ours be upheld by the same expedient?

Fourthly; rich and splendid situations in the church have been justly regarded as prizes held out to invite persons of good hopes and ingenious attainments to enter into its service. The value of the prospect may be the same, but the allurement is much greater, where opulent shares are reserved to reward the success of a few, than where, by a more equal partition of the fund, all indeed are competently provided for, but no one can raise even his hopes beyond a penurious mediocrity of subsistence and situation. It is certainly of consequence that young men of promising abilities be encouraged to engage in the ministry of the church, otherwise our profession will be composed of the refuse of every other. None will be found content to stake the fortune of their lives in this calling, but they whom slow parts, personal defects, or a depressed condition of birth and education, preclude from advancement in any

other. The vocation in time comes to be thought mean and uncreditable—study languishes—sacred erudition declines—not only the order is disgraced, but religion itself disparaged in such hands. Some of the most judicious and moderate of the presbyterian clergy have been known to lament this defect in their constitution. They see and deplore the backwardness in youth of active and well-cultivated faculties to enter into the church, and their frequent resolutions to quit it. Again, if a gradation of orders be necessary to invite candidates into the profession, it is still more so to excite diligence and emulation, to promote an attention to character and public opinion, when they are in it; especially to guard against that sloth and negligence into which men are apt to fall who are arrived too soon at the limits of their expectations. We will not say, that the race is always to the swift, or the prize to the deserving; but we have never known that age of the church in which the advantage was not on the side of learning and decency.

These reasons appear to me to be well founded; and they have this in their favour, that they do not suppose too much: they suppose not any impracticable precision in the reward of merit, or any greater degree of disinterestedness, circumspection, and propriety in the bestowing of ecclesiastical preferment, than what actually takes place. They are, however, much strengthened, and our ecclesiastical constitution defended with yet greater success, when men of conspicuous and acknowledged merit are called to its superior stations: “when it goeth well with the righteous, the city rejoiceth.” When pious labours and exemplary virtue, when distinguished learning or eminent utility, when long or arduous services are repaid with affluence and dignity, when a life of severe and well-directed application to the

studies of religion, when wasted spirits and declining health are suffered to repose in honourable leisure, the good and wise applaud a constitution which has provided such things for such men.

Finally; let us reflect that these, after all, are but secondary objects. Christ came not to found an empire upon earth, or to invest his church with temporal immunities. He came “to seek and to save that which was lost;” to purify to himself, from amidst the pollutions of a corrupt world, “a peculiar people, zealous of good works.” As far as our establishment conduces to forward and facilitate these ends, so far we are sure it falls in with his design, and is sanctified by his authority. And whilst they who are intrusted with its government employ their cares, and the influence of their stations, in judicious and unremitting endeavours to enlarge the dominion of virtue and of Christianity over the hearts and affections of mankind, whilst “by pureness, by knowledge,” by the aids of learning, by the piety of their example, they labour to inform the consciences and improve the morals of the people committed to their charge, they secure to themselves, and to the church in which they preside, peace and permanency, reverence and support. What is infinitely more, they “save their own souls;” they prepare for the approach of that tremendous day when Jesus Christ shall return again to the world and to his church, at once the gracious rewarder of the toils, and patience, and fidelity of his servants, and the strict avenger of abused power and neglected duty.

## THE USE AND PROPRIETY OF LOCAL AND OCCASIONAL PREACHING.

[A Charge, delivered to the Clergy of the Diocese of Carlisle, in the year 1790.]

REVEREND BRETHREN,—The late archbishop Seeker, whose memory is entitled to public respect, as on many accounts, so especially for the judgment with which he described, and the affecting seriousness with which he recommended the duties of his profession, in one of his charges to the clergy of his diocese,\* exhorts them “to make their sermons local.” I have always considered this advice as founded in a knowledge of human life, but as requiring, in its application, a more than ordinary exercise of Christian prudence. Whilst I repeat therefore the rule itself, with great veneration for the authority by which it was delivered, I think it no unfit employment of the present opportunity to enlarge so far upon its use and meaning, as to point out some of the instances in which it may be adopted, with the probability of making salutary impressions upon the minds of our hearers.

But, before I proceed, I would warn you, and that with all the solemnity that can belong to any admonition of mine, against rendering your discourses *so local*, as to be pointed and levelled at particular persons in your congregation. This species of address may produce in the party for whom it is intended confusion perhaps and shame, but not with their proper fruits of penitence and humility. Instead of which, these sensations will be accompanied with bitter resentment against the

---

\* Archbishop of Canterbury's Third Charge to his Clergy. Archbishop Secker's Works vol. iv.

preacher, and a kind of obstinate and determined opposition to his reproof. He will impute your officiousness to personal enmity, to party spirit, to the pleasure of triumphing over an adversary without interruption or reply, to insult assuming the form of advice, or to any motive rather than a conscientious solicitude for the amendment and salvation of your flock. And as the person himself seldom profits by admonitions conveyed in this way, so are they equally useless, or perhaps noxious, to the rest of the assembly; for the moment the congregation discover to whom the chastisement is directed, from that moment they cease to apply any part of it to themselves. They are not edified, they are not affected: on the contrary, they are diverted by descriptions of which they see the design, and by invectives of which they think they comprehend the aim. Some who would feel strongly the impropriety of gross and evident personalities, may yet hope to hit their mark by covert and oblique allusions. Now of this scheme, even when conducted with the greatest skill, it may be observed, that the allusions must either be perceived or not. If they be not perceived, they fail of the effect intended by them; if they be, they are open to the objections which lie against more explicit and undissembled attacks. Whenever we are conscious, in the composition of our discourses, of a view to particular characters in our congregation or parish, we ought to take for granted that our view will be understood. Those applications therefore which, if they were direct, would produce more bad emotions than good ones, it is better to discard entirely from our sermons; that is to say, it is better to lay aside the design altogether, than to attempt to disguise it by a management which is generally detected, and which, if not seen through,

defeats its purpose by its obscurity. The crimes then of individuals let us reserve for opportunities of private and seasonable expostulation. Happy is the clergyman who has the faculty of communicating advice and remonstrance with persuasion and effect, and the virtue to seize and improve every proper occasion of doing it; but in the pulpit, let private characters be no otherwise adverted to than as they fall in with the delineations of sins and duties which our discourses must necessarily contain, and which, whilst they avoid personalities, can never be too close or circumstantial. For the same reason that I think personal allusions reprehensible, I should condemn any, even the remotest, reference to party or political transactions and disputes. These are at all times unfit subjects, not only of discussion in the pulpit, but of hints and surmises. The Christian preacher has no other province than that of religion and morality. He is seldom led out of his way by honourable motives, and, I think, never with a beneficial effect.

Having premised this necessary caution, I return to the rule itself. By “local” sermons I would understand, what the reverend prelate who used the expression seems principally to have meant by it, sermons adapted to the particular state of thought and opinion which we perceive to prevail in our congregation. A careful attention to this circumstance is of the utmost importance, because, as *it* varies, the same sermon may do a great deal of good, none at all, or much harm. So that it is not the truth of what we are about to offer which alone we ought to consider, but whether the argument itself be likely to correct or to promote the turn and bias of opinion to which we already perceive too strong a tendency and inclination. Without this

circumspection we may be found to have imitated the folly of the architect who placed his buttress on the wrong side. The more the column pressed, the more firm its construction, and the deeper its foundation—the more certainly it hastened the ruin of the fabric. I do not mean that we should, upon any emergency, advance what is not true; but that, out of many truths, we should select those, the consideration of which seems best suited to rectify the dispositions of thought that were previously declining into error or extravagancy. For this model of preaching we may allege the highest of all possible authorities, the example of our blessed Saviour himself. He always had in view the posture of mind of the persons whom he addressed. He did not entertain the Pharisees with invectives against the open impiety of their Sadducean rivals; nor, on the other hand, did he soothe the Sadducee's ear with descriptions of Pharisical pomp and folly. In the presence of the Pharisee he preached against hypocrisy: to the Sadducees he proved the resurrection of the dead. In like manner, of that known enmity which subsisted between the Jews and Samaritans, this faithful Teacher took no undue advantage to make friends or proselytes of either. Upon the Jews he inculcated a more comprehensive benevolence; with the Samaritan he defended the orthodoxy of the Jewish creed.

But I apprehend that I shall render my advice more intelligible, by exemplifying it in two or three instances, drawn from what appears to be the predominant disposition and religious character of this country, and of the present times.

In many former ages of religion, the strong propensity of men's minds was to overvalue positive duties; which temper, when carried to excess, not only

multiplied authorized rites and observances, not only laid an unwarrantable stress upon those which were prescribed; but, what was worst of all, led men to expect that, by a punctual attention to the ordinances of religion, they could compound for a relaxation of its weighty and difficult duties of personal purity and relative justice. This was the depraved state of religion amongst the Jews when our Saviour appeared; and it was the degeneracy against which some of the most forcible of his admonitions, and the severest of his reproofs, were directed. Yet, notwithstanding that Christ's own preaching, as well as the plan and spirit of his religion, were as adverse as possible to the exalting or overvaluing of positive institutions, the error which had corrupted the old dispensation revived under the new; and revived with double force, insomuch as to transform Christianity into a service more prolix and burdensome than the Jewish, and to ascribe an efficacy to certain religious performances, which, in a great measure, superseded the obligations of substantial virtue. That age, however, with us is long since past. I fear there is room to apprehend that we are falling into mistakes of a contrary kind. Sadducees are more common amongst us than Pharisees. We seem disposed, not only to cast off the decent offices which the temperate piety of our church hath enjoined, as aids of devotion, calls to repentance, or instruments of improvement, but to condemn and neglect, under the name of forms and ceremonies, even those rites which, forasmuch as they were ordained by the divine Founder of our religion, or by his inspired messengers, and ordained with a view of their continuing in force through future generations, are entitled to be accounted parts of Christianity itself. In this situation of religion, and of men's thoughts with

respect to it, he makes a bad choice of his subject, who discourses upon the futility of rites and ordinances, upon their insignificancy when taken by themselves, or even who insists too frequently, and in terms too strong, upon their inferiority to moral precepts. We are rather called upon to sustain the authority of those institutions which proceed from Christ or his apostles, and the reasonableness and credit of those which claim no higher original than public appointment. We are called upon to contend, with respect to the first, that they cannot be omitted with safety any more than other duties; that the will of God once ascertained is the immediate foundation of every duty; that, when this will is known, it makes little difference to us what is the subject of it, still less by what denomination the precept is called, under what class or division the duty is arranged. If it be commanded, and we have sufficient reason to believe that it is so, it matters nothing, whether the obligation be moral or natural, or positive or instituted. He who places before him the will of God as the rule of his life, will not refine, or even dwell much, upon these distinctions. The ordinances of Christianity, it is true, are all of them significant. Their meaning, and even their use, is not obscure. But were it otherwise; was the design of any positive institution inexplicable; did it appear to have been proposed only as an exercise of obedience; it was not for us to hesitate in our compliance. Even to inquire, with too much curiosity and impatience, into the cause and reason of a religious command, is no evidence of an humble and submissive disposition; of a disposition, I mean, humble under the Deity's government of his creation, and submissive to his will, however signified.

It may be seasonable also to maintain, what I am convinced is true, that the principle of general utility,

which upholds moral obligation itself, may, in various instances, be applied “to evince the duty of attending upon positive institutions; in other words, that the difference between natural and positive duties is often more in the name than in the thing. The precepts of natural justice are therefore only binding upon the conscience, because the observation of them is necessary or conducive to the prosperity and happiness of social life. If there be, as there certainly are, religious institutions which contribute greatly to form and support impressions upon the mind, that render men better members of civilized community; if these institutions can only be preserved in their reputation and influence by the general respect which is paid to them; there is the same reason to each of us for bearing our part in these observances, that there is for discharging the most acknowledged duties of natural religion. When I say “the reason is the same,” I mean that it is the same in *kind*. The *degree* of strength and cogency which this reason possesses in any particular case, must always depend upon the value and importance of the particular duty; which admits of great variety. But moral and positive duties do not in this respect differ more than moral duties differ from one another. So that when men accustom themselves to look upon positive duties as universally and necessarily inferior to moral ones, as of a subordinate species, as placed upon a different foundation, or deduced from a different original; and consequently to regard them as unworthy of being made a part of their plan of life, or of entering into their sense of obligation, they appear to be egregiously misled by names. It is our business, not to aid, but to correct, the deception. Still, nevertheless, is it as true as ever it was, that “except we exceed the righteousness of the Scribes and Pharisees, we

cannot enter into the kingdom of heaven;" that "the sabbath was made for man, and not man for the sabbath;" that "the weightier matters of the law are faith, justice, and mercy:" but to insist strenuously, and, as some do, almost exclusively, upon these points at present, tends to diminish the respect for religious ordinances, which is already too little; and, whilst it guards against dangers that have ceased to exist, augments those which are really formidable.

Again; upon the first reformation from popery, a method very much prevailed in the seceding churches, of resolving the whole of religion into faith: *good works*, as they were called, or the practice of virtue, holding not only a secondary but even distant place in value and esteem; being represented, indeed, as possessing no share or efficacy in the attainment of human salvation. This doctrine we have seen revived in our own times, and carried to still greater lengths. And it is a theory, or rather perhaps a language, which required, whilst it lasted, very serious animadversion: not only because it disposed men to rest in an unproductive faith, without endeavours to render themselves useful by exertion and activity; not only because it was naturally capable of being converted to the encouragement of licentiousness; but because it misrepresented Christianity as a moral institution, by making it place little stress upon the distinction of virtue and vice, and by making it require the practice of external duties, if it required them at all, only as casual, neglected, and almost unthought-of consequences of that faith which it extolled, instead of directing men's attention to them, as to those things which alone compose an unquestionable and effective obedience to the divine will. So long as this turn of mind prevailed, we could not be too industrious in

bringing together and exhibiting to our hearers those many and positive declarations of Scripture which enforce, and insist upon, practical religion; which divide mankind into those who do good, and those who do evil; which hold out to the one favour and happiness, and to the other repulse and condemnation. The danger, however, from this quarter is nearly overpast. We are, on the contrary, setting up a kind of philosophical morality, detached from religion and independent of its influence, which may be cultivated, it is said, as well without Christianity as with it; and which, if cultivated, renders religion and religious institutions superfluous. A mode of thought so contrary to truth, and so derogatory from the value of revelation, cannot escape the vigilance of a Christian ministry. We are entitled to ask upon what foundation this morality rests. If it refer to the divine will, (and, without that, where will it find its sanctions, or how support its authority?) there cannot be a conduct of the understanding more irrational than to appeal to those intimations of the Deity's character which the light and order of nature afford, as to the rule and measure of our duty, yet to disregard, and affect to overlook, the declarations of his pleasure which Christianity communicates. It is impossible to distinguish between the authority of natural and revealed religion. We are bound to receive the precepts of revelation for the same reason that we comply with the dictates of nature. He who despises a command which proceeds from his Maker, no matter by what means, or through what medium, instead of advancing, as he pretends to do, the dominion of reason, and the authority of natural religion, disobeys the first injunction of both. Although it be true what the apostle affirms—that “when the Gentiles, which have not the law, do by nature the things contained in

the law, they are a law unto themselves;" that is, they will be accepted together with those who are instructed in the law and obey it; yet is this truth not applicable to such as having a law contemn it, and with the means of access to the word of God, keep themselves at a voluntary distance from it. This temper, whilst it continues, makes it necessary for us to assert the superiority of a religious principle above every other by which human conduct can be regulated: more especially above that fashionable system, which recommends virtue only as a true and refined policy; which policy in effect is, and in the end commonly proves itself to be, nothing else than a more exquisite cunning, which, by a specious behaviour in the easy and visible concerns of life, collects a fund of reputation, in order either to cherish more securely concealed vices, or to reserve itself for some great stroke of selfishness, perfidy, and desertion, in a pressing conjuncture of fortunes. Nor less justly may we superinduce the guidance of Christianity to the direction of sentiment; which depends so much upon constitution, upon early impressions, upon habit, and imitation, that unless it be compared with, and adjusted by some safer rule, it can in no wise be trusted. Least of all ought we to yield the authority of religion to the law of honour: a law (if it deserve that name) which, beside its continual mutability, is at best but a system of manners suited to the intercourse and accommodation of higher life; and which consequently neglects every duty, and permits every vice, that has no relation to these purposes. Amongst the rules which contend with religion for the government of life, the law of the land also has not a few, who think it very sufficient to act up to its direction, and to keep within the limits which it prescribes: and this sort of character is common in our

congregations. We are not to omit, therefore, to apprise those who make the statutes of the realm the standard of their duty, that they propose to themselves a measure of conduct totally inadequate to the purpose. The boundaries which nature has assigned to human authority and control, the partial ends to which every legislator is obliged to confine his views, prevent human laws, even were they, what they never are, as perfect as they might be made, from becoming competent rules of life to any one who advances his hopes to the attainment of God Almighty's favour. In contradistinction, then, to these several systems, which divide a great portion of mankind amongst them, we preach "faith which worketh by love," that principle of action and restraint which is found in a Christian alone. It possesses qualities to which none of *them* can make pretensions. It operates where they fail: is present upon all occasions, firm upon the greatest; pure, as under the inspection of a vigilant omniscience; innocent, where guilt could not be discovered; just, exact, and upright, without a witness to its proceedings; uniform amidst the caprices of fashion, unchanged by the vicissitudes of popular opinion; often applauded, not seldom misunderstood, it holds on its straight and equal course, through "good report and evil report," through encouragement and neglect, approbation and disgrace. If the philosopher or the politician can point out to us any influence but that of Christianity which has these properties, I had almost said which does not want them all, we will listen with reverence to his instruction. But until this be done, we may be permitted to resist every plan which would place virtue upon any other foundation, or seek final happiness through any other medium than faith in Jesus Christ. At least, whilst an inclination to these rival

systems remains, no good end, I am apt to think, is attained by decrying faith under any form, by stating the competition between faith and good works, or by pointing out, with too much anxiety, even the abuses and extravagances into which the doctrine of salvation by faith alone has sometimes been carried. The truth is, that, in the two subjects which I have considered, we are in such haste to fly from enthusiasm and superstition, that we are approaching towards an insensibility to all religious influence. I certainly do not mean to advise you to endeavour to bring men back to enthusiasm and superstition, but to retard, if you can, their progress towards an opposite and a worse extreme; and both in these, and in all other instances, to regulate the choice of your subjects, by the particular bias and tendency of opinion which you perceive already to prevail amongst your hearers, and by a consideration, not of the truth only of what you deliver, which, however, must always be an indispensable condition, but of its effects; and those not the effects which it would produce upon sound, enlightened, and impartial judgments, but what are likely to take place in the weak and preoccupied understandings with which we have to do.

Having thus considered the rule as it applies to the argument of our discourses, in which its principal importance consists, I proceed to illustrate its use as it relates to another object—the means of exciting attention. The transition from local to occasional sermons is so easy, and the reason for both is so much the same, that what I have farther to add will include the one as well as the other. And though nothing more be proposed in the few directions which I am about to offer than to move and awaken the attention of our audience, yet is this a purpose of no inconsiderable magnitude.

We have great reason to complain of listlessness in our congregations. Whether this be their fault or ours, the fault of neither or of both, it is much to be desired that it could by any means be removed. Our sermons are in general more informing, as well as more correct and chastised both in matter and composition, than those of any denomination of dissenting teachers. I wish it were in our power to render them as impressive as some of theirs seem to be. Now I think we may observe, that we are heard with somewhat more than ordinary advertency, whenever our discourses are recommended by any occasional propriety. The more, therefore, of these proprieties we contrive to weave into our preaching, the better. One which is very obvious, and which should never be neglected, is that of making our sermons as suitable as we can to the service of the day. On the principal fasts and festivals of the church, the subjects which they are designed to commemorate ought invariably to be made the subjects of our discourses. Indeed, the best sermon, if it do not treat of matters for which the congregation come prepared, is received with coldness, and with a sense of disappointment. This respect to the order of public worship almost every one pays. But the adaptation, I apprehend, may be carried much farther. Whenever any thing like a unity of subject is pursued throughout the collect, epistle, and gospel of the day, that subject is with great advantage revived in the pulpit. It is perhaps to be wished that this unity had been more consulted in the compilation of this part of the liturgy than it has been. When from the want of it a subject is not distinctly presented to us, there may, however, be some portion of the service more striking than the rest, some instructive parable, some interesting narration,

some concise but forcible precept, some pregnant sentence, which may be recalled to the hearers' attention with peculiar effect. I think it no contemptible advantage if we even draw our text from the epistle or gospel, or the psalms or lessons. Our congregation will be more likely to retain what they hear from us, when it, in any manner, falls in with what they have been reading in their prayer books, or when they are afterwards reminded of it by reading the psalms and lessons at home. But there is another species of accommodation of more importance, and that is the choice of such disquisitions, as may either meet the difficulties or assist the reflections which are suggested by the portions of Scripture that are delivered from the reading-desk. Thus, whilst the wars of Joshua and the Judges are related in the course of the lessons which occupy some of the first Sundays after Trinity, it will be very seasonable to explain the reasons upon which that dispensation was founded, the moral and beneficial purposes which are declared to have been designed, and which were probably accomplished, by its execution; because such an explanation will obviate the doubts concerning either the divine goodness or the credibility of the narrative which may arise in the mind of a hearer, who is not instructed to regard the transaction as a method of inflicting an exemplary, just, and necessary punishment. In like manner, whilst the history of the delivery of the law from Mount Sinai, or rather the recapitulation of that history by Moses, in the book of Deuteronomy, is carried on in the Sunday lessons which are read between Easter and Whit-Sunday, we shall be well engaged in discourses upon the *commandments* which stand at the head of that institution; in showing from the history their high original and auth-

rity, and in explaining their reasonableness, application, and extent. Whilst the history of Joseph is successively presented to the congregation during the Sundays in Lent, we shall be very negligent of the opportunity, if we do not take occasion to point out to our hearers those observations upon the benevolent but secret direction, the wise though circuitous measures of Providence, of which this beautiful passage of Scripture supplies a train of apposite examples. There are, I doubt not, other series of subjects dictated by the service as edifying as these; but these I propose as illustrations of the rule.

Next to the service of the church, the season of the year may be made to suggest useful and appropriate topics of meditation. The beginning of a new year has belonging to it a train of very solemn reflections. In the devotional pieces of the late Dr. Johnson, this occasion was never passed by. We may learn from these writings the proper use to be made of it; and, by the example of that excellent person, how much a pious mind is wont to be affected by this memorial of the lapse of life. There are also certain proprieties which correspond with the different parts of the year. For example, the wisdom of God in the work of the creation is a theme which ought to be reserved for the return of the spring, when nature renews, as it were, her activity; when every animal is cheerful and busy, and seems to feel the influence of its Maker's kindness; when our senses and spirits, the objects and enjoyments that surround us, accord and harmonize with those sentiments of delight and gratitude, which this subject, above all others, is calculated to inspire. There is no devotion so genuine as that which flows from these meditations, because it is unforced and self-excited.

There is no frame of mind more desirable, and consequently no preaching more useful, than that which leads the thought to this exercise. It is laying a foundation for Christianity itself. If it be not to sow the seed, it is at least to prepare the soil. The evidence of revelation arrives with much greater ease at an understanding which is already possessed by the persuasion, that an unseen intelligence framed and conducts the universe; and which is accustomed to refer the order and operations of nature to the agency of a supreme will. The influence also of religion is almost always in proportion to the degree and strength of this conviction. It is, moreover, a species of instruction of which our hearers are more capable than we may at first sight suppose. It is not necessary to be a philosopher, or to be skilled in the names and distinctions of natural history, in order to perceive marks of contrivance and design in the creation. It is only to turn our observation to them. Now, besides that this requires neither more ability nor leisure than every man can command, there are many things in the life of a country parishioner which will dispose his thoughts to the employment. In his fields, amidst his flocks, in the progress of vegetation, the structure, faculties, and manners of domestic animals, he has constant occasion to remark proofs of intention and of consummate wisdom. The minister of a country parish is never, therefore, better engaged, than when he is assisting this turn of contemplation. Nor will he ever do it with so much effect, as when the appearance and face of external nature conspire with the sentiments which he wishes to excite.

Again; if we would enlarge upon the various bounty of Providence, in furnishing a regular supply for animal, and especially for human subsistence, not by one, but

by numerous and diversified species of food and clothing, we shall be best heard in the time and amidst the occupations of harvest, when our hearers are reaping the effects of those contrivances for their support, and of that care for their preservation, which their Father which is in heaven hath exercised for them. If the year has been favourable, we rejoice with them in the plenty which fills their granaries, covers their tables, and feeds their families. If otherwise, or less so, we have still to remark how, through all the husbandman's disappointments, through the dangers and inclemencies of precarious seasons, a competent proportion of the fruits of the earth is conducted to its destined purpose. We may observe also to the repining farmer, that the value, if not the existence, of his own occupation, depends upon the very uncertainty of which he complains. It is found to be almost universally true, that the partition of the profits between the owner and occupier of the soil is in favour of the latter, in proportion to the risk which he incurs by the disadvantage of the climate. This is a very just reflection, and particularly intelligible to a rural audience. We may add, when the occasion requires it, that scarcity itself hath its use. By acting as a stimulus to new exertions and to farther improvements, it often produces, through a temporary distress, a permanent benefit.

Lastly; sudden, violent, or untimely deaths, or death accompanied by any circumstances of surprise or singularity, usually leave an impression upon a whole neighbourhood. A Christian teacher is wanting in attention to opportunities who does not avail himself of this impression. The uncertainty of life requires no proof. But the power and influence which this consideration shall obtain over the decisions of the mind, will depend

greatly upon the circumstances under which it is presented to the imagination. Discourses upon the subject come with tenfold force when they are directed to a heart already touched by some near, recent, and affecting example of human mortality. I do not lament that funeral sermons are discontinued amongst us. They generally contained so much of unseasonable, and oftentimes undeserved panegyric, that the hearers came away from them, rather with remarks in their mouths upon what was said of the deceased, than with any internal reflections upon the solemnity which they had left, or how nearly it related to their own condition. But by decent allusions in the stated course of our preaching to events of this sort, or by, what is better, such a well-timed choice of our subject as may lead our audience to make the allusion for themselves, it is possible, I think, to retain much of the good effect of funeral discourses, without their adulation, and without exciting vain curiosity.

If other occurrences have arisen within our neighbourhood, which serve to exemplify the progress and fate of vice, the solid advantages and ultimate success of virtue, the providential discovery of guilt or protection of innocence, the folly of avarice, the disappointments of ambition, the vanity of worldly schemes, the fallaciousness of human foresight; in a word, which may remind us “what shadows we are, and what shadows we pursue,” and thereby induce us to collect our views and endeavours to one point, the attainment of final salvation, such occurrences may be made to introduce topics of serious and useful meditation. I have heard popular preachers amongst the Methodists avail themselves of these occasions with very powerful effect. It must be acknowledged that they frequently transgress the limits

of decorum and propriety, and that these transgressions wound the modesty of a cultivated ear. But the method itself is not to be blamed. Under the correction of a sounder judgment it might be rendered very beneficial. Perhaps, as hath been already intimated, the safest way is, not to refer to these incidents by any direct allusion, but merely to discourse at the time upon subjects which are allied to and connected with them.

The sum of what I have been recommending amounts to this: that we consider diligently the probable effects of our discourses upon the particular characters and dispositions of those who are to hear them, but that we apply this consideration solely to the choice of truths, by no means to the admission of falsehood or insincerity: \* secondly, that we endeavour to profit by circumstances, that is, to assist, not the reasoning, but the efficacy of our discourses, by an opportune and skillful use of the service of the church, the season of the year, and of all such occurrences and situations as are capable of receiving a religious turn, and such as, being yet recent in the memory of our hearers, may dispose their minds for the admission and influence of salutary reflections.

My Reverend Brethren, I am sensible that the discourse with which I have now detained you is not of that kind which is usually delivered at a chancellor's visitation. But since (by the favour of that excellent prelate, who by me must long be remembered with gratitude and affection) I hold another public station in the diocese, I embrace the only opportunity afforded

---

\* This distinction fixes the limits of exoteric doctrine, as far as any thing called by that name is allowable to a Christian teacher.

me of submitting to you that species of counsel and exhortation which, with more propriety perhaps, you would have received from me in the character of your archdeacon, if the functions of that office had remained entire.

## DANGERS INCIDENTAL TO THE CLERICAL CHARACTER STATED.

[In a Sermon, preached before the University of Cambridge, at Great St. Mary's Church, on Sunday, July 5, being Commencement Sunday.]

1 CORINTHIANS ix. part of the 27th verse.

*Lest that by any means, when I have preached to others, I myself should be a castaway.*

THESE words discover the anxiety, not to say the fears, of the writer, concerning the event of his personal salvation; and, when interpreted by the words which precede them, strictly connect that event with the purity of his personal character.

It is extremely material to remember who it was that felt this deep solicitude for the fate of his spiritual interests, and the persuasion that his acceptance (in so far as it is procured by human endeavours) would depend upon the care and exactness with which he regulated his own passions and his own conduct: because, if a man ever existed who, in the zeal and labour with which he served the cause of religion, in the ardour or the efficacy of his preaching, in his sufferings or his success, might hope for some excuse to indulgence, some licence for gratifications which were forbidden to others, it was the author of the text which has been now read to you. Yet the apostle appears to have known, and by his knowledge teaches us, that no exertion of industry, no display of talents, no public merit, however great, or however good or sacred be the cause in which it is acquired, will compensate for the neglect of personal self-government.

This, in my opinion, is an important lesson to all: to none, certainly, can it be more applicable than it is in every age to the teachers of religion; for a little observation of the world must have informed us, that the human mind is prone, almost beyond resistance, to sink the weakness or the irregularities of private character in the view of public services; that this propensity is the strongest in a man's own case; that it prevails more powerfully in religion than in other subjects, inasmuch as the teachers of religion consider themselves (and rightly do so) as ministering to the higher interests of human existence.

Still farther, if there be causes, as I believe there are, which raise extraordinary difficulties in the way of those who are engaged in the offices of religion—circumstances even of disadvantage in the profession and character, as far as relates to the conservation of their own virtue—it behoves them to adopt the apostle's caution with more than common care, because it is only to prepare themselves for dangers to which they are more than commonly exposed.

Nor is there good reason for concealing, either from ourselves or others, any unfavourable dispositions which the nature of our employment or situation may tend to generate: for, be they what they will, they only prove that it happens to us according to the condition of human life, with many benefits to receive some inconveniences, with many helps to experience some trials; that, with many peculiar motives to virtue, and means of improvement in it, some obstacles are presented to our progress, which it may require a distinct and positive effort of the mind to surmount.

I apprehend that I am stating a cause of no inconsiderable importance, when, amongst these impediments,

I mention, in the first place, the insensibility to religious impression, which a constant conversation with religious subjects, and, still more, a constant intermixture with religious offices, is wont to induce. Such is the frame of the human constitution, (and calculated also for the wisest purposes,) that whilst all active habits are facilitated and strengthened by repetition, impressions under which we are passive are weakened and diminished. Upon the first of these properties depends, in a great measure, the exercise of the arts of life: upon the second, the capacity which the mind possesses of adapting itself to almost every situation. This quality is perceived in numerous, and for the most part beneficial examples. Scenes of terror, spectacles of pain, objects of loathing and disgust, so far lose their effect with their novelty, as to permit professions to be carried on, and conditions of life to be endured, which otherwise, although necessary, would be insupportable. It is a quality, however, which acts, as other parts of our frame do, by an operation which is general: hence it acts also in instances in which its influence is to be corrected; and, amongst these, in religion. Every attentive Christian will have observed how much more powerfully he is affected by any form of worship which is uncommon, than with the familiar returns of his own religious offices. He will be sensible of the difference when he approaches, a few times in the year, the sacrament of the Lord's Supper; if he should be present at the visitation of the sick; or even, if that were unusual to him, at the sight of a family assembled in prayer. He will perceive it also upon entering the doors of a dissenting congregation: a circumstance which has misled many, by causing them to ascribe to some advantage in the conduct of public worship, what, in truth,

is only the effect of new impressions. Now, by how much a lay-frequenter of religious worship finds himself less warmed and stimulated by ordinary than by extraordinary acts of devotion, by so much it may be expected that a clergyman, habitually conversant with the offices of religion, will be less moved and stimulated than he is. What then is to be done? It is by an effort of reflection; by a positive exertion of the mind; by knowing this tendency, and by setting ourselves expressly to resist it; that we are to repair the decays of spontaneous piety. We are no more to surrender ourselves to the mechanism of our frame than to the impulse of our passions. We are to assist our sensitive by our rational nature. We are to supply this infirmity—(for so it may be called, although, like many other properties which bear the name of vices in our constitution, it be, in truth, a beneficial principle acting according to a general law)—we are to supply it by a deeper sense of the obligations under which we lie; by a more frequent and a more distinct recollection of the reasons upon which that obligation is founded. We are not to wonder at the pains which this may cost us; still less are we to imitate the despondency of some serious Christians, who, in the impaired sensibility that habit hath induced, bewail the coldness of a deserted soul.

Hitherto our observation will not be questioned: but I think that this principle goes farther than is generally known or acknowledged. I think that it extends to the influence which argument itself possesses upon our understanding; or, at least, to the influence which it possesses in determining our will. I will not say, that, in a subject strictly intellectual, and in science properly so called, a demonstration is the less

convincing for being old; but I am not sure that this is not, in some measure, true of moral evidence and probable proofs. In practical subjects, however, where two things are to be done—the understanding to be convinced, and the will to be persuaded—I believe that the force of every argument is diminished by triteness and familiarity. The intrinsic value of the argument must be the same: the impression may be very different.

But *we* have a disadvantage to contend with additional to this. The consequence of repetition will be felt more sensibly by us, who are in the habit of directing our arguments to others: for it always requires a second, a separate, and an unusual effort of the mind, to bring back the conclusion upon ourselves. In constructing, in expressing, in delivering our arguments, in all the thoughts and study which we employ upon them, what we are apt to hold continually in our view is the effect which they may produce upon those who hear or read them. The farther and best use of our meditations, their influence upon our own hearts and consciences, *is* lost in the presence of the other. In philosophy itself, it is not always the same thing to study a subject in order to understand, and in order only to teach it. In morals and religion, the powers of persuasion are cultivated by those whose employment is public instruction; but their wishes are fulfilled, and their care exhausted, in promoting the success of their endeavours upon others. The secret duty of turning truly and in earnest their attention upon themselves is suspended, not to say forgotten, amidst the labours, the engagements, the popularity of their public ministry; and, in the best disposed minds, is interrupted by the anxiety, or even by the

satisfaction, with which their public services are performed.

These are dangers adhering to the very nature of our profession: but the evil is often also augmented by our imprudence. In our wishes to convince, we are extremely apt to *overstate* our arguments. We think no confidence with which we speak of them can be too great, when our intention is to urge them upon our hearers. This zeal, not seldom I believe, defeats its own purpose, even with those whom we address; but it always destroys the efficacy of the argument upon ourselves. We are conscious of the exaggeration, whether our hearers perceive it or not; and this consciousness corrupts to us the whole influence of the conclusion—robs it even of its just value. Demonstration admits of no degrees; but real life knows nothing of demonstration. It converses only with moral evidence and moral reasoning. In these the scale of probability is extensive; and every argument hath its place in it. It may not be quite the same thing to overstate a true reason, and to advance a false one: but since two questions present themselves to the judgment, usually joined together by their nature and importance, viz. on which side probability lies, and how much it preponderates; to transgress the rules of fair reasoning in either question, in either to go beyond our own perception of the subject, is a similar, if not an equal fault. In both cases it is a want of candour, which approaches to a want of veracity. But that in which its worst effect is seen—that, at least, which it belongs to this discourse to notice—is in its so undermining the solidity of our proofs, that our own understandings refuse to rest upon them; in vitiating the integrity of our own judgments; in rendering our

minds as well incapable of estimating the proper strength of moral and religious arguments, as unreasonably suspicious of their truth, and dull and insensible to their impression.

If dangers to our character accompany the exercise of our public ministry, they no less attend upon the nature of our professional studies. It has been said, that literary trifling upon the Scriptures has a tendency, above all other employments, to harden the heart. If by this maxim it be designed to reprove the exercise, to check the freedom, or to question the utility of critical researches, when employed upon the sacred volume, it is not by me to be defended. If it mean simply to guard against an existing danger, to state a usual and natural consequence, the maxim wants neither truth nor use. It is founded in this observation: when any one, by the command of learning and talents, has been fortunate enough to clear up an obscurity, or to settle a doubt, in the interpretation of Scripture; pleased (and justly pleased) with the result of his endeavours, his thoughts are wont to indulge this complacency, and there to stop: or when another, by a patient application of inferior faculties, has made, as he thinks, some progress in theological studies, or even has with much attention engaged in them, he is apt to rest and stay in what he deems a religious and meritorious service. The critic and the commentator do not always proceed with the reflection, that if these things be true, if this book do indeed convey to us the will of God, then is it no longer to be studied and criticised alone, but, what is a very different work, to be obeyed, and to be acted upon. At least, this ulterior operation of the mind, enfeebled perhaps by former exertions of quite another nature, does not always retain sufficient force and vigour to bend

the obstinacy of the will. To describe the evil is to point out the remedy; which must consist in holding steadfastly within our view this momentous consideration—that however laboriously, or however successfully, we may have cultivated religious studies, how much soever we may have added to our learning or our fame, we have hitherto done little for our salvation; that a more arduous, to us perhaps a new, and, it may be, a painful work, which the public eye sees not, which no public favour will reward, yet remains to be attempted—that of instituting an examination of our hearts and of our conduct; of altering the secret course of our behaviour; of reducing, with whatever violence to our habits, loss of our pleasures, or interruption of our pursuits, its deviations to a conformity with those rules of life which are delivered in the volume that lies open before us, and which, if it be of importance enough to deserve our study, ought, for reasons infinitely superior, to command our obedience.

Another disadvantage incidental to the character of which we are now exposing the dangers, is the moral debility that arises from the want of being trained in the virtues of active life. This complaint belongs not to the clergy as such, because their pastoral office affords as many calls, and as many opportunities for beneficent exertions, as are usually found in private stations; but it belongs to that secluded, contemplative life, which men of learning often make choice of, or into which they are thrown by the accident of their fortunes. A great part of mankind owe their principles to their practice; that is, to that wonderful accession of strength and energy which good dispositions receive from good actions. It is difficult to sustain virtue by meditation alone; but let our conclusions only have influence enough once to

determine us upon a course of virtue, and that influence will acquire such augmentation of force from every instance of virtuous endeavour, as, ere long, to produce in us constancy and resolution, a formed and a fixed character. Of this great and progressive assistance to their principles, men who are withdrawn from the business and the intercourse of civil life find themselves in some measure deprived. Virtue in them is left, more than in others, to the dictates of reason; to a sense of duty less aided by the power of habit. I will not deny that this difference renders their virtue more pure, more actual, and nearer to its principle: but it renders it less easy to be attained or preserved.

Having proposed these circumstances, as difficulties of which I think it useful that our order should be apprised; and as growing out of the functions of the profession, its studies, or the situations in which it places us; I proceed, with the same view, to notice a turn and habit of thinking, which is, of late, become very general amongst the higher classes of the community, amongst all who occupy stations of authority, and, in common with these two descriptions of men, amongst the clergy. That which I am about to animadvert upon is, in its place, and to a certain degree, undoubtedly a fair and right consideration; but, in the extent to which it prevails, has a tendency to discharge from the hearts of mankind all religious principle whatever. What I mean is the performing of our religious offices for the sake of *setting an example* to others; and the allowing of this motive so to take possession of the mind, as to substitute itself into the place of the proper ground and reason of the duty. I must be permitted to contend, that whenever this is the case, it becomes not only a cold and extraneous, but a false and

unreasonable principle of action. A conduct propagated through the different ranks of society merely by this motive, is a chain without a support, a fabric without a foundation. The parts, indeed, depend upon one another, but there is nothing to bear up the whole. There must be some reason for every duty beside example, or there can be no sufficient reason for it at all. It is a perversion, therefore, of the regular order of our ideas, to suffer a consideration which, whatever be its importance, is only secondary and consequential to another, to shut out that other from the thoughts. The effect of this, in the offices of religion, is utterly to destroy their religious quality; to rob them of that which gives to them their life, their spirituality, their nature. They who would set an example to others of acts of worship and devotion, in truth perform none themselves. Idle or proud spectators of the scene, they vouchsafe their presence in our assemblies for the edification, it seems, and benefit of others, but as if they had no sins of their own to deplore, no mercies to acknowledge, no pardon to entreat.

Shall the consideration, then, of example be prohibited and discarded from the thoughts? By no means: but let it attend upon, not supersede, the proper motive of the action. Let us learn to know and feel the reason, the value, and the obligation of the duty, as it concerns ourselves; and, in proportion as we are affected by the force of these considerations, we shall desire, and desiring endeavour, to extend their influence to others. This wish, flowing from an original sense of each duty, preserves to the duty its proper principle. "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." *The glory of your heavenly Father is*

still, you observe, the termination of the precept. The love of God—that zeal for his honour and service which love, which gratitude, which piety inspires—is still to be the operating motive of your conduct. Because we find it convenient to ourselves, that those about us should be religious; or because it is useful to the state, that religion should be upheld in the country; to join, from these motives, in the public ordinances of the church, for the sake of maintaining their credit by our presence and example, however advisable it may be as a branch of secular prudence, is not either to fulfil our Lord's precept, or to perform any religious service. Religion can spring only from its own principle. Believing our salvation to be involved in the faithful discharge of our religious as well as moral duties, or rather that they are the same; experiencing the warmth, the consolation, the virtuous energy, which every act of true devotion communicates to the heart, and how much these effects are heightened by consent and sympathy; with the benevolence with which we love our neighbour, loving also and seeking his immortal welfare; when, prompted by these sentiments, we unite with him in acts of social homage to our Maker—then hath every principle its weight; then, at length, is our worship what it ought to be; exemplary, yet our own; not the less personal for being public. We bring our hearts to the service, and not a constrained attendance upon the place, with oftentimes an ill-concealed indifference to what is there passing.

If what we have stated concerning example be true, if the consideration of it be liable to be overstretched or misapplied, no persons can be more in danger of falling into the mistake than they who are taught to regard themselves as placed in their stations for the

purpose of becoming the examples as well as instructors of their flocks. It is necessary that they should be admonished to revert continually to the fundamental cause of all obligation and of all duty; particularly to remember, that, in their religious offices, they have not only to pronounce, to excite, to conduct the devotion of their congregations, but to pay to God the adoration which themselves owe to him: in a word, amidst their care of others, to save their own souls by their own religion.

These, I think, are some of the causes which, in the conduct of their lives, call for a peculiar attention from the clergy, and from men of learning; and which render the apostle's example, and the lesson which it teaches, peculiarly applicable to their circumstances. It remains only to remind them of a consideration which ought to counteract these disadvantages, by producing a care and solicitude sufficient to meet every danger and every difficulty: to remind them, I say, for they cannot need to be informed, of our Lord's solemn declaration, that contumacious knowledge and neglected talents—knowledge which doth not lead to obedience, and talents which rest in useless speculations—will be found, in the day of final account, amongst the objects of his severest displeasure. Would to God that men of learning always understood how deeply they are concerned in this warning! It is impossible to add another reason which can be equal or second to our Lord's admonition: but we may suggest a motive of very distant indeed, but of no mean importance, and to which they certainly will not refuse its due regard—the honour and estimation of learning itself. Irregular morals in men of distinguished attainments render them not despised, (for talents and learning never can

be despicable,) but subjects of malicious remark, perhaps of affected pity, to the enemies of intellectual liberty, of science and literature; and, at the same time, of sincere though silent regret to those who are desirous of supporting the esteem which ought to await the successful pursuit of ingenious studies. We entreat such men to reflect, that their conduct will be made the reply of idleness to industry, the revenge of dullness and ignorance upon parts and learning; to consider how many will seek, and think they find, in their example, an apology for sloth, and for indifference to all liberal improvement; what a theme, lastly, they supply to those who, to the discouragement of every mental exertion, preach up the vanity of human knowledge, and the danger or the mischief of superior attainments.

But if the reputation of learning be concerned in the conduct of those who devote themselves to its pursuit, the sacred interests of morality are not less so. It is for us to take care that we justify not the boasts or the sneers of infidelity; that we do not authorize the worst of all scepticism, that which would subvert the distinctions of moral good and evil, by insinuating concerning them, that their only support is prejudice, their only origin in the artifice of the wise, and the credulity of the multitude; and that these things are but too clearly confessed by the lives of men of learning and inquiry. This calumny let us contradict; let us refute. Let us show, that virtue and Christianity cast their deepest foundations in knowledge; that, however they may ask the aid of principles which, in a great degree, govern human life, (and which must necessarily, therefore, be either powerful allies or irresistible adversaries,) of education, of habit, of example, of public authority,

of public institutions, they rest, nevertheless, upon the firm basis of rational argument. Let us testify to the world our sense of this great truth, by the only evidence which the world will believe, the influence of our conclusions upon our own conduct.

[Preached at the Assizes at Durham, July 29, 1795; and published at the request of the Lord Bishop, the Honourable the Judges of Assize, and the Grand Jury.]

## ROMANS xiv. 7.

*For none of us liveth to himself.*

THE use of many of the precepts and maxims of Scripture is not so much to prescribe actions as to generate some certain turn and habit of thinking: and they are then only applied as they ought to be, when they furnish us with such a view of, and such a way of considering the subject to which they relate, as may rectify and meliorate our dispositions; for from dispositions so rectified and meliorated, particular good actions, and particular good rules of acting, flow of their own accord. This is true of the great Christian maxims, of loving our neighbours as ourselves; of doing to others as we would that others should do to us; and (as will appear, I hope, in the sequel of this discourse) of that of the text. These maxims being well impressed, the detail of conduct may be left to itself. The subtleties of casuistry, I had almost said the science, may be spared. By presenting to the mind one fixed consideration, such a temper is at length formed within us, that our first impressions and first impulses are sure almost of being on the side of virtue; and that we feel likewise an almost irresistible inclination to be governed by them. When this disposition is perfected, the influence of religion, as a moral institution, is sufficiently established.

It is not in this way, but in another, that human laws, especially the laws of free countries, proceed to attain their objects. Forasmuch as their ultimate sanctions

are to be dispensed by fallible men, instead of an unerring and omniscient Judge, the safety as well as the liberty of the subject requires that discretion should be bound down by precise rules, both of acting and of judging of actions. Hence lawgivers have been obliged to multiply directions and prohibitions without number: and this necessity, for such I acknowledge it to be, hath drawn them into a prolixity, which encumbers the law as a science to those who study or administer it; and sometimes perplexes it, as a rule of conduct, to those who have nothing to do with it but to obey it. Yet still they find themselves unable to make laws as fast as occasions demand them: they find themselves perpetually called upon to pursue, by fresh paths, the inventive versatility of human fraud, or to provide for new and unforeseen varieties of situation. Now, should religion, which professes to guide the whole train and range of a man's conduct, internal as well as external, domestic as well as civil, and which, consequently, extends the operations of its rules to many things which the laws leave indifferent and uncontrolled; should religion, I say, once set about to imitate the precision of human laws, the volume of its precepts would soon be rendered useless by its bulk, and unintelligible by its intricacy. The religion of Mahomet, as might be expected from the religion of a military prophet, constituted itself into the law of the states into which it was received. Assuming the functions of legislators and magistrates, in conjunction with the character of interpreters of the Koran, and depositaries of the supplemental laws of the religion, the successors of the Arabian have, under the name of traditional rules, compiled a code for the direction of their followers in almost every part of their conduct. The *seventy-five thousand* precepts of that

code\* serve only to show the futility of the attempt; to prove by experiment, that religion can only act upon human life by general precepts, addressed and applied to the disposition; that there is no ground for the objection that has sometimes been made to Christianity, that it is defective, as a moral institution, for the want of more explicit, more circumstantial, and more accurate directions; and that when we place by the side of each other human and divine laws, without understanding the distinction in the two methods by which they seek to attain their purpose, and the reason of that distinction, we form a comparison between them which is likely to be injurious to both. We may find fault with the Scriptures for not giving us the precision of civil laws; and we may blame the laws for not being content with the conciseness and simplicity of Scripture; and our censure in both cases be unfounded and undeserved.

The observation of the text is exactly of the nature I have been alluding to. It supplies a principle. It furnishes us with a view of our duty, and of the relation in which we are placed, which, if attended to, (and no instruction can be of use without that,) will produce in our minds just determinations, and, what are of more value, because more wanted, efficacious motives.

“None of us liveth to himself.” We ought to regard our lives, (including under that name our faculties, our opportunities, our advantages of every kind,) not as mere instruments of personal gratification, but as due to the service of God; and as given us to be employed in promoting the purpose of his will in the happiness of our fellow-creatures. I am not able to imagine a turn of thought which is better than this. It encounters the antagonist, the check, the destroyer of all virtue—

---

\* See Hamilton's translation of the Hedaya or Guide.

selfishness. It is intelligible to all; to all, in different degrees, applicable. It incessantly prompts to exertion, to activity, to beneficence.

In order to recommend it, and in order to render it as useful as it is capable of being made, it may be proper to point out, how the force and truth of the apostle's assertion bears upon the different classes of civil society. And in this view, the description of men which first, undoubtedly, offers itself to our notice, is that of men of public characters; who possess offices of importance, power, influence, and authority. If the rule and principle which I am exhibiting to your observation can be said to be made for one class of mankind more than another, it is for them. *They*, certainly, "live not to themselves." The design, the tenure, the condition of their offices; the public expectation, the public claim; consign their lives and labours, their cares and thoughts and talents, to the public happiness, whereinsoever it is connected with the duties of their stations, or can be advanced by the fidelity of their services. There may be occasions and emergencies when men are called upon to take part in the public service, out of the line of their professions, or the ordinary limits of their vocation; but these emergencies occur, I think, seldom. The necessity should be manifest before we yield to it. A too great readiness to start out of our separate precincts of duty, in order to rush into provinces which belong to others, is *a* dangerous excess of zeal. In general the public interest is best upheld, the public quiet always best preserved, by each one attending closely to the proper and distinct duties of his station. In seasons of peril or consternation, this attention ought to be doubled. Dangers are not best opposed by tumultuous or dis-

orderly exertions, but by a sedate, firm, and calm resistance; especially by that regular and silent strength which is the collected result of each man's vigilance and industry in his separate station. For public men, therefore, to be active in the stations assigned to them, is demanded by their country in the hour of her fear or danger. If ever there was a time when they that rule "should rule with diligence"—when supineness, negligence, and remissness in office—when a timidity or love of ease, which might in other circumstances be tolerated, ought to be proscribed and excluded, it is the present. If ever there was a time to make the public feel the benefit of public institutions, it is this.

But I shall add nothing more concerning the obligation which the text, and the lesson it conveys, imposes upon public men, because I think that the principle is too apt to be considered as appertaining to them alone. It will, therefore, be more useful to show how what are called private stations are affected by the same principle. I say, what are called private stations; for such they are only as contradistinguished from public trusts publicly and formally confided, In themselves, and accurately estimated, there are few such; I mean, that there are few so destined to the private emolument of the possessor, as that they are innocently occupied by him, when they are occupied with no other attention but to his own enjoyment. Civil government is constituted for the happiness of the governed, and not for the gratification of those who administer it. Not only so, but the gradations of rank in society are supported, not for the advantage or pleasure of those who possess the highest places in it, but for the common good; for the security, the repose, the protection, the encouragement of all. They may be very satisfactorily defended upon

this principle; but then this principle casts upon them duties. In particular, it teaches every man who possesses a fortune to regard himself as in some measure occupying a public station; as obliged to make it a channel of beneficence, an instrument of good to others, and not merely a supply to himself of the materials of luxury, ostentation, or avarice. There is a share of power and influence necessarily attendant upon property; upon the right or the wrong use of which, the exertion or the neglect, depends no little part of the virtue or vice, the happiness or misery of the community. It is in the choice of every man of rank and property to become the benefactor or the scourge, the guardian or the tyrant, the example or the corrupter, of the virtue of his servants, his tenants, his neighbourhood; to be the author to them of peace or contention, of sobriety or dissoluteness, of comfort or distress. This power, whencesoever it proceeds, whether expressly conferred or silently acquired, (for I see no difference in the two cases,) brings along with it obligation and responsibility. It is to be lamented when this consideration is not known, or not attended to. Two causes appear to me to obstruct, to men of this description, the view of their moral situation. One is, that they do not perceive any *call* upon them at all; the other, that, if there be one, they do not see to what they are called. To the first point I would answer, in the words of an excellent moralist,\* “The delivery of the talent is the call:” it is the call of Providence, the call of Heaven. The supply of the means is the requisition of the duty. When we find ourselves in possession of faculties and opportunities, whether arising from the endowments and

---

qualities of our minds, or from the advantages of fortune and station, we need ask for no farther evidence of the intention of the donor: we ought to see in that intention a demand upon us for the use and application of what has been given. This is a principle of natural as well as revealed religion; and it is universal. Then as to the second inquiry, the species of benevolence, the kind of duty to which we are bound, it is pointed out to us by the same indication. To whatever office of benevolence our faculties are best fitted, our talents turned; whatever our opportunities, our occasions, our fortune, our profession, our rank or station, or whatever our local circumstances, which are capable of no enumeration, put in our power to perform with the most advantage and effect, that is the office for us; that it is, which, upon our principle, we are designed, and, being designed, are obliged to discharge. I think that the judgment of mankind does not often fail them in their choice of the objects or species of their benevolence: but what fails them is the sense of the obligation, the consciousness of the connexion between duty and power, and springing from this consciousness, a disposition to seek opportunities, or to embrace those that occur, of rendering themselves useful to their generation.

Another cause, which keeps out of the sight of those who are concerned in them the duties that belong to superior stations, is a language from their infancy familiar to them, namely, that they are placed above work. I have always considered this as a most unfortunate phraseology. And, as habitual modes of speech have no small effect upon public sentiment, it has a direct tendency to make one portion of mankind envious, and the other idle. The truth is, every man has his work. The kind of work varies, and that is all the difference

there is. A great deal of labour exists beside that of the hands; many species of industry beside bodily operation, equally necessary, requiring equal assiduity, more attention, more anxiety. It is not true, therefore, that men of elevated stations are exempted from work: it is only true, that there is assigned to them work of a different kind: whether more easy, or more pleasant, may be questioned; but certainly not less wanted, not less essential to the common good. Were this maxim once properly received as a principle of conduct, it would put men of fortune and rank upon inquiring what were the opportunities of doing good, (for some, they may depend upon it, there are,) which in a more especial manner belonged to their situation or condition; and were this principle carried into any thing like its full effect, or even were this way of thinking sufficiently inculcated, it would completely remove the invidiousness of elevated stations. Mankind would see in them this alternative: If such men discharged the duties which were attached to the advantages they enjoyed, they deserved these advantages; if they did not, they were, morally speaking, in the situation of a poor man who neglected his business and his calling, and in no better. And the proper reflection in both cases is the same: the individual is in a high degree culpable, yet the business and the calling beneficial and expedient.

The habit and the disposition which we wish to recommend, namely, that of casting about for opportunities of doing good, readily seizing those which accidentally present themselves, and faithfully using those which naturally and regularly belong to our situations, appear to be sometimes checked by a notion very natural to active spirits and to flattered talents. They will not be content to do little things. They will either attempt

mighty matters or do nothing. The small effect which the private endeavours of an individual can produce upon the mass of social good is so lost and so unperceived in the comparison, that it neither deserves, they think, nor rewards the attention which it requires. The answer is, that the comparison, which thus discourages them, ought never to be made. The good which their efforts can produce may be too minute to bear any sensible proportion to the sum of public happiness, yet may be their share, may be enough for them. The proper question is, not whether the good we aim at be great or little; still less, whether it be great or little in comparison with the whole; but whether it be the most which it is in our power to perform. A single action may be, as it were, nothing to the aggregate of moral good; so also may be the agent. It may still, therefore, be the proportion which is required of *him*. In all things nature works by numbers. Her greatest effects are achieved by the joint operation of multitudes of, separately considered, insignificant individuals. It is enough for each that it executes its office. It is not its concern, because it does not depend upon its will, what place that office holds in, or what proportion it bears to the general result. Let our only comparison, therefore, be between our opportunities and the use which we make of them. When we would extend our views, or stretch out our hand to distant and general good, we are commonly lost and sunk in the magnitude of the subject. Particular good, and the particular good which lies within our reach, is all we are concerned to attempt or to inquire about. Not the smallest effort will be forgotten; not a particle of our virtue will fall to the ground. Whether successful or not, our endeavours will be recorded; will be estimated, not according to

the proportion which they bear to the universal interest, but according to the relation which they hold to our means and opportunities; according to the disinterestedness, the sincerity, with which we undertook, the pains and perseverance with which we carried them on. It may be true, and I think it is the doctrine of Scripture, that the right use of great faculties or great opportunities will be more highly rewarded than the right use of inferior faculties and less opportunities. He that with ten talents had made ten talents more was placed over ten cities. The neglected talent was also given to him. He who with five talents had made five more, though pronounced to be a good and faithful servant, was placed only over five cities. (Matt. xxv. 20, et seq.) This distinction might, without any great harshness to our moral feelings, be resolved into the will of the supreme Benefactor: but we can see, perhaps, enough of the subject to perceive that it was just. The merit may reasonably be supposed to have been more in one case than the other. The danger, the activity, the care, the solicitude, were greater. Still both received rewards, abundant beyond measure when compared with the services, equitable and proportioned when compared with one another.

That our obligation is commensurate with our opportunity, and that the possession of the opportunity is sufficient, without any farther or more formal command to create the obligation, is a principle of morality and of Scripture; and is alike true in all countries. But that power and property so far go together as to constitute private fortunes into public stations, as to cast upon large portions of the community occasions which render the preceding principles more constantly applicable, is the effect of civil institutions, and is found

in no country more than in ours, if in any so much. With us a great part of the public business of the country is transacted by the country itself: and upon the prudent and faithful management of it depends, in a very considerable degree, the interior prosperity of the nation, and the satisfaction of great bodies of the people. Not only offices of magistracy, which affect and pervade every district, are delegated to the principal inhabitants of the neighbourhood, but there is erected in every county a high and venerable tribunal, to which owners of permanent property, down almost to their lowest classes, are indiscriminately called; and called to take part, not in the forms and ceremonies of the meeting, but in the most efficient and important of its functions. The wisdom of man hath not devised a happier institution than that of juries, or one founded in a juster knowledge of human life, or of the human capacity. In jurisprudence, as in every science, the points ultimately rest upon common sense. But to reduce a question to these points, and to propose them accurately, requires not only an understanding superior to that which is necessary to decide upon them when proposed, but oftentimes also a technical and peculiar erudition. Agreeably to this distinction, which runs perhaps through all sciences, what is preliminary and preparatory is left to the legal profession; what is final, to the plain understanding of plain men. But since it is necessary that the judgment of such men should be informed; and since it is of the utmost importance that advice, which falls with so much weight, should be drawn from the purest sources; judges are sent down to us, who have spent their lives in the study and administration of the laws of their country, and who come amongst us, strangers to our contentions, if we have any, our

parties, and our prejudices; strangers to every thing except the evidence which they hear. The effect corresponds with the wisdom of the design. Juries may err, and frequently do so; but there is no system of error incorporated with their constitution. Corruption, terror, influence, are excluded by it; and prejudice, in a great degree, though not entirely. This danger, which consists in juries viewing one class of men, or one class of rights, in a more or less favourable light than another, is the only one to be feared, and to be guarded against. It is a disposition which, whenever it rises up in the minds of jurors, ought to be repressed by their probity, their consciences, the sense of their duty, the remembrance of their oaths.

And this institution is not more salutary than it is grateful and honourable to those popular feelings of which all good governments are tender. Hear the language of the law. In the most momentous interests, in the last peril indeed of human life, the accused appeals to God and his country, "which country you are." What pomp of titles, what display of honours, can equal the real dignity which these few words confer upon those to whom they are addressed? They show, by terms the most solemn and significant, how highly the law deems of the functions and character of a jury; they show also, with what care of the safety of the subject it is that the same law has provided for every one a recourse to the fair and indifferent arbitration of his neighbours. This is substantial equality; real freedom: equality of protection; freedom from injustice. May it never be invaded, never abused! May it be perpetual! And it will be so, if the affection of the country continue to be preserved to it by the integrity of those who are charged with its office.

OBSERVATIONS  
UPON THE  
CHARACTER AND EXAMPLE OF CHRIST,  
AND THE  
MORALITY OF THE GOSPEL.

ORIGINALLY ANNEXED AS A SUMMARY AND APPENDIX TO  
“REFLECTIONS ON THE LIFE AND CHARACTER OF  
CHRIST,” BY EDMUND LORD BISHOP OF  
CARLISLE.—FIRST PUBLISHED 1770.

ON THE CHARACTER AND EXAMPLE OF CHRIST.

IN the first place, Christ was absolutely innocent: we do not find a single vice to which he was addicted, either from the accounts of his own followers, or as charged upon him by his enemies: we hear nothing like what is told of Mahomet, of his wives and concubines; nothing of his falling, like Socrates and Plato, into the fashionable vices of his country. In the next place, his whole life, that part of it at least which we are acquainted with, was employed in doing good, in substantial acts of kindness and compassion to all those who fell in his way, i. e. in solid virtue. In his youth, he set an example of subjection and obedience to his parents. (Luke ii. 51.) By his presence of mind and judicious replies, whenever ensnaring questions were proposed to him, he testified the coolness and soundness of his understanding. (Matt. xxi. 24; xxii. 16; xxx. 37.) By avoiding all danger, when he could do it consistently with his duty, and resolutely encountering the greatest, *when his hour was come*, i. e. when his own office or

the destination of Providence made it necessary, he proved the sedateness of his courage in opposition to that which is produced by passion and enthusiasm. (Matt. xii. 14, 15; xiv. 12, 13; John iv. 1—3, compared with Matt. xv. 17—19.) By his patience and forbearance, when he had the means of revenge in his power, he taught us the proper treatment of our enemies. (Luke ix. 54; Matt. xxvi. 52, compared with Luke xxiii. 34.) By his withdrawing himself from the populace and repelling their attempts to make him a king, he showed us the sense we ought to entertain of popular clamour and applause. (John vi. 15.) By his laying hold of every opportunity to instruct his followers, and taking so much pains to inculcate his precepts, he left us a pattern of industry and zeal in our profession. By the liberty he took with the Pharisees and Sadducees, the lawyers and scribes, in exposing their hypocrisy, their errors, and corruptions, he taught us fortitude in the discharge of our duty. (Matt. xxiii. Luke xi. 54.) He spared neither the faults of his friends, nor the vices of his enemies. By his indifference and unconcern about his own accommodation and appearance, the interest of his family and fortune, he condemned all worldly-mindedness. (Matt. viii. 20; xii. 40—50; John iv. 34.) He was perfectly sober and rational in his devotions, as witness the Lord's Prayer compared with any of the compositions of modern enthusiasts. His admirable discourses before his death are specimens of inimitable tenderness and affection towards his followers. (John xiv.—xvii.) His quiet submission to death, though even the prospect of it was terrible to him, exhibits a complete pattern of resignation and acquiescence in the divine will. (John xxii. 41—44.)

And to crown all, his example was *practicable*, and suited to the condition of human life. He did not, like Rousseau, call upon mankind to return back into a state of nature, or calculate his precepts for such a state. He did not, with the monk and the hermit, run into caves and cloisters, or suppose men could make themselves more acceptable to God by keeping out of the way of one another. He did not, with some of the most eminent of the stoics, command his followers to throw their wealth into the sea; nor, with the eastern faquires, to inflict upon themselves any tedious gloomy penances, or extravagant mortifications. He did not, what is the sure companion of enthusiasm, affect singularity in his behaviour; he dressed, he ate, he conversed like other people; he accepted their invitations, was a guest at their feasts, frequented their synagogues, and went up to Jerusalem at their great festival. He supposed his disciples to follow some professions, to be soldiers, tax-gatherers, fishermen; to marry wives, pay taxes, submit to magistrates; to carry on their usual business; and when they could be spared from his service, to return again to their respective callings.\* Upon the whole, if the account which is given of Christ in Scripture be a just one—if there was really such a person—how could he be an impostor? If there was no such person, how came the illiterate evangelists to hit off such a character, and that without any visible design of drawing any character at all?

---

\* The like did his forerunner John the Baptist. When the publicans and soldiers, people of the two most obnoxious professions in that age and country, asked John what they were to do, John does not require them to quit their occupations, but to beware of the vices and perform the duties of them; which also is to be understood as the Baptist's own explanation of that **metanoia ejf af esin aʃmartiwn** to which he called his countrymen.

## ON THE MORALITY OF THE GOSPEL.

THE morality of the Gospel [is] not beyond what might be discovered by reason; nor possibly could be; because all morality, being founded in relations and consequences, which we are acquainted with and experience, must depend upon reasons intelligible to our apprehensions, and discoverable by us.

Nor perhaps, except in a few instances, was it beyond what might have been collected from the scattered precepts of different philosophers.

Indeed to have put together all the wise and good precepts of all the different philosophers, to have separated and laid aside all the error, immorality and superstition that was mixed with them, would have proved a very difficult work. But that a single person, without any assistance from those philosophers, or any human learning whatsoever, in direct opposition also to the established practices and maxims of his own country, should form a system, so unblameable on the one hand, and so perfect on the other, is extraordinary beyond example and belief; and yet must be believed by those who hold Christ to have been either an *impostor* or *enthusiast*.

The following are some principal articles of his system.

I. *The forgiveness of injuries and enemies;*—absolutely original.

“Ye have heard that it hath been said, Thou shalt love thy neighbour, and hate thine enemy. But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you; that ye may be

the children of your Father which is in heaven: for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust." (Matt. v. 43—45.)

"If ye forgive men their trespasses, your heavenly Father will also forgive you: but if ye forgive not men their trespasses, neither will your Father forgive your trespasses." (Matt. vi. 14, 15.)

"Then came Peter to him, and said, Lord, how oft shall my brother sin against me, and I forgive him? till seven times? Jesus saith unto him, I say not unto thee, Until seven times: but until seventy times seven. Therefore (i. e. in this respect) is the kingdom of heaven likened unto a certain king, which would take account of his servants. And when he had begun to reckon, one was brought unto him, which owed him ten thousand talents. But forasmuch as he had not to pay, his lord commanded him to be sold, and his wife, and children, and all that he had, and payment to be made. The servant therefore fell down, and worshipped him, saying, Lord, have patience with me, and I will pay thee all. Then the lord of that servant was moved with compassion, and loosed him, and forgave him the debt. But the same servant went out, and found one of his fellow-servants, which owed him a hundred pence: and he laid hands on him, and took him by the throat, saying, Pay me that thou owest. And his fellowservant fell down at his feet, and besought him, saying, Have patience with me, and I will pay thee all. And he would not: but went and cast him into prison, till he should pay the debt. So when his fellowservants saw what was done, they were very sorry, and came and told unto their lord all that was done. Then his lord, after that he had called him, said unto him, O thou wicked

servant, I forgave thee all that debt, because thou desiredst me: shouldest not thou also have had compassion on thy fellowservant, even as I had pity on thee? And his lord was wroth, and delivered him to the tormentors, till he should pay all that was due unto him. So likewise shall my heavenly Father do also unto you, if ye from your hearts forgive not every one his brother their trespasses." (Matt. xviii. 21—35.)

"And when ye stand praying, forgive, if ye have ought against any: that your Father also which is in heaven may forgive you your trespasses." (Mark xi. 25.)

"Love ye your enemies, and do good, and lend, hoping for nothing again; and your reward shall be great, and ye shall be the children of the Highest: for he is kind unto the unthankful and to the evil." (Luke vi. 35.)

"And when they were come to the place, which is called Calvary, there they crucified him, and the malefactors, one on the right hand, and the other on the left. Then said Jesus, Father, forgive them; for they know not what they do." (Luke xxiii. 33, 34.)

## *II. The universality of benevolence without distinction of country or religion.*

"They went, and entered into a village of the Samaritans, to make ready for him. And they did not receive him, because his face was as though he would go to Jerusalem. And when his disciples James and John saw this, they said, Lord, wilt thou that we command fire to come down from heaven, and consume them, even as Elias did? But he turned, and rebuked them, and said, Ye know not what manner of spirit ye are of." (Luke ix. 52, 53.)

"The Jewish lawyer, willing to justify himself, said

unto Jesus, And who is my neighbour? And Jesus answering said, A certain man went down from Jerusalem to Jericho, and fell among thieves, which stripped him of his raiment, and wounded him, and departed, leaving him half dead. And by chance there came down a certain Priest that way: and when he saw him, he passed by on the other side. And likewise a Levite, when he was at the place, came and looked on him, and passed by on the other side. But a certain Samaritan, as he journeyed, came where he was: and when he saw him, he had compassion on him, and went to him, and bound up his wounds, pouring in oil and wine, and set him on his own beast, and brought him to an inn, and took care of him. And on the morrow when he departed, he took out two pence, and gave them to the host, and said unto him, Take care of him; and whatsoever thou spendest more, when I come again, I will repay thee. Which now of these three, thinkest thou, was neighbour unto him that fell among the thieves? And he said, He that showed mercy on him. Then said Jesus unto him, Go, and do thou likewise." (Luke x. 29—37.)

*III. The inferiority and subordination of the ceremonial to the moral Law.*

"Leave there thy gift before the altar, and go thy way; first be reconciled to thy brother, and then come and offer thy gift." (Matt. v. 24.)

"If ye had known what this meaneth, I will have mercy, and not sacrifice, ye would not have condemned the guiltless." (Matt. xii. 7.)

"And, behold, there was a man which had his hand withered. And they asked him, saying, Is it lawful to heal on the sabbath days? that they might accuse him. And he said unto them, What man shall there be among

you, that shall have one sheep, and if it fall into a pit on the sabbath day, will he not lay hold on it, and lift it out? How much then is a man better than a sheep? Wherefore it is lawful to do well on the sabbath days.” (Matt. xii. 10—12.) See also Mark iii. 1—5.

“Not that which goeth into the mouth defileth a man; but that which cometh out of the mouth, this defileth a man.—Those things which proceed out of the mouth come forth from the heart; and they defile the man. For out of the heart proceed evil thoughts, murders, adulteries, fornications, thefts, false witness, blasphemies: these are the things which defile a man: but to eat with unwashen hands defileth not a man.” (Matt. xv. 11, 18—20.)

“Woe unto you, Scribes and Pharisees, hypocrites! for ye pay tithe of mint and anise and cummin, and have omitted the weightier matters of the law, judgment, mercy, and faith (fidelity): these ought ye to have done, and not to leave the other undone.”

“Ye make clean the outside of the cup and of the platter, but within they are full of extortion and excess. Thou blind Pharisee, cleanse first that which is within the cup and platter, that the outside of them may be clean also.” (Matt. xxiii. 23—26.)

“And the Scribe said unto him, Well, Master, thou hast said the truth: for there is one God; and there is none other but he: and to love him with all the heart, and with all the understanding, and with all the soul, and with all the strength, and to love his neighbour as himself, is more than all whole burnt-offerings and sacrifices. And when Jesus saw that he answered discreetly, he said unto him, Thou art not far from the kingdom of God.” (Mark xii. 32—34.)

IV. *The condemning of spiritual pride and ostentation.* “Take heed that ye do not your alms before men, to be seen of them: otherwise ye have no reward of your Father which is in heaven. Therefore when thou doest thine alms, do not sound a trumpet before thee, as the hypocrites do in the synagogues and in the streets, that they may have glory of men. Verily I say unto you, They have their reward. But when thou doest alms, let not thy left hand know what thy right hand doeth: that thine alms may be in secret: and thy Father which seeth in secret himself shall reward thee openly. And when thou prayest, thou shalt not be as the hypocrites are: for they love to pray standing in the synagogues and in the corners of the streets, that they may be seen of men. Verily I say unto you, They have their reward. But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly.—Moreover when ye fast, be not, as the hypocrites, of a sad countenance: for they disfigure their faces, that they may appear unto men to fast. Verily I say unto you, They have their reward. But thou, when thou fastest, anoint thine head, and wash thy face; that thou appear not unto men to fast, but unto thy Father which is in secret: and thy Father, which seeth in secret, shall reward thee openly.” (Matt. vi. 1—6, 16—18.)

“All their works they do for to be seen of men: they make broad their phylacteries, and enlarge the borders of their garments, and love the uppermost rooms at feasts, and the chief seats in the synagogues, and greetings in the markets, and to be called of men, Rabbi, Rabbi.” (Matt. xxiii. 5—7.)

“And he spake this parable unto certain which

trusted in themselves that they were righteous, and despised others: Two men went up into the temple to pray; the one a Pharisee, and the other a Publican. The Pharisee stood and prayed thus with himself, God, I thank thee, that I am not as other men are, extortioners, unjust, adulterers, or even as this Publican. I fast twice in the week, I give tithes of all that I possess. And the Publican, standing afar off, would not lift up so much as his eyes unto heaven, but smote upon his breast, saying, God be merciful to me a sinner. I tell you, this man went down to his house justified rather than the other: for every one that exalteth himself shall be abased; and he that humbleth himself shall be exalted.” (Luke xviii. 9—14.)

#### *V. Restraining the licentiousness of divorces.*

“The Pharisees came unto him, tempting him, and saying unto him, Is it lawful for a man to put away his wife for every cause? And he answered and said unto them, Have ye not read, that he which made them at the beginning made them male and female, and said, For this cause shall a man leave father and mother, and shall cleave to his wife: and they twain shall be one flesh? Wherefore they are no more twain, but one flesh. What therefore God hath joined together, let not man put asunder. They say unto him, Why did Moses then command to give a writing of divorcement, and to put her away? He saith unto them, Moses because of the hardness of your hearts suffered you to put away your wives: but from the beginning it was not so. And I say unto you, Whosoever shall put away his wife, except it be for fornication, and shall marry another, committeth adultery: and whoso marrieth her which is put away doth commit adultery.” (Matt. xix. 3—9.)

N. B. These four last articles were in direct opposition to the established practice and opinions of our Saviour's own country.

*VI. The separation of civil authority from religious matters.*

“Then saith he unto them, Render therefore unto Caesar the things which are Caesar's; and unto God the things that are God's.” (Matt. xxii. 21.)

“And one of the company said unto him, Master, speak to my brother, that he divide the inheritance with me. And he said unto him, Man, who made me a judge or a divider over you?” (Luke xii. 13, 14.)

“He said unto the woman, (caught in adultery,) Where are those thine accusers? hath no man condemned thee? (i. e. judicially; for the woman's answer was not true in any other sense.) She said, No man, Lord. And Jesus said unto her, Neither do I condemn thee:” (i. e. in the same sense, or as a judge.) (John viii. 10, 11.)

*VII. Purity and simplicity of divine worship.*

“When ye pray, use not vain repetitions, as the heathen do: for they think that they shall be heard for their much speaking. Be not ye therefore like unto them: for your Father knoweth what things ye have need of, before ye ask him. After this manner therefore pray ye: Our Father,” etc. (Matt. vi. 7—9.)

“The hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth: for the Father seeketh such to worship him. God is a Spirit: and they that worship him must worship him in spirit and in truth.” (John iv. 23, 24.)

*VIII. Estimating of actions by the intent and no the effect.*

“And Jesus sat over against the treasury, (i. e., for pious uses,) and beheld how the people cast money into the treasury: and many that were rich cast in much. And there came a certain poor widow, and she threw in two mites, which make a farthing. And he called unto him his disciples, and saith unto them, Verily I say unto you, That this poor widow hath cast more in, than all they which have cast into the treasury: for all they did cast in of their abundance; but she of her want did cast in all that she had, even all her living.” (Mark xii. 4,1—44.)

*IX. Extending of morality to the regulation of the thoughts.*

“I say unto you, That whosoever looketh on a woman to lust after her hath committed adultery with her already in his heart.” (Matt. v. 28.)

“Out of the heart proceed evil thoughts, etc.—these are the things which defile a man.” (Matt. xv. 19, 20.)

*X. The demand of duty from mankind proportioned to their ability and opportunities.*

“That servant, which knew his lord's will, and prepared not himself, neither did according to his will, shall be beaten with many stripes. But he that knew not, and did commit things worthy of stripes, shall be beaten with few stripes. For unto whomsoever much is given, of him shall be much required: and (i. e. as) to whom men have committed much, of him they will ask the more.” (Luke xii. 47, 48.)

*XI. The invitations to repentance.*

“Then drew near unto him all the Publicans and sinners for to hear him. And the Pharisees and Scribes murmured, saying, This man receiveth sinners, and eateth with them. And he spake this pa-

rable unto them, saying, What man of you, having a hundred sheep, if he lose one of them, doth not leave the ninety and nine in the wilderness, and go after that which is lost, until he find it? And when he hath found it, he layeth it on his shoulders, rejoicing. And when he cometh home, he calleth together his friends and neighbours, saying unto them, Rejoice with me; for I have found my sheep which was lost. I say unto you, that likewise joy shall be in heaven over one sinner that repenteth, more than over ninety and nine just persons, which need no repentance." (Luke xv. 1—7.)

"And he said, (i. e. upon the same occasion,) A certain man had two sons: and the younger of them said to his father, Father, give me the portion of goods that falleth to me. And he divided unto them his living. And not many days after the younger son gathered all together, and took his journey into a far country, and there wasted his substance with riotous living. And when he had spent all, there arose a mighty famine in that land; and he began to be in want. And he went and joined himself to a citizen of that country; and he sent him into his fields to feed swine. And he would fain have filled his belly with the husks that the swine did eat: and no man gave unto him. And when he came to himself, he said, How many hired servants of my father's have bread enough and to spare, and I perish with hunger! I will arise and go to my father, and will say unto him, Father, I have sinned against heaven, and before thee, and am no more worthy to be called thy son: make me as one of thy hired servants. And he arose, and came to his father. But when he was yet a great way off, his father saw him, and had compas-

sion, and ran, and fell on his neck, and kissed him. And the son said unto him, Father, I have sinned against heaven, and in thy sight, and am no more worthy to be called thy son. But the father said to his servants, Bring forth the best robe, and put it on him; and put a ring on his hand, and shoes on his feet: and bring hither the fatted calf, and kill it; and let us eat, and be merry: for this my son was dead, and is alive again; he was lost, and is found.” (Luke xv. 11—24.)

The gospel maxims of *loving oar neighbour as ourselves*,” and “*doing as we would be done by*,” are much superior rules of life to the **to prepon** of the Greek, or the *honestum* of the Latin moralists, in forming ideas of which, people put in or left out just what they pleased; and better than the *utile*, or *general expediency* of the modern, which few can estimate. As motives likewise, or principles of action, they are much safer than either *the love of our country*, which has oftentimes been destructive to the rest of the world; or *friendship*, the almost constant source of partiality and injustice.

His manner also of teaching was infinitely more affecting than theirs: as may be known by comparing what we feel, when we rise up from reading the parables of the good Samaritan, of the Pharisee and Publican, the servant who when he was forgiven by his master would not forgive his fellowservant, the prodigal son, the rich man who laid up his stores (Luke xii.)—by comparing, I say, these with any thing excited in us, on reading Tully's Offices, Aristotle's Ethics, or Seneca's Moral Dissertations.

No heathen moralist ever opposed himself, as Christ did, to the prevailing vices and corruptions of his own time and country. (Matt. v. vi. vii. xxiii. Luke xi. 39—44.) The sports of the gladiators, unnatural lust, the licentiousness of divorce, the exposing of infants and slaves, procuring abortions, public establishment of stews, all subsisted at Rome, and not one of them condemned or hinted at in Tally's Offices—The most indecent revelling, drunkenness, and lewdness practised at the feasts of Bacchus, Ceres, and Cybele, and their greatest philosophers never remonstrated against it.

The heathen philosophers, though they have advanced fine sayings and sublime precepts in some points of morality, have grossly failed in others; such as the toleration or encouragement of revenge, slavery, unnatural lust, fornication, suicide, etc. e. g.

Plato expressly allowed of excessive drinking at the festival of Bacchus.

Maximus Tyrius forbade to pray.

Socrates directs his hearers to consider the Greeks as brethren, but Barbarians as natural enemies.

Aristotle maintained that nature intended Barbarians to be slaves.

The Stoics held that all crimes were equal.

Plato,

All allow and advise men to continue

Cicero,

the idolatry of their ancestors.

Aristotle,

Both speak of the forgiveness of injuries

Cicero,

as meanness and pusillanimity.

These were trifles to what follows.

Aristotle\* and Plato both direct that *means should*

\* See Dr. Priestley's Institutes of Natural and Revealed Religion, vol. ii. sect. 2, 3.

*be used* to prevent weak children being brought up.

Cato commends a young man for frequenting the stews.

Cicero expressly speaks of fornication as a thing never found fault with.

Plato recommends a community of women; also advises that soldiers should not be restrained from sensual indulgence, even the most unnatural species of it.

Xenophon relates, without any marks of reprobation, that unnatural lust was encouraged by the laws of several Grecian states.

Solon, their great lawgiver, forbade it only to slaves.

Diogenes inculcated, and openly practised, the most brutal lust.

Zeno the founder, and Cato the ornament of the Stoic philosophy, both killed themselves.

Lastly, the idea which the Christian Scriptures exhibit of the Deity is in many respects different from the notion that was then entertained of him, but perfectly consonant to the best information we have of his nature and attributes from reason and the appearances of the universe. The Scriptures describe him as one, wise, powerful, spiritual, and omnipresent; as placable and impartial, as abounding in affection towards his creatures, overruling by his providence the concerns of mankind in this world, and designing to compensate their sufferings, reward their merit, and punish their crimes in another. The foregoing instructions, both with regard to God and to morality, appear also without any traces of either learning or study. No set proofs, no formal arguments, no regular deduction or investigation, by which such conclusions could be

derived:—the very different state likewise of learning and inquiry in Judea and other countries—and the vast superiority of this to any other system of religion:—all these circumstances show that the authors of it must have some sources of information which the others had not.

THE END.
